They thought that, by sending support to certain adventurous officers of the old regime, they could push back the current of history. In the same way, there are Americans today who believe that a little intervention in China will make it possible for Chiang Kai-shek to master the Communists and unify all of China's vast, strife-torn area.

The danger is that a little intervention will lead to our taking sides in a major way in China's internal war. It will draw us in so that we find ourselves sending more troops and more money and guns. This might not happen, but no one can deny that it is a possibility.

Those who were eager for intervention in Russia's civil war, a quarter of a century ago, and those who today want us to hold the balance in China with men and munitions overlook one all-important fact. The American people are opposed, by their deepest traditions and by all the conditions of life in this country, to that kind of action.

It was only after a direct attack on American territory in 1941 that we roused ourselves to resist what was a carefully planned conspiracy to surround and eventually destroy American democracy. Now that that most terrible of all wars is ended, the clamor of public opinion is to bring Americans home, to get out, to pull back within our continental borders.

So persistent is that clamor that it may prevent us from carrying out responsibilities we owe to the world. How, then, can those who urge intervention in China expect that American opinion will accept a risk which may lead to a considerable commitment in men and machines? We read of the angry mutterings of the American fliers who must fly planes to Chiang over the Hump. This is fact, just as real as the air we breathe, and no amount of lecturing; no talk about leadership, no hysteria is going to change it.

This conflict is an old story. It is partly why we have such a hard time shaping any clear line on foreign policy. You have Americans, often in influential positions, who talk about what America will do. They succeed now and then in fooling both our friends and our enemies, but especially our friends.

They ignore the fact that only under the most extreme prodding, and then only most reluctantly, will Americans take positive action outside the borders of this country.

You can argue that this is wrong, dangerously shortsighted. You can argue that America should now take world leadership. You can argue with considerable logic and force for a Pax Americana—a hundred years of peace enforced by our power around the world, working benevolently through the United Nations, or as a frank imperium.

But that is so contrary to the American temperament that it is impossible. We are left, therefore, with only one choice in our foreign policy. Strong within our own borders, we can be friendly with all peace-loving nations. We can, as Walter Lippmann has so well put it, be a friendly mediator between the nations.

The sooner our interventionists—whether they be imperialists or earnest internationalists who want to carry the benefits of American democracy to the world—learn this, the sooner will we be able to take a reasonable position that accords with American opinion.

We have a chance to become a working partner in a world organization. Quarrels over intervention in China or anywhere else weaken that possibility because such quarrels inevitably stir all the old isolationist prejudices.

## Two Trials in Germany

---

EXTENSION OF REMARKS

OF

## HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Memphis Press-Scimitar of December 1, 1945, written by Edward J. Meeman. I commend it to your attention:

The trial at Nuremberg goes well. Evidence, shocking even to a world that thought it had plumbed the depths of Nazi devilishness, steadily unfolds. The trial is being conducted with fairness and dignity. Few doubt that the guilty will be punished and in measure proportioned to their guilt.

There is another trial going on in Germany—the trial of our ability to transform the German nation from a menace into a reliable member of the society of nations. A successful outcome of this other trial depends on our ability to save the innocent—to get Germany to running in such a way that the lives of today's children, and even children yet unborn, will not be warped by

starvation and injustice so that they will be made into Nazis or Communists of tomorrow.

This other trial isn't going well. That we learn from Byron Price, former head of censorship, who was sent into Germany by President Truman to find out conditions and has reported to him that the situation is growing worse hourly.

Germans who live in unheated homes and must walk to work, aren't getting enough food to keep their bodies warm, much less enough to give them enough energy to work.

Mr. Price recommends that additional food be shipped to Germany on credit to provide at least the minimum ration which doctors say is necessary to prevent starvation.

For with starvation would come epidemics and probably riots.

Desperation, he says, might produce a new fuehrer, and embittered Germans would listen to him.

It is right and it is sensible for us to give food and hope to those Germans, however few or many they may be, who will turn to the Western World and its democracy if we give them a chance. Food and hope, too, for the children who, if not molded by our kindness, will be molded by a future fuehrer's cruelty.

For the spirit in which to do this, we may turn to Justice Robert H. Jackson, prosecutor of the Nazis at Nuremberg.

In the great speech with which he opened the trial, at the same time that he was relentlessly indicting the Nazis, he made it clear that the United States was not incriminating the whole German people. He said:

"We know that the Nazi party was not put in power by a majority of the German vote. We know it came to power by an evil alliance between the most extreme of the Nazi revolutionaries, the most unrestrained of the German reactionaries, and the most aggressive of the German militarists."

The German people cannot be absolved from the sin of yielding to this evil minority. But it is unlikely they would have yielded had they not been brought to an economic desperation by the triple disasters of defeat in World War I, a destructive inflation, and a depression.

Let us do what is necessary to prevent a greater economic desperation which would make Germany prey to a new crew of desperadoes.

Let's see that Byron Price's recommendations are carried out.

Let's punish the guilty and rescue the innocent.

Let neither of our great trials in Germany miscarry.

## Veterans' Affairs

EXTENSION OF REMARKS

OF

### HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. ANGELL. Mr. Speaker, when the deficiency bill was before the House recently, I was glad to have been one who was among the House Members taking the lead in restoring to the bill the $156,000,000 item for veterans' hospitals and veterans' housing. At that time I stated my views on the floor in the brief time allotted to me. I include in these remarks an article appearing in the Washington Times-Herald, December 2, by Lt. Comdr. Tyrrell Krum entitled "Veterans' Affairs," in which he discusses this item:

VETERANS' AFFAIRS

(By Lt. Comdr. Tyrrell Krum, USNR (retired))

If any American war veteran thinks he's going to get anything from the Congress of the United States without wading in and fighting for it, he's got another think coming.

No more glaring example of the attitude which is building up among some Members of Congress toward our returning veterans, now that the drums of war are silenced and peace is assured for the time being, could be found than the spectacle which took place on the floor of the House a few days ago.

Gen. Omar N. Bradley, who left a four-star command in Europe to take over a thankless task as head of the Veterans' Administration, was seeking approval of a $156,000,000 appropriation to be used in expanding the VA's hospital program and providing top-flight medical care for millions of men who marched off and fought and won this war.

The program was then subjected to microscopic inspection by the Federal Board of Hospitalization and the Bureau of the Budget. And, finally, after careful consideration by President Truman, it was approved and sent up to the Hill for inclusion in the first deficiency appropriation bill.

One would naturally feel confident that such a program, so conceived and so approved, would encounter little or no difficulty in being blessed by a legislative body to whom billions of dollars are mere chicken feed.

But this was mere wishful thinking.

The House Appropriations Subcommittee, ruled by Representative CLARENCE CANNON, Missouri Democrat, didn't see it that way. CANNON wanted to know what all the rush was about. Why all the hurry? And, furthermore, why wouldn't the Veterans' Administration, instead of building a lot of new hospitals, be content with utilizing Army and Navy hospitals declared surplus?

The Veterans' Administration gave assurances it was willing to absorb some of the discarded service installations. But, on the other hand, many of them were not fit for the care of veterans.

The VA battled in vain. When the first deficiency appropriation bill was reported out for House approval by CANNON it called for a total expenditure of $1,131,552,312 48 for every conceivable type of project from curbstone sewers to public schools and municipal hospitals.

But not one single red cent for veterans hospitals!

On Wednesday the appropriation bill came before the House sitting as a Committee-of-the-Whole. A small group of willful men, determined to fight to restore the cut from the floor, was on hand, led by Representative JOHN RANKIN, Mississippi Democrat, firebrand chairman of the House World War Veterans Committee.

RANKIN offered an amendment to replace the $156,000,000 item in the same form as it was stricken from the measure by the Cannon subcommittee.

And taking the lead in rallying to his support were Representatives EDITH NOURSE ROGERS, of Massachusetts; D. EMMERT BRUMBAUGH, of Pennsylvania; BEN F. JENSEN, of Iowa; WILLIAM A. PITTENGER, of Minnesota; J. LEROY JOHNSON, of California; HOMER D. ANGELL, of Oregon; H. CARL ANDERSEN, of Minnesota; IVOR D. FENTON, of Pennsylvania; all Republicans.

The only Democrat to take the floor in RANKIN'S support was WILLIAM T. BYRNE, of New York.

And thus the day was won. The amendment passed by a vote of 78 to 49. And, thus, the Veterans' Administration Nationwide hospital-medical program squeaked through by a margin of 29 votes.

## American Economic Stability

EXTENSION OF REMARKS

OF

### HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include a thoughtful address by the Honorable O. Max Gardner, Chairman of the Advisory Board, Office of War Mobilization and Reconversion, and former Governor of North Carolina, before the Economic Club of New York, Thursday evening, November 29, 1945. Governor Gardner has approached the problems of the day with frankness and his convictions deserve consideration.

His address follows:

There is no subject more deeply significant to all of us than that chosen for our discussion here tonight: "American Economic Stability." There is no domestic issue more fundamental to the welfare of our Nation than the question of when, and how soon, and by what means, we are to attain economic stability. If we are to find the answer, we must not rest.

With my background and experience, I must confess that I do not pretend to come to you tonight with any expert knowledge qualifying me to speak with authority or finality as to the plans or policies that are necessary for the creation, maintenance, or continuance of the economic stability of America. I doubt if any of us have a proven formula for the attainment of this utopia.

A subject so vast as national economic stability must, of necessity, in the time allotted be treated in general terms. Many years ago a scholarly divine in my section asked a successful evangelist the secret of his power in the pulpit. He replied by saying, "Well, my brother, I just spread the fodder on the ground so that anybody in the congregation from a jackass to a giraffe can get it." I think, with due apology, that I shall follow his example here tonight.

In fact, ladies and gentlemen, I know more about economic instability than I do about economic stability. I was nursed at the sad and loving breast of instability and for most of my life have been on intimate terms with it. Indeed, I am a magna cum laude graduate with a doctor's degree in the sciences of bankruptcy and political discontent. I experienced these catastrophes as chief executive of North Carolina from 1929 to 1933, when they were marshaled against all governments. Former President Herbert Hoover and I entered and graduated and terminated at the same time, and both of us are well qualified to talk for the remainder of our lives on the subject of economic instability in America during a depression. That was one political agony no one in office at the time will ever quite forget.

The only time except tonight that I ever seriously attempted to raise the veil of our economic future and indulge in economic prognosis occurred on July 22, 1932, when, as Governor of North Carolina, I wrote a letter to the then Governor of the State of New York, in which I used this unmistakable language:

"Public opinion is in a state of flux. There are in it currents of thought moving swiftly and with power, sweeping people and lives before them. New and sudden trends are daily felt. It is a mistake to say that these currents of thought are wholly the creatures of demagogues. Demagogues do not create movements. They merely ride upon them.

We are more than blind if we think the American people will stand hitched to the status quo."

This prediction was made, as you know, in the darkest hours of the depression. I was suffering from mental, financial, and political anguish. I am perfectly willing to leave it to you, in the light of what has happened during the last 13 years, as to whether or not I was guilty of overstatement when, as a minor prophet, I caught a glimpse of the New Deal before the New Deal caught a glimpse of you or me.

As Chairman of the Advisory Board on Reconversion, I have tried to locate the fundamental reasons for our economic and social discontent during the period of physical and mental reconversion. I am sure all of us can agree on one point—that the dislocation of the war is the basic cause of our present disunity. Today the air is filled with criticism and complaint. People who walked together in harmony only a few weeks ago are today openly finding fault with one another. Management and labor which worked together so efficiently in producing weapons for war are now in hostile camps. Why have we become so distrustful of each other? Where is the unity which we had as a Nation? What has happened to our allies? Where are the bonds and ties that were the basis of our great victory?

Since I am to speak to you upon the subject of American economic stability, I think it proper for me to discuss some of the ingredients of discontent that divide and confuse as we move from war to peace. How much of the present upheaval is superficial or natural and incident to transition? How much is ominous and dark and of serious import?

I think it perfectly natural for us to experience instability as we enter the postwar period. The sudden termination of total war—the most destructive in all history—is bound to bring serious shocks to the economic and social system of the Nation. The days through which we have recently passed will mark the watershed of history.

Our vast and unlimited expenditures for munitions have suddenly stopped. Of course, this is right and proper. The peacetime way of spending public money differs radically from wartime. Two billion dollars were spent in producing the atomic bomb. All of this was done in secret. Congress was not consulted. In time of war such a method is defensible, but in time of peace every dollar of Federal funds must be subjected to the white light of publicity and to close public scrutiny, and surely in times of peace we should constructively strive for a balanced budget. I realize that, by reason of national necessity, it will be 1948 before we can hope for a balanced budget.

With the end of the war we are throwing off the stupor and regimentation and beginning to think for ourselves. We no longer have a chief of staff to tell us what to do and not to do. There is no use denying the fact that war is impatient and even inconsistent with the democratic process. Democracy means that others than the General Staff must be consulted. It means that the rank and file of the citizenship are to have a part, either directly or indirectly, in great decisions. We are unlimbering the mental muscles that have been cramped and crowded. We are having full and free discussion of issues again, and only in this way can we justify the great cause for which we fought.

I believe you will agree with me that it would be tragic, both for our Nation and for the world, if in this her greatest hour America should, through dissension and bitterness, fail to resolve her differences.

I have confidence tonight that we will resolve our differences in the light of our traditions—our traditions of restraint, moderation, and tolerance. A wise friend of mine once told me that "The denial of a present satisfaction in order to achieve a future goal is the basis of all economic progress."

We are great in America for what we have accumulated and for what we possess, both in wealth and power. We are still greater for the things we have refused to seize and selfishly appropriate for ourselves. If it were not for the confidence of the little men and the little nations of this earth in the integrity of the good intentions of America today, I do not believe there would be any hope for world stability or world order.

What is this spirit of moderation so necessary to the survival of a democracy? How is it cultivated? How is it to be preserved? How is it sometimes lost? From the pen of your eloquent and wise Judge Learned Hand, we have the following:

"A society so riven that the spirit of moderation is gone, no court can save; a society where that spirit flourishes, no court need save. * * * What is the spirit of moderation? It is the temper which does not press a partisan advantage to its bitter end, which can understand and will respect the other side, which feels a unity between all citizens * * * which recognizes their common fate and their common aspirations—in a word, which has faith in the sacredness of the individual."

If the leaders of the jurisdictional fights within labor, and the stubborn individualists in management, and all leaders of labor and management were compelled to memorize these masterful words of moderation from Judge Hand and then reconcile their differences in the common good, what a blessing it would be to the public welfare and to our economic stability.

What is the grave apprehension haunting our present unrest and threatened instability? What are the words on the lips and in the minds of every thoughtful citizen? What constitutes the real basis of disputes between management and labor, of the quarrel over prices and wages? The answers to all of these questions are found in two great fears—inflation and deflation.

As chairman of the Advisory Board, I recently said to President Truman that I thought a good job had been done in keeping inflation under reasonable control, but that I thought the best hour for America since VJ-day would come when, in the national interest, all economic control fetters and binders could be removed without danger to our national life, and a free America be allowed to move forward into full production under the protective policy of a free competitive economy. Right here I would like to say that as long as controls are necessary we should strive to find a more expeditious method for wage-price adjustments and do away with current delays and cumbersome processes. I told Director Snyder that, while inflation was a devastating disease, I knew of only one evil more deadly than inflation, and that was the paralysis of deflation.

I believe, therefore, that if we are to have a stabilized economy in America we have got to chart a course that will avert inflation on the one hand, and at the same time move progressively forward towards the goal of a sound equilibrium, steadily rising under the impulse of full production. In order to do this, we have got to keep our eyes constantly on the value of the American dollar, which is today the soundest money in the world. There are two ways to make what we call money. One of these is the printing press, the other, work. I am a disciple of the doctrine of work.

I believe that economic stability will be achieved when the entire population of this Nation has the opportunity and willingness to work—to contribute to the welfare of the whole in a fair manner consistent with the fundamental resources, needs, and greatness of the country. I emphasize willingness to work. I do not believe that we can attain or retain economic stability in America unless our people firmly resolve to rededicate themselves to the dignity of labor and to the national necessity for all of us who are able to work—actually to go to work. In other words, the only complete antidote to inflation or deflation is production and abundant supply, and this means only one thing—work—work for everybody.

It is rather amusing to me to find many people who think they are economically secure who are worried almost to despair about the abundance of money in the pockets of the average man today. Give us time, brother. All we have to do is to be patient with our present prosperity. It will work itself out. It always has. Our memories are short and with all of our educational advance no institution has yet been able to give a degree in common sense. Unfortunately we may rely upon the eventual improvidence of the average American. It may be difficult for the average American to spend 5 years' savings in 1 or 2 years, but the way we are going now we may be able to do it, as the demand of the American people for new and more products during the next few years will exceed anything the country has ever known. When production catches up with and probably exceeds consumption, the economic club will have to meet again.

We must remember that most of us work not for the sheer joy thereof but to make a living. When a bellboy in my hotel asked me the other day how much higher I thought du Pont was going, I knew we were on the way.

There is one thing more to be dreaded than economic instability, and that is economic profligacy, waste, and riotous living. To my mind, one of the worst things about the 1927–29 joy ride was that we all thought we were endowed with perpetual prosperity and many of us unwisely concluded that we would never have to work again—and please remember that most of these suckers were not people who earned their bread in the sweat of their face. One of them is talking to you, and I see some familiar faces in this audience.

To attain economic stability we must, of course, be willing to work. But that in itself is not enough. There are other factors fundamental to the attainment of a stable society for which we must strive. We shall not find these factors by looking backward. The key to economic stability will not be found in the past. It is just 16 years since 1929; but in terms of social and economic progress it is a hundred years. The so-called boom of 1929 looks pitiful to us today. Then we had less than $100,000,000,000 of production as compared with our wartime achievement of $200,000,000,000. And because of the growth of our labor force and our productive efficiency, a mere 1929 rate of production would leave nearly 20,000,000 of our workers unemployed today—far more than the total we had out of work in the worst years of the depression.

It seems to me that this points to the essence of economic stability. Stability is not synonymous with security. We shall not achieve stability if we are permanently satisfied with our present standards. Society stagnates when it becomes smug and complacent. The key to stability is to set our sights ever higher, to strive for higher and higher goals of production. If the motive power of America had not been to come up—come up higher and higher—most of us would not be here tonight.

Many people think of stability as the elimination of boom and depression, of inflation and deflation, of prosperity and poverty—as the elimination of extremes of any kind. Stability is all of these things, but it is something more. To achieve stability, we must reconcile ourselves to temporary instability and controversy as society struggles painfully with new ideas, new methods, and new conditions. If we do otherwise, we will

achieve neither stability nor the will-o'-the-wisp of security.

This concept of stability is not static. It is dynamic. But the very essence of a dynamic stability is that it cannot be achieved by a policy of drift. We have either got to advance or recede. We cannot stand still. I hardly need say that I believe in the American free-enterprise system. I do not believe that the best interests or the stability of the Nation are served by regimentation in peacetime. But a system of free enterprise does not mean that the Government assumes a role of impotence. Planning by government need not be regimentation. It seems to me that planning is just the commonsense approach to a constructive postwar economy. Every well-managed business has a general staff. Businesslike operations of the Government demand the same approach. Our task is simplified and our chances of success are increased by the best planning we can provide. I mean planning by the Government to create a pattern of government and enterprise relationship in which individual industries, individual companies, and individuals will have a feeling of confidence and stability in making their own plans for their own operations. In this direction lies American economic stability.

I have not yet fully explored what seems to me the most crucial factor in our struggle to achieve economic stability. Production and planning will not suffice. In the long run, stability depends in large part upon our state of mind. I mean that there can be no real stability unless we are receptive to change. I repeat—we cannot be stable if we remain static. Change is the law of life. That society will be the most stable that finds a way to maintain its equilibrium in a changing world. Progress is the residuum of a multitude of mistakes. Only through error do men or nations come to know the truth. The progress and stability of a country may be measured by those things once matters of debate which are now accepted as a matter of course.

Those governments that have had the greatest economic stability have been those that have found a way to adjust to changing conditions. Those governments that have been unable to adjust have often been swept away when they thought they were absolutely secure. As the old philosopher says, "Just about the time they think they have the world by the tail, the tail pulls off."

Yes, if our minds and our hearts are open to change, we can achieve stability—both economic and political. For you all know that we can have no economic stability without political stability and no political stability without economic stability. We make a grave mistake if we think we can have economic stability in America with all the rest of the world in turmoil and ruin. I believe that the roots of our economic system will wither and die unless they are firmly planted in the fertile soil of world trade.

The building of a stable world peace upon the ashes and ruins of this war will require all the capacity, patience, and restraint of which the human race is capable. Whether we like it or not, just remember that the stability of this Nation and the whole world depends upon the slender thread of negotiation and renegotiation now being carried on by the representatives of the three great nations of the earth. Here is the ark of the covenant of stability.

And finally, my friends, if we could explore the mind of the average American citizen today, I believe we would find lying side by side two important desires. One is the wish that a world order may be established to prevent war. The other is the natural desire for a job that will bring with it individual well-being and stability to himself and his family.

The two ideas are really different approaches to the same problem. The untutored thinking of the common man has stumbled upon and laid bare the core of the problem facing this Nation and the world. The common man, knowing little and caring less about fine-spun theories of sovereignty, international law and economic stability, shows an intuitive understanding of world problems when he ties up in one bundle the desire for his daily bread and a chance for world peace. It may well be that we cannot long have our daily bread without world peace, and I am equally doubtful that we can long have world stability without our daily bread.

## Columbia Valley Authority

EXTENSION OF REMARKS
OF
### HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles by Richard L. Neuberger and Robert W. Sawyer from the Sunday Oregonian of November 25, 1945:

COLUMBIA VALLEY AUTHORITY?

(The Oregonian herewith presents both sides of one of the most controversial issues in the history of the Pacific Northwest—the question of whether or not to establish a Columbia Valley Authority similar to the TVA in this region. The affirmative side is presented by Richard L. Neuberger, prominent Portland author, and the negative side by Robert W. Sawyer, publisher of the Bend Bulletin. Mr. Neuberger has been a leader of New Deal groups since he was editor of the University of Oregon campus paper in 1932. Recently discharged from the Army after 3 years' service, Mr. Neuberger is the author of three books and has contributed extensively to Harper's, Collier's, the Reader's Digest, and the Saturday Evening Post. Mr. Sawyer, one of Oregon's most distinguished citizens, is Oregon director of the National Reclamation Association and a nationally known authority on conservation and reclamation. The reclamation association was formed by delegates appointed by governors of the Western States. In addition to his duties as publisher, Mr. Sawyer has served as judge of Deschutes County and as a member of the Oregon State Highway Commission.)

YES

(By Richard L. Neuberger)

As early as 1908 people in the Pacific Northwest began crusading for Federal development of the vast resources of the Columbia River. The crusade was persistent and determined, but nothing happened for nearly 30 years—not until a President entered the White House who had pledged himself to the systematic and orderly improvement of America's great river valleys. The name of this President was Franklin D. Roosevelt.

These facts are important for us to remember. During 3 decades, leading citizens of the Northwest tried to work through such old-line Government agencies as the War Department and the Department of the Interior for the construction of dams at Bonneville and Grand Coulee. But not an ounce of concrete was poured, not a single rivet hammered home. Countless reports were written; they gathered dust in files and drawers. The old-line agencies, competent though they were, failed utterly to put over the projects.

Are we to leave the future development of our region to political caprice? Are we to be solely dependent upon the chance that another President will look with favor on Federal investment in dams, powerhouses, pumping stations and transmission lines along the broad Columbia?

Or will we establish a permanent, continuing regional board with authority and responsibility to develop all the resources of the Columbia River Valley on a coordinated basis?

This issue vitally affects the welfare and destiny of every man, woman, and child in the Northwest. This is particularly true at a time when we need thousands of new jobs to compensate for the war plants which are laying off workers each week.

Before he died, President Roosevelt gave us a pattern for sound development of a major American region. He inaugurated and supported the Tennessee Valley Authority, one of the most successful undertakings in the history of the United States Government.

What about the TVA? Would such an agency benefit the Pacific Northwest? The answer is "yes, most emphatically yes." Ever since a regional authority was first proposed for the Columbia Valley, a campaign of misrepresentation has been carried on against the TVA. One would think, to read these slanders, that the TVA was a tyrannical, mysterious gestapo that destroyed the State's rights and enslaved the people of the Tennessee Valley.

*Governors quoted as describing TVA aid to Tennessee*

What are the facts?

Last year the St. Louis Post-Dispatch, eminent Fulitzer newspaper, asked the Governors of the seven States in the Tennessee Valley whether the TVA had threatened State's rights or personal liberties. These Governors included Republicans and Democrats, liberals and conservatives, New Dealers and anti-New Dealers. Yet without exception they agreed that the TVA, far from endangering State's rights, had actually strengthened and helped the States of the Tennessee Valley.

"People throughout the Tennessee Valley," said Governor Prentice Cooper, of Tennessee, "are enjoying low electric rates which the private companies used to tell us were 'fantastic and impossible.' The rights of this State and its citizens have been enlarged by TVA through enriched opportunities."

"I am a strong believer in States' rights," said Gov. J. Melville Broughton of North Carolina, "but TVA has done nothing which to my mind embodies any threat to the rights of this State."

Yet despite this expert testimony of the distinguished governors whose States are in the Tennessee Valley, the Oregon State Legislature passed a resolution condemning a Columbia Valley authority as a threat to State's rights. Senator Lew Wallace, of Multnomah County, pointed out that the legislature only debated the resolution for a few minutes, whereas it devoted days and weeks to wrangling with the liquor commission. Who inspired the anti-Columbia Valley memorial? Who was so anxious to hurry it to passage?

William L. Chenery, publisher of Collier's magazine, one of the Nation's foremost periodicals, visited the TVA this year. What did he find out? He discovered that TVA had saved soil, improved public health, cut light rates, helped business, and reduced farm indebtedness.

*Chenery asserts Authority brought prosperity*

"The Tennessee Valley Authority," concluded Mr. Chenery, "has increased prosperity in hundreds of towns and on thousands of farms in seven States. Most of the doubts that attended its creation have already vanished."

In the Pacific Northwest, however, many chambers of commerce and private power companies are trying to revive those doubts. They are claiming that TVA is a failure, thus

hoping to discredit the Columbia Valley authority. Are these not the same chambers of commerce that originally opposed creation of the Bonneville Power Administration in the Department of the Interior? Is it not one more effort to thwart development of the Columbia River in the interests of all the people?

This fight is far from new. It reaches way back. In 1935, exactly a decade ago this fall, the Portland Chamber of Commerce appeared before the Pacific Northwest Regional Planning Commission and condemned plans for a Columbia Valley Authority. One of the most respected and experienced labor leaders in Oregon's history heard this criticism—the late Ben T. Osborne, secretary of the Oregon State Federation of Labor of the AFL.

After the chamber of commerce was all through, Ben T. Osborne got up. "I am stronger now for a Columbia Valley Authority than when I came here," he said. "There hasn't been an argument that hasn't convinced me of the desirability of the type of organization similar to that of the Tennessee Valley. I am astonished to hear men rise up in fear and dread of the Federal Government as though it was a great octopus. If this region of ours is to be developed to the greatest good of all the people here, there must be some authority and that authority must be the Federal Government."

The future of the Pacific Northwest was close to the heart of Ben T. Osborne. He knew that the welfare of the 75,000 Oregon wage earners whom he led would be well served by a Columbia Valley Authority.

When it opposes a Columbia Valley Authority, the Portland Chamber of Commerce gives one cause to wonder whether it speaks for the great majority of Oregon's merchants or for a few private power companies. How has business fared in the TVA? Mr. Chenery, of Collier's, was told by merchants, bankers, and real-estate men that the TVA had boomed business throughout the entire valley.

*President described project as proud success*

Smaller wonder that Mr. Chenery heard this praise of the TVA from businessmen. During the immediate prewar years, retail sales for the whole country climbed 54 percent, in the Tennessee Valley 67 percent. The income of the entire country went up 29 percent, in the Tennessee Valley 39 percent. Wages for the whole country increased 46 percent, in the Tennessee Valley 56 percent.

Yet we of the Pacific Northwest now hear the propaganda that an agency like TVA would be a bad thing for the Columbia River Valley.

Harry S. Truman is a wise man. He knows a useful institution when he sees it. On October 10, 1945, the President of the United States said: "By all except a small minority, the TVA is now regarded as a great American accomplishment, of which all of us are proud. We will not listen to the whispers of the timid, that dreams like those of the Tennessee Valley are impossible to accomplish. The valleys of America await their full development. The time has come—now that materials and manpower are more plentiful—to press forward."

*TVA embraces seven States of South*

Yet, despite this wholehearted approval from Presidents and editors, from farmers and merchants, still we of the Northwest hear that a TVA is not suited to our region.

The TVA touches seven States, including in its area 81,000 square miles and 5,000,000 people. The Columbia Valley Authority, as proposed by Senator MITCHELL and Congressman JACKSON, would also touch seven States, taking in 279,000 square miles and 3,500,000 people. We are told that because of the difference in acreage, we of the Northwest cannot have a regional authority. This is nonsense. It is like saying a doctor who performs satisfactorily as an interne cannot be trusted in the larger field of private practice.

On its course from British Columbia to the sea, the Columbia is one river. Yet a whole galaxy of Government agencies has to do with its management. The Bureau of Reclamation plans and builds irrigation projects. The Fish and Wildlife Service safeguards aquatic life. The Army engineers generate power. The Bonneville Power Administration sells that power. Some of these agencies report to the Secretary of War, others to the Secretary of the Interior. There is no coordinating point. Would you run a hotel with one kitchen for salads, another for soups, still another kitchen for meat orders, and so on? You could be sure no guest would ever be fed. Yet that is the way our most precious regional resource, the Columbia River, is now developed and managed.

Opponents of the Columbia Valley Authority claim that competition among these various agencies is a healthy thing, that no over-all authority is desirable. This rivalry among bureaus, far from being beneficial, is one of the reasons that the Pacific Northwest had to stifle its ambition and wait 30 years for Franklin D. Roosevelt to come along and begin construction of dams on the Columbia.

And if interbureau competition is so worth while, why not apply it elsewhere? When a regiment goes to war, let one Government department supply the rations, let another provide the weapons, let still a third check up on the security precautions, have a fourth issue the proper clothing and bedding. Would you feel confident sending your son or husband off to battle under such circumstances? Yet that is the way the Columbia River is now developed and managed.

*Agencies listed as having capable personnel*

The Army Engineers, the Bureau of Reclamation, the Fish and Wildlife Service, the Bonneville Power Administration—all these agencies and many more besides have done notable work in the Columbia River Valley. Their contributions have been outstanding. Their engineers and technical men are among the best in the land. The accomplishments of these agencies would not end with the establishment of a Columbia Valley Authority. Indeed, those accomplishments would be greatly enhanced.

Senator MITCHELL and Congressman JACKSON intend explicitly that the valuable personnel of the agencies already in the region shall be absorbed into the Columbia Valley Authority; CVA will make worth-while use of the talents and skill of these men. Lest anyone think this impossible, just consider a recent episode with which we are well acquainted. A few years ago the old United States Biological Survey was consolidated into the Fish and Wildlife Service along with many other agencies. Such illustrious northwestern biologists as Stanley Jewett and Albert W. Moore, formerly with the biological survey, now continue their eminent work in the Fish and Wildlife Service.

*Authority generates and sells hydroelectric power*

The Tennessee Valley Authority performs many functions to make life better in that region. It generates and sells hydroelectric power; it drains swamps where malaria has festered; it improves navigation; it prevents devastating floods; it distributes fertilizer and restores exhausted soil; it encourages the use of electrical appliances; it makes possible the establishment of new industries, new towns, and new businesses.

A Columbia Valley Authority would undertake most of these tasks, too. In addition, it would develop and reclaim such potentially fertile areas as the Columbia Basin irrigation project in the State of Washington. And it would decide each specific step with an eye on the entire long-range program. It would not lose the forest for the trees. An example will demonstrate the value of such coordination.

Today the Army engineers want to build a new dam at Umatilla Landing, on the Columbia. Up-river communities are in favor of the project. They know it will provide cheap navigation far into the inland empire. But the Fish and Wildlife Service is not so sure of the value of the proposal. Can the Chinook salmon runs survive another dam below the mouth of the Snake? Down-river communities, which rely heavily on the fishing industry, tend to look on the dam with similar skepticism.

This is a vital issue. It involves the livelihood of thousands of people; millions of dollars in annual income are at stake. Yet there is no central point for coordinating the diametrically opposite views. The Army engineers are responsible to the Secretary of War, the Fish and Wildlife Service to the Interior Department. But a Columbia Valley Authority would have on its staff both the engineers proposing the Umatilla Dam and the biologists who fear that the dam will damage the salmon runs. The CVA would study all the evidence on both sides and then reach a decision on the basis of cold, hard facts.

Intelligent men and women in every section of America realize that the model set by TVA is a pattern for such regions as the Columbia Valley to follow. Are we to throw away so opportune a chance? The New York Times, most notable newspaper in the United States, had this to say recently: "The Tennessee Valley experiment has now reached a stage where it has to be regarded as a pattern for other river-valley developments."

The propaganda now being circulated against CVA misleadingly claims that a Columbia Valley Authority would be Federal tyranny. Quite the contrary is true. Today all the Federal agencies associated with the Columbia River must report to Washington for final decisions. No verdict of importance can be reached here in the Northwest. The Army engineers get their orders from the Secretary of War, the Bonneville Administration from the Secretary of the Interior—and many Government departments allow their men in the field scant latitude and independence. All basic policy matters must be referred to Washington, D. C.

*Argument advanced for centrally located headquarters*

CVA, on the other hand, would have its headquarters right in the Northwest—at Portland or Seattle or Wenatchee or wherever else the headquarters was located. The three directors of CVA could make a decision at Portland or Wenatchee without having to report to any Cabinet officer. They would be responsible to the President and Congress. No Cabinet officer would stand between CVA and these elected representatives of the people.

The New York Times stated in January: "TVA has shown that Government itself can be decentralized. Its own roots are in the Tennessee Valley, not in Washington. The result is that after 11 years TVA has almost no enemies in its own territory. It is supported by chambers of commerce, by labor organizations, by farmers' organizations, and by men of widely differing political views.

One can only wish that our own chambers of commerce in the Pacific Northwest would show the far-sighted vision demonstrated by these chambers of commerce in the Tennessee Valley. Our region has existed economically for years by exploiting its basic resource—timber. Now the reserves of trees are running out. The United States Forest Service has been warning us that the annual rate of cutting far exceeds the rate of growth. Sawmills are closing down because no more logs are available.

Our principal economic hope rests in sound development of the resources of the Columbia River. Those resources are power for new industries' development, water for irrigation of arid land, deepened channels for low-cost navigation. This development must be cooperative, not competitive. We do not want one Government agency struggling for water for transportation and a rival agency insisting that the water is more essential for irrigation.

*Tyranny charges discredited by CVA proponent*

The sole chance of coordinating these activities lies in a Columbia Valley Authority.

Do not forget that many of the same individuals now opposing a CVA were also active in the fight to prevent full construction of Bonneville and Grand Coulee Dams. (I do not include Judge Robert Sawyer in this group.) Some of these people did not want the lift locks built at Bonneville. Others among them scoffed at the idea of raising Coulee to full height and installing both powerhouses. One power company spokesman called Grand Coulee "this monstrous fraud on the American people."

Should we listen to these men when now they tell us that a Columbia Valley Authority is unwise and tyrannical? Are they interested in the future of the Pacific Northwest, or do they merely want to protect the private utility companies?

Charges of "tyranny," "centralized control," and "superbureaucracy" are being hurled against CVA. These charges have a familiar sound. All of us have been hearing the same noise ever since 1933. Have not identical accusations been made against every policy adopted by President Roosevelt? Were charges of "tyranny" not leveled against the Wagner act, against old-age pensions, against the Farm Security Administration, against the Securities and Exchange Commission, against all the Roosevelt laws which are now an accepted part of our national life?

*Government given high praise for achievements*

The attacks against the CVA speak alarmingly of "Federal domination." One would think that our Federal Government was an enemy lurking outside the gates. The Federal Government sent Lewis and Clark to explore the Oregon country. It built the greatest army and navy the world has ever seen, and it developed the atomic bomb. If the people of Oregon are not afraid to let the Federal Government come into their homes and send a son or brother off to the Arctic Circle or to the Tropics to fight for his country, then they are willing to let the Federal Government have charge of improving and managing the resources of the Columbia River.

In 1935 the late Ben T. Osborne told the foes of a Columbia Valley Authority: "This Federal Government of ours has furnished the very lifeblood that has kept the Nation alive in the last 2 or 3 years, and I still have a lot of confidence in it." This, of course, is the attitude of the men and women of the Northwest. They know that the Federal Government built Bonneville and Grand Coulee. They know that a regional authority is the one sure way to continue development of the Columbia Valley. Furthermore, they know that those who talk of "State's rights" never talk of "State's responsibilities." Have the so-called State's rights advocates ever generated a kilowatt of power or installed a single pumping station on the Columbia River?

*Roosevelt visioned projects throughout Nation*

We in the Northwest have before us the outstanding example of the TVA. Will we discard that example in favor of regional anarchy, or will we coordinate the development of the great natural resources of the Columbia Valley in a single integrated agency? The Wall Street Journal, organ of business, can set us right on the subject. "The proposal for TVA's in every important watershed of the country," said the Journal, "has a certain logical foundation. If TVA has been a good thing for the Tennessee River region, it should be a good thing for every other river region."

The future is in our own hands. We can succumb to the propaganda now being circulated against CVA. We can let the money which would finance CVA be spent in some other region. We can let our people stand in bread lines or sell apples. We also can demonstrate vision and insist upon the passage of the Mitchell-Jackson bill for a Columbia Valley Authority.

The late President Franklin D. Roosevelt, four times chosen by the voters of Oregon as the leader of our Nation, knew the right answer. When he established the TVA, President Roosevelt said: "If we are successful here, we can march on, step by step, in a like development of other great natural territory units within our borders."

And shortly before his death the President announced that the time had come to march on in other valleys by the creation of authorities similar to the TVA.

Mr. Roosevelt's message constitutes marching orders for a Columbia Valley Authority. The people of the Pacific Northwest will fall in step to this progressive cadence.

NO *

(By Robert W. Sawyer)

("There is before you a major step in the basic reorganization of the Government of the United States as we have known it for the last 150 years," Secretary of the Interior Harold L. Ickes testified on April 18, 1945, before a subcommittee of the Committee on Commerce of the U. S. Senate on the Missouri Valley Authority bill, S. 555.)

In May 1933 President Roosevelt signed the bill for the creation of the Tennessee Valley Authority. The TVA, then, has been in existence and operating for just over 12½ years. It is now claimed that the undertaking has been wholly successful in all of its varied operations and proposals are pending for the creation of other valley authorities. There is a bill in the National House (H. R. 1824) that would divide the Nation into nine authority regions. Senator MURRAY, of Montana, has introduced a bill for an authority in the Missouri Valley (S. 555). There are bills for an Ohio and a Savannah Authority, while a Columbia Valley Authority is proposed in Representative HORAN'S H. R. 2923 and in Senator MITCHELL'S S. 460.

It is the Mitchell bill to which attention has been drawn in the Northwest. It is that bill that is under discussion here.

What form shall the discussion take?

Shall I attempt simply to analyze the Mitchell bill and show point by point what would happen in the Columbia region were the bill to become law?

*Mr. Sawyer places authority under microscope*

Shall I undertake to compare the Tennessee Valley with the Columbia region (please note those words "valley" and "region") and discuss the bill on the basis of that comparison? Shall I examine the TVA's claims of success to discover if the project actually has been successful and therefore has become an ideal pattern to be copied in the rest of the United States?

Well, perhaps a little of each and to begin with, since it is presented as the reason and the justification for the authority proposals, a short look at the "success" of the TVA.

Few, if any, activities of a Federal agency have enjoyed such vast and well-arranged publicity as has the TVA. It is an accepted fact, I believe, that Ivy Lee publicized John D. Rockefeller, Sr., into favorable acceptance by the American people. Using its own highly competent writing staff, TVA has done the job for itself. Depression born, its spending made work for thousands. The only vocal toes it stepped on, if I may mix the figure, were those of the private utilities and they, by reason of past mistakes of their own and cunning misrepresentation of their enemies, were in the dog house, where their cries were muffled.

All that the TVA produced was either given away or sold below cost. At a time when spending public funds, even at the expense of more debt and continued unbalanced Federal Budget, was popular, there were few to protest. Moreover, TVA pointed toward socialism (I quote from the Socialist Norman Thomas) and while the growing American left winged that way, that, to it, was success.

What about the "success" of the TVA? And first let me touch on one of the Authority's "successes" that it definitely does not publicize. I refer to its practice of doing its work by force account. There have been times when the TVA has had as many as 40,000 employees on its pay roll.

Now, the sound and recognized practice followed by other Government construction agencies—the Corps of Engineers, the Bureau of Reclamation, the Federal Works Agency—is to prepare plans and specifications, to call for bids, and to award contracts to the lowest bidder. Thereby there are assured the safeguards provided by the preliminary preparation of complete blueprint and specification with a definite statement of the standards to be maintained throughout the job. Sound costs are determined. These are the protections ordinarily relied on in the expenditure of public funds. One test of success in such expenditure is whether the taxpayer gets his money's worth—a dollar's value for a dollar—a tax dollar—spent. Who can assert that the TVA has been successful in this regard?

*Publisher says flood menace still in existence*

TVA gives no publicity to the costs of the work it has done with a force-account pay roll. It does claim success in controlling floods in the valley of the Tennessee River. "Flood damage is at an end in the valley," say the proponents of TVA, "and it has been ended by the operations of the Authority." Certainly, if valley residents have been freed from the menace of floods, if they can go about their affairs no longer apprehensive of what may happen when the waters come down in spate, there is success. But what are the facts? The facts are, indeed, that the lowlanders are no longer subject to flood because they have been moved out—more than 56,000 of them, over 13,400 families—and nearly 600,000 acres of once-fertile land—the most productive in the valley—has been permanently flooded. An annual agricultural production of a value in excess of $13,000,000 has been ended by the immersion of these rich bottom lands. There has been a heavy tax loss. This does not represent success in a flood-control project. This is destruction, definite and final, brought about in the development of a series of power dams. There are, it is true, short sections of the river just below the dams where the possibility of flood damage has been reduced, but it is also true that Chattanooga is still in jeopardy from floods and the Army engineers have been called on to devise protection for that city under the very nose of the TVA.

TVA's largest investment is in facilities for the production of power—dams and generating plants. It is in the production of low-cost power that the greatest success is claimed for the TVA. The power program, it is said, is operating in the black.

Now, as I conceive it, the sale of electric power at low rates is not, in itself, proof or even evidence of success—unless, of course, it is a sale by a private utility that must succeed or go bankrupt—a contingency never faced by a publicly operated utility. Before

the Government sales agency can lay an honest claim to success it must show that its sales price equals or is not less than its cost. That, of course, is what TVA does claim. TVA asserts that its electric power operations show a return on the investment after all costs are met. Very well, what are the TVA costs? Do the users of TVA kilowatts pay in their rates the same charges that are paid by the users of privately produced kilowatts?

The answer is "No, they do not pay the same charges." TVA's rates do not reflect the operating expenses that are paid by a private utility. TVA operates in the black because of that fact. If TVA, like a private utility, paid interest on the money invested in its power plant; if TVA, like a private utility, paid local taxes on an ad valorem basis on its power plant; if TVA, like a private utility, paid income taxes; if TVA and the distributors of its product, like a private utility, paid Federal energy, social security, capital stock, franchise, unemployment insurance, gasoline, car use, motor vehicle, and other taxes—to say nothing of postage—it would not operate in the black unless it charged higher taxes. TVA's low rates reflect not success but subsidy. The taxpayers of the United States are paying a goodly share of the electric power costs in the Tennessee Valley.

*Taxes listed as glaring weakness of set-up*

That TVA and its defenders all realize the weakness of the Authority position in this matter of taxes is apparent from the way in which they all hasten to assert that TVA does pay taxes. Thus, William L. Chenery, publisher of Collier's, in an article laudatory of TVA, says that though it is an agency of the Government which may not be taxed, nevertheless, it "by a simple provision of the TVA Act, makes contribution in lieu of State and local taxes." On the subject of Federal tax avoidance Mr. Chenery is silent. He does say that "the total tax equivalents and taxes paid by the 83 municipal and 45 cooperative electric systems (that distribute TVA power) amounted to about 5.4 percent of their gross revenue for the fiscal year ending June 30, 1944." Mr. Chenery, like so many others who write in defense of the TVA, thinks it important that the agency does pay something in the nature of taxes. None of these writers, however, though they compare TVA electric rates with those charged by the private utilities, goes so far as to mention the taxes that TVA does not and the private utilities do pay. The private utilities of the United States, in the period in which TVA paid 5.4 percent of its gross in lieu of taxes, paid out about 24 percent of their gross to tax collectors, local, State, and Federal.

The TVA record, I repeat, is one of subsidy rather than success.

This author, Chenery, by the way, writes of "the dams and powerhouses at the head (emphasis supplied) of these new (TVA) lakes"—an odd place, certainly, for dams and powerhouses. Chenery, I imagine, rather than TVA, is confused on this point, but his confusion raises doubts as to his powers of observation and understanding and places a question mark against all he has written.

*Illiteracy declared high in TVA region*

Space is lacking for a discussion of TVA's other lesser activities in which success is claimed. They are varied in an extreme degree. There are few, if any, for which the beneficiaries pay the full cost. In virtually every case, as in the power rates, there is a subsidy contributed by the Federal taxpayer. If, however, TVA has been successful in some of its undertakings that have improved the lot of the residents of the Tennessee Valley, is it indelicate to point to what it was that TVA had to work on—a population with an illiteracy running (1930 census; for some reason the figures were not taken in 1940) from a percentage of 6.6 in Kentucky, through 9.4 in Georgia, 10 in North Carolina, 12.6 in Alabama, to 13.1 in Mississippi—all TVA States).

In contrast note that the percentage of illiteracy in the Columbia region States was Oregon and Washington, 1; Idaho 1.1; and Montana 1.7. There were nearly five times more illiterates in Tennessee alone in 1930 than in these four Northwest States together.

On this whole subject of TVA success, let me quote from an authoritative witness, Representative ANDREW J. MAY, chairman of the Military Affairs Committee of the House of Representatives and a Kentuckian living next door to the TVA. Before the committee hearing the Missouri Valley bill last spring Representative MAY said:

*May branded Authority indisputable flop*

"My purpose in appearing here is to present a factual challenge to the assumption that the Tennessee Valley Authority is, has, or ever will be, a success.

"I shall prove that the TVA is a failure—

"1. As a flood-control project the TVA has created a flood menace.

"2. As a soil-conservation project it has done more harm than it can ever possibly undo.

"3. In both of these activities TVA is wastefully duplicating the functions of two highly efficient existing Federal agencies—the Corps of Engineers of the United States Army and the Soil Conservation Service of the Department of Agriculture.

"4. The TVA in reality is an antisocial institution, its evil effects far outweighing any social progress and reform it professes to have promoted.

"5. As a power project it is doomed to be a red-ink bureau and forever run a chronic deficit in spite of alleged paper profits.

"6. A clever combination of wishful thinking and fanciful conjecture has been crystallized in the public mind by adroit and tireless TVA propagandists to the effect that by TVA's power resources the Nation was 'bailed out' of its aluminum crisis for the war effort.

"7. Subsidized industrial power rates have proven a disappointment to those supporters of the TVA who believe that so-called cheap power would induce new industry into the TVA area.

"8. And, last but far from least, the authority type of Federal agency is a misbegotten offspring of collectivist thinking by which our constitutional system is by-passed and set aside by an authority with economic and political power beyond, above, and different from that of the individual States and the Federal departments as envisaged in the Constitution.

"The path of authoritarism leads to totalitarianism."

It is unnecessary to go into the details of Representative MAY's proof. The interested reader can find it in the record of the Commerce Committee hearing on the Missouri Valley Authority bill, S. 555. I urge that he do so.

And for a moment "reverting back," as a friend of mine used to say, let us look again at this claim of low rates on the part of the TVA. Let us look through the medium of these two quoted paragraphs:

"Domestic consumers under TVA rates used an average of 1,707 kilowatt-hours during the year (1944) and paid 1.88 cents per kilowatt-hour." (From article on TVA in Brittanica Book of the Year, 1945, p. 690.)

"The average price received per kilowatt-hour for residential service by the company in 1944 dropped from 2.03 cents to the low figure of 1.86 cents. * * * Average annual use of electricity by residential customers (was) 1,978 kilowatts." (From annual report of Pacific Power & Light Co. for 1944, p. 6.)

In connection with those figures please note that TVA's lieu tax payments were only about 5.4 percent of its gross revenue while P. P. & L. Co.'s were 16.5 percent.

*George Flagg furnished figures on private power*

For the same year, according to figures supplied by George H. Flagg, Oregon Public Utilities Commissioner, Portland General Electric received 1.75 cents per kilowatt-hour from its residential consumers and they used an average of 2,360 kilowatt-hours. PGE paid out in taxes 19.88 percent of its operating revenues.

Now the Mitchell bill for the Columbia Valley Authority has not yet come to a hearing. Those who study the measure, however, have the benefit of the testimony given in April before the Senate subcommittee on the very similar Missouri bill. It was there that Representative MAY made the statement just quoted. It was there that Secretary Ickes made this dramatic statement relating to all the Authority measures:

"This committee should not underestimate the magnitude of the task that is before it. You have before you not merely a question of establishing a single authority, for eventually the Congress will not do less for one watershed than for another. Therefore, there is before you a major step in the basic reorganization of the Government of the United States as we have known it for the last 150 years."

Mr. Ickes followed that statement with an expression of his own willingness to see this reorganization take place—if he could name the terms. What his terms are is unimportant here for his bill is not before us. It is important that he damned the Missouri Valley bill—important because his condemnation applies equally to the Columbia bill. Paraphrasing what he said of the Missouri bill, S. 460, is in essence an endeavor to create in the Columbia region an authority in the direct image of the TVA, although the problems of the Columbia region, the physical aspects of the Columbia region, the resources of the Columbia region, the manner of life in the Columbia region, are quite different from those of the Tennessee Valley. For example, the Columbia region, embracing almost one-tenth of the Nation, is composed entirely of States which entered the Union as public-land States, and some of which still contain large areas of public lands. The whole pattern of land management over wide sections of the region is in large measure a product of the public-land laws enacted by the Congress. On the other hand, the much smaller Tennessee Valley is not, in the main, a public-land area, and to much of it the public-land laws never did apply. The Tennessee Valley is also an area of ample rainfall. What is done to the waters of the Columbia region must be entirely different from what is done to the waters in the Tennessee Valley. The economic development of the two areas is in no way parallel. Rural electrification in the Columbia region, for example, is way ahead of the stage of development that existed in the Tennessee Valley when its Authority was born.

"A solution for one regional problem," Mr. Ickes said, "is not necessarily the exact solution for all others. A remedy for corns is not likely to be an effective cure for thinning hair. The fact that considerable success has been attained through avowedly experimental endeavors in the primarily southern valley does not mean that we should create agencies in the direct image of the Tennessee Valley Authority all over the West."

So much then for the success of the TVA as justifying other valley authorities and so much for the Ickes testimony. What about S. 460, the Mitchell bill itself?

*Measure prepared by stranger to West, Sawyer says*

S. 460 is a document of 75 pages. It was prepared, not of course by Senator MITCHELL, but by somebody who knew little and cared less for the democracy of the West, the State and Federal economic and legal relationship under which the West has developed and for

the West's background and long established culture and independence. Under section 1 (a) of the bill the region to be included in the authority control would include—not alone the valley of the Columbia and its tributaries as the authority name would indicate—but "that portion of the Columbia River, its tributaries, and watershed which is within the boundaries of the United States, those portions of the States of Oregon and Washington which are not within such watershed, and such additional adjoining territory as may be related to or materially affected by the development consequent to this act."

That clause from the Mitchell bill takes in a lot of territory. In Oregon besides the Columbia, the river valleys that would come under authority control would include the Klamath, the Chetco, the Pistol, the Rogue, the Smith, the Umpqua, the Alsea, the Siuslaw, the Yaquina, the Salmon, the Siletz, and the Wilson, to say nothing of numerous other rivers and creeks emptying into the Pacific Ocean. The Washington list is not as long, but the streams are no less important. The name "Columbia" attached to all these is deceptive. One of wider scope would be more honest. Where California's Smith River belongs in the authority set-up of S. 460 would take a law court to decide.

Let us look beyond this matter of a name, however, and note that in this fact that the valleys of many streams quite independent of the main river are covered by the proposed authority lies one of the initial differences between the proposed CVA and the TVA. Moreover, each stream, including the Columbia, covered by S. 460, finds its outlet in the ocean. Directly or through bay or harbor everyone flows into the Pacific, thereby creating problems unknown and undreamed of in the fresh water Tennessee Valley.

What success has TVA demonstrated in handling these problems of river and ocean? What values have been demonstrated by the TVA that justify substituting authority control in the place of that now held by Oregon's 18 port commissions? Plans for that control are in the bill. Section 20 provides that no "dock, pier, wharf, bridge, float (or) trestle * * * shall be constructed or operated or maintained over, across, along, in, or into any stream or watercourse in the Columbia Valley region, except in accordance with such regulations * * * as may be prescribed by the corporation." Moreover, it is provided that "The requirements of this section shall be in addition to the requirements of all other applicable laws of the United States or of any State. * * *" The authority corporation would overlay the presently sufficient laws with new ones of its own.

I wonder how the State highway commission and the county courts would like the idea of having to go to authority headquarters, possibly in another State, to have their bridge plans approved?

*Control draws question from publisher*

I wonder how this prospect of authority control, in addition to such regulation as is now effective, is regarded by the many Oregonians, private citizens and business interests, who now own and use recreation and business property such as is covered by that section 20?

Is such authority regulation desired by such men as R. C. Elliott, of Gold Beach; Robert Owens, of Wedderburn; R. T. Meservey, of Illahe; E. J. Oakland and Charles Bulkley, of Waldport; Harry Olsen, of Newport; R. D. Shirmer, of Yaquina; George Calkins, of Otis; E. M. Gerttula, of Kernville; Lee Griner, of Florence; Earl Hill, of Cushman; Earl Madsen, of Lakeside; Earl Hallmark, of Charleston and by such interests as Columbia River Packers, of Astoria, and Al Pierce Co., of Coos Bay, to name but a few of the many along the Oregon coast who would be affected by this proposed legislation?

How would property owners on Lake Oswego like it?

Authority over the region would be exercised by a board of three named by the President for 9-year terms but of no required qualifications other than citizenship and a belief in the wisdom of the act. There are provisions for an advisory board—with no effective power—and a National River Basin Development Board headed by the Secretary of the Interior. Once the plans of the authority are approved he, rather than the Congress, will have control of the organization, thus effecting the "basic reorganization of the Government of the United States" as described by Mr. Ickes.

It would be tedious to outline the provisions of S. 460 clause by clause. Here, however, is a summary of the chief powers given in the bill to the authority board as presented last March in an Oregonian editorial wisely titled, "Columbia Superstate":

"To sell surplus water as well as electric energy; to make and sell fertilizers; to establish, maintain, and operate game farms, wildlife preserves and fish-culture stations; to exercise the same powers as the Interior Secretary, Director of Grazing, Agriculture Secretary, and Chief Forester over grazing and forest practices; to establish, maintain, and operate recreational facilities; to develop mining techniques and sell minerals found or purchased; to construct and operate flood-control projects, including but not limited to dams, locks, reservoirs, fishways, canals, roads, docks, sewage disposal, water purification, sanitation works, powerhouses, steam-generating plants, transmission lines, rural electric lines; to assist and give credit to groups constructing water and electric distribution facilities; to experiment with and demonstrate farming processes, and sell plants, grasses, trees."

Go over that list again, gentle reader, and consider how many of your affairs, if the bill becomes law, would come under the control of the authority board. Do you like the prospect?

You will note that that list begins with the phrase "to sell surplus water." The words connote sovereignty over the waters of the Columbia region and that is a proposition that is resisted by every State-rights man, every stockman, every irrigator west of the Mississippi River. Here, indeed, there develops another of the more important points of difference between the Tennessee and the Columbia region—a basic, a fundamental difference—a difference so extreme that even the Oregon State Grange, otherwise favoring the bill, has demanded of Senator MITCHELL that his measure be changed to give it recognition.

The point is simply that one type of water law prevails in the Tennessee Valley; another and a different one in the Columbia. The TVA has had no experience with this western water law. No claims of success in this regard can be made for the TVA. The Western States, on the other hand, have developed a body of water law that S. 460 would sweep away, substituting for the present intimate, local control the regulation of some new and distant authority. Not one of TVA's glib propagandists, writing to urge a MVA, or a CVA, after the pattern of that eastern experiment, has noted this difference in the water laws of the two regions or proposed protection for the western economy that is based on that different legal status of water.

Look again through that list of powers as set out in that Oregonian editorial. Observe that S. 460 not only puts western water rights in jeopardy. Under the bill those distinctly western activities associated with the public domain such as grazing and mining would cease to be regulated as at present and would fall into authority hands. The Forest Service now operating as a national bureau but fully decentralized would be broken up. So would the Fish and Wildlife Service. So would the Bureau of Mines. So would the Bureau of Reclamation. So would the Corps of Engineers, so far as its river and harbor and flood-control functions are concerned.

Why?

I have said that the Columbia region, as defined in S. 460, takes in a lot of territory. The figure is 279,000 square miles or nearly three and one-half times TVA's 81,000. That TVA size, according to Chairman David Lilienthal, is about right. "Substantial additions to the territorial scope of the TVA," he has written, "would impair its effectiveness and threaten the onset of the evils of remoteness. * * *" "Regions," he says, "should not be so large that they are not, in a management sense, of workable size. The full potentialities of the unified approach to resources and the opportunity to be close to the people and their problems may be fatally impaired if the region itself is a vast one."

How large is "vast" Mr. Lilienthal does not say, but on the strength of his word as to the size of the TVA region it is obvious that the Columbia region of S. 460 is too large.

How much too large the Columbia region is would soon be discovered by its citizens when they had to do business with its office "centrally located in the territory." Do Oregonians want to go to Spokane, say, or to Walla Walla or Boise to attend to such of their business as the authority would control? Do they want to have all legal causes developing in the operation of the law tried in a Federal court as provided in the bill and that in the district where the authority has its principal office? All their procedures with respect to water are now carried out within the boundaries of the State through the State engineer, the local water master, or the circuit court at the county seat. S. 460 would force a change to some new procedure more difficult, slower, and more costly and completely deprive the State courts of the jurisdiction they now enjoy.

The financial provisions of S. 460 are interesting. Today local government agencies share in certain of the income derived from federally owned land. With the enactment of S. 460, that income would be gone. The authority, under the bill, may withhold every penny of income for use in its operations, thus by-passing Congress and ending popular control of the public purse.

*Senator Taylor describes authorities as being socialistic*

Norman Thomas, Socialist leader, has said that the TVA "exemplifies what Socialists might do, and the technique they would use in the process." Senator GLEN TAYLOR, of Idaho, said on the floor of the Senate in September: "I will admit that these projects (the valley authorities) are socialistic. There is no use beating around the bush about it. They are socialistic, but they will provide abundant cheap power."

Well, the Northwest already had abundant cheap power at less than TVA rates, and more is coming as river development under Army engineer and Reclamation Bureau plans now formulating are executed. No CVA is necessary to bring about Senator TAYLOR's power goal. Would the Northwest accept this socialistic, totalitarian program outlined in the Mitchell bill even to secure more and cheaper power? Would it willingly see its State rights in water ended, its neighborly relations with present Federal agencies broken, its financial stake in the national forests and the grazing lands taken away, its whole economy placed in the hands of three overlords?

President Truman has given his approval to the valley authority idea. His latest word on the subject was spoken at Gilbertsville, Ky., on October 10, but in the course of the address he made on that day he said, "Let me emphasize that in the last analysis such development is a matter for the people themselves to decide." S. 460 gives the people no

opportunity to decide. It is a bill with the cunning purpose of ending the people's opportunity and right to decide.

In that same address the President said of TVA, "It is an important experiment in democracy." Well, the Constitution of the United States still remains the expression of an important experiment in democracy, and remember that in the valley authority bills "you have before you a major step in the basic reorganization of the Government of the United States as we have known it for the last 150 years."

Has the experiment of the organization set up under the Constitution failed?

If we are to have valley authorities, let everything be put out on the board at once. Let the bill makers get together and draw for the people in one measure the authority control for every river basin in the country. Then let them follow the Truman advice and make it a matter for the people themselves to decide.

## Control of Atomic Energy

EXTENSION OF REMARKS
OF

### HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, on November 23, 1945, I submitted the following resolution, which was referred to the Committee on Foreign Affairs:

Whereas in the atomic bomb there has been unleashed the most destructive force known to mankind, in the production of which the United States can have no enduring monopoly and against which there is no specific military defense; and

Whereas any effort to pursue a foreign policy based on our temporary superiority in atomic weapons will force other nations as well as ourselves into an atomic armaments race, thereby creating a world of fear and hatred in which nations great and small face sudden destruction; and

Whereas the fundamental aim of United States foreign policy is to have world peace, an aim which cannot be achieved by the United States alone or by any other country by itself, but only through maintaining and strengthening the cooperation and unity of the peace-loving peoples and nations of the world; and

Whereas the United Nations Organization cannot function successfully unless the United States, Great Britain, and the Soviet Union cooperate on all major issues: Therefore be it

*Resolved*, That prior to any attempt to set up specific international machinery for dealing with atomic energy the President of the United States immediately invite to a conference the Governments of Great Britain and the Soviet Union, in order to discuss the common danger created by atomic weapons, and to plan for the joint approach by these three nations to the other members of the United Nations Organization for establishing a world-wide system of international cooperation and control of atomic energy to the end of preventing a competitive armaments race and safeguarding peace.

On the evening of November 23 I was invited to appear on the American Broadcasting Co.'s program, Headline Edition, to speak on this resolution. I should like to include here a transcript of that program:

Mr. LEITCH. Mrs. DOUGLAS, will you tell us just why you believe we should invite Russia into a three-power conference on the atomic bomb?

Mrs. DOUGLAS. The fact is relations between the Big Three—Great Britain, the United States, and the Soviet Union—have become strained. Read your newspapers, columnists, the radio commentators. Listen to Members of the House and of the Senate. Listen to the people on the street.

No nation alone can keep peace. It was agreed at San Francisco that it was only through the Security Council that we could keep the peace. The Big Three are the core of the Security Council. They are the core because they are the only nations capable today of making war or making peace on a world scale.

If we want peace, we must see to it that neither the atomic bomb of today nor bacteriological warfare of tomorrow or any other problem which may come up weakens the unity and the understanding and the cooperation between the Big Three.

Mr. LEITCH. Going a step further, Mrs. DOUGLAS, would you make available to Russia the secret of the atomic bomb?

Mrs. DOUGLAS. There isn't any secret. There are atoms in every country and there are scientists in every country. The basic discoveries which led up to the making of the bomb were made in foreign laboratories. The information—the discoveries themselves were widely published before 1940. Moreover, some of the most important men who helped us make the bomb were foreigners and some have gone back home. Do you think they are not talking back home?

The only advantage we have at this moment is the mechanical know-how of putting the bomb together and a slight manufacturing advantage. However, it is agreed by the scientists that any industrial nation can catch up with this know-how in from 2 to 5 years.

When Russia knows how to make the bombs, what then? Do we go to war? The boys who are just getting out of the Army and the Navy—will they like that? Do we start all over again in 5 years? What do we do then? We will still have to fight it out or work it out together. We must work out safeguards to see that atomic energy is used for constructive and not destructive purposes internationally. We must work them out together. We must begin with the Big Three.

Mr. LEITCH. Well, Mrs. DOUGLAS, in view of what many people in this country believe is a decided reluctance on the part of Russia to establish any real basis of cooperation with Britain and us, why should we make the first move?

Mrs. DOUGLAS. Because we don't want to go to war. And as for Russia's willingness to cooperate, the facts don't bear out the fear that Russia is not as desirous for peace as we are. We are the most powerful nation in the world. We dropped the bomb. If we don't work out a control for this bomb now—if we wait the 2 or 5 or 10 years when Russia has it—it only means that between now and then that much more fear and hate and distrust have been allowed to develop. It will only mean that achieving cooperation will be that much more difficult. We still have to fight it out or live it out together.

This resolution was based upon the scientists' recommendation which had been endorsed by 132 scientists. I am happy to say that my resolution now has the endorsement of the Federation of Atomic Scientists. The telegram which I received is as follows:

Your resolution introduced on November 23 has the approval of Federation of Atomic Scientists representing more than 1,000 scientists at major sites of the atomic bomb projects.

The Federation of Atomic Scientists was formed by representatives of the association of scientists who have worked on the atomic bomb. Six associations make up the federation. They were organized to achieve the following aims:

First. To study the implications to our Nation and to the world of the liberation of nuclear energy.

Second. To create a realization of the dangers that this Nation and all civilization will face if the tremendous destructive potential of nuclear energy is misused.

Third. To help establish an atmosphere of world security in which the beneficial possibilities of nuclear energy may be developed.

Fourth. To study the relation between national legislation and the establishment of an adequate international policy.

And to give all possible publicity to the following convictions:

First. That a continuing monopoly of the atomic bomb by the United States is impossible.

Second. That there can be no specific defenses against the destructive effects of the atomic bomb.

Third. That in view of the existence of the atomic bomb, no nation can, in this new age, feel secure until the problem of the control of atomic power is solved on a world level.

The council of the federation will consist of those delegates of the four component associations who are in Washington at any given time. It is intended that one such member from each association should be present in Washington at all times and two will frequently be present. There will be a central office which will act primarily as headquarters for the association. It will also serve as an information and speakers' bureau and will handle contacts with other groups which hold views similar to those of the federation.

The Washington office shall be made available to all scientists' organizations in America which find it necessary to have the same information that the council is to supply to the four associations. Many of these newly formed groups have the same aims and purposes as this federation.

This federation is composed of representatives from the Association of Oak Ridge Scientists at Clinton Laboratories, the Atomic Scientists of Chicago, the Association of Los Alamos Scientists, the Association of Manhattan Project Scientists, New York City Area; the Atomic Production Scientists, Oak Ridge, and the Atomic Engineers, Oak Ridge.

I also heard from such men as Dr. Irving Langmuir, of the General Electric Co., in Schenectady, N. Y., who wired as follows:

Send my enthusiastic endorsement of your resolution.

Dr. Albert Einstein sent this telegram:

Agree whole-heartedly with text of your resolution and am glad to give permission to quote my endorsing it.

Others who sent me their individual endorsements included such men as Dr. Harold Urey, Nobel prize winner, discoverer of heavy water, professor of chemistry, University of Chicago; P. W. Bridgman, famous for work on properties of materials under high pressure; A. P.

Wigner, professor mathematical physics, Princeton; James Franck, Nobel prize winner, professor of physical chemistry, University of Chicago; Glenn T. Seaborg, who recently announced discovery of two new elements; and W. D. Bonner, head of the Department of Chemistry, University of Utah.

Such organizations as the Independent Citizens Committee of the Arts, Sciences, and Professions have endorsed the resolution. Also the newspaper the Oregonian, whose editorial of November 20 I quote:

LET'S TALK IT OUT

HELEN GAHAGAN DOUGLAS, Democratic Congresswoman from California, has introduced into the House a resolution asking that President Truman call an immediate conference of the Governments of the United States, Russia, and Britain, to consider the problems of atomic energy. The conference would be planned as a preliminary to submitting the whole matter to the United Nations, "to the end of establishing a system of international cooperation and control which will prevent a competitive armaments race, safeguard world peace, and make available to all peoples the peacetime benefits of atomic energy."

The resolution should pass.

Not that we think the United States, Britain, and Canada should immediately present the manufacturing secrets of the atomic bomb to Russia on a silver platter, or any other kind of a platter. But Messrs. Truman, Attlee, and King have made it sufficiently clear that they believe in the world-wide use of atomic knowledge if sufficient safeguards can be imposed. And how can it be determined whether Russia is willing to provide these safeguards if we do not get together with Russia and find out?

Chief among the safeguards, as this page repeatedly has argued, must be freedom of information. We must know what is going on in Russia and the Russian people should know what is going on with us. The Governments of the United States, Britain, and Canada appear to subscribe to this view. But the time to pursue the issue is now. We hope that Mrs. DOUGLAS' fair and well-worded resolution forces a showdown.

## Commander Michael A. Musmanno

EXTENSION OF REMARKS
OF
**HON. JAMES G. FULTON**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 5, 1945*

Mr. FULTON. Mr. Speaker, under leave to extend my remarks, I desire to place in the CONGRESSIONAL RECORD the story of the public relations section of the Fifth Army in Italy, written for the Fifth Army News at the time of the assignment to Austria of Commander Michael A. Musmanno of the United States Naval Reserve, naval liaison officer.

Pittsburgh and Allegheny County, Pa., are proud of their fellow citizen and judge of the Common Pleas Court of Allegheny County, and I know his many friends and admirers join me in this tribute to his outstanding war record. We await Commander Musmanno's return from the Navy but in the meantime we offer this sincere tribute:

After 20 months of service with the Fifth Army, Commander Michael A. Musmanno, of Pittsburgh, Pa., leaves this famous fighting organization to serve with the United States forces in Austria.

Commander Musmanno, who in civil life is a common-pleas judge in Allegheny County, Pa., has had an adventurous career in the Navy, most of which, however, has been on land. After several months of deck duty in convoy work on the Atlantic and the Caribbean, he was assigned to the Italian theater, where his experiences included such extremes as running the enchanting Sorrentine Peninsula in the capacity of military governor to flying over enemy lines in observation planes.

At Minturno, while engaged in a mission with Fifth Army troops, he was wounded, but he succeeded in carrying out his mission, for which exploit he was awarded the coveted Bronze Star. December 2, 1943, found him in Bari Harbor with a schooner laden with food for the population of Sorrento. In the daring German air attack which sank 17 large ships, Commander Musmanno lost his craft and was thrown into the sea which was ablaze with burning oil. For his efforts in the venture, though it turned out unsuccessfully, the Italian Government awarded him the Medal of Valor. In the front line with the Eighty-fifth Division at Mount Formichi he was wounded in the knee by an aerial-bomb fragment.

While military governor of the Sorrentine Peninsula he earned the good will of the population who in recognition named one of the main piazzas in his honor. He is keenly remembered here for the work he did in the early days of the occupation in repairing bridges blown by the enemy, reactivating public utilities, bringing in food, establishing economic order and system.

During the Vesuvian eruption he had a narrow escape when a storm of volcanic ashes buried the car in which he was riding.

In Florence he served as assistant to Brig. Gen. E. E. Hume, Chief of Allied Military Government in all territory under the jurisdiction of the Fifth Army.

Commander Musmanno also acted as naval liaison officer with army units in the field. During the Bologna campaign he served for 2 months with an Italian Army division attached to the Fifth Army, participating in various actions, including patrol missions at night.

The nature of Musmanno's duties with the United States forces in Austria has not been disclosed.

## Report on American-Italian Affairs

EXTENSION OF REMARKS
OF
**HON. EMILY TAFT DOUGLAS**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 5, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include the report of the Council for American-Italian Affairs, Inc., dated December 1, 1945, as follows:

Since the people of Italy joined us in the war against the Axis, they have paid a high price for their freedom.

More than 250,000 Italians lost their lives in action against our common enemy. More than a billion dollars worth of goods and services have been rendered to the cause, $650,000,000 of which were procured with Allied military lire, about $350,000,000 requisitioned or furnished without payment.

These contributions to the victory of the United Nations have been duly recognized. The Allied Commission in Italy stated on October 25, 1944. "The Italian Army has been reorganized out of chaos. It has cooperated loyally with us. * * * The Italian Air Force has considerable results to its credit, and its significant contributions to the Allied war effort should never be forgotten. The Italian Navy has given an enormous contribution to the war effort of the Allies since the day of the armistice."

General Clark thanked the Italian partisans for liberating more than 200 cities, including Milan, Turin, Genoa, and Venice, while General Alexander told the British Parliament that the resistance movement of the Italian partisans was the strongest resistance in all Europe.

Under Secretary of State Dean Acheson stated on September 30, 1945, "Italy turned against the oppressor and Italian troops have fought shoulder to shoulder with the Allies to drive the Nazis from Italian soil. At great risk and sacrifice the people and partisans of northern Italy prepared the way for the collapse of Nazi power and the destruction of the Mussolini government."

With these contributions well in mind, high officials of the United States Government have made frequent statements charting the course of our relations with Italy. Acting Secretary of State Joseph C. Grew stated on May 31, 1945:

"Our policy toward Italy has from the beginning been based on the view that Italy should be given every possible opportunity consonant with the Allied military requirements to regain the respect of the world by proving that she is a democratic, cooperative, constructive element in Europe. * * * In the past 20 months the Italian people have given substantial evidence of their love of freedom, attachment to democratic principles, and ability to rise above the shambles of fascism and ruins of war."

United States officials have not hesitated to state that Italy should be aided in its recovery from war devastation. Said Under Secretary of State Acheson recently, "It is in our own interest to grant such aid. This cannot, however, be economic aid on the simple order of charity. It must be such as at a critical time will enable the Italian people to get back on their own feet; it must be essentially creating the opportunity for them to rebuild their devastated agriculture, industry, and commerce."

Despite these statements, aid to Italy is dwindling. There is acute danger that the supply line will be snapped off completely on December 31, 1945. The supplies will be kept moving only if interested Americans demand that they be kept moving.

It would be difficult to exaggerate the plight of the people of Italy as winter deepens. Official United States Government and UNRRA reports all tell of desperate shortages, widespread poverty, increasing unemployment. War destruction, demolition, and looting by the Nazis, and Fascist corruption have combined to inflict enormous damages upon the Italian economy. There are enormous shortages of food, clothing, shoes, shelter, fuel, raw materials. More than 5,000,000 people are homeless; 350,000 are refugees. The average official daily ration is less than 1,000 calories—only 40 percent of the 2,600 required to provide health.

The need for medical supplies is acute. There are about 1,500,000 cases of malaria in Italy. The incidence of tuberculosis is three timess the prewar rate. The death rate of new-born Italian babies is appalling.

The cost of living has skyrocketed. Present unemployment is around 2,000,000, and by midwinter two of every five Italian workers will be jobless.

Destruction of transportation and industrial facilities has reduced recovery to a snail's pace. Ninety-four percent of the power plants in central Italy alone were put out of commission by the Nazis, and only part of them could be repaired. Rolling

stock on the Italian railways is exceedingly scarce. Most transportation must be done by truck, but there is almost no gasoline. The Italian merchant marine, which totaled 3,500,000 tons before the war, has been almost entirely eliminated.

Even in factories not destroyed, production is practically dead for lack of coal and raw materials. Before the war Italian coal imports averaged about 1,000,000 tons a month at present she obtains less than half that amount. A few days ago a newspaper in Turin carried this headline: "Turin's Industrial has only 60 percent of needed coal supplies and 15 percent of needed gasoline."

Most Italian textile factories are intact, but lack of raw cotton and raw wool, besides lack of coal, has prevented any substantial recovery of this vital industry. In normal times it provided work for hundreds of thousands of men and women, and fed a large export trade.

The rayon industry is virtually at a dead stop for lack of cellulose and coal.

Agriculture has suffered gravely, due to prolonged lack of fertilizer, the drafting of manpower, and the worst drought in 20 years. Mines have added greatly to the damage. So has the flooding of reclaimed soil. The large-scale requisitioning and slaughter of livestock and draft animals during the period of military occupation—in part due to desperate efforts to fight off starvation—has caused the disappearance of several million farm animals. The total damage to agriculture since Italy went to war has amounted to billions of dollars, according to UNRRA.

If the Italian economy is to begin to be able to stand on its own feet by the end of 1946, almost 1,000,000 tons of coal and 250,000 tons of wheat are needed every month until the next crop. Requirements include 200,000 tons of raw textiles, particularly cotton and wool, and enormous quantities of fertilizer, a limited amount of farm machinery, seeds, and other supplies, and a substantial number of farm animals. Also, medical supplies for the ill, fats, oils, meats, fish, dairy products, and sugar for the hungry, and copper, steel, and pig iron for idle industry.

There is no possibility that Italy will receive all these things. Estimates of Italy's bare minimum needs in 1946 range from $1,500,000,000 to $1,200,000,000. Take the latter figure based on the requirements estimated by our own Foreign Economic Administration. How might $1,200,000,000 be supplied?

Italy can count on some immigrant remittances of dollar funds in 1946—but total immigrant remittances since the armistice amount to little over $40,000,000. American War Relief for Italy, a private agency that has done a brilliant job, has sent $30,000,000—mostly in the form of powdered milk, old and new clothing and shoes, and medical supplies. Additional relief has gone to Italy in individual packages sent by Italian-Americans to their relatives and friends. Taking into consideration these and other potential sources of aid, suppose that in 1946 Italy obtains the following:

| | |
|---|---|
| In immigrant remittances | $25,000,000 |
| From American War Relief | 25,000,000 |
| In foreign credits from some revival of Italy's now stagnant foreign trade | 100,000,000 |
| In contributions from England and other countries | 100,000,000 |
| In long-term credits | 500,000,000 |
| From UNRRA | 450,000,000 |
| Total | 1,200,000,000 |

The total of $1,200,000,000 would meet Italy's minimum requirement—but all of the above figures are conceived in optimism. Some of them might not materialize.

Obviously, Italy will be condemned to widespread suffering, with dangerous social, economic, and political consequences, if the $450,000,000 UNRRA program is eliminated, curtailed, or even delayed.

There is at least a possibility that the program will be eliminated. There is considerable probability that it will be curtailed. It is already being delayed.

A measure in the United States Congress providing that this country contribute its agreed quota to UNRRA in 1946 by subscribing 1 percent of its estimated national income—a total of $1,350,000,000, with $450,000,000 planned for Italy—is facing serious opposition. The measure is making tragically slow progress through Congress. That it has not been already enacted jeopardizes the supply line to Italy and other nations.

Already, action on the appropriation for $550,000,000 to complete the United States subscription to UNRRA for 1945 (only a negligible part of which goes to Italy) has been delayed in Congress with tragic results. UNRRA has been forced to cancel $50,000,000 orders for medicine, clothing, and other critical supplies, and $50,000,000 worth of United States Army supplies already in Europe are being withheld from starving people until the United States keeps its promise.

Graves are being dug in Europe now for the people who will die there this winter for lack of supplies.

Gov. Herbert Lehman, Director General of UNRRA, testified before Congress:

"I cannot too strongly emphasize that the program for Italy as well as elsewhere will depend on UNRRA being given adequate funds by its member nations. I saw in Italy some of the most pathetic sights I have ever witnessed. I saw houses that were completely destroyed save for one little corner; the people had moved back into that little corner and were trying to eke out a living. I visited refugee camps which were conducted by the Italian Government, but with supplies furnished by UNRRA and under the observation of UNRRA. I will say that the Italian Government has been cooperating splendidly with UNRRA and has been helping the situation there and has been furnishing a great deal of their own money—local currency, of course, because that is all they have got—for the procurement of relief supplies.

"I went over the economic situation; and I am convinced that in Italy, as in other countries, unless aid is given them, and by aid I mean not only food, which, of course, is the most important thing, but other means of supplementing their economic recovery—fuel, which I place at the very top of the list of needs, and raw materials, by which they can begin some work in the manufacture of things of important use by the people of Italy—unless that is done, they are in for a great deal of suffering during the winter, and I am quite convinced that there would result serious social unrest, if not chaos."

The United States actually possesses surpluses of many of the supplies so badly needed in Europe. On November 18, Secretary of Agriculture Clinton P. Anderson revealed that we have produced a third more food in 1945 than in the average prewar year. He declared, "The United States is one of the relatively few nations that has plenty of food for itself and some to spare for its allies. * * * The United States and its allies made the greatest sacrifice of lives in all history to keep their freedom and to win the opportunity for a lasting peace. America fought, but help to a lot of hungry and homeless can be one of the most powerful forces of the world for clinching that great victory into a lasting peace. That is why we pledged ourselves to help our allies to the limit of our strength."

Congressman JERRY VOORHIS, of California, said recently, "Right now there is in prospect another great glut of eggs; there is the largest citrus fruit crop in history coming along. What are we going to do? Will we see our farmers' prices collapse and what is even worse see people hungry for what we have in superabundance? However peace is to be built, it cannot be done that way. Food for the hungry is, I firmly believe, in accordance with the will of most of the American people in this hour * * *. America, after all, carries the banner of human freedom, constitutional democracy, and the dignity of the individual man or woman. The rest of the world is going to judge those institutions largely by what America does in this crisis."

The House Special Committee on Post War Economic Policy and Planning stated in a recent report, "It has been said, in favor of maintaining our postwar exports at the present level, that the industries supplying most of our present exports are the heavy-goods industries which will suffer most from a reduction in war expenditures. It is the output of these industries which will be most in demand for the reconstruction of devastated areas, and for the industrialization of undeveloped countries. If exports are maintained at the present level, the process of transition from a war economy to a peace economy will therefore be much less difficult; fewer industries will suddenly be deprived of markets, and less painful movements of population will be necessary."

Little of the opposition to UNRRA is open. Opposition takes the form of criticism of the administration of UNRRA. And it takes substance in amendments to the legislation providing for American participation. It is privately admitted that the "free-press amendment" to the UNRRA appropriation, for example, is actually an effort to delay if not to kill the UNRRA appropriation.

Governor Lehman does not hesitate to admit UNRRA errors. "Of course, UNRRA has made mistakes," he told the House Committee on Foreign Affairs. "It tackled a job of a nature and scope never attempted in the world before. It began its task while war was still on and when it had to compete usually with little success with the armed forces for food and other supplies, for shipping with which to send them abroad, and for personnel to handle the relief job."

General Eisenhower told the committee that the ravaged nations are looking to UNRRA for relief and added, "If UNRRA were to fail them, they could not help but feel that not only has the United States failed them, but that the hope of solution of world problems through the United Nations action was an illusory one."

A summation of this critical situation as it affects the relations of the United States with Italy is contained in a statement made to the Council for American-Italian Affairs by E. H. Hunt, Chief of the Italian Division of the Foreign Economic Administration:

"A dangerous situation confronts the Italian supply operation. Since the Sicilian invasion in 1943, the Americans, British, and Canadians have been jointly responsible for civilian supplies to Italy, justifying these supplies in their effect on civilian morale while our armies are in that country. Actual military responsibility for handling civilian supplies was terminated on August 31, and, in the case of the United States, a $100,000,000 appropriation administered by the Italian Division of the Foreign Economic Administration has carried basic civilian supplies to Italy since that date. This money, however, will all be spent by December 31.

"The failure to vote additional funds for UNRRA, which was expected to undertake this responsibility as of January 1, 1945, seems certain to result in an interruption of supplies at the most critical period of the winter. Governor Lehman testified before the House Appropriations Committee that he would not undertake the expanded Italian program without a new authorization. Passage of such an authorization, calling for an additional 1 percent of the national income, or $1,350,000,000, for UNRRA is making slow progress in Congress. At the present rate, it seems impossible to hope that the authorization can be passed by both Houses

of Congress and signed by the President before the 1st of January.

"If such a failure occurs, an alternative method must be found. The obvious thing would be to continue for another 3-month period the present program of civilian supplies through which Italy's basic needs are being met. This would call for an estimated $150,000,000."

A former American foreign correspondent in Italy, Lt. John Atkinson, Army of the United States, returned to this country a few days ago after more than 2 years' service in Italy with Allied Military Government and as United States military aide to Harold MacMillan, British Minister in the Mediterranean and President of the Allied Commission. Shocked by news that the UNRRA appropriation was facing opposition, Lieutenant Atkinson gave this statement to the Council for American-Italian Affairs:

"The worried faces of Italian fathers, the anxious faces of Italian mothers, and the pinched faces of Italian children haunt me now with the memory of American promises that still remain to be filled. The faces look at me out of the remains of thousands of war-ravaged homes and villages and towns and cities, and they all ask the same question: 'Will the American ships with food and clothing keep coming?' 'Yes,' I told them then, and I keep praying that they will.

"America must keep her promise, first for Italian lives, and then for their liberty as well as ours."

## The Senate Verdict on UNO

EXTENSION OF REMARKS
OF
### HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New York Times of December 5, 1945:

THE SENATE VERDICT ON UNO

A week of debate on the United Nations participation bill, which the Senate passed last night 65 to 7 and sent to the House, has been enough to measure the strength of isolationist sentiment in the Senate. At no time have the isolationists been able to muster one-sixth of the Senators in support of any amendment which would seriously weaken the Charter.

One of Senator TAFT's amendments, innocuous in its terms, slightly exceeded this fraction—it received 18 votes. Senator DONNELL's proposal that agreements to furnish armed contingents to UNO be ratified as a treaty by a two-thirds vote of the Senate was killed by 57 nays to 14 yeas. The principle of majority rule was thus sustained in a chamber in which 33 Members, voting under the treaty-making clause, can defeat the will of the other 63. Senate confirmation of all appointees from this country to the new world organization which was accepted by the majority yesterday, is on a different footing. Certainly it does not weaken our participation. By requiring careful scrutiny of all appointees it will even give added dignity to our representatives.

This debate has stirred up nothing like the interest shown in the League debates of 1919 and 1920. Last Friday the Senate recessed in the middle of it because of an almost empty chamber. The reason for this apathy may be that the conclusion was foregone. The isolationists wished to have their say, and had it. They did not judge it wise to filibuster. Their strategy last July was to vote for the Charter and try to weaken it when the participation bill came up. Their strategy now may be to register their objections and hope for a change of popular sentiment which will let them do some undermining later on. They may count on a growing American disillusionment with our allies, and indeed with practically everything going on in the world beyond our own frontiers.

If full American participation in the United Nations was part of a beautiful dream of heaven on earth they might succeed. There is nothing like the aftermath of battle to make heaven on earth seem impracticable. But Utopia is not in many persons' minds at the moment. UNO is the best instrument in sight, indeed the only one, for preventing hell on earth. The alternative to UNO is not something better, but something far worse. Nor can we give lip service to UNO and put our real faith in armaments. Without UNO the armaments in question will be as fatal to those who use them as those at whom they are aimed.

UNO finds acceptance in the Senate, will find acceptance in the House, and has the support of the American people because we all know the world cannot afford another war. There is really no longer an issue of isolationism versus internationalism. As Americans we want to run our own affairs as independently as we can. We do not love our neighbors better than ourselves. But we have found out by hard experience that for our own sake, if for no nobler reason, we have got to make some sacrifice in order to get on with our neighbors. UNO as it stands is evidence that our neighbors have made the same discovery. This inescapable reasoning seems to be behind the debate in Washington—behind its slow pace and also behind its sure end.

## Atomic Energy

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following letter and resolutions expressing the opinions of some distinguished scientists at the University of Minnesota on the control of atomic energy:

NOVEMBER 9, 1945.

Hon. WALTER JUDD,
*House Office Building,*
*Washington, D. C.*

DEAR CONGRESSMAN JUDD: At a recent meeting of some of the scientists of the University of Minnesota, sponsored by the Minnesota Association of Scientific Workers, a set of resolutions concerning the control of atomic energy was adopted. I am enclosing a copy of these resolutions along with a list of the scientists who signed these resolutions with the hope that these resolutions along with others of similar nature, will aid in the formulation of a sound policy in this vitally important question.

Very truly yours,
Prof. WILLEM J. LUYTEN,
*President, Minnesota Association Scientific Workers, University of Minnesota, Minneapolis, Minn.*

Inasmuch as no steps have as yet been taken for the international control of atomic energy, and whereas the proper solution of how best to use our knowledge of such atomic energy is the most urgent question of the time; be it

*Resolved by the undersigned scientists of the University of Minnesota meeting under the auspices of the Minnesota Chapter of the American Association of Scientific Workers,* That:

1. The responsibility for control of atomic bombs and of the application of the processes involved to weapons of warfare be vested in the Security Council of the United Nations Organization.

2. We urge the President of the United States to appoint immediately a commission composed of the most competent scientists and statesmen and to urge the formation of similar commissions by the governments of other great powers, in order that these commissions may meet and develop the specific pattern for such control.

Whereas the propcsed May-Johnson bill includes serious restrictions on the dissemination of purely scientific information, and whereas such restrictions will inevitably lead to a deterioration in the quality and quantity of fundamental scientific research and whereas such legislation will pit our country against the world in an armament race, and, furthermore, would place our country at a disadvantage in such race: Therefore, be it

*Resolved,* That we, the undersigned scientists of the University of Minnesota, meeting under the auspices of the Minnesota Chapter of the American Association of Scientific Workers, hereby condemn such legislation; be it further

*Resolved,* That copies of the above resolutions be forwarded to the President of the United States, to the House and Senate Military Affairs Committees, and to our Senators and Representatives in Congress.

MINNEAPOLIS, MINN., *November 1, 1945.*

In view of the increasing importance to human welfare of scientific advances, and because in the past the Government of the United States has ignored scientific opinion—as in the case of the San Francisco Conference of the United Nations Organization, where no representative of science was among the hundreds of advisers: Therefore be it

*Resolved by the undersigned scientists of the University of Minnesota, meeting under the auspices of the Minnesota Chapter of the Association of Scientific Workers,* That we urge Congress and the President of the United States to make it a definite policy to appoint to every advisory and executive committee dealing with problems involving the use or control of scientific advances at least one scientist competent in the field in question, in order to make certain that the salient facts shall be brought to the fore in the deliberations and recommendations of such committees.

## Bring Our Servicemen Home

EXTENSION OF REMARKS
OF

### HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. CLASON. Mr. Speaker, I have received numerous letters from men in the service and from their relatives at home, complaining of the inefficient manner in which servicemen from all branches of the Army, Navy, and Marine Corps are being handled for early transportation to the United States.

The Thirty-first Division was apparently made ready for sailing 3 weeks ago. Yet it is not possible for the parents to secure any definite date when it will leave the Philippines. Letters from servicemen state five times sailing dates have been announced. Each time they have been disappointed.

Letters tell of more than 20,000 high-point men waiting at Guam to return to the United States. Many of the soldiers are anxious to return on cargo ships were used to transport them to the very places where they are now located, even though they would be most uncomfortable and perhaps unfit for such use. Yet the piling up of high-point men overseas due to the failure to furnish some type of transportation is most unfair to these young men who ought to be home with their families for Christmas. They cannot understand why they are forgotten and, through delay, will not be able to compete for employment with men who never went overseas, until most of the available jobs have been filled.

I am sure that other Congressmen are receiving letters like the following which came from the Philippines, as well as articles like the two which I have received with recent letters. The War Department makes known the outfits to be landed at eastern ports from Europe, yet no description of units landing at west coast ports appears in the newspapers. I believe that the War Department and the Navy Department should give more and better publicity to what they are doing to bring the service men and women home, with full explanations of changes in plans and reasons for apparent delays or changes in announced plans:

THE PHILIPPINES, *November 9, 1945.*

Mr. CHARLES R. CLASON,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. CLASON: This is another note to tell you that I found out the answer to my first letter. If you'll remember my question, "Where are the ships?"

Enclosed is a copy of an item that was not printed. You will understand why it wasn't printed when you read the last paragraph of the item. However, I'd like to add something that did not appear in the article.

1. The editor, R. W. Young, was broken from a technician, fifth grade, to a private.

2. He is now doing garbage and latrine details.

3. The commanding officer of this depot spoke to the casuals in this depot one night (the 6th of November), saying that the article was true and that he had known about it for 3 weeks.

4. He also said that he was doing the best he could to get the men home (this was greeted with jeers and boos).

I'm also enclosing three letters which appeared in the Daily Pacifican. The first, "Splash," is comic relief, but it helps. The second letter, "Advice," is something that Senators and Congressmen, I hope, realize. But the best clipping of all is the one, 400 Ships in Graveyards, NMU Claims.

My father wrote that he hoped I'd be home before Christmas or soon after. I guess there are thousands and thousands of American parents who are hoping the same thing. But the Jap parents won't have to worry, because their sons will be home for the holidays through the courtesy of the United States of America.

Sincerely yours.

---

HOMEWARD SAILINGS LAG BEHIND GOAL—DEPOTS CROWDED, SHIPPING LIMITED, NO BIG EXODUS BEFORE NOVEMBER

(By Sgt. Dale Kramer)

MANILA.—Analysis of facts and figures gathered from various Army agencies concerned with moving troops home for discharge reveals that:

1. Shipments from Manila for the month of October will total about half the 77,700 called for in the troop movement schedule announced by General MacArthur's headquarters earlier in the month, judging from the number already departed and shipping facilities in sight.

2. No large-scale movement of returnees can be expected before November 1. At best, about one-fourth of the returnees in the four depots which send personnel through the Manila Port—Twenty-first, Twenty-second, Twenty-ninth, and Women's Distribution Center—can hope to embark before November 1.

3. The crowded depots are accepting only a few returnees, mostly over 90-point men, or men over 38 years old.

4. Returnees will leave the depots on a first-in-first-out basis, rather than according to their number of points.

5. As things look now not much help can be expected from cargo ships. Some returning Liberty ships carry a dozen or so returnees in vacant crew or guard spaces, and Transportation Corps is experimenting with a couple of Liberties. The War Department gives a flat no on hasty "camping out" conversion.

6. No help from units of the fleet can be expected immediately. The Navy has been allotted troop transports for its own personnel.

The above conclusions are drawn from information gained in interviews with officials of AFWESPAC Transportation Corps, Replacement Command, and Far Eastern Air Force's 22d Replacement Depot.

Military personnel sent home through the Manila Port between October 1 and October 20 totaled 31,647, according to AFWESPAC Transportation Corps. The Thirty-eighth Division, shipped as a unit, comprised a little more than half of that figure.

If the schedule for shipping as of October 22 holds, places for 7,114 persons will be available during the balance of October, with the only big ship due at the very end of the month. Waiting to fill these places, besides regular returnees, are hospital patients and a few civilians who have been employed by the Army.

Thus if 7,000 Army returnees are given places the total shipped for October will be around 37,000 compared with the 77,700 goal set in the early October schedule.

Check of the four distribution depots which send personnel through the Manila port shows that between 30,000 and 35,000 men and women now occupy them. Exact figure on October 17 was 33,937, divided as follows:

Twenty-first Depot: 1,043 officers, 1,919 enlisted men.

Twenty-second Depot: 1,048 officers, 7,698 enlisted men.

Twenty-ninth Depot: 2,040 officers, 10,969 enlisted men.

Women's Distribution Center: 768 officers (including nurses) and 512 enlisted women.

Not much change has occurred since then.

Length of time returnees have remained in the depots varies from a day or two for new arrivals to a month and a half for Wacs. Average wait before shipment has been running about 3 weeks. Prospects are that the waiting period will increase rather than lessen.

At the two big AFWESPAC ground-personnel depots—the Twenty-first and Twenty-ninth—men with less than 90 points who appear are being sent back to their units until such time as space becomes available. Men with over 90 points or who are over 38 years old are received if they have permission to enter from the replacement command. The Air Corps Twenty-second Depot, overcrowded, is not accepting men.

The depots are shipping personnel on a basis of first in, first out, rather than on a basis of high pointers first and on down. This will mean that many men with points in the seventies will leave before many with over 90. What happened was that some units made low-point men available before high-point men—quick-acting units moved low-point men to the depots faster than others got high-point men in.

Procedure for mustering men out of AFWESPAC depots is this:

Shipment orders are cut in groups (usually of 25) to separation centers in the States, according to the arrival of men in the depots. Replacement command says that in the case of small separation centers it may require a couple or 3 days to fill a list of 25, but that the spread is never more than 3 days. Thus, two men who come into a depot at the same time should leave within not more than 3 days of each other.

Cargo-ship commanders who have berths available are required to report them to troop movement. In this way small lots of a dozen or two returnees have been moved. But the War Department does not permit transportation of troops on unconverted cargo ships.

A few days ago the War Department did, however, grant permission to AFWESPAC Transportation Corps to convert Liberty ships under certain circumstances. But the change-over regulations are strict, with most of the usual transport conditions required—fresh vegetables, hot meals, bunks, refrigeration, and so on. Transportation Corps is now experimenting with a couple of Liberties. Once converted, a Liberty will be able to carry between 500 and 750 men.

---

OFFER TO BRING GI'S HOME EVADED—EASTHAMPTON MAN SCORES OFFICIALS FOR ATTITUDE

EASTHAMPTON, November 29.—Burned up at the attitude of some officials who evaded the issue when he offered to bring between 600 and 700 servicemen home from the Philippines, Capt. Benjamin Kuta, Easthamp-

ton's only merchant-marine skipper, said his ship, the *Floyd Gibbons*, made the 12,000-mile trip back to the States with an empty bottom.

GOT ONLY EXCUSES

Captain Kuta, the youngest man in the country ever to command a Liberty ship, said there were other ships coming home the same way. He said he could have converted his Liberty ship to accommodate the men in about 2 days, but was given the flimsy excuse that this would tie his ship up. He scoffed at this excuse and said that at the time he made his original offer his ship had already been laid up for 3 days by officials.

He brushed aside other excuses concerning the health of the men and said that this was not given any thought when the men were shipped overseas. He said that many men he talked with would have taken any means of transportation to get home and would not have minded what little hardship they would have encountered on his boat.

The merchant mariner was in his early twenties when he got his first command, and has been in the merchant service for several years. He traveled many difficult runs during the war and has been to ports in all parts of the world.

When he brought his ship into Texas last week, Kuta was returning from a 15-months' voyage in the Pacific. The skipper also lashed out at returning empty ships which should be permitted to carry some of the critical cargo shortages to this country when denied the right to bring home servicemen. He anticipated a strike of ship crews in early December, if conditions are not rectified. Kuta lives on Johnson Avenue and was educated in the local schools and attended the merchant-marine schools.

## We Must Aid Unfortunate War Victims in Europe

EXTENSION OF REMARKS
OF

### HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. PITTENGER. Mr. Speaker, the House of Representatives has already appropriated over $1,300,000,000 for the United Nations Relief and Rehabilitation Administration. This organization was created by Congress for the purpose of giving aid to the unfortunate people in war-torn countries who were suffering and would suffer from lack of food, clothing, medicine, and other necessities of life. That was UNRRA. We were assured with typical cockeyed New Deal assuredness that nothing else would do, but we just had to have it. It was just going to do the job. This attitude on the part of those in authority in this Government of ours was, of course, typical of everything they have done for years and years. When anything worth while is to be accomplished, instead of using one of the numerous bureaus, boards, and commissions which are already in existence and which are being fed by the taxpayers of America—I said America, and not Europe or Asia—right away one of the glamour boys wants to create a new commission so there can be new jobs—and I think most of them are political—and more red tape, and more money spent. However, Congress yielded to the plea that we must do something for the unfortunate, and we have appropriated over $1,300,000,000 for relief purposes to be administered by UNRRA. Today the House is considering an authorization for an additional $1,000,000,000 for UNRRA. The set-up, like all of these "brain trust" set-ups, is a difficult one to oppose. They tell us that there is suffering in Europe, and we all know that, and I do not believe that there is a Member of the House of Representatives who does not want to help and who does not want his Government to demonstrate its humanitarian ideals.

The second part of the brain-trust philosophy is that UNRRA is indispensable and UNRRA must have the money. Then the third step in this brain-trust logic is that if you vote against UNRRA, then you vote to let people in war-torn Europe starve and die. Of course, these so-called logical steps are false as is usually the case with all brain-trust arguments which disregard sound business principles and believe in chasing butterflies and the rainbow.

Certainly relief ought to be extended, but by the same token the American people ought to be told the truth about UNRRA. From every discussion that I have heard by disinterested people, this outfit known as UNRRA has either done a bad job, or no job at all. It just simply is not accomplishing results. It is political. Its methods are filled with inefficiency and mistakes. It is building up a vast organization with large numbers of people on its pay rolls and to make the story short, people who are in need of food and clothing and other things, are just simply not getting them under the present UNRRA methods. Money that Congress is appropriating for the relief purposes is being wasted. There have been too many charges on the floor of this House to that effect, to permit them to go unnoticed. I am satisfied that they are true. Likewise, I am satisfied that our UNRRA set up in different countries of Europe is a political set-up, favoring one faction or the other in connection with internal troubles of those countries. This is certainly a disgrace.

I suggest, Mr. Speaker, that we have some well established agency to do this relief work. We have the American Red Cross. That is an outstanding group of people. I say this in spite of the mud-throwing contest on the part of some ill advised people just a few days ago. Then we have the Salvation Army. Then we have national church organizations in the United States. We have relief groups formed in the United States for the purposes of soliciting funds for relief work in this country or that country, as the case may be. With typical brain-trust, New Deal purpose of wasting money, by creating a new spending agency, administration officials entirely ignore established agencies which I have just enumerated. If we appropriate money for relief, let us place it in the hands of the Red Cross or these other agencies, with proper safeguards. With a good conscience we can vote funds for that sort of procedure. We will know that the under-fed, under-nourished, and sick people in war-torn countries across the seas are going to get as much care as our Government through its agencies can administer. Let us quit following his UNRRA political set-up and measure the problem and the procedure in terms of business-like and common sense methods.

The time has long since passed when the United States should be considered as the one country to which all other countries could and should turn when they want a hand-out. UNRRA is concerned with their political problems. Its shame is all the greater when it plays politics with human misery.

While I am talking about hand-outs to other countries, I call attention to the item in the newspapers 2 or 3 days ago to the effect that France had just negotiated a $500,000,000 loan. You all know that Great Britain wants $5,000,000,000, Russia $6,000,000,000, and well informed people have said that if we are going to follow that pattern of loaning money, then every other country in Europe has the same right. Incidentally, if we are to finance the rest of the world, we have the same duty toward the small countries of Europe that we have towards those I have just mentioned. I deny, however, Mr. Speaker, that there is any duty whatever. We all know that these so-called loans will never be paid. I challenge the good faith of Great Britain and Russia and France.

I challenge the good judgment of the leaders in our Government who look with favor on this program of hand-outs. It is going to bring to us the ill will of every country in the world, and if continued will wreck this Government of ours.

In this connection let it be noted that the War Department and Navy Department must get the idea out of their systems that all they have to do is come to Congress, get all the money they need, and spend it any way they please. They had better get on a peacetime basis where they can show why they need money and how they are going to spend it, otherwise they will wreck a lot of worth-while defense programs on the foundation of their own foolishness and stupidity. The taxpayers are not going to let them operate on any glorified wartime basis. It takes too much money. These same remarks apply to some other Government agencies. As time goes on, the gigantic task of trying to balance the budget and secure an adequate revenue with which to operate the Government and pay its expenses is going to become more and more important. The only other alternative is to turn the printing presses loose, cheapen the dollar, and invite inflation and the payment of our debts and obligations in worthless Government money. There you have it—the same thing as an outright repudiation of Government obligations. We do not want this.

It is all the more important, Mr. Speaker, that we husband our resources and cut out now trying to be papa, grandpa, mama, and grandma, for such defenseless (?) and well-meaning (?) cousins as Great Britain and Russia. Do not let the sunshine of diplomatic boiled shirts dazzle you. These people

do not want us to be their legal guardians.

I say this is important because there are many worth-while domestic programs which are going to require the expenditure of money. Then we ought to look after our own people a little. We have entirely neglected to develop our domestic programs and we have sadly neglected programs that would be for the betterment of our own people. I get letters every day, for example, from some aged couple who are barely able to buy the necessary food on which to live with the small old-age assistance payments that are made to them by their various relief boards. The cobwebs must be in somebody's brains when they think it a fine thing to loan $500,000,000 to France and then say to John Doe, 68 years of age, and to his wife, Mary Doe, 70 years of age, this Government of yours cannot afford to pay you folks more than thirty or forty dollars a month on which to live by way of old-age assistance. I say such an attitude on the part of leaders of our Government is pure nonsense. This is just one problem—the problem of our old people who have heard during recent years a lot of bombastic platitudes about humanitarianism and about helping the unfortunate. Then these same old folks of ours, who are truly the forgotten man, have had no kindly considerations from their own Government along any proper lines whatever.

## Address of Most Rev. Richard J. Cushing, D. D.

EXTENSION OF REMARKS
OF
### HON. JAMES M. CURLEY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. CURLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address at memorial mass for the One Hundred and First Infantry veterans at the Cathedral of the Holy Cross by Most Rev. Richard J. Cushing D. D.:

This memorial service is a prayerful tribute to your departed comrades. The great poet, Tennyson, beautifully expressed the necessity of this tribute when he wrote:

"Pray for my soul. More things are wrought by prayer
Than this world dreams of. Wherefore, let thy voice
Rise like a mountain for me, night and day
For what are men, better than sheep or goats
That nourish a blind life within the brain
If knowing God, they lift not hands of prayer
Both for themselves and those who call them friends?"

Those for whom you pray this morning worked and played, fought and prayed with you. They helped in their own small or great way to build this country. They believed in America, fought for America, and died for America.

The men who settled America were men of strong religious conviction. Their philosophy of life stemmed from that conviction. What was the result? The original object of American education was to make good Christians. The first result of American legislation was to put God in the center of society. The first foundations of American citizenship were laid in the plain, unvarnished statement that the rights of man come from God. As a consequence of this historic background we have a creed rooted in our Constitution, our history, and our spirit which if followed will preserve our land from evil and help to save the world. Every school boy should be taught that creed. In simple, understandable language it can be summarily expressed as follows:

As an American I believe in God and in the laws of God. I believe in the personal dignity of man, and that this dignity, rooted in his rights, belongs to man's nature as a rational being. The use of these rights may be prevented by force; but they cannot be taken away by the state or any other power. In other words, I believe that men are endowed with natural rights which are born with them and remain as long as life remains. Chief among these natural rights are the rights to life, to personal integrity, to economic opportunity, to property, to a reasonable minimum of education, to a family wage, to the expression of thought and opinion, to the practice of religious worship, and to membership in associations.

Your conferees, my dear men of the One-Hundred and First Infantry, fought and died for this doctrine.

As an American I also believe in the sanctity of the home and that the rock upon which society rests is the family.

I believe that the home is the first and the most important school; that the mother has been constituted by God the first and the most effective teacher. I believe that the home is the house of God—another church; that every family is a sanctuary, a gateway to Heaven, a place of reverence and holiness. A dining room table with children's eager, happy faces around it ceases to be a mere dining room and becomes an altar. The home is a temple of life in which is tabernacled the human soul, made to the image and likeness of God. It is the first of those secular structures which democratic life must quicken with religion if it is to survive. Those whom you remember today also died for this doctrine, for the sanctity of the home.

I believe in the right of private property, that capital has not only rights, but also obligations; that labor has the right to organize in order to secure its economic rights, and also the obligation of working in harmony with capital, of producing honestly, of accepting reasonable agreements. I believe that the ideal way of attaining these end is by union-management cooperation in which the brains of both capital and labor unite in mutual support for the welfare of all.

As an American I also believe that law is a sacred obligation, that all human law flows from the law of God. The prewar world built a way of life based on economic plans, political plans, and social plans—on anything and everything but God's law. That prewar world is dead. It was killed by its own hand and it took your beloved comrades with it. Its hand was held up by rationalism, false liberalism, individualism, unbridled capitalism, unrestrained competition, power politics. All its postulates, all its growth and development led only to the right of might. It has now fallen under an avalanche of blood. We have a sacred obligation to cast aside these Godless systems, to put God back in society, to rebuild the world on the basis of God's law. If we do not fulfill that obligation we fail those whom we honor today.

I believe that democracy is based on the great law of love: it is spiritual, social, and moral, not merely political, and as a result I am my brother's keeper and I am obligated to help him in his need. These are the basic doctrines of the creed that flows from the Constitution and the ideals of America. And for these and all other doctrines emanating from the Bill of Rights and the Constitution, your confreres died.

In accordance with that credo—how can we tolerate the slow starvation of millions of people in Europe and elsewhere—how can we trample on the rights of minorities that had no part in hurling the world into the abyss of war—how can we fail to give sympathy, courage, and hope to whole nations who once befriended us and are now being absorbed by foreign powers—how can we passively observe the moral decay of our own country and expect to supply inspiration for the restoration and resurrection of devastated nations?

My dear men, your presence here this morning is a reminder to your fellowmen and to your departed that you cling to the creed that has made America great. Your way for peace and prosperity is the way of spirituality, the way back to God. Every problem is fundamentaly a religious problem and the solution can always be found in our creed and in the application of the basic truths of that creed to the shop, the office, the market place, and the political arena. In the light of this fact we have need of more men of God and fewer diplomats, more fiery prophets and fewer politicians; more of the Sermon on the Mount and less of the jargon from the modern towers of Babel; more of the spiritual values of our founding fathers and less of the time-serving standards of new-found friends, more family prayers and less family jazz; more teamwork on the part of labor and management and less rivalry and greed.

The whole world looks to us for leadership, for life-giving help. We have survived the greatest tragedy of history. Our American way of life, as bequeathed to us by our forebears, possesses all the basic elements of justice and charity so urgently needed throughout the world. Let us be true to our creed, true to America, true to God and one another and we will not fail. Split the unity that is America, smash the spirit that is America, blast the religious background of America, and we will have more destruction than ever came from the split atom in the atomic bomb.

This is the message our beloved dead have bequeathed to us. We might have broken faith with those who died in World War I, but we must not break faith with the heroes of the late war who sleep on the floor of the deep and beneath the soil of five continents. It is for us to maintain what we have, to hold fast to the creed of America and to the fundamental law of our Constitution, love of God and love of neighbor. Every nation in the world looks to us today for leadership, for hope, for salvation. If we will only be ourselves and refuse to wander from our American creed we can fulfill the greatest mission of charity, mercy, and leadership that Almighty God ever permitted to be entrusted to any nation.

## General Bradley's Vital Tasks

EXTENSION OF REMARKS
OF
### HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch for December 3, 1945:

GENERAL BRADLEY'S VITAL TASK

With soldiers and sailors coming home at the rate of nearly 1,000,000 every month, the United States faces a national problem of social readjustment unprecedented in history. "Handle this problem improperly," President Conant of Harvard has said, "and we may well sow the seeds of civil war within a decade."

This warning has been soberly stressed by Gen. Omar Bradley, head of the Veterans' Administration, whose far-reaching program for former servicemen is running head-on against serious opposition from certain elements of Congress and from veterans' organizations themselves. The complexities of the undertaking, outlined by Donald Grant in yesterday's Post-Dispatch, are of an order requiring bold thinking and resolute effort both in and out of Government. The evidence, so far, is that we have not yet begun to do the job.

General Bradley's program calls for a strong, independent, decentralized Veterans' Administration, an organization built and operated for one thing, to give efficient service. He wants a medical corps with the best doctors he can get; he wants hospitals where they will do the most good; he wants administrators of courage and energy, unhampered by traditional procedures; he wants community organizations that will offer the veteran more than a runaround.

Against him are alined many and powerful forces of tradition, political privilege, vested interest and public apathy. There are Members of Congress who are thinking more of getting hospitals in their home districts than they are of caring for disabled men. There are leaders of veterans' organizations, most of them soldiers in earlier wars, who are thinking in terms of their own influence, not of the job to be done.

In the Veterans' Administration itself, there are men who have a vested interest in old and inefficient procedures; there are political job-holders comfortable in sinecures and resistant to change. In many communities—St. Louis among them—there is wide unawareness, resulting in apathy, of the critical urgency of the problem.

So far, it is very clear, the country has not yet understood that General Bradley is saying quite simply that on the wise solution of the veteran problem may depend the very future of freedom in America. Let 15,000,000 men come to feel that they have in any measure failed to establish themselves equitably in the life of the country, and there will be a pressure group such as history has not seen.

## The Divine Destiny

EXTENSION OF REMARKS

OF

### HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and sermon:

WATERVILLE METHODIST CHURCH,
*Waterville, Ohio, November 29, 1945.*

The Honorable HOMER A. RAMEY,
*House Office Building,*
*Washington, D. C.*

DEAR JUDGE RAMEY: I recall with much pleasure your recent visit to Waterville.

As we drove by our church and you saw the sermon title based on immortality, you asked for a copy of the manuscript. It is here enclosed.

Strange as it may seem, I have no special requests for legislation that I have not previously made known. Is that not a relief to you?

With kindest personal regards for your interest, I am,

Sincerely yours,

LOUIS R. WOLTER.

THE DIVINE DESTINY

Life on earth is not a punishment or an existence to be endured in anticipation of that which is above hardship. The divine destiny begins now. Life begins with life. With Peter we ought cry out in joy, "It is good to be here."

To treat life here and now as good in the faith that the best is yet to be is to know immortality. By immortality is meant that which is good and above destruction, and which in the sight of God is eternal. Immortality is not proved; it is lived.

IMMORTALITY OF LIFE

The divine destiny begins with life and begins now. "Life doesn't begin at 40," for it is now in existence.

First of all, there is the immortality of work. No doubt every mother has looked up from the drudgery of a dishpan only to see an inevitable basket of work waiting for laundry and ironing. She has a right to ask, "What is immortal about my work?" In answer we can say there is a good deal of immortality in the work of making a home. If you want to indulge in a moment of pleasant pastime look back at your own days at home when with loving care and fidelity your mother stands at her task of caring for you. When the soldier or sailor comes home, he wants to return to that kind of immortal love and care.

Let no one think the life of a farmer is easy. It is filled with hardship, disappointment, and delay. But the farmer may well discover his work to be immortal. Each day in cooperation with God in nature he seeks to return that which man has taken away. No wonder he looks upon his farm as a landmark. His work has become immortal in building that which endures.

Teachers get tired of grading papers and making assignments. Any routine becomes drudgery. Perhaps students have some opinions about the regularity of examinations and continuous work to do. Both teacher and pupil must have a perspective. The teachers of the men who built the Toledo high-level bridge must sense the immortality of their instruction. The teachers of the statesmen at the San Francisco Conference must sense the immortality of lessons in history and law. The teacher of the doctor is aware of the immortality of work as he sees his life save lives through yet another life.

All of us are scientists in our own fashion. Those who enrich life through discoveries are rewarded for their patient searchings. Madame Curie worked unceasingly in her effort to discover radium. Her work is immortal as we see the lives spared from death because of her discovery.

In the first phase of the economic depression, progress was made in a plan for a work's relief program as opposed to the direct dole. The work's program was criticized for its cost and inefficiency. Much of the criticism was no doubt deserved. What many of us did not then realize was that the program in itself was not at fault. Local administrators thought work, any kind of work, would do. But men do not carry bricks from one side of the road to the other or purposely retard their labors without seeing the futility of their time and energy. The program broke at its weakest link. There was simply no inspiration to the immortality of work. There was no vision, no hope, only the manual inefficient planning of making men move, how, it did not matter. When local administrators set up a goal, men worked, for they had a vision of temples yet undone.

From immortality of work we progress to immortality of thought. Jesus said, "As a man thinketh, so he is." And Jesus was a living example of this truth. His life in word and deed was an audible and visible demonstration of the Sermon on the Mount.

Beside the Bible, we have other great literature recording the immortal thoughts of men. William Wordsworth wrote an Ode—Intimations of Immortality, in which he declares "Heaven lies about us in our infancy." Tennyson's words from In Memoriam are beautiful:

"I hold it truth, with him who sings to one
clear harp in divers tones,
That men may rise on stepping stones of
their dead selves to higher things."

Or, discover the thought of Oliver Wendell Holmes in The Chambered Nautilus as he writes "Build thee more stately mansions, oh, my soul."

A long-time favorite is the Quaker poet Whittier who in Snowbound immortalized:

"Alas for him who never sees
The stars shine through his cypress trees!
Who, hopeless, lays his dead away,
Now locks to see the breaking day
Across the mournful marbles play!
Who hath not learned, in hours of faith
The truth to flesh and sense unknown,
That life is ever lord of death,
And love can never lose its own!"

Immortality begins with life. I have said work and thought are immortal. I now add a third, the immortality of friends. Of the great Biblical friendships, Ruth and Naomi, and Jonathan and David are supreme. These immortal friendships live through the ages.

A chaplain gave his version of Christ's record "He laid down His life for His friend." This story was found in the regiment paper of a western camp. "It was mid-March in the El Guitar sector. They had taken over a position of another battalion and had endured for 2 days the steady artillery barrage from the enemy. At last it was decided to withdraw to the next ridge. The order was given and the withdrawal began. The movement betrayed their positions. As they moved, artillery fire increased in intensity. One company farther out had a most difficult time. The men who could, ran out over the ridge as fast as possible. The aid men helped the wounded. At long last the company commander and his aid men were behind the ridge. They looked out and saw that all men were safely evacuated when they heard a cry. One man still lay in his slit trench. The company commander didn't think it possible to save him. The aid man refused to go away while there was still one in need. Without thought for his safety, he dashed through the withering barrage to the side of the wounded man. He began to administer first aid. The chaplain says that as they looked over the ridge to where the aid man and the wounded soldier were, they saw the cloud of dust that called two men into the Kingdom Triumphant."

Friendships are immortal. The devine destiny begins now in our work, in thoughts, and in friends. May I add now the immortality of possessions? True it is that there are a host of things you can't take with you. If you were to make a list of immortal possessions what would you include? My list is very short. Somehow the possessions which I believe are immortal are memories.

Some of these are memories of more material things. But I am referring now to something of the mind. The memories of our lives are not of suffering or hardship though these may have been present. Who of you do recall in pleasant memory the jaunt through the woods with dad; watching mother prepare the Thanksgiving dinner; listening to the crunch of frosty snow as you made your way to worship; the sound of church bells on a spring Sunday morning; the men who served as ushers at church; the time

you ran home to tell mother about the bird with an injured wing; when you had your first date; the first home; standing by the little crib as you watched your very own asleep; when you saw yourself start down the road to school that first day your youngster made his way alone.

The divine destiny is now. Life begins with life for work, thoughts, friends, and memories are immortal.

IMMORTALITY OF THE SOUL

As life flowers forth in all of its beauty, we recognize that good as this life may be, the best is yet to come. Thus comes to reality the immortality of the soul. This is a natural outgrowth or development of our belief in the immortality of life. All these things that have been listed: work, thought, friends, and possessions, lead us to an even greater heritage, the immortality of the soul.

May we rise above the proof concepts of the physical science? In any field we consult experts. If you want to know about the incandescent light, ask Edison. If you want to know about literature ask Wordsworth. If it is music ask Bach. You would not ask Bach about the light bulb or Edison about literature. Therefore do not seek a man out of his field to learn about immortality. Consult an expert. Ask Christ about immortality of the soul. Anyone less will leave you cold. Ask the Master; he knows.

First of all the record tells us immortality of the soul is to be at one with Christ in God. "If we walk in the light as He is in the light, we shall have fellowship one with another." For us this is the assurance of security of loved ones.

Secondly, the immortality of the soul means the fellowship of love. Jesus looked with compassion upon His companion of the cross and to the pleading entreaty of his eyes He said, "Today thou shalt be with Me in Paradise." There are many of us who sense our own imperfections. We long for a fellowship of love.

Then too, some there are who in loneliness recall with Whittier that "love can never lose its own." And they seek a renewal in spirit of those "gone long since and lost awhile." This is the fellowship of love as Jesus promises the reunion of kindred spirits "come ye blessed of My Father and receive the Kingdom of Heaven."

The divine destiny begins now. "He that believeth hath eternal life. * * * And this is life eternal that they should know Thee, the only true God."

## Letter From an Officer of Our Air Forces Written From Germany

EXTENSION OF REMARKS
OF
### HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 5, 1945*

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

This past month and the first 6 days of this month have been our worst on the Continent, as far as accidents are concerned. This has been due to a combination of unfortunate circumstances, the first being bad weather; the second, an almost total lack of good flying control personnel; the third, an almost total lack of experienced maintenance personnel. This is a result of the criminal way in which the people back home have been tearing the guts out of a beautifully working Air Force. One of my leave ships went down with a loss of 25 officers and men. Four escaped with their lives—how, I don't know. This was but one accident in many, finally resulting in all leave planes being canceled, as well as all redeployment by air.

Don't know whether I told you or not, but about a month ago I was elected president of the mess association (officers' club) on this post, which has a membership of about 500. One of the first controversial questions that came up was whether or not German nationals (male or female) would be permitted to attend our functions as guests. When the question was first discussed about 60 percent of the officers favored it and 40 percent opposed. I got our board of governors to vote against Germans entering into our functions, unanimously, then posted signs excluding them. The war then started over again. After about a week of feuding the commanding officer ordered me to hold a general meeting of all officers to vote on the question. From there on I did the slickest piece of political railroading ever seen by the Air Force. I personally shamed the membership into a standing unanimous vote excluding them. Five officers of high rank refused to vote either way, and I further embarrassed them by stating the vote had been carried unanimously with the exception of five officers who didn't see fit to vote either way. As you can guess, no officer wanted to go on record as a German-lover.

Today I found where one of our headquarters sections had employed a German secretary. This set the fire off again. I'm afraid I'm going to be in hot water from now on, for this seems to be just the beginning. One big laugh—we now have Germans guarding our billets and armed, while we aren't supposed to carry arms.

## J. Lyle Kinmonth

EXTENSION OF REMARKS
OF
### HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 5, 1945*

Mr. AUCHINCLOSS. Recently the people of the Third Congressional District of New Jersey lost one of their outstanding citizens in the death of J. Lyle Kinmonth.

Many years ago Mr. Kinmonth purchased a run-down newspaper and went to work to make it a model of sound and progressive newspaper procedure. He felt with all his being that operating a newspaper was a public trust and that true and accurate reporting would reap its reward in securing the approval and respect of the citizens. He was convinced also that a fearless, honest, and frank editorial policy was good business and good citizenship. He practiced both of these principles of honest thinking in his personal life and insisted on them in the operation of his paper. As a result the Asbury Park Press is what it is today—respected by all, including its competitors.

The following editorial from the Freehold Transcript is evidence of this feeling and it expresses eloquently the sentiment of the community at the passing of Mr. Kinmonth:

J. LYLE KINMONTH

Few men leave behind them a memorial, product of their own toil and heartache, as great as J. Lyle Kinmonth created for himself in the Asbury Park Press. But were the Press a monument to Mr. Kinmonth's zeal only, nothing more than a testimonal to his tirelessness, it would be but a momentary tribute to the man whose life was so long identified with it.

No one, particularly the publisher of a newspaper, can build for himself an enterprise, vibrant and successful, without imparting to it some of is own characteristics. In Mr. Kinmonth's case there was more than courage. There was a controlling conviction that independence in presentation of the news was the surest road to publication of an honest newspaper.

The external story is known to us all. The Press prospered. But it was the owner's own decision that paved the way for that success and, though the unthinking may measure it in columns of advertising, the thoughtful will recall that it was Mr. Kinmonth's insistence that his paper's policy be forever divorced from influence by the advertiser or office-holder, that prepared the way for widespread acceptance of the Press in shore homes. That battleground was Mr. Kinmonth's own mind and the problem was resolved early in his career.

The Kinmonth career, embracing faith in our future, is inspirational to all who knew him, particularly in his chosen field. As a practical newspaper man, Mr. Kinmonth was well acquainted with a reporter's problems. The aid and understanding he imparted on such occasions was founded on his own experience and supplied the diligence to get at the truth. That is how the writer, as a former employee of Mr. Kinmonth's, likes to remember him.

## Boston Should Be Selected as Site of United Nations Capital

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 5, 1945*

Mr. McCORMACK. Mr. Speaker, under unanimous consent to extend my remarks, I include a statement by Dr. Alexander Brin, of Boston, Mass., setting forth reasons why Boston should be selected as the site of the United Nations Organization capital:

A most momentous national and international event in the history of this Nation is the decision of the executive committee of the United Nations, representing the overwhelming majority of the people in the world, to establish the international capital of the new peace organization on the soil of the United States. Today a number of American cities are competing for the great distinction and honor of providing the permanent home of the Organization, which will eventually embrace the 2,000,000,000 people of the world, and covering more of an area than 51,000,000 square miles. The chief contenders for the honor are Boston, San Francisco, Philadelphia, New York, and Chicago.

Through the written and spoken word I have for months been advocating Massachusetts as the outstanding State in the Union preeminently qualified for the world's center of the greatest security organization ever conceived and launched by man.

As far back as last May, while crossing the continent on my way to the United Nations Conference at San Francisco, I utilized my leisure time to brush upon the contributions of early Massachusetts men of letters, internationally minded statesmen and philanthropically minded men whose sympathies were broad and universal, to the sum total

of American and world civilization, whose words and deeds stirred men to action that changed the course of history. As a humble student and lover of American history, I carefully examined some of the historic documents presented to me by my teacher and colleague, the late Prof. Albert Bushnell Hart, of Harvard University, dealing with the American dream of the Massachusetts sons who shaped the earlier destinies of our Nation, to create on this continent a better world to be peopled by nobler individuals.

As I was perusing the aims and dreams of our early Americans expounding their philosophy of government, their love for freedom and justice, their labors for peace and good will among all men, their ideals of statesmanship, their desire to create laws and institutions for the benefit of society, their aim to inculcate spiritual values within the life of the new Republic, their emphasis on the things that make for human betterment, I accidentally stumbled across a letter written by John Adams, the Bostonian who became the second President of the United States, plainly advocating, as early as 139 years ago, the establishment of an International World Court to settle wars and establish enduring peace. President Adams was an ardent exponent of international good will and universal sympathy and understanding. His words were so fresh and sparkling and so modern that the world could study his ideas with profit as a model in achieving a successful society of nations based on fellowship and international friendships. I said to myself, "If the troubled people of the world would but study the sources of our national existence, would understand and apply the fundamental truths pronounced and promulgated by the immortal men who established this Nation, a solution of war and of social, economic, and political problems would be easily attained. It is in the American tradition, basic to self-government, devoid of caste, freedom to work and live and worship in accordance with one's conscience, that the richest life is to be found for all men. No wonder that the United States of America today symbolizes a tremendous hope not only for the 140,000,000 people who are fortunate enough to live on this soil but, in a sense, of all the world. The phrases used by the early Massachusetts settlers not only crystallized the sentiments of the age they lived in but challenged the loyalties of mankind and expressed a hope and prophecy that seems to be the very aim of our present life if our civilization is to survive. The outlawry of war as advocated by President Adams is such a declaration. It is the very essence of the United Nations Charter and should commend the sacrifices and services of all lovers of peace in order to save future generations from the horrible nightmare of two titanic wars in our own generation.

To the everlasting credit of President Adams his advocacy of outlawry of war is being lifted from a phrase to a practical and living and dynamic philosophy. A literal term has been translated into a legal term, backed by 51 nations.

I am convinced that there is no better place on the globe for the capital of the new World Organization than the old Bay State, where the history of America began and where America's No. 1 shrine, dedicated to liberty and democracy is located, where in educational affairs, in the application of the enduring principles of the Golden Rule, we maintain a position of proved supremacy.

The story of the Commonwealth of Massachusetts is the story of American civilization. Massachusetts is more than an aggregation of cities, towns, and villages. Massachusetts, which has long borne aloft the torch of progress in the sisterhood of States, is an epic built by some of America's noblest personalities. The most remarkable example of international idealism in practice took place in this part of the globe. The transition of our Nation from isolationism to responsible world citizenship is in line with the dream of the early Massachusetts men. The noble ideals and sentiments which underlie the United Nations Charter are the same ideals and sentiments of the founders of Massachusetts who played such an outstanding part in molding the character of our Nation to appreciate the finest values of civilization. One of the inspiring results of the United Nations Conference at San Francisco was the rediscovery of the American dream and there was ample evidence that the American spirit and the essentials of democracy have conquered the globe.

In Massachusetts lived the master builders of an Americanism which means the welfare of the world through American ideals. Four Presidents went to the White House from New England; others were of New England ancestry. Massachusetts is ideally suited for work, rest, recreation, and study.

President Adams' letter written on December 22, 1806, is worthy of study and attention by all lovers of peace everywhere:

"Differences may arise between nations as well as individuals, but as the latter discuss their rights before tribunals, there is no difficulty, moral or physical, to prevent the former from following a similar procedure. The time will come when the whole world will cover with benedictions the generous nation, which by being the first to pronounce that she renounced the right to conquest, has displayed the stand of universal peace."

Few names of settlements are so fraught (as in Massachusetts) with awe-inspiring significance so filled with abounding memories as that Bay State. What vast episodes of human history have been enacted in this part of the country in the cause of human liberty and progress. Free public education began here. Long before the beginning of our independent existence as a Nation, Massachusetts men laid the foundations of a philosophy of education that has guided our Nation ever since. Massachusetts is today one of the world's foremost cultural and educational centers. Harvard, the oldest American university, is located in this Commonwealth. We have the finest symphony orchestra in the world and Boston is nearer to Europe than any other major American city.

It is in Massachusetts where the history of the United States had its start. Here the foundations of America were laid. Here the seeds of Americanism were planted, the tree of liberty, the majestic oak, proof against all storms, whose branches overspread our whole country, beneath whose enchanting leaves 48,000,000 of the earth's oppressed and downtrodden from every race and creed and from every part of the world have found refreshing shade, secure shelter, inspiration, and encouragement for most useful lives, a scene and center of the world's greatest, most productive, and beneficent activity.

Massachusetts, with her early settlements, her charming villages and towns that later became thriving cities, scattered all over her broad acres in beautiful meadows, by lake, stream, or brooklet, or nestling among her quiet and serene hills, was the veritable cradle and nursery of Americanism, and sent her sons and daughters all over this broad land till they had peopled the whole continent planting everywhere the seeds of a sturdy, a stanch, a loyal, and fearless Americanism. It is from Massachusetts that the American spirit was spread to the glorious galaxy of the indissoluble Union of freedom, justice, and humanity, the world's supreme and universally inspiring democracy.

It was in Massachusetts where lived our greatest heroes and martyrs, where dwelt and struggled and suffered and succeeded the noblest types of American manhood and womanhood—men who formulated the ideals which form the backbone of the United Nations Charter. Where is there in the entire United States such a locale associated with such beautiful memories, traditions, and ideals of liberty for the human race as our own Concord, the literary shrine of America's greatest writers, where America "flowered" so beautifully? What about Walden Pond, of which Thoreau, who made it famous, said so delightfully: "God gave it a commission to be the only Walden Pond in the world." It was here where thought and wrote and spoke such exponents of human liberty as Emerson and Hawthorne, Longfellow and Whittier, Lowell and Holmes, Webster and Sumner, Garrison and Wendell Phillips, and a hundred others of America's immortals, who give life and hope to the people of all races and creeds who came here to establish themselves in a new country.

Here in Massachusetts the first battle of the American Revolution was fought and where the Minute Man now stands guard, as it were, over American liberties, to be defended at a moment's notice as against whatever foe, as in the glorious days of the early America. It is difficult to measure the scope of the tremendous influence of Plymouth, Mass., where the Pilgrims landed, and Provincetown, in whose beautiful harbor the Pilgrims signed, before landing, the famous compact in the *Mayflower*. We have in Massachusetts the Adams Mansion, in Quincy, home of two American Presidents, the second and the sixth, father and son, John and John Quincy, great patriots, immortal Americans; Marshfield, where dwelt the colossal Daniel Webster, eloquent and inspired orator of the ideals of America with his words so internationally timely: "Liberty and union, now and forever."

It is from Massachusetts that influences have gone forth and molded the American Nation and formed its character, shaped the destiny of our people, and affected that of the people of the earth; breasted and conquered tyranny, won our independence, enfranchised the Negro slave, and achieved scores of other blessings that fill the true American heart with pride.

Not only is Massachusetts invested with spiritual benefits of incalculable value, but where is there another part of the world one will find the picturesque and beautiful country which nature endowed with a scenery that varies from the sand dunes of Cape Cod and the rocky north shore of Massachusetts Bay to the forest lakes of our neighboring State of Maine and the New Hampshire White Mountains. It is a pastoral country that has mellowed in the 326 years since the first settlements. It is an ideal place for every conceivable recreation and nourishment of the physical body, in an atmosphere where life is soothing.

Yes, indeed, my enthusiasm about the whole matter has not been exclusively on the basis of spiritual or historic considerations. A detail practical plan based on hard facts has been worked out to indicate the superior advantages Massachusetts has to offer. In addition I have suggested the following:

No one of sound reason can fail to give unqualified support to the need of exchange of visits of the business people as well as the average citizen of all lands, quite as much as a statesman and intellectual leaders. One way to bring it about is to get our business leaders to erect one of the finest structures of its kind in the world to house a permanent international world exhibit to be established in the vicinity of the headquarters of the United Nations Capital. Purpose would be to exhibit under one roof the diversified products manufactured in New England. But more—a section would be devoted to the products of the members of the United Nations family. There might also be a division wherein there would be exhibited evidence of the development and history of industry from the days that the Pilgrim Fathers landed here to the present time.

International peace must rest ultimately upon the mental and moral disarmament which should be an essential part of the

equipment of all human beings, young and old. To bring this about we should establish here an International University for World Citizenship. In such a university would be gathered the best brains of the world for the purpose of studying and developing international law. The language barrier between the nations might be overcome as a result of linguistic advance and questions of economics as affecting the whole world would be considered. The university might truly be the world's center of business, political and intellectual thought and guidance from which might go forth streams of ideals, principles and policies to guide civilization.

As a step to make the children of the world internationally minded, a movement might be inagurated by the children of the Commonwealth of Massachusetts to present to each of the 51 nations a replica of the Goddess of Liberty, "enlightening the world, holding aloft the torch of light that everyone may see."

What the world needs is the true spirit of Massachusetts. At a time when the American people are called upon to play the largest part as pioneers of a new and greater world democracy, there is no better place for the capital of the World Nations than Massachusetts, the shrine of our political liberties, as well as of our most exalted national ideals. It is the ideal place for a new birth of freedom for the human race. The spirit of Massachusetts, embracing the creative arts of peace, will help fill the world with immortal beauty and with unending blessing.

## Address of Hon. Helen Gahagan Douglas, of California

EXTENSION OF REMARKS

OF

## HON. JOHN H. FOLGER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. FOLGER. Mr. Speaker, I am taking this opportunity to commend to every Member of the House, those present and those not present, that they read the broadcast made by the gentlewoman from California [Mrs. DOUGLAS] last night. I give it to you as my opinion that her address is extremely timely and one of the most profound, and one of the grandest utterances made anywhere in this country in the last 10 years or more.

Up in New York State, on a bluff overlooking the wide, majestic sweep of the Hudson River Valley, there is a quiet garden that will forever be a shrine to all who love courage, decency, and fair play.

For in that garden one bright sunny day last spring the American people bade farewell to all that was mortal in their friend—the friend of the little people, the humble, and the oppressed all over this earth. He went to his well-earned rest, mourned by all the world as no man had ever been mourned before—Franklin D. Roosevelt.

Not quite 4 months later a bomb was dropped on Hiroshima. A few days later the war with Japan stopped.

The war is over, but peace has not yet come. The world is uneasy. The war is over, but the peace is yet to be won.

To win the peace will take the same kind of imagination, the same daring as it took to build the bomb that ended the war. Halfpenny measures will lose the peace for us.

It was easier to pull down the mighty German and Japanese war machines than it will be to rebuild a more than half-ruined world. It was easier to build 50,000 war planes than it will be to help restore health and confidence to millions of the peoples of this rubble-strewn earth. It was easier to mobilize and train our superb Army than it will be to set our economy in the kind of order that will provide jobs for all who will need them, now that the war is over.

Don't let's fool ourselves. It was easier to keep up the morale of the men on the Ledo Road than it will be to keep our balance, our sense of proportion in this twilight period between war and peace.

We will have to fight to retain our faith and hope in the future. We will have to fight with everything that is in us against deadening discouragement and cynicism.

We must again keep our eye, our mind and our heart on the goals, remembering that, whether we like it or not, we will together share the results of our labor.

Those who think that a planless peace is in the cards are unrealistic. What would have happened if our Commander in Chief and our generals had launched the second front without a plan?

What do we plan for? Where are we going? What are our goals?

World peace. We and the peoples of this earth yearn to settle our difference in the future around a council table, without the persuasion of atomic bombs. And toward this end we have helped to lay the foundation for the United Nations Organization. We must plan now, with everything that is in us, to keep that Organization together, to allow no part of our unity to seep away through friction, misunderstanding, or suspicion. For with it will slip away our very future.

Here at home we have envisioned new goals of human happiness in the economic bill of rights left to us by our friend who sleeps in that quiet garden. And we have the 21-point program given us by President Truman which would make the economic bill of rights a reality. That program demands our action. Lip service never turned a wheel.

What are our assets? What have we got to work with?

A legacy of international good will and friendship, begun and patiently built, stone by stone, in the years before Pearl Harbor and cemented with blood and tears in the heat and flame of battle.

We have inherited for the job ahead a strong and healthy body.

We are rich—rich in industrial capacity, industrial know-how, scientific farming—rich in our reservoir of skilled labor—rich in our men of science and letters—rich in natural resources.

We are intact. We are whole. Our factories, our fields, our cities, and our homes have escaped the scars of war. We have not been driven underground. We have not been bombed.

We are powerful, more powerful than any other nation on the globe today.

Yet we are young—only half grown. We have the assets of youth—vigor and resistance.

But our greatest asset—our most priceless treasure—is our heritage as freemen.

Freemen are unafraid. Freemen have open minds, open hearts that quicken to the yearning of others for freedom, whether they be black, or white, or yellow—whether that freedom is to be won in far-off places or extended here at home.

We have everything to work with—everything to work for. If we can't make a go of it, nobody can.

There is no question that we have the ability to reach our goals. But have we a sense of the urgency of the hour?

Looking back will solve nothing. Yet what seems to be the principal preoccupation here in Washington? What happened at Pearl Harbor 4 years ago—that's the $64 question. It's the hottest topic under discussion. It covers the front pages of our newspapers.

Oh, yes; there is a lesson to be learned from Pearl Harbor. It is the lesson that it is dangerous to fail to read the signposts. There are signposts now, all over the place, but there are some who cannot read them, some who refuse to read them—and some who would even turn them around and have them point the other way.

There are certain groups in this country who thought we could do business with Hitler, Mussolini, and Hirohito—isolationists then, isolationists now—blind then, before the onslaught of coming war; blind now, stupidly and deliberately blind, before the impact of peace—who choose to spend their time—and ours—scratching around, digging into the files, trying to prove that we wouldn't have been in the war if it hadn't been for Franklin Roosevelt.

These are the people who always hated everything he stood for, because they have always felt contempt for little people. And now they seem to think that by discrediting Roosevelt, by character assassination of the vilest kind, they can do two things: kill his program and justify their own isolationism of yesterday.

The irony of it! That these same people who are trying to prove that President Roosevelt dragged us into this war are by their constant baiting of Russia preparing the ground for an atomic bomb armaments race and for the next war—the last war.

Can it be that anyone is so abysmally ignorant as to think that, had we withdrawn our fleet from Pearl Harbor, abandoned China to her fate, given up all hope of defending the Philippines and Hawaii, sold the Japanese all the steel and oil and munitions of war they demanded, given up all our rights to conduct trade and commerce in the Far East, Japan would not have attacked us eventually?

Can it be that they don't know that Germany, after she finished with Europe, Britain, and Russia, would have turned on us next?

Well, if they don't know it, all they have to do is follow Nuernberg trials, and the German documents will tell them all about it. For they are documenting, step by step, what almost all of us knew—that Germany, years before Pearl Harbor, was bent on world conquest, that Germany and Japan months before Pearl Harbor had formed their Axis. If there are still those who believe that the gentle Japanese war lords were prodded into the Pearl Harbor attack, again the Nuernberg trials have shown that the Germans and the Japanese were discussing the projected attack on the United States many months before December 7, 1941. The rewriters of recent history had better follow the Nuernberg trials and learn a few facts.

Or is this just the cheapest and most cynical political trick that was ever attempted in this land of freedom-loving people? If it is a political trick, the shame falls across the grave of every man, woman, and child who fell in the wake of this terrible war. It is a grinning, obscene mockery in the face of every wounded boy in every hospital in the world.

Even while the Nuernberg trials are going on, before we have liquidated the Nazi party and all its evil works, they would, to satisfy their own political ambitions, do a thing coldly calculated to destroy our unity, to breed mistrust and doubt, at this most dangerous moment in history. Isolationists, not only in the world, but in their own communities.

Whether it is a political trick or not, it is a danger to every fighting man coming home looking for a job. It is a danger to every working man and woman in this country—

and to our whole economy, which is dependent on their earnings. It is a danger because it keeps us looking back instead of forward. It is a danger because, instead of leading, we are allowing events to push us.

Pearl Harbor, do they say? What about the Pearl Harbors of tomorrow? There can be Pearl Harbors of peace, too.

We have a housing Pearl Harbor on our doorstep right now. Look at your daily newspapers, with pictures of veterans living in tents. In my city of Los Angeles homes are needed now for 135,000 families. There is imminent danger that, with the overcrowding, sanitation facilities might break down, resulting in widespread epidemic. This story is repeated in city after city over the face of this land. When all our men in uniform not required for occupation duty have returned home, this country will have a shortage of 3,000,000 homes. We could have been ahead of this emergency. We could have had a housing law months ago.

More than a million of our fighting men are coming home every month. Where is our full employment bill? Unemployment isn't hounding us yet. Are we going to wait and see if it does before we act? After all these months, the bill has just been reported out of committee, completely rewritten so that no one will even recognize it. The words "full employment" are not even mentioned. Those incapable of reading signposts are afraid to set full employment as a national goal. They are afraid of the words "full employment." Well, the American people are not afraid of full employment. They don't think it's un-American to take steps to insure every able and willing American worker a job so that he can feed his family and keep a roof over his head.

Is there danger of a Pearl Harbor in strikes? What has happened to the points in President's Truman's program that would have given confidence and a sense of security to millions of American workers against the day when they might be out of jobs?

Why hasn't the minimum wage been raised from 40 to 65 cents an hour, so that millions of our people could come at least within shouting distance of that high standard of living we're always boasting about?

We hear a great deal about profits, but millions of Americans today are not thinking about profits. They are thinking about enough money to clothe and feed and house their families, pay doctor bills, and meet the increased cost of living on their peacetime, cut-back wages.

Is there danger of a Pearl Harbor in inflation? The Pearl Harbor boys of yesterday don't seem to be worried about that. They're all for going back to the good old law of supply and demand. They're not afraid of high prices. They think a little inflation wouldn't do us any harm.

Is there a possible Pearl Harbor of racial tension? Where is the permanent FEPC, to which both party platforms pledged their support? Where is the permanent FEPC which would put an end to job discrimination against Negroes, Jews, Catholics, the foreign born, and all minority groups?

Remember that April Saturday when Franklin Roosevelt came back to Washington for the last time?

Millions of Americans that day stood with bowed heads—as they had stood through the night along the railroad tracks all the way up from Georgia—as they were to stand again as a train sped through the night from Washington to Hyde Park—and made a solemn vow that the things he stood for, the things he had fought for so valiantly—would be finished.

Well, what are we waiting on?

Let's get started on finishing the job. Let your leaders in Washington know you are ready—that you accept the challenge.

## Converting Cargo Ships to Troop Ships

EXTENSION OF REMARKS
OF
### HON. JACK Z. ANDERSON
*Wednesday, December 5, 1945*

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Mr. ANDERSON of California. Mr. Speaker, some time ago I addressed communications to the Secretary of War and to the Administrator of the War Shipping Administration with reference to the desirability and the possibility of converting Liberty ships to troop ships in order to relieve the transportation bottleneck that is preventing the speedy return of high-point men from overseas. Enclosed with my letters were recent news pictures of countless cargo ships swinging idly at anchor in San Francisco Bay as well as a copy of a news article from the Daily Pacifican, the Army newspaper in the western Pacific, which stated that a Colonel Davidson had indicated that Liberty ships could be converted to troop transports in 48 hours.

No reply has yet been received from the War Department, but I have an answer from Admiral E. S. Land which I wish to include with my remarks:

WAR SHIPPING ADMINISTRATION,
*Washington, November 30, 1945.*

The Honorable JACK Z. ANDERSON,
*House of Representatives.*

DEAR JACK: I have your clippings showing cargo ships anchored in San Francisco Bay and describing the belief of Colonel Davidson that Liberty ships can be converted into troops ships in 48 hours. The cargo ships are at anchor because there is no cargo for them to carry. The suggestion of Colonel Davidson is a popular one but has many drawbacks. The so-called "48 hour conversion" of the standard Liberty ship into 750-man troop ships is a temporary expedient which, I understand, the Army has resorted to only in emergency. The War Shipping Administration must, necessarily, in its conversion take into account the need for adequate sleeping, sanitary, medical, and messing facilities and must provide an installation which will be safe for the troops under all conditions of weather. For the purpose of general troop carrying the War Shipping Administration does not feel it either safe or good policy to initiate a program of "48 hour conversions."

Our available ships in the Atlantic are now sufficient to take care of the backlog of men in the European area waiting to come home and within less than a month we will be diverting ships to the Pacific. By the time we could convert these various cargo ships into troop ships the need for them would have disappeared. This problem is one of great urgency and we are doing everything we can to speed up return troop movements. We have checked Army and Navy figures on personnel available for return and find that the presently available ships are all that can be used effectively.

Sincerely yours,

E. S. LAND,
*Administrator.*

Now, Mr. Speaker, as indicated by Admiral Land, the Army has at various times converted cargo carriers to troop ships in emergency. I firmly believe that as long as high-point servicemen, eligible for discharge, are held overseas because of the lack of sufficient ships to bring them home, an emergency exists. Whatever we can do to expedite the return of these men, without jeopardizing the national safety, must be done.

In this regard it is gratifying to note that the chairman of the House Naval Affairs Committee has appointed a special subcommittee to inquire fully into the subject and to report back to the full committee the results of the investigation. As a member of the subcommittee I am looking forward eagerly to this opportunity to obtain all of the facts and information that are available in the various branches of the armed services. I am sure that our committee will be able to recommend steps that will be helpful to those men who have done their duty, who have served their country during a great emergency and who are entitled to a speedy return to their homes and families.

Mr. Speaker, how much more sensible and effective this is than the unwarranted and reckless action just recently taken by various longshoremen's and maritime unions in tying up ships and cargoes at various important ports throughout the United States. In this connection I wish to include with my remarks copies of telegrams recently addressed to Harry Bridges and Ferdinand Smith by the Administrator of the War Shipping Administration. I commend Admiral Land for his forthright language and for his condemnation of the "ill-conceived propaganda" to which he refers.

NOVEMBER 30, 1945.

MR. HARRY BRIDGES,
*International Longshoremen's and Warehousemen's Union,*
*San Francisco, Calif.*

In reply to your telegram of November 28, I repeat what I told you in my previous wire of November 26, namely, that troop transportation from all theaters has proceeded at such a rate that December will see a substantial excess of capacity in the Atlantic. In fact, at least 30 ships with a capacity of more than 76,000 troops will be diverted during that month to the Pacific.

As to your reference to the vessel named *Mormactern*, she was rejected as a troop ship by Army, Navy, and WSA after her last assignment to that service demonstrated her unsuitability.

Second. Your statement that the *Monterey*, the *Matsonia*, and the *Lurline* were returned to the Matson Line for reconversion to passenger service is false. They have not been so returned. There is no intention of reconverting them at this time. Influence which you say maritime unions brought to bear has not dictated any actions taken in connection with these troop ships.

Third. With reference to your remarks about conversion of ships to troopers, that question is decided, as I have told you before, by the Joint Chiefs of Staff, and I assume it has occurred quite naturally to them that in view of current excess capacity further conversions cannot be justified.

Fourth. The War Shipping Administration alone is currently operating 551 troop ships, a fleet very substantially larger than the entire foreign-trade fleet of the American merchant marine in 1939.

Fifth. These ships have a collective capacity of nearly 600,000 troops per sailing homeward bound.

Sixth. In addition, both the Army and the Navy operate troop ships.

Seventh. As I have advised your associate, Ferdinand Smith, secretary of the National Maritime Union, all vessels in operation by the War Shipping Administration are providing a variety of essental services to troop transportation, to our allies, and to our own country (and that includes coastwise and intercoastal services), so that any interference by you with the sailing of any ship on December 3 under any such specious pretext as you have advanced would be a disservice to yourselves, to your Government, and to the merchant marine in general.

And finally, as I also advised Mr. Smith, it is my opinion that your ill-conceived propaganda tends primarily toward discouraging, disillusioning, and demoralizing men and women of our armed forces depending upon water transportation homeward.

E. S. LAND,
*Administrator, War Shipping Administration.*

## Price Control

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 5, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

GENERAL COMMITTEE OF ADJUSTMENT,
BROTHERHOOD OF LOCOMOTIVE ENGINEERS,
*Boston, Mass., November 30, 1945.*
The Honorable THOMAS J. LANE,
*House of Representatives,*
*Washington, D. C.*

MY DEAR SIR: Attached is copy of letter sent to Chester Bowles by the Massachusetts State OPA Labor Advisory Committee, of which I am the chairman.

The representatives of organized labor in this Massachusetts area, CIO, A. F. of L., and railroad brotherhoods, have been cooperating with OPA in an effort to keep down the cost of living. We have recently discussed this situation and are very much disturbed about rumors to the effect that price control might soon be discontinued. We feel that it is for the best interests of organized labor and the workingman that price control continue until supply equals demand.

As a representative of the Locomotive Engineers on the Boston and Maine Railroad, with headquarters here at Boston, I feel that a matter of this importance should be brought to your attention. I have taken this up with my colleagues in organized labor, the CIO and A. F. of L. members, and they have agreed that we, as representatives of organized labor, should bring to your attention our position on this very important subject.

We trust that you will do all in your power to cooperate in the fight against inflation.

Very sincerely yours,
HENRY A. TWICHELL,
*General Chairman, Brotherhood of Locomotive Engineers.*

---

MASSACHUSETTS STATE OPA LABOR
ADVISORY COMMITTEE,
*Boston, Mass., November 27, 1945.*
CHESTER BOWLES, *Administrator,*
*Office of Price Administration,*
*Washington, D. C.*

DEAR MR. BOWLES: The Massachusetts State OPA Labor Advisory Committee at its meeting on November 14, 1945, held at Boston, discussed the magnificent fight you are waging against pressure from special-interest groups who are attempting, because of selfish reasons, to break the line on price control and rent control.

We, labor advisory committee members, who are leaders representing organized labor in this area, are voluntarily and without compensation giving our time and effort to cooperate with OPA in its efforts to keep down the cost of living. We realize that your fight is a sincere and honest one aimed to benefit the general public and that you do not favor "special favors" to pressure groups. For this, we highly commend you and we stand solidly with you.

Very sincerely yours,
HENRY A. TWICHELL,
*Chairman, Massachusetts State OPA Labor Advisory Committee.*

## Not Unduly Exacting in Indonesia—Part I

EXTENSION OF REMARKS
OF
## HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 5, 1945*

Mrs. LUCE. Mr. Speaker, when Maj. Gen. Patrick Hurley said that "in the Far East we are furnishing lend-lease supplies and using all our reputation to undermine democracy and bolster imperialism and communism," he confirmed the facts of a policy which has been a source of grave concern to many Americans.

General Hurley's statement repeats what has been hinted in less specific terms by the Acting Secretary of State, Mr. Grew, last May, when he said "the United States is leaning over backward to avoid offending Russia," and also by the present Secretary of State, Mr. Byrnes, in October 1945 by the phrase, "we were not unduly exacting in regard to Poland."

Many Americans agree with General Hurley's opinion that, "The weakness of American foreign policy has backed us into two world wars. There is a third world war in the making. In diplomacy today we are permitting ourselves to be sucked into a power bloc on the side of colonial imperialism against Communist imperialism."

Nowhere does the weakness of our foreign policy show up more clearly than in our present bewildered inactivity about the tragic situation in Indonesia. Like General Hurley most Americans are "opposed to both"—imperialisms—most Americans "still favor democracy and free enterprise." The consequences possibly ensuing from our lack of constructive, positive action are very plainly pointed out by the following editorial in the Christian Century's issue of November 21:

THE BRAVE NEW WORLD REACHES JAVA

Shocking things are happening all over the globe—in China, in Palestine, in Poland and Czechoslovakia, in Germany, and in many parts of South America. But nothing that is going on in any of these spots is quite so shocking as the fighting in Java. There, as we go to press, the half-million inhabitants of the port of Soerabaja are ringed in by a circle of fire from warships, tanks, and bombing planes, while ground troops are systematically overrunning the city street by street, house by house. And the fighting is spreading to Batavia. Italy did nothing worse in Ethiopia. An imperialist power, Britain, which has no right to be in Java, is using Indian mercenaries and American lend-lease equipment to mow down a native population whose offense has been a demand for freedom. The purpose is to force the Indonesians back under an alien rule that the alien imperialism, Holland, is itself not strong enough to restore. A "labor" Britain and a "democratic" United States are thus taking a leading part in refastening the shackles of imperialism on a major portion of the Southwest Pacific. The United States tries to escape its share of the responsibility by asking that the American insignia be painted off the weapons that are killing the Javanese. The British prime minister talks about his nation's "moral responsibility" to the Dutch. What responsibility? And what about British Labor's moral responsibility to the Indonesian hope of liberty? This whole bloody business in Java is almost too terrible to contemplate. Yet it goes on, growing worse day by day. And in this extremity, to whom do the Javanese patriots appeal for understanding and support? To the United States, which likes to think of itself as the beacon light of freedom? Not at all. The Javanese appeal to Russia. Think that over. It may have a lot of future history tied up in it.

From the November 17 issue of the New Leader, the following editorial on this subject of Indonesia and the part required of the United States if we are truly interested in a peaceful world, merits careful consideration:

THE REVOLT IN INDONESIA AND AMERICAN RESPONSIBILITY

The passivity of the United States and its nonintervention in the great conflict in Indonesia is neither sensible nor salutary.

Against British planes, tanks, and guns the rebels have no chance. The insurrection will be suppressed, and the Dutch authorities will be reinstated. For a certain time order and quiet will return to these rich islands which are, with their population of 70,000,000, almost an empire in themselves. But how long will Dutch law and order last, and what is its price?

Criticism regarding the Indonesian uprising is easy but not entirely convincing. It is true that the people of Indonesia endured the Japanese occupation without a revolt; that the weapons they are fighting with at present are of Japanese origin; that they had direct military help on the part of Japanese officers; that the appeal for Russian help is illogical, since popular movements in Russia are suppressed by methods even more cruel than those applied by the British and Dutch in Indonesia.

These considerations do not solve, however, the great problem. What the world sees in the great area between the Indian and the Pacific Oceans today are movements of colonial peoples which have grown and matured in recent decades and have reached a stage in their development when much more self-government is possible and imperative.

Great, popular movements in the colonial spheres, from Egypt and Palestine to French Indochina and Indonesia, have followed the war They are of particular strength in the French and Dutch colonies; this is a symptom and a consequence of the weakening of France and Holland during the war, and the fruit of prewar maladministration. It would be a mistake simply to adhere to the principle of French and Dutch sovereignty and to restore the old colonial status.

The United States has taken a political step of fundamental significance in intervening in the Palestinian problem. Palestine belongs to the British sphere and America has no right to interfere in its internal affairs. With the consent of the people of Palestine as well as of the British Govern-

ment, the United States is going to play a major role in one of the most complicated problems of the Middle East as well as of the whole Arabic world.

America has risen to an outstanding and dominant position in the postwar world. The U. S. A. is not interested in further territorial conquest. The colonial world looks to us with hope. We cannot evade our responsibilities; we cannot return to isolation in any sphere. The U. S. A. alone of all nations is in a position to intervene in Indonesia, in China, in Palestine, on the side of democratic progress. We can stop the senseless bloodshed in the Far East. We can open the road to self-government to the millions of colonial people longing for our political as well as economic aid.

As General Hurley says in his statement on American foreign policy:

A democracy must live on its intelligence, and its integrity, and its courage. To the people of the democracy should be given all the facts to enable them to form correct opinions.

The facts in regard to Indonesia and other parts of the Orient are not simple. To many Americans they seem strange and often bizarre. Yet upon our earnest efforts to understand these facts depends our hope of peace.

## Communist Russia Realistic

EXTENSION OF REMARKS
OF
### HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 5, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, thousands of our men in the military services are having an opportunity to meet Russian soldiers and civilians. The association, in many instances, is quite intimate and this affords these men a chance to judge the Russian, and the social and political system which he symbolizes.

I have just received a letter from a young ensign, who is stationed at Saseba, Japan, and he writes a most vigorous letter about our Russian ally.

Mr. Speaker, under leave to extend my remarks, I offer for the RECORD this personal opinion of my young friend in the Navy. For obvious reasons, I omit his name in the fear that he might be subjected to discrimination by his superiors:

As far as the current diplomatic policy of the Soviet Union is concerned, I believe it can be expressed briefly and truthfully by the two words: "tactful aggression." The writer has had the opportunity of observing at close hand the policy and conduct of the Russians in that portion of southeast Europe, which they have occupied and has seen them as they really are—not people who can be bought off or bested by a kind of poker-game-trump-card strategy, but tough, fearless, and stubborn men and women who believe unquestionably in the destiny of Russia, in the eventual supremacy of the communistic system throughout the world, and in the infallibility of Josef Stalin. As Stalin commands, so they will do, and with an eager alacrity.

Russians are the world's best-known realists. Force and a firmness of purpose equal to their own they understand, admire, and respect. Ransom and its giver they despise but will take as long as it is forthcoming.

Communism is as serious threat to democracy as the fascism we have just defeated ever was. If we are weak now in the postwar reconstruction, if we play the part of a craven moneybags buying a temporary security with gold, if we do not speak to the world with the mighty voice our armed power entitles us to; then a third, and even far more horrible, world conflict is inevitable.

What has happened to the America which boasted: "Millions for defense, but not one cent for tribute"?

## The Government's Policy Respecting the Aluminum Industry

EXTENSION OF REMARKS
OF
### HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
*Thursday, December 6 (legislative day of Monday, October 29), 1945*

Mr. HOEY. Mr. President, some time ago I inserted in the Appendix to the RECORD a letter from Mr. L. M. Brile, president, Fairmont Aluminum Co., Fairmont, W. Va., addressed to Mr. W. Stuart Symington, Administrator of Surplus Property. I have received a copy of the reply of Administrator Symington, under date of November 20, 1945, and I ask unanimous consent to have it inserted in the Appendix to the RECORD. The letter gives a very clear statement of the policy of the Government, and I am glad to have the opportunity of placing it in the RECORD. I feel sure that it will be of intense interest to the Senators.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NOVEMBER 20, 1945.

MR. L. M. BRILE,
*President, Fairmont Aluminum Co., Fairmont, W. Va.*

DEAR MR. BRILE: Thank you for your comments dated October 22, 1945, on our aluminum report to Congress. We regret that as an independent in the aluminum industry you should construe the program we proposed as contrary to the interests of independent producers. Other independent producers have indicated approval of the proposed program on the basis that it would assist them.

Nothing in our report recommended subsidies for any producers, whether of primary ingot or fabricated products, and we clearly stated on page 53 of the printed copy that if subsidies were to be considered, Congress would make the decision and not the Surplus Property Board (Administration). We, of course, have read the charges made by the Aluminum Co. of America, but those charges are based on that company's own interpretation of our report, and is at variance with our intentions.

You assume that our suggestion that the Government might guarantee losses would constitute a subsidy. We recommended certain precautions that should prevent such an outcome, and we expected that others could operate in good faith under such a guaranty, and show profits as did the Aluminum Co. of America operating under an identical arrangement. You may be interested to know that all bids, involving such a proposal for the lease of aluminum reduction plants, have been withdrawn and that at present such an issue does not exist.

No bauxite subsidy was even mentioned in our report. The proposed assistance is merely of a general nature, with the individual company expected to undertake the normal business investment invcived, aided by our Government in international negotiations, if necessary. This is a practice which various businessmen in this country have relied upon from time to time, especially when they suspected discrimination by foreign interests.

I am sure that there is a misunderstanding over the measures we propose, because we are in full accord with your own interest in seeing the aluminum industry operated by fully independent competitive private enterprise.

Sincerely yours,
W. STUART SYMINGTON,
*Administrator.*

## Inflation in the Price of Homes

EXTENSION OF REMARKS
OF
### HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. BIEMILLER. Mr. Speaker, on several occasions I have commented on the serious housing problem, particularly as it affects veterans, which confronts us.

Yesterday, Mr. Chester Bowles, OPA Administrator, testified before the Banking and Currency Committee, on the Patman bill to check inflation on housing costs. His remarks are so illuminating that I desire to insert them in the RECORD, as follows:

More than a month ago, before another congressional committee, I urged that legislation be adopted to head off a wild inflation in the prices of homes. And today I am deeply grateful for this opportunity to testify as forcefully as I know how in favor of the bill Congressman PATMAN has introduced.

As Price Administrator, I am concerned, first, because of the direct effect that a wild inflation in home prices can have upon the effectiveness of the OPA's efforts to control rents and prices of building materials. Secondly, I am convinced that the Nation's whole effort to maintain a stable economy during the critical months ahead may easily be exploded by an inflationary fire in the real-estate field. And finally, I have every American citizen's feeling of responsibility about the desperate housing needs of millions of veterans and others who will be homeless or forced to live in cramped or substandard quarters next year unless the housing issue is faced quickly, intelligently, and courageously.

We have come through the war years with a far better record of economic stability than most of us, a few years ago, dared to hope would be possible. We have succeeded in stabilizing the cost of living in the face of inflationary pressures far beyond anything that the country has experienced in its history before. And we can continue to hold the line until the danger is past.

I have been very much disturbed by the dangerous defeatism of some people who have stated publicly their opinion that the line cannot be held, that inflation is inevitable. This is dangerous and irresponsible propaganda. I cannot help but believe that it has been deliberately fostered by certain groups

who feel that a little inflation would serve their selfish interests. These people are either unable or unwilling to recognize that there is no such thing as a controlled inflation.

Once inflation is well started, it is about as easy to control it as to control the chain reaction in an atomic explosion. And the results can be almost as disastrous.

Let me emphasize again that the American people have so far been able to hold back the highest tide of inflationary pressures in history. And we can continue to hold it if we will plug the one hole in the dike that threatens the entire foundation of the stabilization program in the critical months ahead. Uncontrolled prices of homes constitute a danger spot which can and must be repaired quickly.

The inflationary crisis in the real-estate field follows the familiar pattern of tremendous demand for an unavoidably small supply. It was this same war-born condition which prompted a foresighted Congress to act 4 years ago to head off runaway prices on food, clothing, rents, and thousands of other commodities.

It is estimated that American families today need a total of about 12,000,000 new homes to make up for building that has not been done during recent years, to replace our more than 7,000,000 substandard dwellings and to meet the needs of the families of more than 3,000,000 newly married veterans and others who have been living doubled up or who want to set up households for the first time.

Surveys indicate clearly that a large part of this need is in the form of immediate demand backed up by more cash than American families have ever had before. Individual savings have increased by $145,000,000,000 since before the war. Checking accounts have increased from twenty-seven to seventy-two billion dollars since 1939. The immediate demand for homes during the next 2 years is estimated at between two and three million units. In addition, the National Housing Agency estimates that the backlog of repair and modernization work which was put off during the war totaled $3,000,000,000 in 1944.

However, the best estimates also indicate that not more than 400,000 to 500,000 homes can even be started during 1946 and probably no more than 350,000 to 400,000 can be completed.

We in the OPA are working constantly with other Government agencies and with industry to break bottlenecks and to clear the way for the largest possible volume of construction. We have watched building-materials prices carefully and have made numerous adjustments wherever it was clear that price was actually standing in the way of production. In addition, we have done everything possible to encourage the construction of new rental property by assuring prospective builders in advance that they will receive rentals high enough to make ample allowance for increased construction costs since 1939.

It is obvious that this particular inflationary bomb will not be rendered completely harmless until we are building homes at the rate of a million or more units a year. In the meantime, while it is still physically impossible to come near closing the gap between supply and demand, the fuze on that bomb must be dampened by effective controls.

The danger signs are already frighteningly clear. Construction costs have increased more than 30 percent since the beginning of the war in 1939. Anybody who has tried to build or buy a home during recent months knows that prices are sweeping higher and higher every day. Evictions of tenants resulting from home sales provide another inflationary danger signal. On the basis of 8 months' experience it is estimated that such evictions in 1945 will total 225,000 as compared with only 73,509 in 1943.

If we fail to plug this dangerous hole in the stabilization dike once and for all, we must be prepared to face the same crippling building boom and collapse which occurred at just about this time after the last war. There was a great accumulated demand for homes after the last armistice too. Early in 1919 a vigorous building boom began. But in 1 year building costs skyrocketed 40 to 50 percent above 1918. And within 1 year the boom collapsed. Runaway prices had dried up the market.

During the "boom and collapse" process, some buyer dug far too deeply into their pockets to pay high prices and lived to regret it later. Thousands of others could not buy at all and thus failed to get the homes they badly needed and would gladly have bought at prices within their reach. The building industry was robbed of its long-range market. It failed to make the contribution it might otherwise have made to a sustained, high-level economy. When the collapse came, thousands of workers lost their jobs. Few people gained and many suffered. There was a long-term aftermath of mortgage foreclosures and economic maladjustment which contributed heavily to the crash of 1929.

There are three reasons why failure to stabilize the prices of homes will also make rent controls increasingly difficult to maintain. In spite of OPA's efforts to allow rents on new construction sufficiently high to bring a generous return, few builders will be inclined to put up dwellings for rent when a big speculative return on the investment can be had so easily by building for sale. Secondly, sales of old houses—and consequently evictions—will increase as more and more owners are persuaded by a speculative profit to sell their properties. And finally, if instead of a healthy long-range building program, we have a quick boom and collapse, the upward pressure on rents for an insufficient supply of existing rental dwellings will continue for many years to come.

Recent surveys certainly give us no reason to believe that we can allow real estate prices to boom merrily upward and yet somehow avoid the inevitable collapse. While there is a ready "flash market" for homes at inflated prices, there is no long-range market at these levels. The surveys show that about half of the people who intend to build or to buy homes are willing to pay no more than $6,000. The Architectural Forum study also indicates that if the people who intend to build or buy are asked to pay even as little as $1,000 more than they now expect to pay, 37 percent of these potential buyers will be out of the market. In recent surveys of soldiers at separation centers, it was found that from 24 to 46 percent (depending on the size of their home towns) said that they can pay no more than $30 a month in rent. Twenty-two to thirty-five percent said they could not afford home-purchase payments of over $30 a month. Only 6 percent think they can pay over $50 a month for a home.

An uncontrolled boom in real estate prices would also weaken OPA's controls over the prices of building materials and services. With prices of finished houses free to soar upward while supplies of building materials continued scarce, the irresponsible speculative builder could easily bid building materials away from those who want to build or repair their own homes. In this setting the black market in materials would be extremely difficult to control, and reputable builders would be unable to hold their own.

Finally, perhaps the greatest cost of an uncontrolled inflation in homes will be the human cost.

According to discharge reports from the armed services and surveys of veterans' housing requirements, approximately 10,000 veterans are coming into the housing market every day. It is estimated that by the end of 1946, 3,500,000 married veterans will have to find homes. Add to this problem the millions of families who have been living in unfit quarters or doubled up under the same roofs with other families and I think you have the biggest reason why America must plan for a healthy, long-range building program which will provide the number of homes our people need at prices they can afford to pay. Our opportunity is all the greater because today, for the first time, thousands of families have the savings and the incomes with which to buy suitable, moderately priced homes of their own.

The Government has already taken some action to head off a crippling inflation in home costs. All parts of the "six-point program" announced by Mr. John Snyder on September 18, 1945, must be pursued vigorously. You can be sure that we in OPA will follow through with our part of that program by seeing to it that the lid is kept on the prices of building materials, construction services, and rents to the very best of our ability. At the same time, we will continue to do everything in our power to help encourage the greatest possible production.

However, I am convinced that the best that all interested Government agencies and industry can do together will not be enough under the present program. And that is why I am glad to be here today to speak in support of the Patman bill.

This bill provides adequate authority to control the prices of new homes and would check speculative demand for existing homes. Control would be limited to those areas and kinds of housing where it was shown to be necessary.

The bill provides that ceiling prices on new construction would be determined on the basis of the actual costs of construction—not in excess of ceiling prices—plus the fair-market value of the land plus the generally prevailing contractors' margin for comparable units in 1941.

This would allow the legitimate builder a generous profit and encourage sound construction. And it would prevent speculative exploitation of the acute housing shortage at the expense of the returning veteran.

I believe, too, that there would be a minimum of red tape in the law's operation. Mr. PATMAN, in his testimony before the committee, pointed out that the builder would be able to determine his own ceiling on the basis of his costs and margin as permitted in the bill. Or the builder could have his ceiling price approved in advance if he wished. Provision is also made for adjustments later to cover any unforeseen circumstances that might develop after building was started. This should set at rest any fears about undue delays.

The provision setting as a ceiling on an existing home the price at which it is first sold after the enactment of the law is certainly generous enough and would help to discourage speculation in existing homes. Obviously this arrangement would place no restriction on the price which the present owner could receive on the first sale.

I am glad that power to allocate scarce building materials to residential construction and especially to low-cost housing is included in the bill. Although this authority is already contained in the Second War Powers Act, the limited period for which it is now proposed to extend that act makes it advisable to have a separate and longer grant in the housing field.

There is increasing evidence that some materials shortages, which it was hoped would be relieved by the first of next year, are growing more serious daily. Lumber, the most important single item in home construction, is more critical than it was 2 months ago. Prospects are that supplies may

easily grow tighter. On the face of these shortages, the home-building industry is increasingly concerned with the diversion of needed materials from home construction to commercial and other nonresidential building.

Positive assistance to residential construction is imperative if we are to come close to realizing our housing goals for the coming year. In view of the obvious needs of returning veterans especially, it seems clearly proper that this assistance should be directed to encouraging construction in the moderate price ranges and in rental housing.

Authority to give preference in the purchase or renting of new residential construction to veterans in areas where there is an acute housing shortage is included in Mr. PATMAN'S bill. Of the millions who will be compelled to double up in the coming year, a major part are veterans. While they have been in their country's service they have been unable to compete on even terms for the homes they now so badly need. They are entitled to ask for something more than the right to scramble for the dregs of an almost exhausted housing supply.

The bill would also authorize subsidizing the construction of new low cost housing accommodations where there is no other practical method for getting adequate housing built in an acute shortage area. I will leave it to the housing experts to decide on the desirability or the necessity for this provision. I am convinced, however, that there is a desperate and immediate need to provide some shelter for the homeless veteran with a family.

As for the administration of the bill, I sympathize with the sense of urgency that prompted the proposal to establish a new agency. However, I do feel that at a time when we are all trying to streamline and simplify the governmental structure, we ought to try to avoid establishing a new agency. It seems preferable to me that the powers contained in the bill should be conferred on the President to be delegated to existing agencies which already have the housing know-how to do the job.

I believe that Mr. PATMAN'S bill is a moderate proposal. I believe that the big majority of thinking people in the real-estate and financial industries will understand the need for it and will help to make it work for their own protection as well as for the protection of the economy in the years ahead. These people know that sound, long-range business cannot be built on runaway costs and inflated prices. Such a plan would clearly strike only at the profiteer and the fly-by-night operator. It places a minimum burden on the majority of responsible people in the industry and provides a foundation for generous and sustained profits.

If we can meet this issue head-on, we have at our fingertips the best possible insurance for a sustained high level of employment and business activity for years to come. We have a ready-made reservoir of demand for homes. If it is not dried up overnight by inflationary prices, it can produce a steady flow of profitable business activity and employment for at least a decade. One and a quarter million houses at an average price of $5,000 would produce consumer expenditures of $6,250,000,000 a year. This is more than a billion dollars larger than consumer expenditures for motor vehicles in 1941. It is estimated that a sound residential boom will make from four to four and one-half million jobs a year, in building and closely related industries. This is nearly one-fifth of our peak wartime industrial employment and about seven times the employment in the automobile industry in its best year.

At this moment we have one of the greatest opportunities in our history to strengthen the social and economic structure of our country at its foundations. But at this same moment, I think the American people and the Congress also face the most dangerous single inflationary threat in our history. That is why I urge with all the conviction I have that the Congress enact this legislation to stop the onrushing inflation of home prices in its tracks before it is too late.

## Errors in Government Unemployment Predictions

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Wilbur J. Brons from the Chicago Journal of Commerce of November 28, 1945:

ERRORS IN GOVERNMENT UNEMPLOYMENT PREDICTIONS

(By Wilbur J. Brons)

The course of true love is not running smoothly for the ardent advocates of the planned economy, most of whom had pinned their hopes on the full employment legislation now in Congress.

The trouble seems to be that the annual job budget—the device by which the President and his advisers would forecast the state of employment 18 months in advance—has come under a cloud.

As most of us recall, various representatives of government, who were presumed to speak with some knowledge, were rather busy after VJ-day making sober pronouncements as to the number of workers who would soon be idle. On August 15 Stabilization Director Snyder, who probably had at hand more statistics than even the Department of Labor or Commerce, made this statement: "It is expected that there will be 5,500,000 or more unemployed in 3 months."

By spring, Mr. Snyder added, "unemployment may reach about 8,000,000." At about the same time, the War Manpower Commission was predicting 5,000,000 unemployed "in the last quarter of 1945." Meanwhile, the Social Security Board, another Federal agency with access to presumably authoritative information on the number of jobless, thought the figure might go as high as 7,500,000.

About the middle of October, 2 months after these dire predictions were broadcast throughout the land, along came the Bureau of the Census with some data based on actual developments. This agency reported that unemployment in October was only 1,520,000, which represented a decrease of 130,000 from the September total. Almost simultaneously, the Bureau of Labor Statistics of the Department of Labor reported that the number of reconversion lay-offs was declining rapidly.

Needless to say, these discrepancies were hardly calculated to promote confidence in the ability of the slide-rule swamis to predict unemployment, which predictions are the heart and soul of the full-employment scheme. The figures showed that the statistical experts of the Government were painfully wrong, and that any program of Federal investment (spending to you) based upon their work would be founded upon shifting sand.

As a matter of probability, the predictions of Mr. Snyder, the War Manpower Commission and the Social Security Board may yet come true—but not for any reason which they took into consideration when they made their forecasts. If we have unemployment running into the five, seven or eight millions, it will be because the big CIO unions have, with Government's assistance, succeeded in tying reconversion into knots by hamstringing the automobile industry.

The full employment bill is undergoing some tailoring in the House. The committee which has it in charge agreed yesterday to drop the budget device altogether. Now if the committee will take the next logical step and report unfavorably on the whole cockeyed program of job predictions and compensatory Federal spending, it will be doing the country a genuine service.

The young men who know more about what is in store for business than business itself were spectacularly wrong in the information they gave their superiors last September. How can anyone assert with a straight face that their data will be reliable in the future?

## For Military Training

EXTENSION OF REMARKS
OF
### HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Manchester Union of December 5, 1945:

FOR MILITARY TRAINING

According to the findings of those organizations that make a business of polling public opinion, three out of every four citizens in the United States favor universal military training. Surface appearances, and the diffidence of Congress regarding this important issue, may seem to contradict these findings. But only until one remembers that organized opposition to any measure is always more fervent and vocal than the large body of public opinion, and that Congress is usually more responsive to that opposition.

If a high percentage of the letters written to Congressmen on this issue are strongly against it, that is only because the bulk of the public does not write letters to Congressmen. Those who favor universal military training are more or less passive. They will express their opinion if it is solicited, but only then. The result is that a noisy minority gives the impression of being far stronger than it is, because it dominates the field of discussion.

One of the soundest sources of opinion in a matter like universal military training is the returning veteran. These men have had knowledge of war at first hand, and of the dangers which the Nation faces. The service which they have just completed is the evidence of their patriotism and their interest in adequate national defense. These men know what the defense of the Nation today involves in training and preparation. It is therefore not surprising to discover the high percentage of returning veterans who believe that universal military training is the only sound guaranty of future national security.

The danger in dealing with any national issue is that minor considerations or prejudices shall dominate the discussion. That this is true in the case of military training is

not surprising. But in facing this issue one consideration must of necessity supersede all others. That is the question of national security in a world where high-powered weapons of war have made continued preparation imperative. With the V-bomb and the atomic missile, instruments of future attack, the time factor becomes the controlling element in national defense. It is the height of folly to disregard this fact. To do so is to play with danger. It is futile to talk about personal rights or personal comfort at a time when a new war may be the total obliteration of life itself at a moment's notice. Obviously, to escape this danger when it comes, we must be prepared to meet it promptly. And when one considers the time required to learn how to operate modern weapons of defense, the argument for universal military training becomes invincible.

## Resolutions of Union County, Iowa, Farm Bureau

EXTENSION OF REMARKS
OF
### HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. LeCOMPTE. Mr. Speaker, the Farm Bureau of Union County, Iowa, at the recent annual meeting of members held at Creston, Iowa, on November 6, adopted constructive resolutions, and Members of Congress will be glad to study the proposals from one of the best counties in the greatest agricultural State.

Under leave to extend my remarks in the RECORD, I include therein this set of resolutions:

REPORT OF RESOLUTIONS COMMITTEE, UNION COUNTY FARM BUREAU

FOREWORD

Now that the struggle our Nation has been engaged in for the past 3½ years is over and our attention is turned to the immediate problems of reconversion from a wartime basis to a peacetime standard, we should all be thankful and give expression of our appreciation to those people who assisted on the various farm fronts.

Farm people made great sacrifice of life, of time, effort, and material and natural resources. They realize, too, that equal effort, vigilance, and thought must be put forth to prevent the chaos that has always been the aftermath of war.

To that end we again pledge our allegiance to our Government, to the Iowa Farm Bureau Federation, and the American Farm Bureau Federation, and reaffirm and endorse those policies that we have previously endorsed that have not as yet been made effective: Therefore, be it

SECONDARY ROADS

*Resolved*, That we request the allotment of money for secondary roads be on the basis of need of transporting farm products and of school children.

WEEDS

Recommend State and county action on measures to control weeds, one of the most serious farm problems, and further recommend provision be made providing for mowing of weeds on roadsides of all township roads.

INSPECTION

That State supervision be given to private institutions serving farmers, particular reference being made to community sale barns and frozen-food lockers.

RURAL ELECTRIFICATION

Recommend that electric service be made available to every farm home.

REA

Request that Congress appropriate sufficient funds so that adequate finance may at once be made available to the cooperative utilities serving Union County.

Recommend the establishment of adequate electric generating plants so that service may be maintained on all rural lines.

EXTENSION WORK

That the 4–H Club work, home project activities, and work with rural young married people be continued and strengthened in the county.

STATE INCOME TAX

That the State-income tax should be restored to 100 percent, the same to be used as a replacement to be used to better school conditions.

FEDERAL FARM PROGRAMS

We recognize the continuing need for the services rendered by the various Federal farm agencies and express our appreciation for their cooperative effort in meeting farm problems.

APPRECIATION

We wish to express the appreciation and thanks of the membership to the employees of the Farm Bureau for their untiring work in the organization.

ED HANRAHAN,
*Chairman.*
MRS. FRED HOOD.
L. W. HERRING.
HOMER PORTER.
R. AUSTIN GRIFFIN.
MRS. FLOYD BROWN.

## Demobilization

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. JUDD. Mr. Speaker, it is so seldom these days that we hear a word of commendation for the way in which the armed services are handling demobilization that I am glad to be able to include with my remarks the following letter from a father who has been ill and who needs his boy to help handle his business. The boy has only 43 points, and therefore is not yet eligible for discharge on that basis. The father's report on his visit to a separation center where the son is working deserves reading:

MINNEAPOLIS, MINN., *November 30, 1945.*
Hon. WALTER H. JUDD,
*House of Representatives,*
*Washington, D. C.*

MY DEAR MR. JUDD: I have just returned from spending a day at Camp McCoy, Wis. I went down to the camp with the idea there might be some way of persuading the commanding officer that my son William, who is stationed there, might be released. I was very courteously received and shown the regulations that govern these matters. Brigadier General Rice, the commanding officer, took the time to explain why he had ruled against my son's release; gave me a personally conducted tour of the separation center and explained to me the manner in which the returning soldiers are discharged.

While I think the War Department should make a ruling more liberal in such cases as my son, I have no quarrel with General Rice and his decision. I found the separation center working in a very efficient, well-timed manner, with every consideration given to the men being discharged. I had an opportunity to go through every department, including the medical examination, and was present at the ceremony when the men received their medals, if any, and their final discharge papers. The whole procedure is efficient and dignified, and reflects credit on the Army and the officers in charge, particularly General Rice and Major Hammond.

I thought you would be interested in my reaction as not many civilians have an opportunity of seeing how this work is done.

With best regards, I am,
Yours very truly,
MORRIS T. BAKER.

## Bulwinkle Bill, H. R. 2536

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. WHITE. Mr. Speaker, for the consideration of my colleagues, I am transmitting a letter from Mr. W. J. Hynes, a prominent citizen of Boise, Idaho:

BOISE, IDAHO, *December 1, 1945.*
Hon. COMPTON I. WHITE,
*Member of Congress,*
*Washington, D. C.*

DEAR CONGRESSMAN: I sincerely trust that you may see fit to actively support the Bulwinkle bill (H. R. 2536). The purpose of the bill and its only purpose, as the language clearly shows, is to make it possible to carry out the will of Congress. After many years of steady growth and development in transportation the Congress in 1940 declared the national policy in regard to transportation. That declaration appears at the beginning of the Interstate Commerce Act. No one—not even the opponents of this bill—challenges that policy. Everyone concedes that it is fair and just and sensible. Experience has clearly shown that the observance of that declared policy requires a certain degree of conference and cooperation between the shippers and the carriers who haul their freight and between the carriers themselves. While it is readily agreed that some acts of cooperation are necessary and proper, it has been contended that other acts would be a violation of the antitrust laws. The purpose of the bill is to direct the Interstate Commerce Commission to determine, after public hearing, whether or not a specific proposed act or method of cooperative procedure is or would be "in furtherance of the national transportation policy." Upon such a determination the act or procedure would not be in violation of the antitrust laws.

It is a common thing for Congress to enact laws which, under certain conditions, may conflict with each other. There has developed a clear conflict between, on the one hand, the Interstate Commerce Act, as it has been amended from time to time and as late as 1940, and, on the other hand, the Sherman antitrust law as it was enacted in 1890. The only purpose and effect of the bill is to resolve that conflict—to make both laws consistent and proper—and, by so doing, to make them both stronger in their practical application.

This bill would not promote or sanction monopoly. Section 5 of the Interstate Commerce Act prevents consolidations, mergers,

pooling of traffic, and other kinds of monopoly. That section has 16 subparagraphs and is complete in its coverage, placing full supervision in the hands of the Interstate Commerce Commission. That section would not be changed by this bill.

Furthermore, the bill itself contains all necessary safeguards. By a specific provision of the bill no agreements between carriers of different classes would be permitted. (See section 3.) Thus conference between shippers and railroads and between shippers and truck lines, for example, would be permitted if they were in furtherance of the national transportation policy but no such agreements would be permitted between railroads and truck lines or between any carriers of different classes.

The bill has had the earnest consideration of all parties interested, particularly the shippers who pay the freight. Their complete confidence that the bill would not promote or sanction monopoly is shown by their unanimous support. As you know, the bill has the approval of the following Idaho organizations: Idaho Potato and Onion Shippers; Idaho Woolgrowers; Idaho Cattlemen's Association; Idaho State Grange; Idaho Farm Bureau Federation; Order of Railroad Conductors; Idaho Cooperative Council; Idaho Mining Association; North Idaho Chamber of Commerce, and numerous local chambers of commerce; Idaho Department of Agriculture; Idaho Public Utilities Commission, whose chairman, Mr. Cornell, appeared before the committee to testify in behalf of this measure; Idaho Motor Truckers Association; Idaho Branch, Associated General Contractors of America; and many others.

I sincerely believe that the enactment of this bill is in complete accord with the overwhelming majority of the people of Idaho.

Very truly yours,

W. J. HYNES.

## Uniform Divorce Law

EXTENSION OF REMARKS
OF
### HON. HOMER A. RAMEY
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Law Student magazine:

UNIFORM DIVORCE LAW

(By Richard Harding Armstrong, Ph. D. LL. B.)

Fast travel between States has necessitated change in many things. Interstate business has done the same. When each of these United States were more or less sovereign, and when a man was born, married, acquired a fortune, and died, all within a radius of 20 miles, there was little need for uniformity of law between the States. The law of a neighboring State was unimportant. It affected only its inhabitants generally. Today, however, we are concerned with the laws of a sister State almost as much as our own in many particulars. Many live in one State and work in another. Many are working in several States. Large business houses do business in all States. Uniformity of law in many ways is very helpful; almost necessary. Uniform business acts have been enacted to fit the demand and need.

All are aware today, that divorce is a necessary evil. Some feel it to be a safety valve and a blessing. Certainly in practice, we have all found it to be the only answer to some domestic difficulties. Different States have entirely varying legislation on the subject. Grounds for divorce range from none in South Carolina to 14 in Kentucky and New Hampshire. Classified in one way there are 36 grounds in the United States and District of Columbia.

The answer is that the wealthy citizen need not be at all concerned with the law of his or her State but may choose any one of the 36 grounds; establish a residence of a varying period in any one of the States and have the bonds of matrimony severed. Some complications arise in the lawyers' mind; in some States a man may be married while in another he is not; he may be a bigamist in one State and not in another; his children may be legitimate in some States and bastards in others and so on through the familiar haze of complications brought about by lack of uniformity in marriage and divorce laws. The only solution is an acceptable uniform act. Strange as it may seem, such an act should not be difficult to arrange. Considering the grounds for divorce, we might safely arrive at that conclusion.

Incapacity or impotency is recognized as a ground for divorce in 34 States. There should be little objection to this as a ground. The same rule applies to adultery recognized in 47 States and the District of Columbia; South Carolina sh uld yield to such an overwhelming majority even though its constitution need be changed. Even constitutions do not always reflect the mind of the times. Desertion or abandonment is a ground in 44 States. The period varies from 1 to 5 years (R. I.). At best the period must be arbitrary. There can be no particular argument in favor of any certain number of years over one. One, two, and three years are most popular. It is difficult to see how any legislature could object to 2 years. Forty States recognize conviction of crime as a ground. One State has a special ground in crime against nature. There would seem to be no special reason for this ground. Certainly courts would consider it a most serious form of cruelty whether committed on the married spouse or another. Intemperance, drunkenness, intoxication, and addiction to drug could all be classified under intemperance in drink or drug. Over 20 States recognize this ground in one form or another. Pregnancy of wife by another man is a ground for divorce in 14 States. Actually it is considered as a valid ground in nearly all States under other provisions of law. Without making it a separate ground, if it happens after marriage it is covered by adultery and if before it should be made a ground for annulment. Twelve States have as a ground insanity or lunacy. There being very good logical argument both for and against mental derangement as a reason for divorce, I shall not list it as a uniform ground for divorce, for the reason that the majority of States have not done so. Further, fortunately such cases are not very frequent, and when they do occur, the sane spouse thinks of things other than divorce usually. Non-support or like neglect is recognized in 25 States. Forty-one States have a cruelty provision. This is probably the most used section in any State recognizing the ground. While 1 State, at least, attempts to distinguish between extreme cruelty and cruel and abusive treatment by statute there seems to be no very good reason for supposing that cruelty is not broad enough to cover both classes of cases.

There are many other offenses for some special local reason which are made grounds for divorce in one or more States. The fact that there might have been some very good reason for enacting such provisions is not denied, but that they are unnecessary or properly covered by some other provision seems to be more apparent. For example, varying periods of absence unheard from are grounds in a few States. These can be properly covered by desertion. Lewd behavior, violent and ungovernable temper, attempt on life of other, public defamation, prostitution or licentiousness prior to marriage, vagrancy, uniting with certain religious societies, venereal disease, imprisonment for life, and so on are each a ground in one or two States. It is quite evident that the particular offense is better covered by a broader ground mentioned above.

Therefore, I shall list what might be wrought into a model uniform statute listing grounds for divorce, broad enough to cover all necessary cases:

1. Incapacity or impotency.
2. Adultery.
3. Desertion or abandonment, 2 years.
4. Conviction of infamous crime.
5. Intemperance in drink or drug.
6. Nonsupport or like neglect.
7. Cruelty.

It is interesting in reading the divorce statutes of different States to note how closely the above table resembles many of the various statutes. No doubt the time will come when something of the sort will be adopted by a majority of the States, together with uniform regulations as to residential requirements, alimony, and the like.

## New Year Greetings

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. PITTENGER. Mr. Speaker, the holiday season is with us and the Christmas bells will soon be ringing out their message. The notes are strangely mixed this year, with love and hate, greed and generosity, grief and joy, and many other contrasts which suggest themselves.

Perhaps one of the most lofty sentiments connected with Christmas and the New Year was written by Alfred Tennyson, who contrasts the old with the hopes of the future in this language:

CHRISTMAS AND THE NEW YEAR

Ring out, wild bells, to the wild sky,
The flying cloud, the frosty light:
The year is dying in the night;
Ring out, wild bells, and let him die.

Ring out the old, ring in the new,
Ring, happy bells, across the snow:
The year is going, let him go;
Ring out the false, ring in the true.

Ring out the grief that saps the mind,
For those that here we see no more;
Ring out the feud of rich and poor,
Ring in redress to all mankind.

Ring out a slowly dying cause,
And ancient forms of party strife;
Ring in the nobler modes of life,
With sweeter manners, purer laws.

Ring out the want, the care, the sin,
The faithless coldness of the times;
Ring out, ring out my mournful rhymes,
But ring the fuller minstrel in.

Ring out false pride in place and blood,
The civic slander and the spite;
Ring in the love of truth and right,
Ring in the common love of good.

Ring out old shapes of foul disease;
Ring out the narrowing lust of gold;
Ring out the thousand wars of old,
Ring in the thousand years of peace.

Ring in the valiant man and free,
The larger heart, the kindlier hand;
Ring out the darkness of the land,
Ring in the Christ that is to be.

And those who love mankind and translate their words into deeds, and their ideas into ideals, will find the whole philosophy of Christmas and the beginning of the New Year encompassed in this lofty and stirring language of Tennyson.

Most of us have listened year after year to a recital of the Christmas story which portrays a visit from that character, Santa Claus, so real to the boys and girls at this time of the year. In the magazine Coronet for December 1945, we are told about the authorship of the classic, A Visit From St. Nicholas. I think the inspiration of this story will be felt by everyone who reads it. The author of the article is Keith Monroe, and the article and the poem are as follows:

A FATHER'S GIFT TO ALL CHILDREN

"Your son is dying," the doctor told the college professor. "Technically, it's a case of shock plus loss of blood. But actually, the boy just doesn't want to live. If you can think of something that will cheer him up, even temporarily, he may rally."

The professor's son was only 7 years old. That day he had been galloping his pony along a winding pathway. The pony had slipped and fallen hard, slamming the little boy to the ground.

When they found the boy, he lay in a pool of blood, with the prostrate pony thrashing feebly beside him. The animal's leg was broken. So they shot the pony and carried the boy home to his father.

The lad had seen his beloved pony die—and he had lost the desire to live.

That was the terrible problem that faced Prof. Clement C. Moore one dark afternoon shortly before Christmas of 1822. Cheer the boy up, the doctor had said. But what did Moore know about cheering up little boys? He had devoted most of his life to producing a monumental work entitled "A Compendious Lexicon of the Hebrew Language: In Two Volumes." As professor of biblical learning and interpretation of scripture at the Diocesan Seminary, his style of writing and speaking was dignified, almost pompous. He had just finished writing an essay expressing his alarm because "more of the well-disposed among my young countrymen do not devote their leisure hours to the attainment of useful learning rather than to frivolous amusement."

But now Professor Moore knew he must devise a frivolous amusement to keep his son alive.

So the father turned away and went to the desk in his own study. He thought a while then began to write desperately, scratch out, and write again. For 2 hours his quill pen raced over sheet after sheet of foolscap. At last he rose and hurried into his son's bedroom.

The boy looked up at him again, his face white and streaked with tears. Dr. Moore began to read—to read in a gay and rollicking voice what he had just written:

" 'Twas the night before Christmas, when all through the house
Not a creature was stirring, not even a mouse."

The long poem was totally unlike anything Clement C. Moore ever wrote before or afterward. But millions of children have been enchanted by it for generations without end. And the one child for whom it was written? He liked it, too—liked it so well that he kept on living for Christmas, and for 60 years thereafter.

"A VISIT FROM ST. NICHOLAS

" 'Twas the night before Christmas, when all through the house
Not a creature was stirring, not even a mouse;
The stockings were hung by the chimney with care,
In hopes that St. Nicholas soon would be there;
The children were nestled all snug in their beds,
While visions of sugarplums danced in their heads;
And mama in her 'kerchief, and I in my cap,
Had just settled our brains for a long winter's nap,
When out on the lawn there arose such a clatter,
I sprang from the bed to see what was the matter.
Away to the window I flew like a flash,
Tore open the shutters and threw up the sash.
The moon on the breast of the new-fallen snow
Gave the lustre of mid-day to objects below;
When what to my wondering eyes should appear,
But a miniature sleigh and eight tiny reindeer,
With a little old driver, so lively and quick
I knew in a moment it must be St. Nick.
More rapid than eagles his coursers they came,
And he whistled and shouted, and called them by name:
'Now, Dasher! now Dancer! now, Prancer! and Vixen!
On, Comet! on, Cupid! on, Donder! and Blitzen,
To the top of the porch, to the top of the wall!
Now dash away, dash away, dash away all!'
As dry leaves that before the wild hurricane fly,
When they meet with an obstacle, mount to the sky,
So up to the house-top the coursers they flew,
With the sleigh full of toys—and St. Nicholas, too.
And then in a twinkling I heard on the roof
The prancing and pawing of each little hoof.
As I drew in my head, and was turning around,
Down the chimney St. Nicholas came with a bound.
He was dressed all in fur, from his head to his foot,
And his clothes were all tarnished with ashes and soot;
A bundle of toys he had flung on his back,
And he looked like a peddler just opening his pack.
His eyes—how they twinkled; his dimples how merry!
His cheeks were like roses, his nose like a cherry!
His droll little mouth was drawn up like a bow,
And the beard of his chin was as white as the snow;
The stump of a pipe he held tight in his teeth,
And the smoke it encircled his head like a wreath;
He had a broad face and a little round belly,
That shook, when he laughed, like a bowlful of jelly.
He was chubby and plump, a right jolly old elf,
And I laughed when I saw him, in spite of myself;
A wink of his eye and a twist of his head,
Soon gave me to know I had nothing to dread;
He spoke not a word, but went straight to his work,
And filled all the stockings then turned with a jerk,
And laying his finger aside of his nose,
And giving a nod, up the chimney he rose;
He sprang to his sleigh, to his team gave a whistle,
And away they all flew like the down of a thistle.
But I heard him exclaim, ere he drove out of sight,
'Happy Christmas to all, and to all a goodnight.' "

Peculiarly appropriate at this time of the year, having in mind the close of a global war and the vivid knowledge of our people that the sons of America, many of them, will spend this Christmas and this coming New Year's Day in foreign lands, the following verse written by our own poet, Henry Van Dyke, will strike a responsive chord in every American heart, in every land:

AMERICA FOR ME

'Tis fine to see the Old World, and travel up and down,
Among the famous palaces and cities of renown,
To admire the crumbly castles and the statues of the kings—
But now I think I've had enough of antiquated things.
So it's home again, and home again, America for me!
My heart is turning home again, and there I long to be,
In the land of youth and freedom beyond the ocean bars,
Where the air is full of sunlight and the flag is full of stars.

Oh, London is a man's town, there's power in the air;
And Paris is a woman's town, with flowers in her hair;
And it's sweet to dream in Venice, and it's great to study Rome;
But when it comes to living, there is no place like home.

I like the German fir-woods, in green battalions drilled;
I liked the gardens of Versailles with flashing fountains filled;
But, oh, to take your hand, my dear, and ramble for a day
In the friendly western woodland where Nature has her way!

I know that Europe's wonderful, yet something seems to lack;
The Past is too much with her, and the people looking back,
But the glory of the Present is to make the Future free—
We love our land for what she is and what she is to be.

Oh, it's home again, and home again, America for me!
I want a ship that's westward bound to plough the rolling sea,
To the blessed land of room enough, beyond the ocean bars,
Where the air is full of sunlight and the flag is full of stars.

The song of the angels has become the hope of the world; that hope, which springs unbidden in the human breast, is a sentiment universal at this time: "And on earth peace, good will toward men."

We all hope that the coming year may bring a lasting realization of this wish to our country and to the world.

## The President's National Health Program

EXTENSION OF REMARKS
OF
**HON. A. L. MILLER**
OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include an editorial from the Journal of the American Medical Association entitled "The President's National Health Program and the New Wagner Bill."

Mr. Speaker, in my opinion, the President's health program is not only one of socialized medicine, but one of political medicine. If such a program were adopted, it would require an additional 4 to 8 percent pay-roll reduction, a year, from the worker or the employer. It would mean lowering the quality of medical care in this country. This editorial points out many of the fallacies in the Wagner-Murray-Dingell health bill.

THE PRESIDENT'S NATIONAL HEALTH PROGRAM AND THE NEW WAGNER BILL

Last week the Journal published the message sent to Congress on November 19 by President Harry S. Truman, submitting a national health program. On the same day Senator WAGNER, of New York, introduced, for himself and Senator MURRAY, Senate bill 1606, and Congressman DINGELL introduced into the House the same version of the new Wagner-Murray-Dingell bill. Obviously a number of conferences between those interested must have preceded the coordinated action that occurred. Senator WAGNER accompanied his introduction of the measure with another opening statement, a brief summary of the health provisions and a long series of questions and answers about the prepaid medical care provisions of the National Health Act of 1945. The language of the President in his message to the Congress and of Senator WAGNER in his statement to the Senate and the language of the measure itself are the same trite locutions that the advocates of Federal compulsory sickness insurance have used for these many years in trying to force these proposals on the American people. According to Arthur Sears Henning, "the compulsory health insurance plan is chiefly the brainchild of Isidore S. Falk, research director of the Social Security Board, and Michael M. Davis, a member of the CIO Political Action Committee."

Elsewhere in this issue appears an analysis by the bureau of legal medicine of the American Medical Association of the changes in the latest version of the Wagner-Murray-Dingell bill from that introduced previously. Mr. WAGNER in his opening statement again informs the Senate that this bill is the result of the constructive suggestions of many outstanding medical authorities and of labor, farm, consumer, and health organizations interested in improving the Nation's health. Neither the President nor Mr. WAGNER nor the Social Security Board made the slightest attempt to consult any representatives of the American Medical Association, which now embraces in its membership more than 125,000 American physicians. Typical of the kind of government that the bureaucrats would force on the American people is this technique of consulting advisers who are known in advance to be in complete agreement with the persons whom they are supposed to advise and of studiously avoiding any one who might offer a contrary opinion. This is government by minority with a vengeance.

The insidious strategy that has been employed in recent years, leading toward culmination by approval of the President of the United States, is clearly apparent to those with an understanding of what has been going on. Since the time when Michael Davis and his associates engineered the formation of the Committee on the Costs of Medical Care down to the present, a gradual enlistment has been secured in behalf of socialized medicine of every agency that could be induced to combine in a movement toward socialization of the American system of government. Around their banner have rallied the members of the so-called Boas' Physicians Forum, certain doctors of philosophy in the field of economics and sociology, the socialistic element in the American Public Health Association and those employed in governmental health agencies who thirst for increased power and expansion of the bureaus that they serve. Let the people of our country realize that the movement for the placing of American medicine under the control of the Federal Government through a system of Federal compulsory sickness insurance is the first step toward a regimentation of utilities, of industries, of finance, and eventually of labor itself. This is the kind of regimentation that led to totalitarianism in Germany and the downfall of that nation. Its prime consideration is deduction from the pay of the worker and taxation of the employer so that the government does for the people most of the things that our people in the United States have been accustomed to do for themselves. The time may yet come when the American worker, as was the case with the German worker, will have more deductions from his wages than "take home" pay.

SOCIALIZED MEDICINE AND FREE CHOICE

In the President's message to the Congress and in the material written for Mr. WAGNER by those whom he employs and consults in the preparation of his proposals, constantly reiterated is the statement that these proposals are not socialized medicine. The first of Mr. WAGNER's questions and answers is concerned with this question in semantics. Worse than socialized medicine is state medicine. In any system of state medicine the government collects the funds available, manages the service, and distributes the payments. Is not this what the Wagner-Murray-Dingell bill would accomplish? True, in the proposed legislation for a Federal system of compulsory sickness insurance, patients are told that they will have free choice of doctors; doctors are told that they will have the right to refuse any patients; but the bill provides that the Surgeon General can limit the number of patients that a physician will see, and that the Surgeon General will provide other physicians when too many patients select one or more of the physicians in a community. The measure mentions free choice of doctor for the patient, but it is free choice within limitations. It is free choice of the doctors who are willing to work under the system. It is free choice if the doctor is willing to work under a fee bill set up by the Government. It is free choice if the doctor is willing to accept a payment of so much per person per year for his services. It is free choice if the doctor is willing to work as a salaried member of a group. It is free choice if the doctor is willing to abide by a majority vote of the doctors licensed to practice in his community. What kind of free choice is that?

Senator WAGNER has always insisted that compulsory health insurance—really sickness insurance—is not socialized medicine. Actually the proposals involve both socialized medicine and state medicine. The American people are entitled to straightforward, honest statements from their representatives as to what such proposed measures would do to them and to their physicians. They have not had such a straightforward statement either from the President in his message or from Senator WAGNER in his statement to the Congress.

THE STATISTICS

In opening his message to the Congress, President Truman referred again to the rejections of registrants under the draft and to the rejections of women who applied to the Women's Army Corps and other women's services. Every fundamental principle of the scientific interpretation of statistics has been violated by the proponents of Federal compulsory sickness insurance in their utilization of these figures as propaganda for the measures they propose. The facts have been provided in several previous editorials in the Journal. One needs only to recognize that the standards of physical fitness for military service changed greatly from the Army of preparedness to the end of the war. Men who were rejected as physically unfit for military service in the first year of war were accepted as quite fit for complete service or for limited service in the later years of the war. Furthermore, none of the proponents of this legislation have ever admitted frankly, as they should if they are interested in an honest scientific statement of the facts, that a tremendous number of those rejected as unfit could not be made more fit by any knowledge available to modern medicine today.

In his questions and answers presented to the Congress, Senator WAGNER again challenges the statement that health conditions and standards of medical service in the United States are higher than in any other large country in the world. Here are more tricks with words. The figures for New Zealand have often appeared better than those of our country, but New Zealand is quite different from the United States and not in any sense of the word comparable. And even if it were comparable, the statistics for New Zealand concern its white European population and carefully avoid citation of its colored and native population. As we go to press New Zealand's system of socialized medicine reportedly faces failure and bankruptcy. Mr. WAGNER challenges the figures for life expectancy in the United States. Let him consult the most recent figures prepared by the leading life insurance companies in this country, which have a financial stake in the life expectancy of the people; he will discover how far ahead the United States really is of any other country in the world with or without a national compulsory system of medical care.

FEDERAL AID FOR HOSPITALS

The President's program includes five features. First is the proposal to grant Federal aid for the building of hospitals and health centers throughout the Nation. Both the American Medical Association and the American Hospital Association have approved the principles of the Hill-Burton bill, which make this proposal effective. Senator WAGNER in his statement to the Congress reminds us that he himself introduced a hospital construction bill in 1940. He has now eliminated from the new Wagner-Murray-Dingell bill the section in the previous draft which concerned hospital construction. This at least is fortunate for the American people because the provisions of the Hill-Burton bill, as modified by the Senate committee which conducted the hearings and which has reported the bill favorably to the Senate, are much more wise and much more scientific than the proposals of WAGNER, MURRAY, and DINGELL. Under the Hill-Burton bill money will not be spent until the need is shown by a survey conducted in the individual State. Furthermore, State organizations will be developed which will have the responsibility for allocation of funds and the control of the expenditure of funds. The place of the Federal Government will be to act as custodian of the funds and to provide the funds when adequate evidence of their need and

proper utilization is supplied. Incidentally, this measure recognizes that some areas of the country may need funds much more than do others, and beyond the ability of the individual State to match any Federal appropriation.

MATERNAL AND CHILD HEALTH SERVICES

The second recommendation by President Truman is for an expansion of maternal and child health services. Apparently President Truman failed to take into account the pending Pepper bill for maternal and child health, which was analyzed in an editorial published in the Journal on November 10. Senator WAGNER in his statement to the Senate does recognize the existence of other proposals. The Wagner-Murray-Dingell bill would make increased grants-in-aid through the Children's Bureau to the individual States for maternal and child health and crippled children, the States developing their own plans, which, of course, would have to have the approval of the chief of the Children's Bureau. Here the grants are made variable according to the established need in the individual States. The Wagner-Murray-Dingell bill requires that the chief of the Children's Bureau enter into agreements or cooperative working arrangements with the Surgeon General of the Public Health Service to insure coordination in the administration of programs and services in this field. This at least is a recognition of the fact that Federal coordination of health activities is a fundamental need in our Government at this time. The Congress will soon give authority to the Chief Executive to transfer various agencies in order to secure coordinated action and to bring about unified policies. The American Medical Association has recommended again and again and again that the number one step necessary in coordination of health activities is removal of the Children's Bureau from the Department of Labor to the United States Public Health Service in the Federal Security Agency. Previous Presidents have apparently been unable to accomplish this highly desirable objective. The American Medical Association favors the utilization of Federal or State funds for the extension of maternal and child health services where needed.

President Truman also urges an extension of public health services throughout the United States. At present less than half the counties in the United States are provided with full-time public health service. Perhaps some of our counties could never utilize a full-time public health service efficiently; groups of counties could, of course, cooperate. Nevertheless the American Medical Association has been among the leaders of the Nation in urging that adequate public health service be made available in every community in our country.

EDUCATION AND RESEARCH

Confusion again prevails when the proposals of the President's message and of the Wagner-Murray-Dingell bill are read in connection with the proposals of the various measures for establishing a National Science Foundation. This Mr. WAGNER recognizes in his statement to the Congress; he points out that the Senate Committee on Military Affairs has before it legislation providing for the promotion of medical research and professional education. He indicates that these proposals remain in his revised National Health Act because he wants to help promising individuals without financial means to get a medical education, and he wants to overcome "the restrictions which the medical schools apply particularly to persons of minority groups." For these purposes the sums of $10,000,000 the first year and $15,000,000 the second year are mentioned. Incidentally, the Senator wisely recognizes the necessity for training adequate personnel in the field of public health if progress is to be made in that field. Nevertheless the Congress would do well to place in some single agency all of the various programs allocating funds for training personnel in the field of research, medicine, the public health, the basic medical sciences, and related fields of study.

Scientists throughout the Nation are agreed on the desirability of a National Science Foundation. Physicians favor increased research on cancer and on mental disease and indeed in every medical field in which research could be helpful. They do feel, however, that any National Science Foundation should be directed by a competent board of scientists, who could coordinate research and education. Apparently the present administration seems to prefer a National Science Foundation which would be headed by a politically appointed director. Apparently WAGNER, MURRAY, and DINGELL seem to prefer a system in which the Surgeon General of the United States Public Health Service would allocate funds to medical schools, research institutions and similar agencies that meet his approval. The movies have a czar who directs and coordinates their activities in certain fields, but they can remove him when they wish to do so and they are free to resign from his support when they wish to do so. Similary baseball has its czar. Now apparently our Government wants a czar for medicine and another czar for research, but there is no way in which those who would be compelled to subscribe for the establishment of the system and for those who would be compelled to work under the system to resign. Their freedom would become a thing of the past.

Incidentally, in his statement on medical research and education, Senator WAGNER has one quite revolutionary paragraph. Under the Constitution of the United States the control of medical practice is within the province of the individual States. Here is the statement of Senator WAGNER:

"State licensure laws are so complex, so lacking in uniformity and so obstructive of interstate mobility of qualified practitioners that some Federal legislation is necessary to bring order out of this chaos. There are no medical schools in some States, and measures to remedy this defect should be considered. Finally, the discrimination which most medical schools practice against student applicants from minority groups requires congressional consideration and appropriate action."

Regardless of whether or not some of the abuses to which the Senator refers exist, the Senator finds only one possible remedy—compulsion by the Federal Government and removal from the individual States of their right to control their own policies. Furthermore, has he made the slightest possible investigation to find out whether or not every State in the United States can support and operate successfully a modern medical school? Has he considered the necessity for teachers, for pupils, for patients? One is reminded of the State which built with Federal funds a hospital for crippled children that exhausted the needs of a hospital for crippled children in that State within 2 years.

COMPENSATION FOR LOSS OF EARNINGS DUE TO SICKNESS

The fifth proposal in the President's program and in Senator WAGNER's measure is compensation for loss of earnings due to sickness. The American Medical Association, through its house of delegates, has consistently favored such insurance. Most strange among the changes in the present measure offered by WAGNER, MURRAY, and DINGELL from their previous promulgation is the failure to indicate anywhere in the proposed measure the taxation to be provided on the worker and on the employer to provide funds for this measure. True, the President in his message mentions 4 percent on the first $3,600 earned by an employee, but the measure itself makes no such mention. Perhaps the mention was avoided deliberately by Senators WAGNER and MURRAY and by Congressman DINGELL so that the bill could be referred to the Senate Committe on Education and Labor, of which Senator MURRAY is chairman, rather than to the Senate Committee on Finance, to which the previous measure was referred. This may serve to secure hearings on the legislation and thus to keep it alive rather than to permit it to sink into the innocuous desuetude that was the fate of the previous measure.

EVILS OF COMPULSORY SICKNESS INSURANCE

Many of the answers included by Senator WAGNER in the questions and answers submitted by him to the Senate are denials of the charges repeatedly made against his proposals by those who wish to see the principles of initiative, democracy, and freedom maintained in American medicine. Thus he categorically denies that his measure "will destroy the private practice of medicine," that it will place the medical profession "under the direction of one man, the Surgeon General of the United States Public Health Service," that "the National Advisory Medical Policy Council will have no authority," that "the hospitalization provisions in the bill" will "destroy the voluntary hospital system," that "medical education will be controlled by the Surgeon General," that "the bill will plunge the physicians into political slavery," that "people will be obliged to take any doctor the Surgeon General tells them to," that "the Surgeon General of the Public Health Service" will have "the power and authority to designate which doctors can be specialists." The Senator by sophistic argument and smooth phrases categorically denies all of these charges against this measure; the Journal of the American Medical Association now insists that every one of these charges against the measure is valid and that the actual text of the measure itself is the proof of that validity.

No one will ever convince the physicians of the United States that the Wagner-Murray-Dingell bill is not socialized medicine. By this measure the medical profession and the sick whom they treat will be directly under political control. By this measure the great system of private hospitals and community hospitals that have grown up in our country will depend for their continued operation on funds paid to them by a Federal Government agency. By this measure the philanthropic efforts for the care of the sick, which have been the pride of our Nation, will be forever deterred. Through this measure competent young men who would enter the medical profession will be forced to seek other fields of action still remaining under our democracy which still permit the exercise of individual initiative and freedom of thought and action. By this measure doctors in America would become clock watchers and slaves of a system. Now, if ever, those who believe in the American democracy must make their belief known to their representatives, so that the attempt to enslave medicine as first among the professions, industries or trades to be socialized will meet the ignominious defeat it deserves.

## Practical Democracy

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following from an editorial on the financial page of the New York Times, Saturday, December 1, 1945:

PRACTICAL DEMOCRACY

It was stimulating to observers who attended the preliminary meeting of Alien Property Custodian Markham yesterday to establish the conditions of sale of a former enemy property to note the readiness with which the Government official not only welcomed but solicited suggestions from the large number of prospective bidders present. Of the latter, some, bothered by minor details of procedure, others, by broad aspects, discussed back and forth and suggestions were readily adopted with greater dispatch than would have been expected had Mr. Markham been less frank and cordial.

## Try It in Moscow

EXTENSION OF REMARKS

OF

### HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William Philip Simms, from the Washington Daily News of December 5, 1945:

TRY IT IN MOSCOW

(By William Philip Simms)

The Communists are again picketing here in Washington. A little history of this phenomenon, therefore, might be worth while.

Before August 1939 American Communists and fellow travelers, like most of us, were bitterly anti-Nazi. Then came the Stalin-Hitler partnership greenlighting World War II, the Molotov-Ribbentrop deal partitioning Poland and Molotov's speech blaming the war on Britain and France. "The imperialistic character of this war," he said, "is obvious to anybody who wants to face realities and does not close his eyes to facts."

Overnight the party line in America changed to fit Moscow's. President Roosevelt was accused of being a "warmonger." The White House and Congress were picketed. Placards read: "The Yanks are not coming," "No convoys," "No AEF," "Stop wars."

The Communists waged a relentless crusade against national preparedness. They advocated strikes in war industries. Strikes, which the Justice Department said were Communist-fomented, closed down airplane plants for weeks during one of the most critical periods of the war. There was intense opposition to lend-lease.

The anti-Hitler fever in this country was dubbed "war hysteria." Communist rallies sang such songs as this:

"Oh, Franklin Roosevelt told the people how
he felt.
We almost believed him when he said:
'Oh, I hate war, and so does Eleanor!'
But we won't be safe 'til everybody's dead!"

Then came another sudden about-face. That was when Hitler double-crossed Stalin in June 1941 and launched his armies against Russia. Silent for about 48 hours as though the breath had been knocked out of them, American Communists began to call the war "a life or death struggle between democracy and fascism and urged "all measures, military, and otherwise" to defeat Hitler. It now became "a sacred obligation" for American workers to turn out every gun, every plane.

Forgetting the immediate past, they claimed it was "slander" to say the Communists had engaged in conspiracies against the war effort. Instead of saying "The Yanks are not coming," they began to demand a second front in Europe to help Russia—again losing sight of the fact, partly owing to their own efforts, the United States was far from prepared to invade Europe.

Among the organizations which did flip-flops besides the Communist Party, were the Young Communist League, American Peace Mobilization, American Youth Congress, League of American Writers, American League for Peace and Democracy, the Committee to Rebuild the American Labor Party, Greater New York Industrial Council, and others.

Now the war is over and the Communists are picketing the Government again. They are demanding that our marines be brought back from China. Hurley is out, they say, and Secretary Byrnes should go, too. And so on. They have made another complete somersault.

Observers, watching the parade, can hardly help wondering what would happen if Russion picketers suddenly started walking up and down Red Square, in front of the Kremlin, with placards reading: "Get the Red Army out of Poland." "Get our boys home from Rumania and Iran!" "Out with Molotov!"

## No Boats, No Votes

EXTENSION OF REMARKS

OF

### HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. LANDIS. Mr. Speaker, all of our overseas servicemen who were in action on the different fighting fronts expected to be home this Christmas. They cannot understand what has happened to the boats which were to bring them home. Most of them are willing to return in the same boats which carried them to these foreign countries. They have adopted the slogan "No boats, no votes."

They cannot understand why these boats are available for celebrations. They want to know why they transported horses, dogs, and Chinese troops to America. Many are at a loss to know why their outfit has been given several sailing dates and then had them canceled at the last minute.

Congress has done everything possible to bring these boys home as soon as possible. I made a protest to the Chief of Staff, United States Army, about bringing Chinese to the United States to attend school at a time when American troops are on the waiting list in India for transportation home. It was reported to me from a member of the American armed forces, that the ship *General A. W. Greely* left Calcutta, India, August 28, 1945, and landed in New York City September 26, 1945, with many American troops but among them were several hundred Chinese troops. However, there were many American troops left behind who were eligible to come home. American troops in India and also those on the returning ship resented this incident.

Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD a letter I have received from an American serviceman stationed on Okinawa:

OKINAWA, *November 26, 1945.*

DEAR MR. LANDIS: I have been reading in the papers and magazines quite a bit lately (on my own time) quite a lot of words, just can't realize what is the truth and what is propaganda. Very much of it seems to have a hidden meaning, or rather is a lot of words written uselessly to present a picture to the public, not as it is, but as a few of the people want it presented to all of the people.

Now take the shipping situation, for example: Excluding all of our ships that are in the China seas hauling Chinese soldiers into North China, manned with soldiers and marines of our country, subjecting them to the dangers of a war—your pardon—a revolution of and in which they have no part. I can sit here as I write this and actually see enough ships at anchor to take at least one-third of the soldiers, 100,000, from this coast tomorrow. Of course, I understand that none of these vessels have been converted into the luxury liners that the Army, the Navy, and business agents are demanding that shall be used for the return of troops, but if they were unfit in their present condition and yet we were sent here in them, why can't we have the last say as to whether or not we can be returned in them, as they are now.

Now if you as the people's representative could get the ships back that we have loaned to our gracious and grateful allied countries at cessation of hostilities and put them to a use that they were meant for by the laborers and bond buyers that made them possible, we of the Army would appreciate it very much and be humbly grateful.

Sir, the ships that I have referred to as being within my vision at the present time do not include the ships at anchor at the present time in Buckner Bay and on other beaches along the coast of this island. The ships I have reference to are along Soba Beach and Naga.

Now as to the waste in the Army of all taxpayers' money, yours, sir, and mine, within 6 months after I become a civilian ?? again. I know that our Army or any army that has operated on the large scale that we have, cannot possibly operate without a maximum of waste, but when extravagant waste is so grossly carried on that each and every man shudders at the thought of it, then it is time for someone to take charge and put a stop to such waste. Of course, it is understandable that there should be a reserve of all kinds on this island and every isle under our command at the present time. But when this reserve gets so large that they are taking crates out and piling them by the thousands (unopened) and either covering them over with dozers or else loading them on ships and dumping them into the ocean to get rid of them, and yet still keep shipping the same kind of supplies in that they say it is unprofitable to return to the States. Such equipment as tanks, of course, we know the war is over and all, and they are a lot of iron we will admit, but they were in very good running condition and it wouldn't be too costly to have returned them to the Philippines where even in prewar days they would have been as good as any to have run out on a hill to be made a target of. That is one of the more bulky items. Now take clothing, for instance, the way woolens are packed for shipment in the Army there can be quite a few thousand dollars worth done up in packages and stored in odd corners. That was also one of the scarce articles and so essential that it took the cuff off every pair of trousers in the United States for 3 years, yet in one dump fire on this island

alone there was enough wool clothing (that the bales had never been broken on) burned to put a cuff on every pair of pants made during the same period.

Now I understand that there are quite a large number of representatives—I don't know just exactly what or who they represent—known as the investigating committee out investigating. Well, if they come in with a report on anything with the exception of the officers' clubs, nurses' quarters, and the Red Cross, they should have quite a few interesting topics for discussion.

Now, sir, in regards to the morale of the men in this Army. At the present time it is at a very low ebb, and as for myself, I can't see it improving any in the near future under any circumstances, as they have all done their job and it was a job very well done, and with the one aim left—that was that the quicker it was over, the more quickly they would get home, not only to their family, to their accustomed way of life. Then came the points—leaving some of the mudders in the trenches till the very last.

Oh, yes; I can throw a rock on one now that has spent 26 months in that category till VJ-day—from Bougainville on up through Luzon to here, and with all of that good time he has only 69 points to his credit. Now I know another soldier that never even heard a buzz bomb who has been out for quite awhile now with 87 points to his credit. Which just goes to prove British were right in this instance of one pun they have about our Army—join the American Air Corps and get an invasion ribbon and battle star for every picture you see in the theater.

Then, too, it is impossible to present a picture to the soldiers of anything but slave labor, as they are being driven now, what with the war being over and 42 percent of our officers getting an advancement in grade since VJ-day, and the rest trying to drive their men till they can receive one. This even after the announcement that all construction cease with the exception of recreational projects.

Sir, I will now close—not having enough points to get home—hoping you will use your influence and persuasion to help the boys here that do have points ranging from 115 down to 60 that are now eligible and still here waiting for a ship that as far as they know is still in the very distant future.

S. A. T.

## Tito's People's Republic

EXTENSION OF REMARKS
OF
### HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. WASIELWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of December 1, 1945:

TITO'S PEOPLE'S REPUBLIC

The expected has happened. The delegates recently "elected" in Yugoslavia to a body which was to be simultaneously a constituent and legislative assembly have unanimously approved a proclamation read by Marshal Tito declaring Yugoslavia a "federal people's republic," abolishing the monarchy and decreeing King Peter II, together with the entire Karageorgevitch dynasty, "deprived of all rights vested in him and his dynasty."

From his place of exile in London, King Peter has issued a statement charging that this decision represents "a series of acts by Marshal Tito which have had the effect of removing such a decision from the hands of the people themselves and placing it entirely within his own and those of the 'national front.'" The King then points out that this is a flagrant violation of the Tito Subasitch agreement, "concluded under the auspices and guaranties of the great Allies," providing for a plebiscite on the future constitutional status of Yugoslavia, arrived at by free and democratic elections, as provided for under the Yalta agreement. The King points out that Dr. Subasitch and other members of that original coalition government have resigned in protest, but "the Tito government simply trampled down all their obligations, destroyed the agreement, and organized a totalitarian form of government, in most striking contrast to the ideals of the United Nations, the Yalta resolutions, and the promises they themselves had made." The King's statement ends by saying that he will do his best to "liberate Yugoslavia from tyranny, no matter whence it comes."

There can be no reasonable doubt that King Peter's statement is substantially correct. For the outside world the issue is not whether or not the monarchy should be reestablished, but whether the Yugoslav people as a whole should have the right freely to decide their own destiny. That right has obviously been denied them. Yugoslavia is today in the grip of a totalitarian dictatorship as absolute as any that exists anywhere on earth. The recent "elections," though technically unobstructed, were preceded and accompanied by such intimidation and terrorism that the opposition dared make no campaign or nominate candidates of their own. Furthermore, armed resistance continues in Serbia and Bosnia on a considerable scale, with militant unrest in other sections of the country despite concentration camps and mass executions. Whether or not the western powers decide diplomatically to recognize "accomplished facts," the future of Tito's "people's republic" promises to be a stormy one.

## Appropriations for UNRRA

EXTENSION OF REMARKS
OF
### HON. JOHN W. MURPHY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. MURPHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann from the Washington Post of December 6, 1945:

PLAUSIBLE NONSENSE

(By Walter Lippmann)

A minority, chiefly but not entirely, composed of Republicans, has been holding up the appropriations for UNRRA, alleging that American funds should not be used in any foreign country which does not give American newspaper correspondents full opportunity to report how the funds are used. Any experienced journalist who has worked in foreign countries will tell Congress that this method of promoting freedom of the press is a piece of plausible nonsense. It is one of those proposals which seem sensible enough when first they are looked at, and quite senseless when they are looked into.

For it is a proposal to have American reporters perform the duties of American officials. It supposes that American newspapers have enough foreign correspondents to cover regularly and continuously the distribution of relief in all the cities of Greece, Poland, Yugoslavia, Austria, Czechoslovakia, Albania, Italy, the Ukraine, Byelorussia, Korea, Formosa, and China. It supposes that this army of American correspondents—which of course does not exist, which could not be recruited, which American newspapers could not afford to maintain, whose reports our papers would not have space to publish—that this army of newspapermen can make more accurate reports on the operation of relief than our embassies and legations and consulates, our military missions and our intelligence services, not to say the Americans who serve in UNRRA itself.

The proposal, assuming it to be sincere, is plainly the work of men who do not know how correspondents get most of their information in foreign countries where for the most part they do not speak the language, and where there are no free and independent local newspapers. They get it from American officials and the officials of friendly governments, and from persons with whom they make contact largely through American and other officials. The amount of first-hand direct reporting that can be done independently of the regular American official observers is much smaller than most laymen seem to realize. In the countries where UNRRA operates it would be the exception rather than the rule that a foreign correspondent obtained significant news that officials do not already know. He cannot have anything like the same opportunity to find out what is going on.

It is, therefore, quite misleading for Congressmen to tell our people that they must depend on the foreign correspondents to see to it that money given for relief is honestly administered. That is the business of our officials abroad. Where the press comes into it is to report to the people what the officials are reporting, and to watch, which they can do, whether these officials are making competent reports.

It never was, and never could be the function of the press to be inspector, accountant, auditor, detective of a widespread, complicated operation like the administration of relief in some 13 or 14 foreign countries. These gentlemen in Congress may think they are paying a compliment to the press but in fact they are trying to burden the press with a responsibility which is cannot discharge.

The obstruction which the UNRRA appropriations have encountered this autumn has brought this country very near to a moral default on a solemn commitment. UNRRA was created on the initiative of the United States, and in March 1944 the House by a vote of 338 to 54 and the Senate by 47 to 14, passed Public Law 267 offering, without conditions, to give UNRRA an amount equal to 1 percent of our national income in 1943. All the other United Nations, whose territory had not been devastated by the war, made the same pledge of 1 percent of their 1943 national income. Great Britain has fulfilled her pledge; we have not. The necessary authorizations and appropriations have been stalled in Congress on the alleged ground that the destitute must starve, the sick go without medicines, unless our correspondents can be present.

The delay is a scandal and a dishonor. Already, for lack of funds Congress had promised it, UNRRA has had to cancel orders for medicines, clothing, shoes, seeds, plows, and material to provide emergency shelters. That is a cruel punishment to inflict upon suffering humanity in the name of the freedom of the press. It has been a dishonorable thing to do in the name of a government which has justly prided itself that when it makes a pledge, it does not squirm out of it.

Of all the people in this country, newspapermen have the strongest reason for repudiating and resenting this demagoguery about the freedom of the press. Senator WHERRY and his associates need have no fear that American journalists and editors who use

the freedom of the press, who have defended it long before he ever took an interest in the press, who promote it wherever and whenever they can, have ceased to care about this most fundamental of all civil rights. If the best of our editors and correspondents do not want to have helpless and destitute people suffer and die in order that they may get access to the rigidly censored countries, it is not because they need any instruction from Senator WHERRY about the importance of freedom of the press. It is because they do not wish to strike foul blows for their principles, and that they do not think it wise or decent to submerge the principles of liberty, which are meant to give life and hope to mankind, in a morass of misery and disease and death.

## Statement of Republican Members of Congress

EXTENSION OF REMARKS
OF
### HON. CHARLES A. HALLECK
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a statement of principles, policies, and objectives authorized and approved by the Republicans of the Senate and the House of Representatives after consideration and conference action thereon:

Today's major domestic issue is between radicalism, regimentation, all-powerful bureaucracy, class exploitation, deficit spending, and machine politics, as against our belief in American freedom for the individual under just laws fairly administered for all, preservation of local home rule, efficiency and pay-as-you-go economy in government, and the protection of the American way of life against either fascist or communist trends.

We believe that genuine social and economic progress can be achieved only on these American constitutional principles and it is our purpose to give our citizens this clean-cut choice.

In foreign affairs we shall continue to strive to avoid partisanship. But we shall also seek to avoid secrecy, inefficiency, and drift.

To these purposes we dedicate the following statement:

FOREIGN AFFAIRS

We support the United Nations Organization for international peace. We look with particular hope to the General Assembly as the "town meeting of the world" wherein the organized conscience of mankind shall find effective expression in behalf of peace with justice.

We support the indispensable inter-American system as a regional part of the international organization.

We will engage in essential international relief as a humanitarian obligation and to prevent chaos through misery. We demand sound management and protection against exploitation in this connection. We will assist other nations to rehabilitate themselves under arrangements consistent with intelligent American self-interest and over-all limitations that shall not jeopardize our own economic recovery and stability.

We believe in fulfilling to the greatest possible degree our war pledges to small nations that they shall have the right to choose the form of government under which they will live and that sovereign rights and self-government shall be restored to those who have been forcibly deprived of them. We deplore any desertion of these principles.

We will seek to find common policies with the other great powers. But we reject great-power domination of the world and the thesis that world peace requires us to endorse alien doctrines or to abandon efforts to seek justice for the weaker peoples of the world.

We advocate ultimate international agreements to stabilize military establishments. We demand open diplomacy, at home and abroad, and free communication throughout the world.

We consider that the maintenance of a strong, solvent, free America is the basis of our greatest contribution to world order.

NATIONAL DEFENSE

We stand for a well-trained and fully equipped Army, Navy, and Air Force adequate to meet any emergency under future conditions of warfare. It must be supported by the most modern scientific research, a strong industrial system, and adequate reserves of trained men with the best weapons and equipment.

DOMESTIC AFFAIRS

Government alone cannot feed the people, nor employ them, nor make the profits from which new enterprises and new jobs are born. Government can help its people to prosperity by lightening the burdens of debt and taxes, laying down the rules of fair play, and protecting those whose own strength and resources are not sufficient to protect themselves.

We believe that equality of opportunity should be available to all, regardless of race, creed, or beginnings. Every individual should be afforded an opportunity to prosper according to his talents, his abilities, and his diligence, subject only to a like right for his neighbor.

We deplore the political tactics which have resulted in class consciousness and strife. We oppose those who would destroy us through the continuation of such strife and struggle.

Our tax burden must be equitably distributed. Taxes must be so imposed as to stimulate creative enterprise, not destroy it, and to afford the individual adequate purchasing power. Tax forms and taxpaying must be simplified. There must be an incentive for business to expand production and employment and for the individual to invest his savings in such expansion. There must be a fair return to both labor and investors if we are to have jobs for the workers, goods for the consumers, and adequate revenue for the Government.

The solvency of our Government must be assured. Outlay must be brought in line with income. The value of the dollar must be maintained.

Economy in Government spending must be achieved. Extravagant Government spending now advocated by the administration in every field can lead only to ruin. Programs involving expenditure of Federal funds should not be undertaken unless the justification therefor is clearly established.

Wartime limitations, restrictions, and controls must be removed. The instant a right or liberty can be returned to the people, it shall be returned. Neither the war nor any other excuse shall be justification for fastening regimentation permanently upon the American people.

Bureaucracy, with its thirst for power and self-perpetuation, must be drastically reduced. The number of Government employees must be cut to an efficient minimum.

We reaffirm our belief in the right of labor to organize and bargain collectively with employers as one of the cornerstones of competitive enterprise. The processes of such bargaining must be protected and strengthened if we are to have real jobs and prosperity for all.

For that purpose we believe that governmental decision must not be substituted for free agreement, but governmental machinery to promote peaceful settlement of disputes should be improved.

Demands by either side must be kept within the bounds of reason and fairness and both sides must recognize the rights of the general public.

The desired end of bargaining between management and men is a contract. Once that contract is made, it should and must be equally binding on both parties as to agreements made.

Free collective bargaining and contracts resulting therefrom must not be nullified or destroyed by resort on either side to willful violence or unlawful destruction of property.

We favor Federal aid to the extent necessary, to States and through States to their subdivisions, to assist them in affording subsistence, shelter, and medical care to their citizens who are unable to provide for themselves. Such aid, including unemployment compensation, must be based on State and local initiative, operation, and responsibility, without Federal bureaucratic interference. It must avoid socialization of the medical profession or of any other activity. Federal aid must be in amounts which do not impose an unreasonable burden of taxation on the rest of the population who pay the bills.

We have pledged stability of farm prices during the reconversion and readjustment periods. We will carry out those pledges. We will support sound, permanent proposals to give farmers expanding markets and their fair share of the national income. We reaffirm our long-standing support of soil and water conservation. We shall support measures designed to better rural living.

A grateful nation demands that those who fought in its defense, their widows and orphans, must never be forgotten. The best of medical care and rehabilitation, education, and training for all desiring it, and efficient assistance in securing homes, farms, businesses, and real jobs, must be provided for the veteran. Nothing in the Federal program should lessen the responsibility of each local community to provide for the return to civilian life of its gallant sons and daughters in a spirit of understanding, helpfulness, and dignity.

## Wagner-Ellender Housing Bill

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

MASSACHUSETTS STATE
FEDERATION OF LABOR.
*Boston, Mass., November 29, 1945.*

Hon. THOMAS J. LANE,
*Member, House of Representatives,*
*House Office Building,*
*Washington, D. C.*

DEAR REPRESENTATIVE LANE: During the recent special victory convention conducted by this organization, October 26–28, 1945, which was called specifically to consider matters affecting trade-unionists and other wage earners in the postwar era, the enclosed resolution was unanimously adopted.

It is sincerely hoped that you will give this matter favorable consideration and assist in whatever way possible in the active support of Senate 1342, commonly known as the Wagner-Ellender bill.

Respectfully,

KENNETH I. TAYLOR,
*Secretary-Treasurer.*

Whereas this great Nation in concert with its allies has brought to a victorious conclusion its war to make the world and the Nation a better place in which to live; and

Whereas the exigencies of war have proven that the combined resources of Government, labor, and capital can accomplish the well-nigh impossible; and

Whereas the transitional or reconversion period from war to peace is one of paramount importance which may affect the economy of the Nation for many years: Therefore be it

*Resolved*, That the body in convention assembled reiterate and again record itself in its determination to do all in its power to bring about the ideals for which the youth of the Nation fought, bled, suffered, and died; and be it further

*Resolved*, That this body act to make possible two of the aims of every veteran and worker in the Nation, the right to a job at a saving wage and the right to a decent house in which to live; surely in this Nation and in this day, not too much to expect; and be it further

*Resolved*, That this organization petition the next session of the General Court of Massachusetts for appropriate enabling legislation to make effective the terms and conditions of the Wagner-Ellender housing bill (S. 1342); and be it further

*Resolved*, That this body record itself in active support of a bill now before the Congress of the United States, known as S. 1342, or the so-called Wagner-Ellender bill, which seems destined, if passed, to become a milestone on the road to a good home for every citizen to be supplied by both private industry and government, and in so doing will create a tremendous value of work in the transition period; and be it further

*Resolved*, That the officers of this organization be directed to make known the views of this organization and the contents of this resolution to every Member of the Congress in this Commonwealth; to every member of the committees of the Congress concerned with the bill; to the parent body of this organization; to his excellency the Governor of the Commonwealth, and to such other persons, groups, or organizations as may seem desirable.

## Loans to Foreign Nations

EXTENSION OF REMARKS
OF
### HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. REED of New York. Mr. Speaker, the call has gone out to the nations of the earth, "Come one, come all, and get your billions; there is no limit to New Deal generosity." The taxpayers be damned and the devil take the hindmost, under the philosophy of those who spend and spend and tax and tax, is now the order of the day.

These transactions of so-called loans to foreign nations remind me of the experience of Benjamin Franklin with his "poor relation" who persuaded Franklin to lend him $50; then he asked Franklin for a sheet of paper in order to give him a note for the sum.

"What," said Franklin, "do you want to waste my stationery as well as my money?"

The case of an Englishman is also in point: Charles Fox, the English statesman, once received a severe lecture from his father who asked him how it was possible for him to sleep or enjoy any of the comforts of life when he thought about the immense sums he owed.

"Your Lordship need not be in the least surprised," answered Charles, "your astonishment ought to be how my creditors can sleep."

Mr. Speaker, our foreign debtors will not lose any sleep because of what they owe us, but the tax-paying creditors here at home will eventually find it difficult to sleep. Our debtors may have pleasant dreams, but the American creditors will suffer many a hideous nightmare when the grim specter of inflation stands by the bedside to torment and haunt them.

Under leave to extend my remarks, I insert an article by Constantine Brown which appeared in the Washington Star under date of December 5, 1945:

THIS CHANGING WORLD
(By Constantine Brown)

Washington officials are expecting a stream of representatives from Europe in the near future. They will all come with the same mission: to obtain loans ranging from millions to billions of dollars.

The British have already made arrangements to obtain a loan of close to $4,000,000,000. The remaining hurdle is Congress, where conditions of the loan are likely to be thoroughly scrutinized.

Conversations between the Russian representatives and State and Treasury Department officials for a reported $6,000,000,000 credit have been carried on for some time, and while no definite arrangements have been made it is expected that they will be completed early next year.

In the meantime, Poland has asked visas for an economic mission seeking to negotiate a loan of between $300,000,000 and $500,000,000.

The negotiations for such sums will be more complicated because of the uncertainty of Poland's economic situation. The American Government, and particularly the Export-Import Bank, is taking the position that it must be satisfied that money advanced will be repaid with interest in the not too distant future.

But while Britain and Russia will be able to meet their obligations, through repayment in kind, or particularly in the case of Russia, in gold, there is little hope that the Poles will be able to meet obligations they intend to assume.

The entire stock of gold Poland possessed before the German invasion is now either at Fort Knox or in Canada. It is subject to lengthy litigation because it did not belong to the Polish government but to the Bank of Poland in which the government had some stock. The owners of the shares of that institution—a majority of whom are outside Poland—are not likely to yield their possessions and will demand that the gold held in America be kept here until their shares have been redeemed in yellow metal.

A mere decree on the part of the Warsaw government that the Bank of Poland has been nationalized will not bring their case before American and Canadian courts.

The repayment of a loan with exports is equally complicated.

As in the case of Hungary and Rumania, the Polish government has placed its entire national economy under the wing of Moscow. The Polish currency, the zloty, has been tied to the Russian ruble and has no gold backing. Poland is not free to promise any payments in kind unless it obtains Moscow's consent. Moreover, it does not possess the necessary machinery to exploit the newly acquired mines in Silesia, a province which was given Poland by Russia in exchange for the agricultural lands east of the Vistula River.

The Potsdam agreement gave Russia the right to 75 percent of the industrial machinery in her zone of occupation in Germany. She has fully availed herself of this agreement, although it meant stripping the factories, mines, and harbors in a territory which had become Polish in accordance with the Moscow-Warsaw agreement.

The Swedes, who have relied on Silesian coal in the past, are shivering this winter. The new owners of the Silesian mines can no longer deliver the coal because of lack of machinery and harbor facilities.

Many members of the board of the Import-Export Bank who are commercially rather than politically minded want to know what guaranty Poland can offer to repay the sums she desires.

The Warsaw government has already indicated it wants only a small amount of dollars in cash for the upkeep of its foreign missions. The balance is needed to purchase industrial machinery and goods in this country. This suggestion may appear appealing provided the Poles can give adequate guaranties that the purchased equipment will remain in the country and will not be transferred to Russia. In other words, the Import-Export Bank feels that America should not be called on to pay for the reparations Russia is taking from the Germans.

As things now stand, the Russians are taking everything that is movable, not only from the former Reich, but also from areas which have been annexed with her consent by certain United Nations. These nations are compelled to appeal to the United States for replacements.

A Finnish delegation also is expected in Washington soon. The reparations that country is compelled to send to Russia have made it impossible for her to have enough exports to purchase abroad the essentials for her population. Washington officials realize that the situation in that little republic—the only European country which has honored its indebtedness to the United States—is desperate.

Finland's credit is good, but there is a suspicion that the machine tools and the manufactured goods we might sell her on credit would find their way to Russia in the shape of reparations. Those who have control over the American purse strings can see no valid reason why the United States should to be a heavy contributor to the payment of Russian reparations.

## Claremore, Okla., Bids for Capital of United Nations

EXTENSION OF REMARKS
OF
### HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. SCHWABE of Oklahoma. Mr. Speaker, Claremore, Okla., is the county seat of Rogers County. The late Will Rogers was born in that county, and called Claremore his home. It is the resting place of both Will Rogers and his wife. A most beautiful shrine and memorial has been erected to his memory at Claremore. This memorial contains a museum of literature, art, and articles possessed by Will Rogers during his lifetime. Thousands of students and admirers of the homely philosophy of Will

Rogers visit his shrine and this museum every month, where they may read his writings and see the things which made life dear to him.

Claremore is a thriving little city, a health resort located in a rich agricultural section. Two trunk-line railroads, one transcontinental highway, and numerous other State highways make it accessible to the outside world. It is situated almost exactly in the center of the United States.

The mayor of Claremore has sent me the following telegram:

GEORGE B. SCHWABE,
*Congressman, Washington, D. C.:*

Claremore seeks the capital of the United Nations. Claremore is the home of the late Will Rogers. At a meeting of the various civic organizations of this city Sunday December 2, it was voted to make a bid for the capital of the United Nations and the following resolution seeking same was adopted:

"Whereas Will Rogers was a world citizen and an ambassador of common-sense humor, promoted peace and friendly relations among all people; and

"Whereas his life exemplified the aim and purposes for which the United Nations Council was created; and

"Whereas it would be a fitting recognition and reward for the service he rendered to relieve the distress and suffering of mankind during the depression years of 1931 and 1932, to establish the United Nations capital of the world at his home town, and site of the magnificent memorial which marks his final resting place."

On behalf of all civic bodies, the chamber of commerce, the American Legion, and the city of Claremore, I have the honor to request that all possible exploration be made to determine the feasibility of selecting Claremore, Okla., as the United Nations capital of the world.

ELMER TANNER,
*Mayor, City of Claremore, Okla.*

Mr. Speaker, just as Will Rogers was the ambassador of good will from this country to the people of every civilized land, his home folk would like to extend the same spirit of good will to the peoples of the world by having established in their midst the capital of the United Nations. Will Rogers said that he never met a man he did not like. If that spirit could become world dominant, and permeate the lives of the peoples of all races and climes, foreign policies might become a thing of the past and we might truly become a family of nations wherein all men would be brothers. The spirit of Will Rogers would triumphantly hover over assemblies of peoples of the earth at Claremore envisioning such an utopia.

## Child Welfare in Europe

EXTENSION OF REMARKS
OF
### HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mrs. SMITH of Maine. Mr. Speaker, under leave to revise and extend my remarks, I include a statement made by Katharine F. Lenroot, Chief of the Children's Bureau, United States Department of Labor, who has just returned from Europe.

While attending the International Labor Conference in Paris, Miss Lenroot visited Germany, saw something of war-torn Europe, and from her experience abroad makes the following observations:

An American who has not before visited war-torn Europe can fully measure the depth of the impression made only on her return, when she sees here the streets full of automobiles, the people well clothed and well fed, the shops and markets full of goods at prices which bear at least some measurable relation to prewar levels, and knows that everywhere in the country homes and buildings are intact, streets brilliantly lighted, and houses warmed.

Europe's population, children and adults alike, face a winter of cold, privation, and hunger that will lead to hundreds of thousands of deaths unless prompt relief is made available. It was commonly reported that all over Europe cemeteries are being enlarged against the winter's toll of human life.

The work of the International Labor Conference, meeting in Paris in its twenty-seventh session, centered upon four main subjects: Maintenance of high levels of employment; protection of children and young workers; minimum standards of social policy in dependent territories; and constitutional questions relating to the structure and functioning of the International Labor Organization and the ways in which it may be brought into relation with the United Nations Organizations.

* * * * *

A very important feature of the conference was the reports presented concerning the suffering of the peoples of Europe and the effects of war and occupation on children and young people. * * *

Cold, hunger, tuberculosis, and separation of families through deportations for forced labor in Germany, and service in the armed forces and in the resistance movement, have had serious effects upon children and young persons in the occupied countries.

* * * * *

The story of the displaced peoples of Europe is stark tragedy. Already millions have been repatriated, but 1,300,000 are still in assembly centers in Germany, including some 800,000 Poles and about 138,000 Baltic peoples. Approximately 100,000 children under the age of 14 years are reported to be in those centers. These displaced people live in barracks, 8 to 12 to a room, adults and children of all ages together. Children without parents or relatives number now nearly 4,000 in the American and British zones, under the care of UNRRA, and more are being located every day, as foreigners are being registered throughout Germany. A central tracing bureau has been set up in Berlin and every effort is made to identify children and locate relatives. Three children's centers have been set up in the American zone and two more are about to be established. Here, as observed in one center, these orphaned and homeless children will receive excellent care. Many are stunted in growth, underdeveloped in muscular coordination, and greatly retarded in school. For instance, 70 percent of the Polish children under the care of UNRRA are in the first and second grades. In one camp, it was reported, there were 990 expectant mothers. In another camp it was expected that 25 babies would be born by Christmas. One of the first concerns of the Poles in the camps has been to regularize family life, as the Germans did not allow the Poles to marry. In one day 16 weddings were performed, and all the brides managed to have white dresses.

In a children's center at Giesterhausen, Germany, maintained by UNRRA, the writer talked with a 16-year-old Lithuanian girl who had been in a hospital when the Germans took her parents for forced labor. She, of course, had never heard of them from that day to this. Later, probably at the age of 13 or 14, she herself had been taken into Germany for forced labor. She had been in two concentration camps, the last one in Belsen. Her number, 14,027 (approximate), was deeply tatooed on her forearm. The horrors that child and her companions had witnessed must have been indescribable. * * *

There are practically no Jewish children between the ages of 6 and 12 years among the displaced persons in Germany. Apparently only those of preschool or adolescent age have survived.

Americans can well be proud of the service being given by American UNRRA staff, working with staff from England, France, Latin-American countries, and other parts of the world. It is a real international enterprise. Many more trained workers are needed, for with the first mass repatriation accomplished, the "hard core" of cases remain. School supplies—paper, pencils, crayon—have been lacking until recently, and are still very scarce, and arrangements for the first books, in Polish, were just being made at the time of the writer's visit. One of the first spontaneous developments in a camp is said to be the school. The displaced population is said to include persons competent to teach from nursery school through university, but most of the teaching has had to be done without supplies or equipment and from memory. Many of the displaced people are superior in every way, and must be given their chance to contribute to the rebuilding of the world.

* * * * *

The first part of the work of the Committee of the ILO on Protection of Children and Young Workers dealt with proposed lists of points for consultation with governments, preparatory to next year's conference when draft conventions will be drawn up for presentation to member governments for ratification. The subjects discussed were medical examinations for fitness for employment and restriction of night work, both relating to children and young persons.

## A Letter From Manila

EXTENSION OF REMARKS
OF
### HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. REED of New York. Mr. Speaker, I have before me a letter from Manila which every Member of this House ought to read. I have not the time nor can I get the time to present this letter to the House. UNRRA seems to have the right-of-way because of the deep concern for foreign victims of this war rather than our soldiers who were also victims of the war. It is very evident that the refusal of Congress to take action to help the boys is not deceiving these young men who have fought so nobly and so well. They will not fail to discover who have signed discharge petitions to give them a lift and who have failed to do so. Under leave to extend I am inserting a letter from Manila to which I referred. Again I urge each member to read it:

Who started the rumor that there is a shortage of shipping (there isn't—the ships are not being used for a just purpose) to get the men home? Why should 200 Filipino civilians be allowed shipping space in order

that they may pursue their college educations State-side while we, many of whom have had their college educations (like myself) interrupted, be left here and forgotten except by our wives and loved ones back home?

Why should we be forced to stay over here with nothing to do but follow the whims of our generals, stand reveille, retreat, drink all the liquor we can get to drown our sorrows, and run around with free women, while we hear big lies about how soon we shall be sent home? (Think of the degraded bunch of men that will eventually return to the States if this condition persists.)

Why shouldn't we receive a justified monthly bonus (the Government gives our good money and our articles to other countries or throws it away but we don't reap any of it) for being forced to to remain overseas while the big wigs here and back in the States take all our troubles with a grain of salt? Right now, in our young lives, is our earning period for the future or the time to pursue our educations which were interrupted. Some amends in the form of compensation should be made for our waste of time which is definitely not our fault.

We have seen graft. We have seen waste. Yet there is one thing that we haven't seen. That is the ships that are to come and take us home as fast as they brought us over here.

According to the bull sessions I have had with the officers and men over here and what I've seen published in the Mailbag of the Daily Pacifican, an AFWESPAC publication here in Manila, the men over here now do not intend to forget who their Congressmen are who have let them down. Our aim over is to write everyone we know telling them how and why we are being detained and also what should be done in the next elections to see that such injustices are not carried out again. As for me, my legal voting residence is St. Paul, Minn.

I would like to request a copy of your bill and also who the Representatives were that voted for it. It shall be distributed about, and if possible I shall try to have part of it printed in the Mailbag, where it may receive wide publication.

Thanking you in advance, and here's hoping that this grossly unjust situation is brought to someone's immediate attention.

## Postwar Problems

EXTENSION OF REMARKS
OF
### HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. TABER. Mr. Speaker, pursuant to the consent of the House, I submit the following speech which I made before the National Cooperative Milk Producers Federation convention, on Tuesday, December 4, 1945, at Chicago, Ill.

All over the world today there is a lack of appreciation of the problems that confront us in the period following the war.

Twice in my lifetime, Germany has had an opportunity to conquer the world by peaceful means and has thrown it overboard by getting into war. She did this because her people worked a little harder than any other peoples in the world. In 1914 she was operating ships all over the world; she had colonized extensively in south Brazil, in Argentina, in Africa, in parts of China, and the East Indies. Her merchant ships were carrying nearer to capacity loads than any other merchant ships in the world. Her factories were humming. Her inventive genius and experimentation was resulting in the development of all sorts of things that were filling the markets with German goods.

At that time she had a monopoly on the world's dye industry and during the First World War it was impossible for us to get any dyes.

Then the military came along and talked the people into war and Germany wound up in an utter collapse. When the First World War was over, she had no navy and very little of merchant marine. Immediately she began to build back her merchant marine. Immediately her industry took over. They organized all sorts of cartels and different kinds of trusts. The most notorious was the I. G. Farben set-up. Her people were down, but they nevertheless were ready to work. They had been brought up to work and they knew how to work. Her merchant marine was rebuilt; her trade was extended all over the world. They were able to unsell other countries because of many reasons:

1. The price.
2. The quality of their merchandise.
3. They sent their people into every nation to develop their trade.
4. They procured enormous loans from other countries which they never intended to pay back.
5. When the airplane development began to come along, they were the most progressive of any nation.

They had their air lines all over South America, all over the Middle and Far East; all over Europe; and by the time 1939 came around their military aircraft were so far superior to anything else in the world and their military equipment was so far superior that they were able to move right in to a point where they were on the verge of victory.

It probably needed a blow like the World War to wake up the people to the situation that Germany presented. If she had not started the World War, her development of her export trade all over the world and her ship-carrying capacity would have allowed her to be in the most favorable position of any nation within a very few years.

England and France slept through that period. Doles and hand-outs from the Government were demoralizing their peoples. Those things succeeded in wrecking the French. America, from 1933 on, was subject to the same demoralizing influences. Governmental hand-outs and that sort of thing stood out rather than the development of our trade and our resources; rather than the development of the new methods of doing things that gave the Germans the lead.

Now the world is faced with the same kind of a situation. The Germans, while tremendously hard-hit, are at work cleaning up what they have. The people of Holland, Belgium and Denmark are at work, Sweden and Norway are at work. France and Italy are practically prostrate. They are not going to work. Russia is working and will make considerable headway although her methods of doing things are far behind our own. Britain is not organized. She is demoralized. Her people are not working effectively. They have the philosophy of a radical government which says to the people that they can have nationalization of industry and mines and at the same time have freedom, when history shows that this is absolutely impossible.

Unless we can maintain the private employment of our people and operation of our industry and mines, there is going to be no place for a labor union and collective bargaining and there is going to be no place for liberty in America. Unless our people get to work and get rid of the idea that unemployment insurance is the great goal, we are going to follow the line of France and England after the last war and we are going to be in the same position that they are in. At the present time England, France, Italy, and Greece are in that terrible position. They all want help from the United States. If we can help it we should not let people starve. On the other hand, we should not be handing them the means of livelihood in such a way that we prevent their recovery of initiative.

Here in the United States we are troubled with other things—strikes galore; unrest on the part of the returning servicemen and almost every segment of our population. A good deal of those strikes and a good deal of the unrest has been due to bad labor legislation. There is only one way that the Federal Government can take part in labor relations successfully and that is to act as an arbiter or conciliator between labor and the management. To my mind, that calls for the immediate repeal of the National Labor Relations Board and the establishment of a tribunal similar to the National Mediation Board which has kept peace between the railroad industry and its employees for 20 years. That is the only way that the labor unions can continue to exist in the long run. That is the only way that there can be any opportunity for liberty and freedom.

If we are going to have governmental promotion of demands of one group or another, or governmental suppression of one group or another, we are going to get to the point where we have to have a dictator who fixes the wages and the prices that every manufacturer can charge and that means only one thing—complete and absolute socialism and regimentation of all our people. This means reaction and not progress. This means the end of liberty in America.

Now we have another problem. The expenditures of the Government for this current fiscal year ending June 30 next, are going to run, as near as I can figure, $65,000,000,000. The revenue cannot exceed $35,000,000,000. This leaves a deficit for this fiscal year ending June 30 of $30,000,000,000. Next year the revenue cannot exceed $25,000,000,000. In the years following, the revenues will still further reduce because there will be no hangover of uncollected taxes of substantial amounts.

For the next fiscal year beginning July 1 next, these are some of the demands being made by the administration upon the Government:

| | |
|---|---|
| Army, peacetime basis | $9,000,000,000 |
| Navy, peacetime basis | 3,500,000,000 |
| Compulsory military training | 2,000,000,000 |
| Interest upon public debt | 5,000,000,000 |
| Departmental expenditures | 3,000,000,000 |
| Veterans' Administration | 4,000,000,000 |
| Proposed construction projects | 2,000,000,000 |
| Proposed UNRRA | 1,350,000,000 |
| Proposed loan to Russia | 3,000,000,000 |
| Proposed loan to Great Britain | 5,000,000,000 |
| Total | 36,850,000,000 |

It is easy enough to see that if we loan all this money and if we spend all this money, we are going to have a deficit in the fiscal year 1947 and a larger deficit in the fiscal year 1948. If our Government is going to survive and we are going to avoid inflation of a very dangerous character to survive, it is absolutely necessary that we cut down on the expenditures which are proposed by the different departments. None of them can be carried on on the basis that they are now being carried and the Army and the Navy even must be cut down below their asking price.

We have to consider when we are making gifts and loans to foreign countries that there is an end to the gratuities that the United States can hand out somewhere and that unless we get to that point, and unless we

get to the point where we ask these other countries to devote themselves to the task of building up their standard of living of their peoples, and do it largely by their own effort toward larger production, we are going to be in a position of serious difficulty.

At the present time we have a national debt of $265,000,000,000 with a prospect of twelve to fourteen billions more before the end of the year. We have paper money outstanding with little behind it, totalling upward of $26,000,000,000—five times what it was before the war. If you add that twenty-six billions to the two hundred and sixty-five billions and add the debts of Government corporations which the Government has guaranteed, you reach a total of $290,000,000,000 of debt already existing.

I beg the American people to wake up and realize the seriousness of the impact of these continued deficit-spending operations upon their own future and to begin to realize an unwillingness to work is going to completely destroy our prosperity. In that way alone can we maintain those ideals of liberty which have been handed down to us by generations of freemen.

## Pay of the Merchant Marine

EXTENSION OF REMARKS
OF
### HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. CANFIELD. Mr. Speaker, I have just received a letter from Mr. Donald W. McKone, judge advocate of the Merchant Marine Veterans Association of the United States, with a comparison of the pay of men in the merchant marine with those in the armed forces.

Mr. McKone's letter and statement follow:

MERCHANT MARINE VETERANS
ASSOCIATION OF THE UNITED STATES,
*Boston, Mass., December 4, 1945.*

Hon. GORDON CANFIELD,
*House of Representatives,*
*Washington, D. C.*

MY DEAR MR. CANFIELD: During the hearing on H. R. 2346, which proposes certain benefits for merchant marine veterans, it was most apparent that considerable confusion exists on rates of pay. These pay scales are a matter of public record as are those of the Army and Navy. However, to make it easier to understand them we have prepared two tables:

1. A comparison of pay of men in the merchant marine with those in the armed forces.

2. Pay rates of five individuals who belong to our Washington (D. C.) Post and represent typical ranks in the merchant marine.

May we urge that you closely examine these tables and we invite your comments.

We speak for the 300,000 men of the merchant marine in thanking you for the sympathetic hearing which you gave us.

Sincerely yours,
DONALD W. MCKONE,
*Judge Advocate.*

COMPARISON OF MERCHANT SEAMAN PAY RATES AGAINST THOSE IN ARMED SERVICES

NOTE.—Bonus payments apply only while in dangerous waters; normally England to Murmansk, around British Isles, coast of France, and Mediterranean Sea, east of Hawaiian Islands. All bonus figures in this study are prior to VE-day. Bonuses have been drastically reduced or eliminated since then.

*Armed services pay per annum*

| | |
|---|---|
| Wife and 2 children, Navy seaman, second class | $1,886.00 |
| Navy petty officer, second class | 2,303.68 |
| Navy lieutenant (senior grade) (on duty in Washington) | 3,990.00 |
| Army captain, AAF (overseas) | 5,400.00 |
| Sergeant, AAF (overseas) | 2,976.00 |

*Comparable merchant marine pay with full bonus (tax deducted) per annum*

| | |
|---|---|
| Ordinary seaman | $1,897.70 |
| Able seaman | 2,132.28 |
| Second officer (trip to Hawaii) | 2,640.00 |
| Second officer | [1] 5,280.00 |
| Boatswain ($1,350 trips to Hawaii and South America) | [1] 2,700.00 |

[1] While on sea duty from England to Murmansk, Russia—highest bonus payable.

It must be borne in mind that these are pay-roll figures. Merchant seamen do not enjoy armed services emoluments such as uniform allowances, free medical care for self and family, furlough train fare rates, reduced admission to amusement places, etc.

The Navy in its official publication All Hands, September 1945, states "A civilian has to earn $3,600 a year to be as well off as an apprentice seaman; $6,000 to equal a CPO. * * * A CPO (chief petty officer) who entered the Navy at age 20 can retire at 50—on $155.25 a month for life. Few civilians have a future like that."

PAY RECEIVED BY INDIVIDUALS SERVING IN THE UNITED STATES MERCHANT MARINE

In view of the interest shown by Congress in the pay of individual seamen we have listed below the pay received by members of our Washington (D. C.) Post who represent every section of the service.

J. R. Hawkins, 2800 Naylor Road S. E., oiler, served 1942 to 1944, wounded and permanently disabled by enemy attacks in Pacific. Average net pay received per year—$1,810.

Forrest H. Morgan, 6316 Brookville Road, Chevy Chase, Md.: Trainee for purser-pharmacist mate license. Trained at Sheepshead Bay Training Station beginning January 1944. Serious illness in training contracted and honorably discharged June 1944. Pay received $50 monthly.

Donald W. McKone, 5332 Forty-second Street NW.: Licensed officer serving at sea, 1943-44. Honorably discharged. Average net pay received $222.07 monthly.

R. Michael Ring, 7819 Stratford Road, Bethesda, Md.: Ensign to lieutenant, United States Maritime Service, administrative duty (also served some sea duty) September 1943 to April 1945. Honorably discharged. Compensated at same pay rate as United States Navy.

Fred Wormcke, 5315 Seventh Street NW.: Age 18. October 1944 to May 1945. Fifty dollars monthly while training. Permanently disabled on first sea duty, April 1945, as a result of enemy torpedoing, total pay received $200.

## Price of Crude Oil Should Be Increased

EXTENSION OF REMARKS
OF
### HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. BECKWORTH. Mr. Speaker, I call the attention of the membership of the House to the enclosed letter. I, too, feel that the price of crude oil should have been increased many months ago. The small producer, particularly if he produces marginal wells, has had and is having a very difficult time.

INDEPENDENT PETROLEUM
ASSOCIATION OF TEXAS,
*Dallas, Tex., November 28, 1945.*

Congressman LINDLEY BECKWORTH,
*United States House of Representatives,*
*Washington, D. C.*

DEAR CONGRESSMAN BECKWORTH: The time is past overdue for the OPA to be compelled to surrender its arbitrary and dictatorial power which it used during the war to deprive Texas school children of $15,000,000, the State treasury of $62,000,000, the farmers and ranchers of $217,000,000, and the State's economy as a whole of $1,500,000,000.

These startling figures stem from the OPA's obstinate refusal to permit a normal price for crude oil. All other commodities brought better than normal prices. Crude oil, which is the largest factor in Texas economy, brought a wartime average of less than $1.22 a barrel contrasted with a normal value of $1.85.

If holding down inflation means preventing enormous and unscrupulous profits, then the OPA's efforts in that respect should be backed up 100 percent. It is not inflationary for a commodity to sell for enough to pay for the cost of replacement. As far as holding the line is concerned, the OPA has steadfastly refused to let crude oil come up to the line.

During the war period from December 7, 1941, to August 14, 1945, Texas produced 2,330,542,267 barrels of oil, according to Beauford H. Jester, member of the Railroad Commission of Texas. This oil should have brought an average price of $1.85 a barrel instead of an average of about $1.22—that is, it should have brought 63 cents a barrel more than it actually did.

At 63 cents more, the 2,380,542,267 barrels should have brought Texas almost exactly $1,500,000,000. The failure to receive this just and fair added income means that Texas was penalized by that amount. Is Texas a conquered enemy subject to reparations? Then why should Texas be the victim of expropriations?

The income to Texas from its crude oil benefits every man, woman, and child in the State. Of the 254 counties in Texas, 179 now are in the petroleum-producing column. Farmers, ranchers, and other landowners, including the University of Texas, the public-school system, charitable institutions, and the like, benefit from the royalty payments for oil produced on their lands.

Royalty payments, including overrides, average 14.5 percent of the value of the oil. If Texas oil produced during the war had brought 63 cents a barrel more, the royalty payments would have been about $217,000,000 more than they were.

Petroleum is Texas' largest taxpayer. One of the numerous taxes levied upon it is known as the gross-production tax. This is a State tax. If the oil produced by Texas during the war had brought 63 cents a barrel more than it was permitted to bring, the State would have collected 4½ percent of the total amount, or nearly $62,000,000, as its part of the increase. What a backlog this would have been for postwar public works, with attendant jobs for returning servicemen.

By provision of the State constitution, one-fourth of the taxes collected from certain sources go into the public-school fund. The gross-production tax on oil is one of these. You can readily see that if the State had collected nearly $62,000,000 additional via the gross-production tax, the public-school fund's one-fourth share would have been more than $15,000,000.

The war against our two outside enemies could not have been fought, much less won, without Texas oil. Here's the record:

The war period, December 7, 1941, to August 14, 1945, covered 3 years and 250 days. During this period Texas produced 2,380,542,000 barrels of oil against 1,805,161,000 barrels produced in the comparable period immediately before the war—that is, between April 2, 1938, and December 7, 1941—also 3 years and 250 days. Texas' wartime increase was 575,381,000 barrels, or 31.3 percent.

By comparison all other oil-producing States in the Union stepped up from 3,023,936,000 barrels prewar to 3,407,860,000 during the war—a gain of 383,924,000, or 12.7 percent.

Of the total wartime increase—959,305,000 barrels—Texas accounted for 60 percent of it. If Texas had increased its production only by 12.7 percent—the gain registered by the rest of the country—Texas would have produced only 2,034,416,000 barrels instead of 2,380,542,000—a difference of 346,126,000 barrels. In other words, Texas produced 346,126,000 barrels of oil more than its pro rata share.

The last of our outside enemies—Japan—surrendered on August 14. During the 100 days since that time the OPA continues to block the road to normal fair prices for Texas oil. If you have done anything to bring about the surrender of OPA in this sector, I have not heard about it.

What do you think you can do?

Very truly yours,

D. H. BYRD, *President.*

## General Housing Bill

EXTENSION OF REMARKS

OF

### HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. BIEMILLER. Mr. Speaker, the governing bodies of the two largest industrial cities of my State, Milwaukee and Racine, have passed resolutions urging the prompt passage of the Wagner-Ellender housing bill.

They read as follows:

Whereas the metropolitan area of Milwaukee, Wis., in common with similar urban areas throughout the United States, is presently experiencing a severe housing shortage which has been in large measure caused by justifiable restrictions on the use of building materials during World War II imposed by the Federal Government as war measures; and

Whereas the inconvenience and actual hardship of such housing shortage is becoming more and more acute due to the return in ever-increasing numbers of veterans of the armed forces of the United States and such veterans and their dependents are the persons who will be the first to suffer from such housing shortage; and

Whereas it is the sense of the Joint Committee on Emergency Housing that inasmuch as this problem has in large part been caused by necessary Federal war measures, it is still the responsibility of the Federal Government as a corollary war measure necessary to reestablishment of World War II veterans in civil life, to provide such assistance, financial, by relaxation of restrictive regulations, and by the supply of existing materials, as will make it possible for the Milwaukee metropolitan area together with all other like areas, to relieve such housing shortage; and

Whereas the so-called Wagner-Ellender housing bill is now pending before the Committee on Banking of the United States Senate and is susceptible of amendment: Therefore be it

*Resolved*, That the United States Senators from Wisconsin be and they are hereby requested to prepare and submit an amendment to such bill whereby sufficient funds may be appropriated to cover the costs of dismantling existing vacant temporary war housing, transportation of such materials and its erection and rehabilitation in areas of acute housing shortage, and also where advisable to erect new temporary housing all as a necessary war measure and thereafter to do everything possible to secure the enactment of such legislation; and, be it further

*Resolved*, That a certified copy of this resolution be forwarded to the United States Senators from Wisconsin and to the Representatives in Congress from Milwaukee County.

---

*Be it resolved*, That the common council of the city of Racine does hereby go on record as urging the immediate passage of the Wagner-Ellender-Taft general-housing bill now before the Congress of the United States; be it further

*Resolved*, That the reason for this resolution is the desperate situation that all communities in this area are confronted with a serious housing problem, especially for returning veterans, which demands immediate solution; be it further

*Resolved*, That a copy of this resolution be sent by the city clerk to each and every Member of Congress from the State of Wisconsin.

## UNRRA Chief Quits in Protest at Jews' Plight

EXTENSION OF REMARKS

OF

### HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. REED of New York. Mr. Speaker, it would seem that those supporting UNRRA because of their sympathy for those pitiful victims of war would wish to insist that the money be used for the purpose intended. What good does it do to place funds in the hands of UNRRA to be used for graft and corruption? Surely, there are disclosures of black-market operations, "inhuman treatment of * * * inmates of camps sufficient to put this Government on notice." The facts fully warrant a thorough investigation of the charges made against UNRRA.

Under leave to extend my remarks, I am inserting an article entitled "UNRRA Chief Quits in Protest at Jews' Plight," which appeared in the Washington Times-Herald under date of December 6, 1945:

UNRRA CHIEF QUITS IN PROTEST AT JEWS' PLIGHT

FRANKFURT, December 5.—An American relief worker resigned as welfare director of the Landsberg displaced persons camp today in protest against what he called inhuman treatment accorded Jewish inmates of the camp.

The director, Dr. Lee Srole, a former Hobart College professor, charged that the American Army and the United Nations Relief and Rehabilitation Administration were forcing the Jews to live under deplorable conditions "where epidemics threaten hourly."

SMITH DISPUTES SROLE

Lt. Gen. Walter Bedell Smith, chief of staff for American forces in the European theater, disclosed the accusations at a special press conference in his headquarters this afternoon.

Smith disputed the UNRRA worker's charges and invited correspondents to accompany him on an immediate inspection tour of the Landsberg camp, west of Munich.

"The charges are a black eye for the Administration, if true—but the Army does not admit they are true," Smith told the newsmen. "I want you to come with me and then determine the answer."

The UNRRA official said that "thousands" of displaced persons in the Landsberg camp were in danger of death from epidemic, and that he "refused to be an accessory to their deaths."

He charged specifically that two and three people were required to sleep in single beds and that many were being housed in dark shelters which had been condemned as unfit for German prisoners of war.

SPECIAL TRAIN TRIP

He also protested that the displaced persons were receiving a meager 2,000-calorie daily diet. He said it was inadequate for people suffering from the after-effects of 6 years' imprisonment in German concentration camps.

He charged that both the Army and UNRRA headquarters had ignored all reports on the "appalling conditions" at Landsberg.

## No Time for Politics

EXTENSION OF REMARKS

OF

### HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of December 5:

NO TIME FOR POLITICS

Europe's children are unlikely to read the pages of the CONGRESSIONAL RECORD to learn the loftiness of intent with which some Members of Congress espouse the principle of freedom of the press. But they will know about that espousal all the same. They will know about it, if it should prevail when the House of Representatives acts tomorrow on the UNRRA authorization bill, through the twisting pain of hunger and disease which the great principle will inflict upon their infant bodies. They will know, and we at home will have won the dubious right to read about their agony.

These children of Europe, liberated by our armies and by the armies of our allies, desperately need the $1,350,000,000 contribution from the United States which UNRRA is now asking Congress to authorize. They need this contribution because UNRRA's funds, including even the $550,000,000 appropriation still awaiting final congressional approval, will be exhausted by the end of this year. If UNRRA's flow of supplies to the needy is to continue without interruption, the new contribution must be authorized, and an adequate appropriation of money must be made before the first of the year—indeed, before Congress goes into recess, as it plans, for a Christmas holiday.

UNRRA must have these fresh funds if it is to place orders for food and other supplies to be delivered throughout the hard winter that lies ahead.

The House Foreign Affairs Committee has recommended passage of the UNRRA authorization bill—without the attachment of any shackling amendments. But the bloc of Republican Congressmen who tried to tie their so-called free press rider onto the $550,000,000 appropriation now threaten to do the same in connection with the new authorization. This rider would prohibit the use of American funds in any country which maintained any barriers to free reporting by American newspapermen. It is, as we have said before, a provision which is administratively altogether unworkable. And what is worse, it would impose a special condition upon our participation in an international undertaking—a political condition to which the recipient nations could not in self-respect accede and which would invite the 46 other participating nations to impose all sorts of crippling special conditions of their own.

The effect of this amendment, if it prevailed, let us make no mistake about it, would be to prevent the delivery of relief to the people who need it most. Even an unsuccessful attempt to attach this amendment to the bill could have disastrous consequences. For the amendment must be fought; and if it should delay the granting of funds to UNRRA beyond the first of the year, it would be paid for in suffering and in human life. The Republicans who choose to make a party issue out of this spurious defense of press freedom will be engaged in the ugliest form of politics. Democrats who support them will share in the contempt which Americans cannot fail to feel for so heartless an action. None of us, in or out of Congress, will be able to find much cheer in the Christmas season if we default in our responsibilities to our fellow human beings overseas.

## The Labor Situation

EXTENSION OF REMARKS

OF

### HON. WAT ARNOLD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. ARNOLD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter which I received from Mr. N. M. Brittain of Chillicothe, Mo., concerning the labor situation:

The following I think explains the feeling of most of the people back home in regard to the labor situation.

If both parties would forget the vote that they think they might get by giving labor the right-of-way, then there could be something done that would benefit some one else besides labor.

"Demand of labor's come to be
A hindrance to prosperity
The manufacturer doesn't know
Just when their plants will stop or go.

"They grow more tense with each demand
How much of this can business stand?
It's up to Congress now to do,
And make some laws entirely new.

"Discard all sort of graft and tricks,
Take labor out of politics,
Then hang the leaders one by one,
And keep it up until you're done."

## European Veterans Are Angry Over Being Stuck in Pacific

EXTENSION OF REMARKS

OF

### HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the following letter, telling of 90-point men who are sitting on a Pacific island with nothing to do and waiting in vain to be sent home. This letter, which was written by a Buffalo man on Okinawa, appeared in the Buffalo Evening News, Wednesday, November 28, 1945:

My story has been a long roundabout affair from the time I left the good old U. S. A. to now. I spent 10 months with a general hospital in England, then crossed to the Continent, was reassigned to a quartermaster battalion which was directly redeployed to the Pacific and have come to roost here in Okinawa for the last 3 months.

I am going to try to give you a factual picture of the type of treatment the European theater troops who were directly redeployed to the Pacific theater have received and the way the Army discharge plan affects them. I'll try hard not to allow my personal feelings to break forth, because you must know how terribly anxious I am to see my 9-month-old daughter for the first time.

MEN INADEQUATELY FED

I want you to evaluate it yourself, on your own terms and with your own standards, and judge whether we are rightfully discouraged and angry.

Within 2 months of VE-day we were aboard a transport, the *General Butner*, crowded like a herd of cattle, and had a 61-day trip through Panama to Okinawa. During this time I can swear, as a medical officer, that the men were inadequately fed, and I never saw as much skin pathology.

VJ-day arrived as we were anchored in Ulithe Lagoon, on the way to Okinawa. Hopes rose for a quick return home. All other ships on their way from Marseille were sent to New York or San Francisco, but we proceeded. And it was not pleasant to hear the greetings from Pacific troops: "Hello sucker." We had been assigned to the Tenth Army (led by General Stilwell) to be in the first wave of the invasion of Japan. Still the men's spirits held up—surely the War Department would give us a priority, especially since all other troops from ETO were getting furloughs home before direct redeployment.

NOT A SINGLE TASK

Then came the staggering news that no more deployment would occur directly from Europe, no 75-point men would be sent overseas—and yet here we are, with nearly all the men all above that score, and for 3 months in Okinawa we have not had a single task, not even one assignment. Our headquarters is now run by a warrant officer, junior grade, a job that calls for a lieutenant colonel. We have had no commanding officer, no executive officer, no adjutant, no personnel officer.

Now, we hear that all troops in the United States from European theater of operations who were on leave prior to redeployment are being discharged. This really hurts.

As to the medical situation, no more doctors are being commissioned, men who have never even left the States are being discharged, and with 18 months overseas I have only 45 points and must sit here because point credits are frozen and the release score for a medical officer still is 80.

We have no way to express our problems to the War Department, nor to Congress, nor to the people themselves, because in their long way through channels they are always stopped some place.

WANTS STATEMENT OF POLICY

We feel we should be brought home immediately, not 6 to 12 months from now, as it would work out with present plans.

I know you will understand that I merely want to see a good break for the men overseas, especially those who came here from Europe directly. We fully realize that all the pressure now is from the men at home, who have not been overseas.

I thought maybe you would help me to get our troubles before the people, Congress and the War Department, so we can have an honest, simple, straightforward statement of their plans for us, not a lot of buck passing and dead silence.

Surely we should be brought home soon. We feel in our hearts that we have done our part. We just can't understand how men can be let out in the States who have done far less than we have, while we are asked to stay here and wait. It's not right—and all the propaganda about speedy return of veterans is not true. We still have 90-point men here in Okinawa.

Why not sign petition No. 8 on the Speaker's desk and give these men a chance to get home?

## Col. Charles A. MacDonald Saved Lindbergh

EXTENSION OF REMARKS

OF

### HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. PRICE of Illinois. Mr. Speaker, there has been recent discussion on the floor of the House concerning combat action in which Charles A. Lindbergh engaged while serving in the Pacific theater of operations as a civilian technician.

Under leave to extend my remarks in the RECORD, I include herewith an Associated Press news release describing how Lindbergh narrowly escaped being shot down in flight. The article names Col. Charles A. MacDonald as the Air Force fighter pilot who came to Lindbergh's rescue.

I am sure that the Members of Congress will be interested to learn that Colonel MacDonald is now the chief of the Army Air Forces branch of the Legislative and Liaison Division in the War Department, and that he is the leading surviving Army Air Forces fighter ace in the Pacific, having 27 enemy aircraft to his credit.

For his gallantry and skill, Colonel MacDonald, who was formerly the commanding officer of the Four Hundred and

Seventy-fifth Fighter Group, has been awarded the Distinguished Service Cross, with Oak Leaf Cluster, signifying that this decoration, the second highest conferred by our Nation, was earned twice. As further evidence of his heroism and expertness, Colonel MacDonald received the Silver Star, with the Oak Leaf Cluster, the Distinguished Flying Cross with 5 Oak Leaf Clusters, and the Air Medal with 10 Oak Leaf Clusters.

The news article to which I referred follows:

LINDBERGH NARROWLY ESCAPED IN FIGHT, FLIER REVEALS

NORTH HOLLYWOOD, CALIF., December 1.—Charles A. Lindbergh narrowly escaped being shot down when he accompanied a fighter mission over Truk, Capt. Robert De Haven, 23, disclosed yesterday.

Captain De Haven said Mr. Lindbergh, stationed on Biak as a technician, was with three fliers of the Four Hundred and Seventy-fifth Fighter Group when—

"They encountered Zeros and Mr. Lindbergh's guns jammed. Col. Charles A. MacDonald shot down a Nip who was drawing a bead on Mr. Lindbergh's plane. It was after this that Gen. George C. Kenny, far eastern Air Force commander, ordered that Mr. Lindbergh not be permitted to fly combat missions."

Captain De Haven described the incident as occurring a few days after a flight over Halmahera, "during which Lindbergh shot down a Nip." He identified Colonel MacDonald as commanding officer of the Four Hundred and Seventy-fifth.

## Military Government in Germany

EXTENSION OF REMARKS

OF

## HON. ELLSWORTH B. BUCK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. BUCK. Mr. Speaker, under leave to extend my remarks, I include herewith a recent letter from a young Army officer currently serving with the military government in Germany. He not only has analyzed the problems but he has suggested some solutions:

BAVARIA.

Hon. ELLSWORTH B. BUCK,
*Member of Congress, Washington, D. C.*

DEAR DR. BUCK: Since VE-day I have been assigned to military government in Germany. Through various sources it has been possible to keep moderately well informed of press and public reactions in postwar United States. The reporting of important developments has usually been adequate. It has, I think, tended to lack the depth and perspective that are vital to the long-range evolution of the average American's consciousness as a citizen of a world society. Perhaps it is the hypocritical attitude of the spectator who brings a portable radio to a football game and spends the afternoon at odds with the announcer's report. Since it is obviously quite impossible to be wholly objective, I will limit myself to stating my reaction to some of the major problems that confront those who are in Germany this winter.

Displaced persons: A displaced person is technically defined as an individual from an Allied or liberated country who is in Germany against his will. In all there were a considerable number fewer DP's in Germany than was originally estimated. The problem was further aided by the speed with which the citizens of the eastern countries repatriated themselves on bicycle, foot, cart, or truck. Six weeks after VE-day a large portion of these people were out of Germany. However, somewhat overzealously, perhaps, a tremendous number of western Europeans had been herded into large camps. These camps were often inadequately staffed, unsanitary, and generally miserable places in which to live. The released factory slaves were, perhaps, better off than formerly, but the released farm workers were, in general, worse off. Looting, rape, and murder, though perhaps far less than might reasonably have been expected, were a constant problem.

Since the end of May a superior job of transporting these western Europeans has been accomplished by use of tactical unit transportation and reconstructed railroads. At present there are about 500,000 DP's in the American zone. In most instances, these are adequately, if not comfortably, housed. They are given some medical care, receive better than a subsistence ration and have been issued some clothing. Among these people, however, one finds a condition that may well in the long run be one of the most persistent, most dangerous, and most difficult problems to combat in all Europe. Partially because of unavoidable circumstances, and partially because of a very loose interpretation of those to be classed as DP, the category has given shelter to political malcontents, social undesirables, and outright Fascists in considerable numbers. Perhaps not surprisingly, in many camps these elements have been the most attractive, most cooperative, best educated. In result, often it is these people who get the preferential treatment and in fact supervise the distribution of largesse. To tell you even in generalities who these people are is impossible. They are from no special country although many of them come from the Baltic States. They have migrated in several waves, starting in about 1939. Most of these people came either to escape the wrath of their countrymen or the wrath of the Russians.

Among them is a good sprinkling of Poles, Ukrainians, and Russians who refuse to return to their country. From this segment come frequent and, occasionally, well-documented reports of alleged Russian atrocities. When the wedges between the Allies are evaluated it may well be said that some of the biggest and most effective were hammered home by those whom we now protect. A second difficult problem in this handling of displaced persons is the fact that they cannot be forced to work. I feel that this has been most unfortunate in two respects. First, the harvest in Germany was considerably smaller than it might have been and, second, that people without work, particularly people with no experience in idleness, invariably get into trouble. Most of the displaced persons in the American zone have been afforded a chance to return home and I think I can speak for many of the Americans here in saying that my sympathy is well nigh exhausted. A particularly dangerous piece of reporting was done by Life on this problem when they described as an expert a photographer who made a 7-day, 1,500-mile survey of the problem. In 7 years he might attain such a reputation.

In all fairness, however, the plight of thousands of innocent, indigent, war-shocked humans with no shadow of hope cannot be lightly dismissed. An early and careful screening of these persons would clarify the problem markedly. It would be quite possible to "screen out" most of the unworthy.

Denazification: Here a superior job has been accomplished, especially at the Kreis (county) level. At this point I wouldn't attempt to discuss the short-range effects of the policy as outlined at Potsdam. In Bavaria the policy of denazification is "fait accompli" and in many cases this policy has been extended far down to root out even the apparently nominal party people who were in many cases actually forced under considerable pressure to join the party. Since there is little point in discussing the justification of this policy on a moral or practical basis, I can only say that to date the spirit and letter of the directive have been accomplished unusually well. It is quite probable that we have vetted party people as completely as the Russians and considerably more completely than the British.

The corollary problem of denazification is, of course, replacing those who have been removed and set to work in menial jobs. To try to assess the solution that has been made is quite impossible. The Germans who now govern range from the most staid "Tory" to those "left of left." Efficiency in civil government, highly prized by the Germans in contrast to the Americans, has undoubtedly been sacrificed. This reduction in efficiency is contingent upon both the untried nature of new personnel and the outlawing of the harshly enforced regulations that the Nazi was able and willing to enforce. What the forthcoming election results will be is assuredly anyone's guess. The population, particularly in rural Germany, is decidedly not too party conscious at the moment. There is a general feeling of sympathy for the nominal party members who have had their jobs and security taken from them, their funds frozen, and they themselves forced to work at unskilled labor. On the other hand, many of the present incumbents have suffered heavily at the Nazi hand and are perhaps even more vindictive than we.

Democracy in Germany: There is no reason for any shred of optimism in the thought that the German mentality will be attracted to the philosophy of "liberty, equality, fraternity" in the predictable future. Here and there, through the chaotic haze one can distinguish a flicker of light, but it is pathetically feeble. Twelve years under the guidance of the Hitler gang has beaten out unrelentingly the spark of freedom from all but the most persistent. The approaching winter and the next 5 years in Germany will hardly fan this spark to a blaze. I am quite convinced that true democracy in Germany, or anywhere else in the world, is not attainable on empty stomachs. For the German today the problem is not one of political philosophy but rather that of survival. Concerning the future of men, I am an incurable optimist but for the future of democracy here, the road will be a long, tortuous one, and the foundations will be founded on a people who are largely without hope. In revolting from fascism these spiritless people may well charge blindly to the philosophy of nihilism. In brief, the problems of a constructive peace are far more complex than those of a destructive war. I feel the urge to run physically, as well as mentally, and still there is the inexplicable magnetism of history in the making.

Education: In this field there is much to be done, and so far little accomplished. The youth of Europe can be roughly divided into two general groups. Those who have grown up in the school of fascism and those who have grown up with no school but cruelty and privation. The challenge is so great that it cannot be defined. To date the progress has seemed infinitesimal, but it will take a generation of arduous effort with little perceivable result to even scratch the surface. Perhaps the first "light" to go off in Europe was that of liberal education. Until it is again rekindled, there will be neither lasting peace in Europe nor in the world.

Military government personnel: Much of the adverse comment on military government has, quite understandably, been directed at the personnel. Perhaps I am too close to see the forest, but I feel that the personnel is a very fair sampling of people who were qualified and available. That some of these in every grade are illy adapted to the job is to be

expected. These individuals do not constitute an alarming portion of the officers and men involved. In spite of a wealth of problems that have no solution, in spite of misguided interference from tactical troop commanders with neither skill in, nor appreciation of, governmental problems and techniques, in spite of living in a society where every self-gratification is not only condoned for those in power but actually encouraged, commendable progress has been and is being made.

If these hastily collected thoughts have been of any use or interest, I am pleased. If I can be of any small service as an unofficial source of information, I'll be most happy to help.

My sincere best wishes to you and Mrs. Buck.

## Government Spending

EXTENSION OF REMARKS
OF

### HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. HOLMES of Massachusetts. Mr. Speaker, on last Saturday afternoon I had the pleasure of hearing our good friend and colleague, Hon. HAROLD KNUTSON, of Minnesota, address the Massachusetts Federation of Taxpayers' Associations at their annual meeting held at the Statler Hotel, Boston.

In his usual forthright and thoughtful manner Mr. KNUTSON addressed himself to the subject of Government spending, citing billions of dollars that are each year appropriated by Congress to make possible certain projects for which there is no pressing need and which could very easily be postponed until such time as the American people can better afford them.

In analyzing Government spending our colleague showed how cost of Government and taxes go up and down together and that we can look for no substantial reduction in taxes until the administration institutes a rigid policy of retrenchment.

It is needless for me to say that Mr. KNUTSON's remarks were unusually well received and from all sides came expressions of complete approval.

What Mr. KNUTSON said at Boston can very profitably be read by the membership of Congress. His remarks follow:

Fellow Americans, it is a distinct honor and a very real pleasure to be permitted to address the Massachusetts Federation of Taxpayers' Associations in the historic city of Boston. From my earliest childhood have I admired the people of New England for their courage, their industry, their vision, their thrift, and their dependability. No finer race ever lived. Their contribution to the building of America, their part in maintaining the Union intact and independent, also their work in developing the West, are written on the brightest pages of our glorious history.

I dare say your organization came into being to combat the constant rise of Government taxing, and Government spending, and we may take courage from the knowledge that similar organizations are on the alert now in nearly every State in the Union.

Government spending and taxes are, of course, interwoven and inseparable. As spending goes up taxes must of necessity follow. We can only reduce taxes as we reduce the cost of Government, local, State, and Federal. Until recently our watchful eye was directed almost entirely to taxation, and little heed was given to the spending end, but the stern law of necessity now forces us to keep the two in constant focus, with a view to bringing them into alinement.

Some 20 years ago I visited a marine officer friend stationed in the interior of the Republic of Haiti.

A day or two after my arrival we set out on an inspection trip. Before our departure my friend directed the yard boy to fill a galvanized tank in the back yard, which was used as a shower.

The boy evidently took his orders too literally because on our return, after an absence of some hours, we found him pumping away for dear life, the tank overflowing and the yard flooded.

I have often thought of that incident, and how like the yard boy is the average American taxpayer, who pours his money into a bottomless maw that we call the Federal Treasury, and all the time that he is doing so is perfectly oblivious to where the money goes and how it is spent.

That was all very well in the old days when we had no national debt to speak of, and but a nominal income tax. It was only when we awakened to what we thought were our responsibilities to the other peoples of the world and decided to set the world's household in order, that our national debt began to grow by leaps and bounds.

Not to be out-done, taxes followed suit, and they increased, and continued to increase with the speed of a jet-propelled plane. In 12 years we have had 17 tax increases. Think of it!

From a national debt of less than $1,000,000,000, at the time of our entrance into World War I, the debt is now in excess of $250,000,000,000 which, by the way, amounts to about $250 for every minute since the dawn of the Christian era.

Not all of that stupendous sum was spent in "making the world better." Much of it was poured out on a plan to remake America and our economy, in a manner that is as alien to our concepts of government as would be a litter of blooded pups nursed by an alley cat.

Many who watched with apprehension the rapidly mounting debt were lulled by repeated assurances from our leaders that a big debt was a good thing for the country; that the more we owed the greater our wealth; that in the final analysis it was not a debt, because we owed it to ourselves.

A gullible Congress, spurred on by an equally gullible people, embraced that philosophy with all the ardor of a crusading knight in search of the Holy Grail. Not only were we assured that our wealth would increase with the debt, but we were also told that the less we produced the more we would have.

Out of the window went the old, time-tried philosophy that all wealth must come from the soil, from the mines, and from the sea, and that wealth can be created only by labor and by creative toil.

It was not until our taxes had increased about 2,000 percent that the gullible really began to question the soundness and the wisdom of their political soothsayers.

A majority of the American people evidently labored under the impression that the tax burden was being borne by the other fellow, because they continued to go to the polls and register their approval with all the abandon and cheerfulness of a group of children being taken to the country for their first visit.

Time after time they went to the polls and voted their approval of what was being done for them, or, should I say, done to them.

It was only when the little fellow was taken into the tax gatherer's fold that he began to suspect that his leaders had been flimflamming him. It took a long time for the idea to percolate into the minds of the masses that every dollar spent by the Government must be raised through taxation, hidden and visible.

By that time the average chap was too dazed to figure it all out for himself, but slowly the rank and file began to understand that it takes more than WPA rakes, shovels, and hoes to bring us out of a labyrinth of confusion, prodigality, and waste that has stamped the past decade as one of irresponsible governmental spending, and futile planning.

It only takes a pup 9 days to get its eyes open, but the homo sapiens seem to require that many years.

We can only have tax reduction as we have reduction in Government spending. There is no denying that our Government, as it is now operated, and as it has been operated the past 12 years, is costing us at least three times as much as it should, and the reason is not far to seek.

Let us see what certain people have said about this waste. Senator HARRY F. BYRD (Democrat) has said: "Inefficiency and the lack of organization among the very numerous departments of the Government have made the war cost at least twice as much as it should."

On June 29, 1943, a United States Senator stood on the floor of the Senate and said: "I could stand here all afternoon and give example after example showing that tremendous sums of money are simply being thrown away with a scoop shovel." The name of that Senator was Harry S. Truman.

On June 3, 1943, the Comptroller General of the United States, Lindsay Warren, appeared before the House Civil Service Investigating Committee and made statements which were highly significant. They reflected the actual findings of the General Accounting Office, which Warren described as the "strictly nonpolitical" agency responsible to Congress for providing independent audit and settlement of the Government's financial accounts. Said Mr. Warren, in part:

"* * * under the gentle guise of war, the word 'economy' has been deleted from the dictionary."

"Thrift and prudence, ordinary prudence in the expenditure of other people's money, has gone out of the window."

"* * * sometimes the contracting officials for the Government are either nitwits or else."

"* * * some day, some time, I want to see more people in the employ of the Government who are looking out for the Government. It is time some of them are concerned about the people who pay the taxes."

In the seventeenth and eighteenth centuries every administration that came to power or fell from power in the major European nations either rose or was wrecked upon its fiscal policies. No nation can be indefinitely maintained on a deficit budget. In the end disaster must overtake any nation which fails to pay its way.

Unless we can maintain this Nation on a sound financial basis there is disaster ahead for us and for the world.

The situation is critical, not because we are in a stage of transition from one historic era to another, not because we are entering on a period of extraordinary scientific and industrial development. It was critical before we entered the war, before we dreamed that war was possible. The situation is critical because a decade before the opening of the war we had developed a spending psychology, had entered upon a period of unrestrained and uninhibited spending. We bought what we wanted. Too often we bought what we saw whether we were certain we wanted it or not. We did not stop to count the cost or to consider the source

from which the money was to come to pay for it. The result was a spending spree such as the world has never before seen.

In 10 or 12 runaway years Congress increased the annual appropriations by leaps and bounds. No plan for spending was too fantastic, no amount asked too large. I can find no parallel in the fiscal annals of any nation. Remember, we are not speaking of war expenditures. There is nothing here for war or preparation for war.

If we do not trim the sails of governmental expenditures down to the point where there can be a balancing of the Budget, America is going to take an inflation ride, and the destination will be old-fashioned paper-money inflation that may wipe out all—rich and poor, big and small. We are traveling in that direction pretty fast right now, with upward of $28,000,000,000 of paper money outstanding—nearly six times what it was before the war.

What does that mean? It means that the people of America must wake up. It means that we must stop catering to every whim and trying to provide funds for things that we can do without. It means we must give the people in American an opportunity to live as our fathers lived before us. In short, it means a return to those virtues which in 150 years made America the happiest and most prosperous country on earth.

May I digress a moment to speak briefly on the very serious labor unrest that now afflicts all parts of the country. We are all agreed that wages must be brought into alinement with living costs. However, there is no need for anyone to strike to bring such a balance about. It can be accomplished through friendly negotiation if both sides are disposed to be fair and reasonable. Failing in that the President should use his broad powers to bring about a resumption of production to meet the unprecedented needs for nearly everything, such as automobiles, household necessities and above all, additional housing of which we now have a most serious shortage.

Let production proceed without interruption. The public has some rights that should be respected, but are all too often ignored.

When I came to Congress nearly 30 years ago, it cost the American people about a billion dollars a year to operate the Federal Government. Before Pearl Harbor the cost had increased by 800 percent, or to about eight billion, not counting relief.

The budget estimates submitted by President Truman for the next fiscal year call for sixty-six billions.

We have been operating the Government in the red for 14 years and if we don't bring out a balanced budget pretty soon the sheriff will take us over just as sure as 2 and 2 are 4, and that would be distasteful, even to the most ardent spender and do-gooder.

As a member of Senator BYRD's Joint Committee on Reduction of Nonessential Expenditures, which has already saved the taxpayers over $4,000,000,000 since it was organized 4 years ago, I have had an unusually good opportunity to observe how our Government has grown and expanded until there isn't an activity that mortal mind can conceive of, in which Uncle Sam does not have his finger. Today he operates banks, railroads, busses, trucks, steamship lines, department stores, hotels, printing establishments, and as sale bills have it, other activities too numerous to mention.

As of November 1 a year ago, our committee found that the Government is made up of 1,141 departments, bureaus, and what not. Before the New Deal there were 68 bureaus. Today the Federal telephone directory in Washington alone is almost as big and fat as is the telephone directory of the city of Boston and its suburbs and, like Topsy, it is growing and growing.

Let us take the State Department as an example: It is made up of 69 component parts, and they have divisions that supervise everything from international affairs to pink teas and cocktail parties in the Nation's Capital. Today, we have 26 independent agencies, with a total of 265 components; the Treasury Department is made up of 93 parts. Then we have the emergency war agencies comprising 364 divisions. And so we might go on.

Where we used to get along with about 500,000 on the Federal payrolls there are now in excess of 3,000,000. In most instances when a bureau is discontinued, as a result of too much publicity, the personnel is transferred to another bureau, so there is no reduction in force.

In many of these bureaus there is little or nothing to do. The employees check in in the morning and the first order of business is to read the morning papers. Then, as many as can possibly squeeze into the rest rooms retire for a cigarette and a little chin music.

Many of the clerks play the races and are in constant telephonic contact with their bookmaker. It would be interesting to know how many of the girls are now kept busy making presents for Christmas.

Well, may you ask me, who is responsible for this deplorable and indefensible condition. The answer is, Congress is primarily responsible because these extravagances are only made possible through appropriations made by Congress.

Now, don't you folks begin feeling "holier than thou." You are also responsible and I mean it in a much more real sense than the President's contention that you are responsible for Pearl Harbor.

All over the land there are highly organized pressure groups constantly bombarding Congress to appropriate money for this, that, and the other thing. Too many go on the theory that any money jimmied out of the Federal Treasury is just so much gravy.

The late lamented and beloved Speaker, Champ Clark, frequently made the remark that if there is anything more cowardly than a Congressman it is two Congressmen. After all, Members of Congress are but human beings.

When these pressure groups begin bombarding their Congressmen with telegrams, telephone calls, and letters urging them to support this, that, and the other project for spending more money, the average Congressman, with one ear to the ground, and both eyes on the next election, being rather pliable and amenable, as you know, goes along because he thinks the telegrams and letters reflect the majority sentiment in his district.

Let me list some of the projects now pending in committees of Congress which are sponsored by pressure groups and call for huge outlays. And I might say that many of these projects were approved by the President in his September Budget message to Congress. Here are some of them:

| | *Per year* |
|---|---|
| Federal aid for education | $500,000,000 |
| Vocational education aid | 100,000,000 |
| Free food stamp plan | 500,000,000 |
| Rural electrification | 500,000,000 |
| Federal aid to hospitals | 110,000,000 |
| Federal health program | 600,000,000 |
| School lunch program | 100,000,000 |
| Sewage treatment program | 100,000,000 |
| Federal housing program | 80,000,000 |
| Increased Federal salaries | 500,000,000 |
| Total | 3,090,000,000 |

Then we have bills introduced providing for lump sum appropriations which include:

| | |
|---|---|
| Veterans' bonus legislation | $13,000,000,000 |
| Additional UNRRA contribution | 1,350,000,000 |
| Commodity Credit Corporation | 500,000,000 |
| Federal aid for highways | 3,000,000,000 |
| Additional river valley authorities | $5,000,000,000 |
| Federal aid for airport construction | 1,000,000,000 |
| Total | 23,850,000,000 |
| Making a grand total | 26,940,000,000 |

We must not overlook the possible additional item of fifteen billions to other countries.

Every single item that I have enumerated is being backed by one or more pressure groups, so I want to take this occasion to say to the good men and women of America that if they want to prevent wild spending in Washington they had better turn their energies into channels that are directed to economy rather than in high-pressuring Congress for bigger and better appropriations.

REMEMBER, MY FRIENDS, WE CAN'T EAT OUR CAKE AND HAVE IT

The Massachusetts Federation of Taxpayers' Associations has done an outstanding job in awakening the people of New England to the imperative need for reducing the cost of government—Federal, State, and local—and your association is known far and wide for its intelligent and effective work.

Similar associations exist in nearly every State in the Union, and they are all doing a fine work. We know that it is only through such organizations that the desired end can be attained. We also know that these organizations are effective in the degree of their size, therefore every taxpayer in America should join a tax league because that is the only medium through which he can express himself effectively.

The people are going to get economy in government when the demand for economy becomes sufficiently strong and vocal. There is no other agency that I know of through which the people can express themselves for economy so effectively as through an organization such as yours.

Every taxpayer in the State of Massachusetts should join your organization and help promote the great work for economy that you are doing, ever remembering that in numbers there is strength. Alone they can hope to accomplish little. Every dollar invested in such work will return steady and remunerative dividends.

Let me admonish the American people to stop looking to the Government in Washington to do for them the things they should do for themselves.

America was not builded and made great by Washington bureaucrats and Government subsidies. Rather, this great and glorious country is the product of industry, freedom, opportunity, and personal initiative.

The brave men and women of the East, who loaded all their worldly possessions into covered wagons, and turned their faces resolutely and hopefully to the setting sun, braving the hidden dangers of the forests; who in 150 years transformed an empire wilderness into the richest empire on earth—they were the ones who builded America.

Not only did they wrest the empire west of the mountains from the hostile Indians, but they built roads and railroads, opened up farms, established schools and churches, and created thousands of modern and prosperous cities, villages, and hamlets where the standard of living is so high that it is the envy of all the world.

When they set out on that great migration they severed all ties with the old home, and what they did, and what they accomplished was done without Government subsidies, Government controls, or even governmental planning. In short, they also underwent the tribulations and the trials of their forefathers, who had landed on Plymouth Rock two centuries before.

While their worldly possessions were few, they had boundless faith in the future of

America, and a supreme confidence in themselves. That is what America needs today.

They demonstrated to an admiring world what the American people can do if but given a free hand.

Today that area, which we fondly call the bread-and-butter-basket of the world, holds as many opportunities as it ever did. All that we ask is that Uncle Sam remove from our throats the stranglehold of a bold and grasping bureaucracy, and that we be permitted to retain for ourselves a fair share of the wealth that we create.

Fellow Americans, I have boundless confidence in the future and in the destiny of America.

I believe we now stand on the threshold of the most wonderful era in all the history of mankind.

Let us here and now resolve to break the shackles that a bureaucratic octopus has fastened upon us.

Let us also resolve that Washington shall have every dollar that is necessary for the orderly conduct of our Government, and for our national security, but at the same time determine that there shall not be one penny for extravagance and waste.

America no longer has money to throw away. Henceforth, let us think of America first. Then we will again become a happy and prosperous people. Let us ever remember that only a prosperous America can help rebuild a war-devastated world.

## Moral Conditions in Yokosuka

EXTENSION OF REMARKS
OF
## HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

THE SECRETARY OF THE NAVY,
*Washington, December 5, 1945.*

Hon. JOSEPH P. O'HARA,
*House of Representatives.*

DEAR CONGRESSMAN O'HARA: Kindly refer to your letter of November 20, 1945, relative to the open letter from Lawrence L. LaCour, Chaplain, USNR, describing conditions of prostitution and sex laxity among naval personnel in the Yokosuka area, Japan.

I am pleased to advise you that, immediately on learning the situation at Yokosuka, an investigation was made and directives were issued ordering strict compliance with the long-established and documented Navy policy for the suppression of prostitution. This compliance has been secured, and all houses of prostitution have now been placed "out of bounds." Parenthetically, it should be noted that the venereal disease rate for the fleet for the month of October was considerably lower than in the continental United States.

The investigation disclosed that an honest effort was made by the commanding officers to control an admittedly difficult situation by means of what at the time appeared most effective. In order to properly meet morale needs, it was imperative that liberty be granted to personnel. Because of the health and recreational problems presented, it was deemed advisable to place many sections of the city "out of bounds." Unfortunately, however, some houses of prostitution existed in the "in bounds" area; and, in order to protect the health of the men, prophylaxis stations were established where they would be most effective; and, in one instance, this was at the entrance to a house of prostitution. While such a procedure may have given the appearance of encouraging the patronage of a house of prostitution, in reality it should have served to remind the men of the hazards to be encountered in such patronage.

The Navy has, for a number of years, made intensive educational efforts to indoctrinate all personnel regarding the dangers of prostitution, not only from a venereal disease standpoint, but also from the standpoint of the moral implications of promiscuous sex behavior. Continence has been urged as the only pattern that will absolutely protect against venereal disease. The Yokosuka and fleet commands involved, at an early date, reindoctrinated their personnel on the hazards they would encounter on liberty.

What Chaplain LaCour observed was the result, in large part, of group pressures, sudden release of inhibitions long pent up by many months of hazardous sea duty, cessation of hostilities and the general let-down in morale stamina of all personnel, all occurring during the confusion incidental to the occupation of Japan by American forces.

While there has been a unanimity of opinion and in directives issued by the policy-making bodies of the Army, Navy, and Public Health Service that prostitution should be vigorously suppressed, there is a wide divergence of opinion of the matter among the rank and file of the services. This reflects the confused thinking of the American public in general on the subject. This confusion exists in spite of the considerable educational efforts that have been carried on in the last several years to enlighten the public as to the moral, social and medical evils of prostitution.

You may be assured that the Navy Department will continue to do its utmost to protect the American ideals of home and family life. In this effort we earnestly urge that the whole citizenry accept their share of the responsibility for the behavior of its individual members.

Sincerely yours,

JAMES FORRESTAL.

---

OCTOBER 31 1945.

DEAR MR. SCANLAN: The chaplains in the service and the bishops and priests at home have apparently lost round No. 1 in contesting the venereal-disease-control program in the Army. I hope that I am not overreaching myself or exaggerating when I say that we have lost. That is why I add, "round No. 1," because I am hoping that there will be another round. Only this time we had better not be left in the corner. For round No. 2 comes up with compulsory military training and our 18-year-olds.

Round No. 2 must be fought differently than the first round. Instead of it being contested in isolated instances by individual priests and bishops over scattered areas, I think it must be carried on in a well-planned, well-organized, and constructive manner. The present system of venereal-disease control a la Army is pagan, and it can and will be corrected only by arousing public indignation; by shocking parents into realizing what has been and is going on; and by familiarizing them with those things which their sons will face when they are introduced to the Army. The men in the service and the chaplains especially are familiar with the Army's method of presenting its venereal-disease-control program. It is the most immoral and the crudest thing the Army has to offer. For in attempting to curb a disease, the venereal-disease-control program in its present form has succeeded in encouraging immorality.

The following examples are cited in order to clarify and support the thesis that "immorality has been encouraged in the Army."

1. Back in 1941 and again in 1942 there were many objections coming from the soldiers themselves because they were being "forced" to take "pro-kits" with them when they left the post. After much pressure the War Department clarified its regulation that "availability" of pro kits does not mean "compulsion" for the men to carry them. Nevertheless, in 1944 a chaplain's attention was directed to an outfit in an overseas area where the acceptance of a "pro kit" was the condition on which men were allowed passes to town. And again as late as the summer of 1945 another chaplain happened upon the same practice in another outfit in the same area. In each instance the practice was discontinued only after the chaplain quoted the regulation. Was it ignorance on the part of the local commanding officers? No; it was rather their zeal for maintaining a low veneral-disease rate in their outfits.

2. There is no balance in the venereal-disease program as it has been and is now presented to the men. In one or two sentences they are told casually that "sexual relations are not necessary for good health," and that "total abstinence is the best protection against venereal disease." But in six or eight hundred or a thousand sentences the use of prophylaxis is boosted to the skies.

It is true that the chaplain fits into the program. Once every 6 months he is scheduled to give a 15- or 20-minute talk on sex morality. But on the same program a medical officer explains the use of prophylaxis and a film is shown to demonstrate it. To supplement this the men are warned about venereal disease and instructed in the use of prophylaxis sometimes two, three, and four times a month. Prominently displayed in latrines and on the bulletin boards are large posters advocating the use of prophylaxis. Some of these posters are crudely worded, v. g. "There may be a rubber shortage, but there is no shortage of rubbers * * * use prophylaxis," and again, "You can tell when a gun is loaded but you never know when a woman is loaded with venereal disease * * * use prophylaxis." Then in many orderly rooms it is not unusual to see an ample supply of "pro kits" with the invitation "Take one." And all of this in the surroundings where men are supposed to live.

3. The venereal-control program in the Army is reduced to an axiom: "Education in the use of prophylaxis and its easy and ready availability to every man." A program like this considers it in no way evil for a man to expose himself to immorality. The terrible evil is that a man should fail to take a prophylaxis after an exposure.

4. Each commanding officer has the responsibility of keeping the venereal-disease rate down. In order to accomplish this he sees to it that the men are instructed in the use of prophylaxis "ad nauseam." A program like this can give the impression that illicit sex relations are the accepted thing so long as prophylaxis are used.

5. In a Latin-American outpost a commanding officer cooperated with the local civilians by setting up a combined "pro station" and "house of prostitution." It was a fenced-in area with a guard on duty at all times. When a soldier entered he had to give up his pass to the guard. His pass was returned as he left. Before he left, however, it was certain that he had received a prophylaxis. It kept the venereal-disease rate down. But it was an Army-controlled house of prostitution.

6. At another Latin-American outpost the commanding officer confessed that he had closed his eyes to the practice of some of his men bringing native women into the camp area. Although it was against the rules, it was "safe" for the men since they could use the pro station at the camp, whereas there was no such convenience in town.

All of which gives us another axiom: "If men are going to expose themselves, make prophylaxis convenient." And so at every pro station a GI is on duty 24 hours a day to take care of the men who are doing the right (?) thing so long as they take a prophylaxis after an exposure.

7. "You will not be paid for the time you spend in the hospital with a dose of venereal disease" is the argument the line officer used to present to the men as a motive for not becoming infected. Then the medico demonstrated the newest, simplest, safest, and most convenient prophylaxis. (Now a man gets paid for the time he spends in the hospital with venereal disease.)

And so a soldier muses: "The Padre, my parents, and my conscience tell me not to do this thing, while the Army tells me how to do it."

8. The crowning glory (?) of the Army's thorough indoctrination in venereal-disease control was most evident during the days of redeployment of troops from the European to the Pacific theater. The bad houses of Panama were the most popular haunts in the city. They were young kids, most of them, who hadn't a thing to worry about because they were equipped with "pro kits." And the Army told them how to use them.

I am only one priest among thousands and thousands of men giving his and the average man's reaction to the venereal-disease-control program as he has met it. And I believe that it should be blasted sky high. There is no reason why this program cannot be presented in a dignified and constructive manner without undermining morality and encouraging immorality. That venereal-disease control is necessary is a well-established fact, but that it be served to the men in its present form should not be tolerated. The following suggestions are offered to remedy the present Army program.

1. The Government should spend as much money presenting some dignified posters and leaflets (not the "preachy" type) advocating self-control, as it does on advocating the use of prophylaxis.

2. The Government has an obligation to the good, decent, and moral men. These men should be given incentives for remaining that way. Not all of them have religious principles to guide them. But they are familiar with the rules about moral behavior and self-respect, and they should be encouraged to follow them.

3. The Government should draw up carefully prepared outlines on "How to instruct men on the subject of venereal diseases." In their present form these outlines deal with various types of diseases, their cause and the need of prophylaxis. They should be supplemented by some practical motives for moral behavior and the commonly accepted rules for overcoming the venereal desires and avoiding the occasions of sin. Remember that the chaplains have a minority of men coming to church once a week. The Army has all of the men all the rest of the time.

4. The Government should offer a more dignified treatment of the venereal-disease subject by making available to line officers carefully prepared sex-morality lectures which will be read to the men. This will eliminate the stupid efforts of some officers who have no sense of moral values themselves and who have very little constructive advice to offer their men.

5. The Army should exercise its control over houses of prostitution by placing them "off limits." It should also restore the system of penalizing personnel who become infected with venereal disease.

6. It should be an established policy in the Army that, whenever a talk or publicity is given concerning venereal disease and the use of prophylaxis, an equal amount of time and space will be given concerning morality and self-control.

It is my sincere conviction that the Christian people of America are powerful enough and Christian enough to insist that the United States Government will establish a venereal-disease-control program in the Army that will be worthy of their sons.

Please feel free to do with this letter as you see fit. I would request, however, that my name be withheld because of military restrictions.

With best personal wishes, I remain,
Sincerely yours in Christ.

## UNRRA

EXTENSION OF REMARKS

OF

### HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. TRIMBLE. Mr. Speaker, UNRRA was established at the suggestion of our own country and out of the generous spirit of the American people to bring food and clothing to the destitute families of those men and women who gave all they had, even in many, many cases life itself, to support the joint enterprise in which we were all at the time engaged, that of driving tyranny from the world. They, through the underground, rescued and saved untold thousands of our brave fliers and foot soldiers, who found themselves shot down or cut off in those unhappy lands. To do this, they not only risked their own lives but the lives of their families, as well as the loss of their homes. In order to help us achieve victory with as little expense of lives as possible, they blasted their own bridges; they destroyed their own towns; they fought the common enemy.

Americans are not the kind of people who fail a friend. There may be complaints here and there. And, of course, mistakes are made. Why, even among our own soldiers, boys we love so much and the ones who fought for us, we find black markets. We would not for one single solitary fraction of a second damn and condemn the whole Army for the sins and derelictions of the few. Therefore, we cannot, in fairness, damn and condemn UNRRA simply because within its organization we find those who are unfaithful to their trust and are goaded to wrong by a selfish urge.

A lot of money is asked for here, it is true, but the denial of one package of cigarettes by each of the smoking public of America per week for 1 year would almost pay this bill. Can we afford to jeopardize the integrity of our own pledged word to the Allied Nations, and, of our implied pledge to those who fought for us and with us and are now hungry and cold through no fault of their own?

On the wall in my office is a picture. It shows a young American soldier feeding a starved French child, from his own mess kit, his own rations. He will fight on an empty stomach if necessary, but his heart and his soul are fed. You can see it in his countenance. I think that is the real spirit of America.

We grow by sharing and if America survives the future, it will be because she has the bigness of spirit to know and understand the suffering of others throughout the world and is ready to share.

I am sure that my people in the Ozark Mountains of northwest Arkansas would be ashamed of me if, by my vote, I permitted one orphaned child of any dead soldier of our allies to starve or freeze this winter.

## Not Unduly Exacting About Indonesia—Part II

EXTENSION OF REMARKS

OF

### HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mrs. LUCE. Mr. Speaker, the question of American security is inextricably concerned with the establishment of peaceful administrations in the islands of the Pacific, which shall be acceptable to the populations of the islands. In particular, the vastly overcrowded East Indies group is of vital importance to us—no less than to the titular colonial overlords of those islands.

The United States cannot and should not claim a perfect record of colonial administration, but in the Philippines, at least, the events of the past years have demonstrated that our former wards in that Commonwealth prefer our type of government to any of the other political offerings now current. For this reason it seems remarkable that, so far as we know, our Government has put no moral or other pressure on the British or Dutch Governments to persuade them to a like course in their East Indian insular possessions. Here, again, is an example of what Mr. Secretary Byrnes called our being "not unduly exacting." In plainer-spoken days it might have been termed "moral laziness and moral cowardice."

Some further results of our passivity in the Indonesian crisis can be seen from the following dispatches:

KEY INFLUENCE OF COMMUNISTS IN ASIA CITED—PARTY, OFTEN UNDER ANOTHER NAME, BACKS REVOLTS IN SOUTHEASTERN AREA

(By A. T. Steele)

NEW DELHI, INDIA, December 3.—Communist influences long suppressed or discouraged in the countries of southeastern Asia are playing a growing if not always conspicuous role in the various freedom movements which today are agitating those crowded lands. In general, their immediate announced objective is independent democratic government. In general, they are striving to work through united fronts rather than by taking a lone line, although their policy varies from country to country.

Many observers regard the situation in Indonesia as a portent of what is likely to happen elsewhere in the Orient, particularly if the United States continues its passive policy of leaning over backward to avoid undue exactions.

Constantine Brown give a comprehensive summary in his article of No-

vember 18 published by the Washington Evening Star, of which the following is an excerpt:

The far eastern volcano is not yet in full eruption. But unless the major world powers show more wisdom and a greater desire for sincere cooperation, there is grave danger that before the end of the year one of the most populated areas in the world will be in complete turmoil.

The Indonesian situation affects the United States only indirectly. Because of previous agreements, it is not possible for the American Government to do more than give counsel, which may or may not be followed by the Netherlands and British Governments, the principal beneficiaries of the riches contained in Java and Sumatra.

So far as can be ascertained here there are no political subversive elements behind the revolution of the Indonesian peoples. And although the interested powers may try to put the blame either on "Communist activities" or on subversive propaganda, it is evident that the Indonesian leaders wish only one thing—to run their own people themselves. There is no tendency on their part to divorce themselves entirely from their Dutch masters. Neither are there any indications that they wish to proceed with a policy of nationalization which would be harmful to the large British interests invested in that country.

WOULD BE OWN MASTERS

The Indonesian leaders want to be masters in their own house. Reports from unbiased on-the-spot American observers say they would welcome an economic cooperation from the western world—provided it is more beneficial to the millions of natives who in the past have received only a few meager crumbs from the untold wealth of their country.

The repressive policy of the Netherlands Government supported by the British military and naval forces is considered here as being frankly nearsighted. Use of force against the Far Eastern people might have paid dividends 20 or 30 years ago. But today, after the British and Dutch have been humiliated during the war and forced to surrender to the Japanese, the display of force against poorly armed natives can make little impression on the people of the far Pacific.

The possibility of the Indonesians fighting for self-rule and political and economic autonomy may have serious repercussions in Malaya, Burma, and India itself. In a period of restlessness such as has never been witnessed before, the efforts of the Dutch and British Governments to stick by a policy of force are highly unwelcomed by the American Government and the American people.

WILLING TO MEDIATE

This Government, in keeping with its previous commitments, has adopted a hands-off policy in that area, but the administration, it is said in responsible quarters, would not hesitate to act as a mediator should the governments in London and at The Hague ask for such mediation.

The Indonesian situation has been made unnecessarily explosive. The British and the Dutch must have been fully aware that negotiations could have brought excellent results. The present explosive crisis has been precipitated by an unbelievable lack of comprehension and stubborness on the part of the men who have had the responsibility of dealing with the Indonesians' logical demands.

As George Moorad, the PM correspondent, cabled from Shanghai on November 29:

It is perhaps not thoroughly realized at home that American public opinion is the single most important factor in this oriental tug of war, and the various factions both to left and right have been trying, up to the present rather successfully, to befog the picture of American intents and interest. The struggle of political propaganda from both sides has already reached world-wide proportions.

Practically every informed observer agrees that the greatest danger to world peace at present arises from the lack of a determined policy on the part of the United States. Generally speaking, the American public is still in the dark as to what commitments have been made in its name about our relations to other countries—although those relationships will determine to a great degree the daily life and livelihood of every American for years to come.

As General Hurley has pointed out, the American public has no present part in making or even in learning about our policy, because the cliques and the experts cover all essential issues with secrecy. The purpose of this secrecy is to hide the existence of a vacuum, the empty place where our policy should be. No one has defined or can define our policy in the Pacific, because, the fact is, we have none. There are bits and pieces of policy, limited to specific areas and in some cases conflicting and self-contradictory—just as General Hurley described.

This situation has become more acute in recent years because of administration distrust of a well-informed American people, being openly given the choice between various courses. At no time recently has any executive department of the Government issued a majority and minority report from its advisers. It has issued only unified statements, which leave out every political consideration to which any of the departmental experts may object. Since there are experts of every political correlation, the result is a pronunciamento full of solemn, inane generalizations.

Today in Indonesia, as in many other sections, we are helping to promote war by solemnly refusing to adopt any principle by which both sides may be forced to adopt peace. But in order to do that, the American people must first decide what kind of a world they want to work for, live in, and, if necessary, fight to maintain. Specifically, in Indonesia do we want a return of Dutch-English colonial exploitation? Do we want a native government led by former collaborationists of Japan on a program of racial hatred toward white men? Or do we want, and will we help establish and maintain, a progressive system of education looking toward the full participation of the Indonesian peoples in an unprejudiced world society?

Such choices, with full documentation of background and probabilities of outcome, should be laid before the American people by their Government. It is only in this way, and not by leaning over backward, or by being not unduly exacting, that the United States can properly exert its present paramount influence toward the establishment of peace.

## Address of Hon. Alexander Wiley, of Wisconsin, Before Shrine Luncheon Meeting, Washington, D. C.

EXTENSION OF REMARKS

OF

## HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

*Friday, December 7 (legislative day of Monday, October 29), 1945*

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me today before the Shrine luncheon meeting in Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Let me preface my remarks. Four years ago today the news spread throughout America and the world of the attack on Pearl Harbor. In a moment America became united and went to work and performed miracles.

A year later the situation was very dark. Hitler was at the gates of Stalingrad, Rommel at the gates of Alexandria, and the Japanese were knocking at the door of Australia.

What changes have taken place since then.

And so, in this holiday season we lift our voices in gratitude to the Giver of Life that the victory is ours.

It is good to be here with you today. It is good to be in this refreshing atmosphere of joy, to look at smiling faces, cheerful eyes, and jolly hearts.

I am speaking to men who possess the quality of leadership in your make-up. Anyone who has eyes to see with or ears to hear with is aware of the fact that we in America have a job on our hands. While Shrinedom is the playground of Masonry, it is the playground of earnest men who are concerned with meeting head-on the challenges of the present.

Yes; it is good to be in this refreshing atmosphere of brother nobles. It is my privilege to belong to Tripoli in Milwaukee. I always like to get out with good fellows—men who radiate joy and good fellowship, and who are attuned to the worthwhileness of living. Such men know that it is necessary to go apart for refreshment. Appropriate refreshment is found in many channels of human living. We find it in music, we find it in good books, we find it in good conversation, we find it in the playground of Masonry.

But this hour that I shall spend with you will not be taken up with that kind of going apart. Rather we will consider among ourselves some of the present-day challenges (and incidentally some of the joys), because life only comes in meeting challenges effectively and conscientiously—in living in action.

You probably have noticed, as I have, that in the Congress of late there is not so much of what we call name calling. Men are not called standpatters or liberals, Tories or Progressives as much as formerly. Why? Because we are confronted with problems that require the best thinking of liberals and conservatives—in fact, of all segments of our society. The real issue now is whether this country can maintain its republican form of government. In planning for this postwar era one needs to maintain balance and judgment and an open mind so that we do not find ourselves led up a blind alley.

As we all know, since the discovery of atomic energy we are living in a world that

has gone ahead a thousand years. Our tomorrows will be pretty much what we make them. We are grateful for the cessation of war and America's return somewhat to normalcy. All this is cause for gratitude and rejoicing and we are happy that many new discoveries and inventions have been made which will make our physical living more enjoyable.

However, we know that material success and well-being do not by themselves create real happiness. They are but the instruments which, if properly used, will contribute toward happiness and toward peace. Yes; the mere accumulation of things, of money, as many have found out in this period, does not without spiritual values make for peace and joy within. It is well at the start that we have a clear understanding of this, because if we are to go ahead and meet successfully the problems up ahead, we must do so with a spirit of joy in our hearts, with a sense that round about us are the everlasting arms. And with a dedication in our hearts, we will go forward to do right and justice.

The Great Teacher told us to "labor not for the meat which perisheth, but for that meat which endureth unto everlasting life." And in Ecclesiastes we have the idea expressed another way: "Vanity of vanities; all is vanity."

In these war days, America has had cognizance of this idea. You and I know that when loved ones are in jeopardy or when our freedom is in jeopardy, then our money, our income, all become of little value unless they contribute to the safety of loved ones and further the cause of human freedom and justice.

So in this period we must make sure that we do not drift back into complacency, that mentally we do not become apathetic, that we meet our problems with the thought of mastery within, just as we did during the war years. So, with this in mind, may I be privileged to suggest some points that I think we should give consideration to in the program that America must shape. I think we could all challenge each other to do the following things:

1. Substitute faith, industry, thrift, for fear, slothfulness, love of spending, etc. These are not mere words. Our President some years ago said that the only thing we have to fear is fear itself. And those words cut into the very depth of every American and brought courage and strength to America. We cannot afford to loosely spend, to the jeopardy of the Nation's debt, shortly approximating $275,000,000,000. Neither can we let down on the job. We must get to work.

2. Be alert to the fact that we are living in a new world of science which is just around the corner. This new world will bring changes comparable to what the race witnessed during the period of the Renaissance and the discovery of the New World; comparable to the period of industrial revolution; to the period of the political revolution, when America spearheaded the movement that governments derive their power from the consent of the governed.

It is for leaders like you, in your lodges, in your businesses, in your churches, in your homes, in every contact, to demonstrate that you are not simply living by the side of the road and witnessing this great forward movement. Rather, we must all be alert to the privilege and responsibility of living in this age.

3. Get rid of the little foxes in our business relations, in our political relations, in all our affairs—the little foxes that destroy the vines of productivity. Not only world cooperation among nations, but cooperation on every front, in the individual's life, presents a challenge. We cannot be content with a static status. We must watch our own speech and thoughts lest we unwittingly join the ranks of the little foxes, and we must not miss the mote in our own eye while trying to spot the beam that is in our brother's eye. The world needs friendship and understanding—a seeking on everyone's part to see the other fellow's viewpoint. Every individual knows that it is the kind thing, the considerate act, the understanding gesture, that sweetens the daily existence. Businessmen must not engage in rough furor of economic competition. Rather they must engage in healthy, friendly competition—not overreaching. Labor must seek to appreciate the problems of management, and management the problems of labor. This does not mean that we have to always be in the pollyanna mood.

4. Keep our personal and national perspective. What I have to say now applies to individual differences and national differences. We must bear in mind our objective. We must not behave like prima donnas. We must put ourselves into the other fellow's shoes and seek to see the other fellow's viewpoint. We must seek to find common ground, find the things that unite us, and look our differences straight in the eye and seek to iron them out. With poise, not poison, with humility, not bravado, with restraint, not rashness, we must seek the solution.

5. Bear in mind that every age has its problems and remember that we can always get refreshment by going back to the Declaration of Independence and the Constitution of the United States, and recall the historical situation that existed at the time these two great American charters came into being. May I read to you the preamble of the Constitution of the United States.

"We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

It is significant to note that when the Charter of the United Nations was formed, it started out with these words: "We, the people of the United Nations, determine."

And it further stated: "to reaffirm faith in fundamental human rights, in the dignity and the worth of the human person, in the equal rights of men and women and of nations, large and small,"

And, "to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained,"

And, "to promote social progress and better standards of life in larger freedom."

And then we find these words: "And for these ends to practice tolerance and live together in peace with one another as good neighbors and to unite our strength to maintain international peace and security and * * * that armed force shall not be used save in the common interest and to employ international machinery for the promotion of economic and social advancements of all people, have resolved to combine our efforts to accomplish these aims."

You will notice that in the Charter of the United Nations and in the Constitution of the United States, "We, the people," have undertaken the job. That means you and me. That means that you and I can't pass the buck to someone else. It is our job to establish justice, to practice tolerance, to promote good will and the general welfare.

All of us know that the mere agreement by 50 nations to the Charter will not of itself accomplish what we hope and pray for. The Charter of the United Nations will have no vitality unless the people make it vital, unless they activate it with their will, intent, purpose, and desire for peace.

6. Relight the flame of a worthwhile living in our homes, our schools, our churches. Clemenceau said some 20 years ago, after Versailles, that the world was sitting on top of a powder barrel. The situation is similar now. Conditions in Asia and in the Near East, in Europe, and our inability to really go places in America, are all indications of the truth of this statement. It has been stated that when God created the world he looked upon it and it was good. We have to recognize that wars, injustice, etc., are man-made. God works through man His wonders to perform, if man will permit Him. This is the way to correct injustices. It is an individual problem. The institutions of the home, the school, and the church are made up of individuals and if those individuals are filled with the flame of divine living, we will have the result, as expressed in these words:

"I took a piece of living clay
And touched it gently, day by day,
And molded with my power and art
A young child's soft and yielding heart."

Hitler molded the youth of Germany his way. Recently I talked with a Senator who had occasion to speak with Reverend Niemoeller after he was released, and he confirmed that experience of the German youth. But Hitler's teaching sowed the wind, and the world reaped the whirlwind. It is for these three institutions—and you and I are a part of each—to get into action so that the youth will give supremacy to the human and spiritual and will daily see the joy of living the Golden Rule.

And we must by word and deed contribute toward creating and maintaining sound public opinion and high idealism, which make possible the increase of righteousness, justice, and good will on the homefront and abroad. This type of leadership is what the world is hungering for. There must be reborn in all of us a leadership that is intelligent, aggressive, and serviceable, that creates friendly understanding among all citizens, that insists on businesslike methods in administrative government, and the living of the highest principles by the individuals in social, business, and professional life.

## Documents Bearing on Termination of Anglo-American Financial and Trade Discussions

---

EXTENSION OF REMARKS

OF

### HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

*Friday, December 7 (legislative day of Monday, October 29), 1945*

Mr. HILL. Mr. President, I have here the statement made in Washington by the President of the United States and in London by the Prime Minister of Great Britain on December 6, 1945, with reference to the American loan to Great Britain; also a joint statement by the United States and the United Kingdom regarding the understanding reached on commercial policy; also a joint statement regarding settlement for lend-lease reciprocal aid, surplus war property, and claims; and also the financial agreement between the Governments of the United States and the United Kingdom.

I think it might be well to have these documents printed in the RECORD, and I

ask unanimous consent that they be printed in the Appendix.

There being no objection the documents were ordered to be printed in the RECORD, as follows:

1. Statement made in Washington by the President of the United States and in London by the Prime Minister of Great Britain on December 6, 1945.

2. Joint statement by the United States and the United Kingdom regarding the understanding reached on commercial policy.

3. Joint statement regarding settlement for lend-lease reciprocal aid, surplus war property and claims.

4. Financial agreement between the Governments of the United States and the United Kingdom.

STATEMENT MADE IN WASHINGTON BY THE PRESIDENT OF THE UNITED STATES AND IN LONDON BY THE PRIME MINISTER OF GREAT BRITAIN ON DECEMBER 6, 1945

The economic and financial discussions between officials of the United States and United Kingdom Governments meeting in Washington have now been completed.

These discussions have been concerned with the major problems affecting the basic economic and financial relations between the two countries, in the light of the provisions of article VII of the mutual-aid agreement between their governments signed February 23, 1942.

They have covered the questions of financial assistance from the United States to the United Kingdom, the demobilization of wartime trade and monetary restrictions, the settlement of lend-lease, the disposal of surplus war property in the United Kingdom owned by the United States, and, finally, long-range commercial policies in the broad sense, embracing the fields of trade barriers and discriminations, policies in respect of commodities in world surplus, cartels, an international trade organization, and international aspects of domestic measures to maintain employment.

The purpose of the discussions has been to arrive at mutually advantageous solutions of these problems which the two governments would commend to the peoples and legislatures of the two countries and to the world as a whole.

Both sides have been fully conscious of the significance to other countries, as well as their own, of the outcome of these discussions, and they have from the beginning had continuously in view the common interest of their governments in establishing a world trading and monetary system from which the trade of all countries can benefit and within which the trade of all countries can be conducted on a multilateral, nondiscriminatory basis.

The discussions have been successful.

Agreement has been reached, subject to the approval of the legislatures of both countries, for the extension by the United States to the United Kingdom of a line of credit of $3,750,000,000 on the terms stated in the financial agreement signed this day, for the following purposes: to facilitate purchases by the United Kingdom of goods and services from the United States, to assist the United Kingdom to meet transitional postwar deficits in its current balance of payments, to help the United Kingdom to maintain adequate reserves of gold and dollars, and to assist the United Kingdom to assume the obligations of multilateral trade. This credit would make it possible for the United Kingdom to relax import and exchange controls, including exchange arrangements affecting the sterling area, and generally to move forward with the United States and other countries toward the common objective of expanded multilateral trade.

Agreement has been reached for the final settlement of lend-lease and reciprocal aid, the disposal of surplus war property in the United Kingdom owned by the United States, and the final settlement of the claims of each government against the other arising out of the conduct of the war.

Agreement has been reached on the broad principles of commercial policy for which the two governments will seek general international support.

These arrangements, if carried out, will put an end to the fear of an economically divided world; will make possible, throughout the world, the expansion of employment and of the production, exchange, and consumption of goods, and will bring into being, for the first time, a common code of equitable rules for the conduct of international trade policies and relations.

The realization of these proposals will depend upon the support given them by the peoples and legislatures of the United States and the United Kingdom, and where they envisage measures requiring broad international collaboration, the support of other countries.

The following documents resulting from these discussions are being issued by the two governments:

Financial agreement.

Joint statement regarding the understanding reached on commercial policy.

Joint statement regarding settlement for lend-lease and reciprocal aid, surplus war property, and claims.

---

JOINT STATEMENT BY THE UNITED STATES AND THE UNITED KINGDOM REGARDING THE UNDERSTANDING REACHED ON COMMERCIAL POLICY

The Secretary of State of the United States has made public today a document setting forth certain "proposals for consideration by an international conference on trade and employment." These proposals have the endorsement of the executive branch of the Government of the United States and have been submitted to other governments as a basis for discussion preliminary to the holding of such a conference.

Equally, the Government of the United Kingdom is in full agreement on all important points in these proposals and accepts them as a basis for international discussion; and it will, in common with the United States Government, use its best endeavors to bring such discussions to a successful conclusion, in the light of the views expressed by other countries.

The two Governments have also agreed upon the procedures for the international negotiation and implementation of these proposals. To this end they have undertaken to begin preliminary negotiations at an early date between themselves and with other countries for the purpose of developing concrete arrangements to carry out these proposals, including definitive measures for the relaxation of trade barriers of all kinds.

These negotiations will relate to tariffs and preferences, quantitative restrictions, subsidies, state trading, cartels, and other types of trade barriers treated in the document published by the United States and referred to above. The negotiations will proceed in accordance with the principles laid down in that document.

---

JOINT STATEMENT REGARDING SETTLEMENT FOR LEND-LEASE, RECIPROCAL AID, SURPLUS WAR PROPERTY, AND CLAIMS

1. The Governments of the United States and the United Kingdom have reached an understanding for the settlement of lend-lease and reciprocal aid, for the acquisition of United States Army and Navy surplus property, and the United States interest in installations, located in the United Kingdom, and for the final settlement of the financial claims of each government against the other arising out of the conduct of the war. Specific agreements necessary to implement these understandings, setting forth the terms in detail, and consistent herewith, are in the course of preparation and will shortly be completed.

2. This settlement for lend-lease and reciprocal aid will be complete and final. In arriving at this settlement both Governments have taken full cognizance of the benefits already received by them in the defeat of their common enemies. They have also taken full cognizance of the general obligations assumed by them in article VII of the mutual-aid agreement of February 23, 1942, and the understandings agreed upon this day with regard to commercial policy. Pursuant to this settlement, both Governments will continue to discuss arrangements for agreed action for the attainment of the economic objectives referred to in article VII of the mutual-aid agreement. The Governments expect in these discussions to reach specific conclusions at an early date with respect to urgent problems such as those in the field of telecommunications and civil aviation. In the light of all the foregoing, both Governments agree that no further benefits will be sought as consideration for lend-lease and reciprocal aid.

3. The net sum due from the United Kingdom to the United States for the settlement of lend-lease and reciprocal aid, for the acquisition of surplus property, and the United States interest in installations, located in the United Kingdom, and for the settlement of claims shall be $650,000,000 subject to the account adjustment referred to below. This amount consists of (a) a net sum of $118,000,000 representing the difference between the amount of the services and supplies furnished or to be furnished by each Government to the other Government after VJ-day through lend-lease and reciprocal aid channels, less the net sum due to the United Kingdom under the claims settlement, and (b) a net sum of $532,000,000 for all other lend-lease and reciprocal aid items, and for surplus property and the United States interest in installations located in the United Kingdom and owned by the United States Government. The actual amounts due to the respective Governments for items included in (a) above other than claims will, however, be ascertained by accounting in due course, and the total sum of $650,000,000 will be adjusted for any difference between the sum of $118,000,000 mentioned above, and the actual sum found to be due. All new transactions between the two Governments after December 31, 1945, will be settled by cash payment.

4. The total liability found to be due to the Government of the United States will be discharged on the same terms as those specified in the financial agreement concluded this day for the discharge of the credit provided therein.

5. In addition to the financial payments referred to above, the two Governments have agreed upon the following:

(a) Appropriate nondiscriminatory treatment will be extended to United States nationals in the use and disposition of installations in which there is a United States interest;

(b) Appropriate settlements for the lend-lease interest in installations other than in the United Kingdom and the colonial dependencies will be made on disposal of the installations;

(c) The United States reserves its right of recapture of any lend-lease articles held by United Kingdom armed forces, but the United States has indicated that it does not intend to exercise generally this right of recapture;

(d) Disposals for military use to forces other than the United Kingdom armed forces of lend-lease articles held by the United Kingdom armed forces at VJ-day, and disposals for civilian use other than in the United Kingdom and the colonial dependencies of such lend-lease articles, will be made only with the consent of the United States Government and any net proceeds will be paid to the United States Government. The United Kingdom Government agrees that except to a very limited extent it will not release for civilian use in, or export from, the United Kingdom and the colonial dependencies lend-lease articles held by the United Kingdom armed forces.

(e) The Government of the United Kingdom will use its best endeavors to prevent the export to the United States of any surplus property transferred in accordance with this understanding.

6. The Government of the United Kingdom agrees that, when requested by the Government of the United States from time to time prior to December 31, 1951, it will transfer, in cash, pounds sterling to an aggregate dollar value not in excess of $50,000,000, at the exchange rates prevailing at the times of transfer, to be credited against the dollar payments due to the Government of the United States as principal under this settlement. The Government of the United States will use these pounds sterling exclusively to acquire land or to acquire or construct buildings in the United Kingdom and the colonial dependencies for the use of the Government of the United States, and for carrying out educational programs in accordance with agreements to be concluded between the two Governments.

7. The arrangements set out in this statement are without prejudice to any settlements concerning lend-lease and reciprocal aid which may be negotiated between the Government of the United States and the Governments of Australia, New Zealand, the Union of South Africa, and India.

---

FINANCIAL AGREEMENT BETWEEN THE GOVERNMENTS OF THE UNITED STATES AND THE UNITED KINGDOM

It is hereby agreed between the Government of the United States of America and the Government of the United Kingdom of Great Britain and Northern Ireland, as follows:

1. Effective date of the agreement: The effective date of this agreement shall be the date on which the Government of the United States notifies the Government of the United Kingdom that the Congress of the United States has made available the funds necessary to extend to the Government of the United Kingdom the line of credit in accordance with the provisions of this agreement.

2. Line of credit: The Government of the United States will extend to the Government of the United Kingdom a line of credit of $3,750,000,000, which may be drawn upon at any time between the effective date of this agreement and December 31, 1951, inclusive.

3. Purpose of the line of credit: The purpose of the line of credit is to facilitate purchases by the United Kingdom of goods and services in the United States, to assist the United Kingdom to meet transitional postwar deficits in its current balance of payments, to help the United Kingdom to maintain adequate reserves of gold and dollars, and to assist the Government of the United Kingdom to assume the obligations of multilateral trade as defined in this and other agreements.

4. Amortization and interest:

(i) The amount of the line of credit drawn by December 31, 1951, shall be repaid in 50 annual installments beginning on December 31, 1951, with interest at the rate of 2 percent per annum. Interest for the year 1951 shall be computed on the amount outstanding on December 31, 1951, and for each year thereafter, interest shall be computed on the amount outstanding on January 1 of each such year.

Forty-nine annual installments of principal repayments and interest shall be equal, calculated at the rate of $31,823,000 for each $1,000,000,000 of the line of credit drawn by December 31, 1951, and the fiftieth annual installment shall be at the rate of $31,840,736.65 for each such $1,000,000,000. Each installment shall consist of the full amount of the interest due and the remainder of the installment shall be the principal to be repaid in that year. Payments required by this section are subject to the provisions of section 5.

(ii) The Government of the United Kingdom may accelerate repayment of the amount drawn under this line of credit.

5. Waiver of interest payments: In any year in which the Government of the United Kingdom requests the Government of the United States to waive the amount of the interest due in the installment of that year, the Government of the United States will grant the waiver if:

(a) The Government of the United Kingdom finds that a waiver is necessary in view of the present and prospective conditions of international exchange and the level of its gold and foreign exchange reserves and

(b) The International Monetary Fund certifies that the income of the United Kingdom from home-produced exports plus its net income from invisible current transactions in its balance of payments was on the average over the five preceding calendar years less than the average annual amount of United Kingdom imports during 1936–38, fixed at £866,000,000, as such figure may be adjusted for changes in the price level of these imports. Any amount in excess of £43,750,000 released or paid in any year on account of sterling balances accumulated to the credit of overseas governments, monetary authorities and banks before the effective date of this agreement shall be regarded as a capital transaction and therefore shall not be included in the above calculation of the net income from invisible current transactions for that year. If waiver is requested for an interest payment prior to that due in 1955, the average income shall be computed for the calendar years from 1950 through the year preceding that in which the request is made.

6. Relation of this line of credit to other obligations:

(i) It is understood that any amounts required to discharge obligations of the United Kingdom to third countries outstanding on the effective date of this agreement will be found from resources other than this line of credit.

(ii) The Government of the United Kingdom will not arrange any long-term loans from governments within the British Commonwealth after December 6, 1945, and before the end of 1951 on terms more favorable to the lender than the terms of this line of credit.

(iii) Waiver of interest will not be requested or allowed under section 5 in any year unless the aggregate of the releases or payments in that year of sterling balances accumulated to the credit of overseas governments, monetary authorities and banks (except in the case of colonial dependencies) before the effective date of this agreement is reduced proportionately, and unless interest payments due in that year on loans referred to in (ii) above are waived. The proportionate reduction of the releases or payments of sterling balances shall be calculated in relation to the aggregate released and paid in the most recent year in which waiver of interest was not requested.

(iv) The application of the principles set forth in this section shall be the subject of full consultation between the two governments as occasion may arise.

7. Sterling area exchange arrangements:

The Government of the United Kingdom will complete arrangements as early as practicable and in any case not later than 1 year after the effective date of this agreement, unless in exceptional cases a later date is agreed upon after consultation, under which immediately after the completion of such arrangements the sterling receipts from current transactions of all sterling area countries (apart from any receipts arising out of military expenditure by the Government of the United Kingdom prior to December 31, 1948, to the extent to which they are treated by agreement with the countries concerned on the same basis as the balances accumulated during the war) will be freely available for current transactions in any currency area without discrimination; with the result that any discrimination arising from the so-called sterling area dollar pool will be entirely removed and that each member of the sterling area will have its current sterling and dollar receipts at its free disposition for current transactions anywhere.

8. Other exchange arrangements:

(i) The Government of the United Kingdom agrees that after the effective date of this agreement it will not apply exchange controls in such a manner as to restrict (a) payments or transfers in respect to products of the United States permitted to be imported into the United Kingdom or other current transactions between the two countries or (b) the use of sterling balances to the credit of residents of the United States arising out of current transactions. Nothing in this paragraph (i) shall affect the provisions of article VII of the articles of agreement of the International Monetary Fund when those articles have come into force.

(ii) The Governments of the United States and the United Kingdom agree that not later than 1 year after the effective date of this agreement, unless in exceptional cases a later date is agreed upon after consultation, they will impose no restrictions on payments and transfers for current transactions. The obligations of this paragraph (ii) shall not apply:

(a) to balances of third countries and their nationals accumulated before this paragraph (ii) becomes effective; or

(b) to restrictions imposed in conformity with the Articles of Agreement of the International Monetary Fund, provided that the Governments of the United Kingdom and the United States will not continue to invoke the provisions of article XIV, section 2, of those articles after this paragraph (ii) becomes effective, unless in exceptional cases after consultation they agree otherwise; or

(c) to restrictions imposed in connection with measures designed to uncover and dispose of assets of Germany and Japan.

(iii) This section and section 9, which are in anticipation of more comprehensive arrangements by multilateral agreement, shall operate until December 31, 1951.

9. Import arrangements: If either the Government of the United States or the Government of the United Kingdom imposes or maintains quantitative import restrictions, such restrictions shall be administered on a basis which does not discriminate against imports from the other country in respect of any product; provided that this undertaking shall not apply in cases in which (a) its application would have the effect of preventing the country imposing such restrictions from utilizing, for the purchase of needed imports, inconvertible currencies accumulated up to December 31, 1946, or (b) there may be special necessity for the country imposing such restrictions to assist, by measures not involving a substantial departure from the general rule of nondiscrimination, a country whose economy has been disrupted by war,

or (c) either government imposes quantitative restrictions having equivalent effect to an exchange restriction which that government is authorized to impose in conformity with article VII of the Articles of Agreement of the International Monetary Fund. The provisions of this section shall become effective as soon as practicable but not later than December 31, 1946.

10. Accumulated sterling balances:

(i) The Government of the United Kingdom intends to make agreements with the countries concerned, varying according to the circumstances of each case, for an early settlement covering the sterling balances accumulated by sterling area and other countries prior to such settlement (together with any future receipts arising out of military expenditure by the Government of the United Kingdom to the extent to which they are treated on the same basis by agreement with the countries concerned). The settlements with the sterling area countries will be on the basis of dividing these accumulated balances into three categories: (a) balances to be released at once and convertible into any currency for current transactions, (b) balances to be similarly released by installments over a period of years beginning in 1951, and (c) balances to be adjusted as a contribution to the settlement of war and postwar indebtedness and in recognition of the benefits which the countries concerned might be expected to gain from such a settlement. The Government of the United Kingdom will make every endeavor to secure the early completion of these arrangements.

(ii) In consideration of the fact that an important purpose of the present line of credit is to promote the development of multilateral trade and facilitate its early resumption on a nondiscriminatory basis, the Government of the United Kingdom agrees that any sterling balances released or otherwise available for current payments will, not later than 1 year after the effective date of this agreement unless in special cases a later date is agreed upon after consultation, be freely available for current transactions in any currency area without discrimination.

11. Definitions:

For the purposes of this agreement:

(i) The term "current transactions" shall have the meaning prescribed in article XIX (i) of the Articles of Agreement of the International Monetary Fund.

(ii) The term "sterling area" means the United Kingdom and the other territories declared by the defense (finance) (definition of sterling area) (No. 2) order, 1944, to be included in the sterling area, namely, the following territories, excluding Canada and Newfoundland—that is to say: (a) any dominion; (b) any other part of His Majesty's dominions; (c) any territory in respect of which a mandate on behalf of the League of Nations has been accepted by His Majesty and is being exercised by His Majesty's Government in the United Kingdom or in any dominion; (d) any British protectorate or protected state; (e) Egypt, the Anglo-Egyptian Sudan and Iraq; (f) Iceland and the Faroe Islands.

12. Consultation on agreement: Either Government shall be entitled to approach the other for a reconsideration of any of the provisions of this agreement, if in its opinion the prevailing conditions of international exchange justify such reconsideration, with a view to agreeing upon modifications for presentation to their respective legislatures.

Signed in duplicate at Washington, D. C., this 6th day of December 1945.

For the Government of the United States of America:

FRED M. VINSON,
*Secretary of the Treasury.*

For the Government of the United Kingdom of Great Britain and northern Ireland:

HALIFAX,
*His Majesty's Ambassador Extraordinary and Plenipotentiary at Washington.*

## The Committee on Interstate and Foreign Commerce—150 Years

EXTENSION OF REMARKS
OF
## HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. HARRIS. Mr. Speaker, last night at the Mayflower Hotel, in Washington, D. C., a dinner in honor of Col. J. Monroe Johnson, Director of the Office of Defense Transportation, and also in commemoration of the one hundred and fiftieth anniversary of the establishment of the Committee on Interstate and Foreign Commerce of the House of Representatives, was given by the Association of American Railroads. Our genial and able colleague, the Honorable ALFRED L. BULWINKLE, of North Carolina, and a member of the Committee on Interstate and Foreign Commerce in the House of Representatives, delivered a most interesting and informative speech, which I include under leave to extend my remarks in the RECORD:

Chairman LEA, of the commitee, being necessarily absent, the duty and privilege has fallen upon me to take his place on this program.

I deem it both a privilege and a pleasure, on behalf of the committee, to be present and to pay honor to Col. J. Monroe Johnson, the Director of the Office of Defense Transportation, at this dinner given by the Association of American Railroads. The Nation is grateful to him for his magnificent efforts to aid in the transportation of materials of war and troops during the critical period through which we have passed.

It is also quite an honor for me to be here and speak to you on this occasion, which I understand is recognized as the one hundred and fiftieth anniversary in the United States Congress of the Committee on Interstate and Foreign Commerce, although, accurately speaking, the Committee on Interstate and Foreign Commerce was not established, or created, until Monday, December 14, 1795. At that time in the House of Representatives the Standing Rules and Orders for the first session of the Fourth Congress were adopted, and under the provisions of these rules four committees were named:

1. A Committee on Elections, seven members.
2. A Committee on Claims, seven members.
3. A Committee on Commerce and Manufactures, seven members.
4. A Committee of Revisal and Unfinished Business, three members.

The Rules and Orders of that day further provided that: "It shall be the duty of the said Committee of Commerce and Manufactures to take into consideration all such petitions and matters or things touching the commerce and manufactures of the United States as shall be presented, or shall or may come in question, and be referred to them by the House, and to report, from time to time, their opinion thereon."

Two of these committees had been created in previous Congresses. The Committee on Elections on April 13, 1789, and the Committee on Claims on November 13, 1794. The Committee on Elections was largely a committee on credentials as well as to pass upon the question, if there should be one, as to the election of a Member. Due to the numerous claims, in the nature of petitions, which were filed with the Congress, it was found necessary to create a committee to investigate and pass upon these before the House considered them. Likewise, it developed a year later that the merchants, manufacturers, and shipping and mining interests of that day also had filed numerous petitions in the House relating to their businesses. It must be remembered that prior to this first session of the Fourth Congress that the House consisted of 115 Members, and that all bills, resolutions, petitions, and so forth, were not considered by any committee. When the House convened, if a bill or resolution was drafted it was then referred to the House in Committee of the Whole House. There may have been hearings by some select committee, or, rather, investigations. The whole matter was thrashed out in the Committee of the Whole. When the claims and petitions became too many, the Committee on Claims was established as I have stated, and a Committee of Commerce and Manufactures was likewise established later on.

The Speaker wasted no time in appointing this committee on Monday, the 14th of December 1795. The committee was composed of:

Mr. Benjamin Goodhue, of Massachusetts, chairman.
Mr. Benjamin Bourne, of Rhode Island.
Mr. Edward Livingston, of New York.
Mr. John Swanwick, of Pennsylvania.
Mr. Samuel Smith, of Maryland.
Mr. Josiah Parker, of Maryland.
Mr William Smith, of South Carolina.

The first official act of business of this committee was a petition, or memorial, of John Courts, collector of the revenue for the district of Cedar Point, in the State of Maryland, praying that Enjemoy, in the State of Maryland, be made a port of entry instead of Cedar Point. Up to this time I have been unable to ascertain what action was taken on the memorial of Mr. Courts.

The first written report that I found that the committee filed was on the petition of Samuel Legare, James Theus, and Samuel Prioleau on the 27th day of December 1796. These three gentlemen were owners of the ship, *General Washington*, and it appears from the record that in the year 1794 some of the crew, without the knowledge of the captain, as was alleged in the petition, concealed and secreted amongst the ballast a few kegs of gin, some of which was landed in the United States contrary to the Revenue Act without being reported by the master of the ship. A fine of $500 was placed upon him, and the owners of the ship became surety for the payment of this amount. The captain, or master, left the State of South Carolina for parts unknown and was not expected to return. The Treasury Department was requested by the owners of the ship to relieve them of the payment of this $500. This was refused, so they came to Congress. This committee of 149 years ago made a report in brief and terse language, quote: "That the prayer of the petitioners, Messrs. Legare, Theus, and Prioleau cannot be granted." Nor do I find where the House took any action on this adverse report of the committee.

The coal miners of Virginia petitioned for a higher tariff on coal in order to protect the coal miners from being at the mercy of the foreign shippers of coal of that day.

This brings to my mind the reason for the separation of manufactures from commerce. Numerous conflicts had arisen on the question of jurisdiction on tariff duty between the Committee on Ways and Means and the Committee on Commerce and Manufactures. This tariff fight led to the creation of a Committee on Manufactures, for it was claimed by the protectionists that the purpose of the Committee on Commerce and Manufactures was to foster infant industries. It was claimed that none of the 22 revenue bills from the Committee on Ways and Means had benefited the manufacturers. For this reason, the advocates of protection sought the separation of commerce from manufactures. To the chagrin of the free traders,

the Speaker, Henry Clay, packed the new Committee on Manufactures with friends of protection. This new committee at once became the rival of the Ways and Means Committee and reported out numerous tariff bills up to the year 1832. After this time, it had little influence but did report a bill on wool duty as late as 1864, though it had lost its place among the great committees of the House.

During the years the Committee on Commerce lost some jurisdiction. On December 19, 1883, the Committee on Rivers and Harbors was established and took over the jurisdiction of the rivers and harbors bill. In 1935 it lost jurisdiction when foreign water transportation, coast guard, and other matters were vested in the Committee on Merchant Marine and Fisheries.

The Committee on Commerce continued from 1819 to the year 1892, when its name was changed from the Committee on Commerce to the Committee on Interstate and Foreign Commerce. It was a very interesting event which brought about the change in the title of the committee. In the first session of the Fifty-second Congress there was a contest in the Democratic caucus for Speaker. Charles F. Crisp, of Georgia, Roger Q. Mills, of Texas, and William M. Springer, of Illinois, were the candidates. On the thirtieth ballot Mr. Crisp was nominated. When Mr. Crisp was elected Speaker he appointed Mr. Springer as chairman of the Committee on Ways and Means, much to the surprise of those who had supported Mr. Mills, because in the Fiftieth Congress he had been chairman of this committee. Evidently the feeling was pretty hot, and in order to placate Mr. Mills the Speaker appointed him chairman of the Committee on Commerce. This did not work, and the Speaker took another try at it, and had the name of the committee changed from Commerce to the Committee on Interstate and Foreign Commerce.

We do not know, of course, whether Mr. Mills would have been placated by the changing of the name or not, because he was elected to the United States Senate and did not have the opportunity of refusing, but it was rumored around that he would not have served as chairman. The Speaker then appointed Mr. George D. Wise, of Virginia, the ranking Democratic member of the committee, as its chairman.

During these 150 years men of ability and integrity have served the committee as its chairman. Men who were active in Congress for years. I shall not recite the names of all of them but will give the names of men like John H. Reagan, of Texas; William P. Hepburn, of Iowa; James R. Mann, of Illinois; William C. Adamson, of Georgia; Thetus W. Sims, of Tennessee; John J. Esch, of Wisconsin; Samuel E. Winslow, of Massachusetts; James S. Parker, of New York; and last but not least, Sam Rayburn, of Texas, and Clarence F. Lea, of California.

It has been my privilege to serve under these last two. Mr. RAYBURN was selected as chairman in 1931. From that time up until 1937, you and each of you know of the amount and quality of the safe, sound, and progressive legislation that was reported from the committee and became law. Likewise, from 1937 much worth-while legislation has been reported from the committee and passed in the House. The Civil Aeronautics Act, the Transportation Act of 1940, the public-health laws, the amendments to the Pure Food and Drug Act, and other meritorious legislation has been placed upon the statute books.

I have given you briefly some of the history of this committee. Members on it carry heavy responsibilities which require much work. Its present jurisdiction is extensive and varied and includes practically all bills relating to the Department of Commerce, including Civil Aeronautics, the Interstate Commerce Committee and all that includes, the Federal Communications Commission and all that includes, the Federal Power Commission, the Federal Trade Commission, the Securities and Exchange Commission, the Railroad Retirement Board, the Railway Adjustment Act, Public Health, legislation relating to the Pure Food and Drug Act, petroleum and the Petroleum Administrative Board, natural gas, and many other subjects So you can see why I am proud of the fact—and I know that every member of this committee is—that it has weathered the storms of the past 150 years and is today the greatest legislative committee in the House of Representatives.

If time would permit, which it does not, it would be interesting to give in detail the many and various bills that have become law during these 150 years. I cannot take that time, but I do want to call to your attention that from this committee nearly 102 years ago was reported out, and finally enacted into law, the bill which made telegraphy possible in the United States. Without this means of communication the railroads could not have been extended over the Nation as they have. Hand in hand these two have brought progress to the country. Without the telephone, without the telegraph, without the radio, transportation would be seriously crippled whether by air, land, or sea. Some day I hope to be able to select the bills reported out of the committee which have had the greatest influence on the trade and commerce of the United States, as well as the other bills which have affected the health and well-being of the individual citizen.

We have touched on the creation and history of the committee during its 150 years. The work of the committee has been touched on. In closing it might be well to remind you that a tomorrow is coming. The future holds very heavy responsibilities and exceedingly hard work for each and every member of the committee. It is true that a great amount of the work deals with regulatory legislation, which is very important to the country. It is also true that some of the work will deal with the individual citizen of the Nation. In times like these, of a necessity these types of legislation must increase; but, be that as it may, it must be remembered that the underlying principle of the legislation that will be reported out of the committee must have as its guide the words "in the public interest."

On behalf of each and every member of the committee, I wish to express our appreciation for the invitation which you extended, and we accepted, to be present and honor a truly great American citizen, Col. Monroe Johnson, and I wish to say to him that he is in every respect well qualified and worthy to be a member of the Committee on Interstate and Foreign Commerce.

Following is a list of the names of the men who served as chairmen of the committee during the 150 years, with the Congresses they served in, and the years:

CHAIRMEN OF COMMITTEE ON COMMERCE

| Congress | Year | Name and State |
|---|---|---|
| 4 | 1795 | Benjamin Goodhue, Massachusetts. |
| 5 | 1797 | John Swanwick, Pennsylvania. |
| 6 | 1799 | Samuel Smith, Maryland. |
| 7 | 1801 | Do. |
| 8 | 1803 | Samuel L. Mitchell, New York. |
| 9 | 1805 | Jacob Crowninshield, Massachusetts. |
| 10 | 1807 | Thomas Newton, Virginia. |
| 11 | 1809 | Do. |
| 12 | 1811 | Do. |
| 13 | 1813 | Do. |
| 14 | 1815 | Do. |
| 15 | 1817 | Do. |
| 16 | 1819 | Do. |
| 17 | 1821 | Do. |
| 18 | 1823 | Do. |
| 19 | 1825 | Do. |

CHAIRMEN OF COMMITTEE ON COMMERCE—con.

| Congress | Year | Name and State |
|---|---|---|
| 20 | 1827 | C. Churchill Cambreleng, New York. |
| 21 | 1829 | Do. |
| 22 | 1831 | Do. |
| 23 | 1833 | John B. Sutherland, Pennsylvania. |
| 24 | 1835 | Do. |
| 25 | 1837 | Francis O. J. Smith, Maine. |
| 26 | 1839 | Edward Cwetis, New York. |
| 27 | 1841 | John P. Kennedy, Maryland. |
| 28 | 1843 | Isaac C. Holmes, North Carolina. |
| 29 | 1845 | Robert McClelland, Michigan. |
| 30 | 1847 | Washington Hunt, New York. |
| 31 | 1849 | Robert H. McLane, Maryland. |
| 32 | 1851 | David L. Seymour, New York. |
| 33 | 1853 | Thomas J. B. Fuller, Maine. |
| 34 | 1855 | Elihu B. Washburn, Illinois. |
| 35 | 1857 | John Cochrane, New York. |
| 36 | 1859 | Elihu B. Washburn, Illinois. |
| 37 | 1861 | Do. |
| 38 | 1863 | Do. |
| 39 | 1865 | Do. |
| 40 | 1867 | Do. |
| 41 | 1869 | Nathan F. Dixon, Rhode Island. |
| 42 | 1871 | Samuel Shellsberger, Ohio. |
| 43 | 1873 | William A. Wheeler, New York. |
| 44 | 1875 | Frank Hereford, West Virginia. |
| 45 | 1877 | John H. Reagan, Texas. |
| 46 | 1879 | Do. |
| 47 | 1881 | Horace F. Page, California. |
| 48 | 1883 | John H. Reagan, Texas. |
| 49 | 1885 | Do. |
| 50 | 1887 | Martin L. Clardy, Missouri. |
| 51 | 1889 | Charles S. Baker, New York. |

CHAIRMEN OF COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

| | | |
|---|---|---|
| 52 | 1891 | (Roger Q. Mills, Texas.<br>(George D. Wise, Virginia. |
| 53 | 1893 | Do. |

## The Hurley Controversy

EXTENSION OF REMARKS

OF

## HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Friday, December 7 (legislative day of Monday, October 29), 1945*

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Exit Pat Hurley," by Maxwell S. Stewart, published in the December 8, 1945, issue of the Nation; and I also ask unanimous consent to have printed in the Appendix the column entitled "On the Other Hand," by Lowell Mellett, in which Mr. Mellett uses the heading "Thinks Hurley might give Chinese benefit of his 1931 Oklahoma plan."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Nation of December 8, 1945]

EXIT PAT HURLEY

(By Maxwell S. Stewart)

Ordinarily when a public servant fails in his task, he resigns quietly, and his shortcomings are mercifully forgotten. This has always been true in the diplomatic service, where tradition frowns upon the airing of individual opinions. But Patrick Hurley is not a man who can accept failure gracefully. He showed that repeatedly in his brief but stormy career as Ambassador to China. And when the inevitable consequences of his meddling in Chinese domestic affairs became so apparent that he was denounced in Congress, his inordinate vanity would not permit a peaceful exit. Instead, he issued an angry public statement which only dramatized his unfitness for the responsibilities with which he had been entrusted.

His attempt to shift the blame for his failure to his former subordinates is a reflection of both his vanity and his incompetence. While it is true that his staff, almost to a man, opposed his consistent support of the reactionary elements in the Chungking regime, it must be remembered that Hurley's policies in every case prevailed and that during the past 6 or 8 months he had surrounded himself with men of his own choosing. Nor has the China Division of the State Department exercised a restraining influence. When conflict arose, Hurley was upheld against the judgment of experts who had spent years studying China's complex political problems. Hurley might have argued that civil war would have broken out even if the United States had not encouraged the Kuomintang with promises of American backing, but he certainly has no grounds for blaming our involvement in that war on those who opposed our taking sides in China's domestic dispute. Hurley's charge that some of the career men openly favored the Communists is a deliberate misrepresentation cooked up, apparently, for political effect. The policies advocated by the experts were from the beginning essentially those of Stilwell and Gauss. They sought to prevent American supplies from being diverted from the war against Japan for use in civil conflict and to assist all groups—not merely the Communists—seeking to establish a more democratic political structure in China. In contrast, Hurley's unconditional support of the Kuomintang has encouraged Chungking to resist popular demands for democratic constitutional reform.

The part of General Hurley's statement that most clearly betrayed his unfitness, however, was the self-contradictory charge that these foreign-service officials were siding simultaneously with an imperialist bloc and with Communist imperialism against democracy and free enterprise. It would be impossible in a brief article to untangle the confusion that apparently exists in General Hurley's mind regarding these basic issues. The equating of democracy and free enterprise provides a partial key to the confusion, but even that does not explain how the career men's alleged Communist sympathies were causing us to be sucked into a power bloc against Communist imperialism. Yet this is the one specific charge that would in any way justify his assertion that their policies, in contrast to his own, were laying the basis for World War III.

Confused and uninformed though General Hurley's statement is, it has been seized upon with delight by the anti-British, anti-Russian press. Yet its effect in the long run should be salutary. The American people have a right to know not only the details of our involvement in China but how our policies on crucial foreign issues are formulated. They should be particularly interested in learning why the views of a relative novice should be permitted to override the recommendations of men who have devoted years of study to Chinese affairs. Another relevant question is why, considering his obvious incompetence, General Hurley was kept in his post as long as he was. It is known that a successor—a man with long experience in China—was selected several months ago, even before the general returned from China. But after Chiang Kai-shek sent an urgent letter requesting Hurley's retention, it was announced that he would return to China. The public would doubtless like to know why the views of a Chinese official should take precedence over the interests of the American people. A congressional investigation of these questions would be useful.

After the furor created by Hurley's resignation it was obviously impossible for the President to go back to the original plan of naming a career diplomat to replace him. He had to find a man who enjoyed the confidence of all sections of American opinion and who at the same time would command the highest respect in China. While the selection of a military man with little China experience may be questionable, especially at a time when political issues are paramount, General Marshall is no ordinary military man, and he is not wholly without experience in China. His ability is exceptional, and there is no reason to believe that he shares Hurley's anti-Russian bias. While his task is an unenviable one, he will assume it with as close to united backing as any diplomat could desire.

President Truman has promised that General Marshall will be given specific published instructions before he leaves for Chungking. It is probable that these instructions will follow the general lines of those given Hurley a year ago, making due allowances for changed circumstances. The new Ambassador will undoubtedly be asked to explore the possibility of solving the Kuomintang-Communist controversy and to help formulate a long-range policy on American military and material assistance to China. Whether the President will go further is uncertain. But Marshall's task would be greatly clarified if the President would use this occasion to restate the principles of American foreign policy contained in his Navy Day speech as they apply to China. Such a statement would have a tremendous effect on China's internal situation. The militarists who have gone confidently ahead with preparations for civil war on the assumption that Uncle Sam will provide the arms and pay the bill would lose their trump card if our policy were clearly put; for no responsible American official will pledge the kind of assistance the Kuomintang militarists need if they are to establish control throughout China. If the President were to make it plain that American military and economic support will depend upon the acceptance of basic democratic principles, Chungking might be forced to abandon its stubborn opposition to constitutional reform and so might open the way for a settlement of China's internal difficulties.

---

[From the Washington Star]

ON THE OTHER HAND—THINKS HURLEY MIGHT GIVE CHINESE BENEFIT OF HIS 1931 OKLAHOMA PLAN

(By Lowell Mellett)

We're funny folks, we Americans. We know how to manage everybody's business. Just now we are undertaking to manage China's business, which is civil war. That's been a large part of China's business for a long time and just now it shows signs of becoming a big business. And there we are, right in the middle of it, prepared to take a hand and show the Chinese how it should be done.

We should know. Didn't we have about the greatest of all civil wars, the greatest in the numbers of killed, wounded, and dead of disease? And didn't we win it; that is, didn't we northerners win it? We certainly did. And look at the results. We've got Bilbos and Rankins and McKellars running the country, or running the Congress, which runs the country.

And so, having demonstrated our capacity, we will now straighten out the little mess into which some 400,000,000 Chinese have got themselves. We will show them the democratic way. Our greatest expert has left the field of actual battle, but he is here with us in Washington and being heard in the halls of Congress. He is telling our lawgivers what should be done for the Chinese—what, indeed, he would be doing this moment himself for the Chinese if an upstart Congress Member hadn't irritated him into resigning; how he would bestow upon the Chinese the blessings of democracy.

WINTER OF 1931 RECALLED

Back in the cold winter of 1931 our hero was, even as now, sacrificing himself on the altar of public duty. He was serving as Secretary of War. The times were troublous. Some millions of Americans were becoming restless. They wanted to eat. The War Secretary—there is no point in concealing his name, it was Patrick J. Hurley—sympathized with this desire and undertook to do something about it. He had a plan. It was embodied in a letter from a fellow Oklahoman, John B. Nichols, of the Oklahoma Gas Utilities Co., of Chickasha, Okla. General Hurley forwarded the letter, with his indorsement, to Col. Arthur Woods, who was in charge of President Hoover's pacification program. The plan, quoting from the letter, provided:

"Sanitary containers of 5 gallons each should be secured in large numbers so that four will always be left in large kitchens where the restaurants are serving a large-volume business. The containers should be labeled 'Meat, Beans, Potatoes, Bread, and Other Items.' Someone from the Salvation Army with a truck should pick up the loaded containers every morning and leave empty ones. The civic clubs, restaurants, the proprietors, and the workers should be asked to cooperate in order to take care of all surplus food in as sanitary a way as possible. In other words, when a man finishes his meal he could not (after lighting his cigarette or cigar) leave ashes on the food which he was unable to consume. * * *"

IT WASN'T FOR CHARITY

"Baskets or sacks must be placed in each store and particularly those operating meat markets. The proprietor of each firm, together with the clerks, will be asked to place whatever food they can spare or cannot sell. Viz, bones, meats of any kind, potatoes, apples, vegetables that might be used for soup or any other items they see fit to place in the baskets and sacks. All bakeries should do likewise."

But this wasn't to be charity. The unemployed, Mr. Nichols explained, were to work for these meals by chopping wood donated by farmers.

"We expect a little trouble now and then," said Mr. Nichols, "from those who are not worthy of the support of the citizens, but we must contend with such cases in order to take care of those who are worthy. God placed them here and it is our duty to see that they are taken care of in a Christian manner."

Well, God placed the Chinese in China, didn't he, and what does General Hurley mean

by letting one little Congress Member interfere with his taking care of them in a Christian manner? He should explain that while he is engaged in telling Congress all.

## Tuskahoma, Okla., Proposed as Allied Nations Capital

REMARKS
OF
**HON. PAUL STEWART**
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. STEWART. Mr. Speaker, I have just been advised by Hon. Don McBride, chairman of the Oklahoma Planning and Resources Board, that I have been named a member of a committee to be known as the Tuskahoma Advisory Commission. The duties of said committee are to further the proposition that the Tuskahoma area in Pushmataha County, Okla., be considered as a possible site for the new Allied Nations Capital.

In his letter of appointment, Mr. McBride points out:

It is our opinion, notwithstanding the fact that many large cities are bidding for it, that this future world city should be a city in itself and not an appendage to any established metropolis. The area would be internationalized and that would hardly be feasible in an existing city. It is a new idea—this council of the nations of the world—and should, therefore, be housed in a completely new city—rising on virgin soil with no disagreeable past to tarnish it.

Mr. McBride further states:

That Oklahoma could well afford and would be willing to donate the land for this city is of course a definite fact.

In the rest of his letter Mr. McBride gives a very graphic description of the Tuskahoma area as follows:

The site is less than 300 miles from the geographic center of the United States. This fact should be stressed because in any event, the delegates from foreign countries to this capital must of necessity cross one or the other great oceans. That the delegates from the East or West would also have to cross our whole continent if either of the coast-line cities are chosen goes without saying. Therefore, the location of Tuskahoma geographically is perfect.

It is natural to suppose that the future travel—for time, convenience and comfort—will be by air. The great Southwest surrounding the Tuskahoma area has year-around flying weather. The airports and facilities for air travel are unsurpassed by any region in the United States. The temperature range is such as to provide mild winters and pleasant summers.

The water supply is abundant. Dams would impound water for an ample supply for such a city. Their is plentiful material for the construction of multiple buildings. Lumber, granite, limestone, glass sand, and asphalt, as well as an unlimited supply of the raw materials for making brick and tile, are available. Natural gas as a fuel supply is immediately available and abundant and buildings erected where gas is used as a fuel will be as beautiful 10, 20, 50, or 100 years from now and would not be blackened by the smoke-filled air such as would be the case in cities of the north whose invitations the locating committee may be considering.

The proximity of the supply of natural gas would supply the power necessary for this city, as our great fuel-burning power plants could testify.

Scenically, the Kiamichi Valley is a region of great natural beauty.

These are but a few attributes briefly mentioned of the Tuskahoma area as a world capital site.

Subsequent to the appointment of the advisory commission, the Honorable Fred McDuff, of Seminole, Okla., for previous business reasons, could not qualify as chairman of the commission and the Honorable Moss Patterson, Oklahoma City businessman and former resident of McAlester, has accepted the chairmanship. The following citizens were named as members of the Tuskahoma Advisory Commission: Fred McDuff, chairman, Seminole, Okla.; Don McBride, chairman of Oklahoma Planning and Resources Board; Gov. Robert S. Kerr, Oklahoma City, Okla.; Lt. Gov. James E. Berry, Stillwater, Okla.; L. D. (Bill) Melton, Tulsa Chamber of Commerce, Tulsa, Okla.; W. G. Skelly, Skelly Oil Co., Tulsa, Okla.; Hon. James C. Nance, State senator, Purcell, Okla.; Dr. George L. Cross, president, University of Oklahoma, Norman, Okla.; Hon. H. I. Hinds, speaker, house of representatives, Tahlequah, Okla.; Robert J. Bell, attorney, McAlester, Okla.; M. E. Williams, insurance, McAlester, Okla.; Hon. Paul Stewart, Congressman, Washington, D. C.; Hon. Bill Stigler, Congressman, Washington, D. C.; Hon. Ross Rizley, Congressman, Washington, D. C.; Hon. Elmer Thomas, United States Senator, Washington, D. C.; Ben Dwight, Choctaw tribal attorney, Oklahoma City, Okla.; Hon. W. A. Durant, principal chief, Choctaw Nations, Tuskahoma, Okla.; Dr. Henry G. Bennett, president, Oklahoma A. & M. College, Stillwater, Okla.; Hon. Brown Moore, attorney, Stillwater, Okla.; Hon. Homer Paul, State senator, Pauls Valley, Okla.; E. K. Gaylord, president, Oklahoma Publishing Co., Oklahoma City, Okla.; Ken Miller, news editor, Radio Station KVOO, Tulsa, Okla.; Hon. Jack Bradley, State representative, Wilburton, Okla.; Frank Phillips, Phillips Petroleum Co., Bartlesville, Okla.; Herbert K. Hyde, attorney, Oklahoma City, Okla.; Hon. Frank Carmichael, State representative, Sayre, Okla.; Don Whistler, WNAD Radio Station, Norman, Okla.; Mr. Geo. H. Evans, co-publisher of the Chickasha Daily Express; Dr. Anna Lewis, professor of history, Oklahoma College for Women, Chickasha; Dr. E. E. Dale, head of history department, University of Oklahoma, Norman; Hon. Moss Patterson, transportation, Oklahoma City, Okla.

## Is Christianity Her Only Crime?

REMARKS
OF
**HON. JOHN E. RANKIN**
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. RANKIN. Mr. Speaker, these attacks now being made on Madame Chiang Kai-shek raise this question in my mind, "Is Christianity her only crime?"

In my opinion she is the greatest Christian leader that China has seen in a thousand years. We saw her stand on that rostrum and plead with the American people to furnish the Chinese fighting forces arms with which to defend themselves against the brutal Japanese.

She made the greatest impression of any foreign visitor I have ever heard address the Congress of the United States.

Now we find the Communists, who have swallowed the atheistic doctrines of Karl Marx, out knifing these Chinese patriots under Chiang Kai-shek who fought to hold the Japs back as best they could, while our boys were dying by the thousands in the Southwest Pacific. Those individuals who are going into the press, on the radio, or on the floor of this House and attacking Madame Chiang Kai-shek are doing an injustice to one of our allies, as well as this little Chinese woman, Madame Chiang Kai-shek, who has done so much to advance the cause of Christianity to suffering people of China.

## Mrs. Roosevelt and Chinese Democracy

EXTENSION OF REMARKS
OF
**HON. CLARE BOOTHE LUCE**
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mrs. LUCE. Mr. Speaker, yesterday I spoke of the somewhat ungracious and inaccurate remarks made by Mrs. Roosevelt in criticism of Madame Chiang Kai-shek and China, remarks to the effect that Madame Chiang, like the Chinese people, talk about democracy but do not know how to live it.

The following editorial from this morning's Washington Post points out to Mrs. Roosevelt the unsoundness of the position which she, one trusts, took thoughtlessly, a circumstance which can always be pardoned in one who talks so much and so often.

Moreover, Mrs. Roosevelt was quick to clarify and, to some extent, apologize for these remarks as will be seen in the article she published this morning.

Mrs. Roosevelt does not comment on the fact that Dr. Sun Fo, a strong and vigorous critic of the Kuomintang Government of Chiang Kai-shek, is allowed, indeed encouraged, to speak and talk freely in China. Surely the granting of free speech in opposition to the government is one of the signs that China is practicing democracy, though it would not be viewed as a sign of unity in Soviet Russia, where freedom of speech is defined as the right of all citizens to say exactly the same thing.

[From the Washington Post]

CHINA LESSON

That a little knowledge is a dangerous thing has never been better illustrated than in the case of Mrs. Roosevelt. It is doubly

dangerous when coupled with an emotional streak such as Mrs. Roosevelt possesses. She used to be one of millions of Americans who looked at China through rose-colored glasses. Now she has joined in criticism of the Chiang Kai-shek government for its undemocratic ways. To be sure, criticism is justified, but not in the comprehensive, unknowing manner that Mrs. Roosevelt puts it. This is how Mrs. Roosevelt expresses her castigation: "Madame Chiang is typical of the Chinese in that she can talk beautifully about democracy, but does not know how to live democracy." A mountain of ignorance is contained in Mrs. Roosevelt's sentence. Actually the Chinese are the people above all others who "live democracy."

Mrs. Roosevelt is confusing representative institutions with democratic living. The value attached to the individual is a Chinese inheritance extending back long before the Christian era. The individual rises superior to the state, even to God. Thus, the Chinese are at the opposite pole from the German and the Japanese, to whom the individual meant nothing and the state everything. It is the dignity felt for the individual that accounts for the civilization of China. Indeed, China is more a civilization than a state, even a nation. No matter where you go in China, whether rule is exercised by a war lord, a Communist, or a Kuomintang general, you will find the same way of life. In China they call it tao, a word the flavor of which can be expressed only by the Biblical way. Along with respect for the individual, the Chinese way of life has no class distinction and no racial prejudice, and is expressed by loyalty to the family and suspicion of the state, no matter who is running it.

Here is the key difficulty about China. Inefficiency is rife because the Chinese have such an abiding respect for the individual. Incompetents are seldom fired, either in the home or in the factory, because the concern would always be about their fate. Far from not living democratically, in other words, the Chinese live too democratically. Bad government is tolerated because government is nobody's concern and therefore is little more than a piratical adventure. It is for these reasons that the governmental unity which Secretary Byrnes, in a letter to Representative ANDERSON, says is the object of our policy toward China will be hard to achieve. We must persevere in pressing Chiang Kai-shek to liberalize his regime in conformity with his promises and the principles of the founder of the Chinese Republic, Sun Yat-sen. But we cannot afford to forget what Secretary Byrnes calls the realities of China, as Mrs. Roosevelt does.

---

[From the Washington Daily News]

MY DAY—CHINA CANNOT HAVE UNITY WITHOUT ALL PARTS BEING FREE

(By Mrs. Eleanor Roosevelt)

NEW YORK, Thursday.—I was reported the other day to have made a criticism of Madame Chiang and that leads me to devote this column today to a few thoughts on the Chinese situation and our own relationship to the situation.

Sensational things have been said of late by people in high places. My few words are aimed at something quite different from criticism. I believe we should make an effort to understand a situation which to most Americans is difficult and confusing.

When Madame Chiang was here she spoke of democracy in words which we all applauded. Anyone living in China, however, knows quite well that there is still a great gulf between those words and the possibility of living in China today in what we would consider a democratic way of life.

We, of all people, should know that democracy requires a literate people. The Chinese people have been divided by different spoken dialects so that a man from one section of the country cannot be understood in another. The educated Chinese are held in high esteem because it takes so long to become educated, and the average Chinese who is for the most part, a peasant or a worker, has only had an opportunity in the very few past years to learn basic Chinese. Only a few million of China's teeming millions can read and write what may some day become a common language and this is the first step in the unification of China.

The Generalissimo's great strength has been his desire to unify China in which Madame Chiang always has helped him. But because this is such a difficult task and those undertaking it, are at times in such precarious positions, there is greater fear of the opposition than there would be, let us say, in our own country of any movement against our country's democratic form of government. We are not seriously afraid of either fascism or communism because we know that as long as through our democratic form of government, we meet the needs of the people, there will be no threat to democracy.

But the needs of the people are far from being met in China today and so the comparatively small group known as Communists, do inspire greater fear in the central government.

The papers have reported of late a movement in China under the Democratic League, whose leader is Mr. Sun Fo, son of Sun Yat-sen. From what one reads it would seem that this might be the middle of the road group which might bridge the gap between the left and the right. One thing seems to me quite certain, according to General Hurley and our State Department, we agreed to support the Generalissimo in his efforts to create a unified government in China, and that is our obligation. But we did not agree to use force against any group in China, and it would be very undemocratic if we tried to settle Chinese internal problems for them.

It is obvious to us as citizens of a democracy that there never can be any unity in any great country unless all parts of that country and all shades of opinion have full expression and representation. That seems to me vital in the solution of Chinese problems today.

---

[From the Worcester Telegram of December 5, 1945]

CHINA AND DEMOCRACY

Mrs. Franklin D. Roosevelt, visiting Lovell General Hospital, took the occasion to speak slightingly of Chinese democracy, and of Madame Chiang, the wife of Chiang Kai-shek, in particular. Madame Chiang, she said, was typical of the Chinese in that she "can talk beautifully about democracy but she does not know how to live democracy." This inability, she said, came about because the Chinese never had an opportunity to see or practice democracy in action.

Mrs. Roosevelt certainly cast no aspersions against Madame Chiang's democracy, or the democracy of the Chinese people, in the dark days of 1942 when she and her late husband were glad enough to entertain her at the White House. Perhaps the political complexion of the present Chinese civil war has now caused Mrs. Roosevelt to side with those parlor pinks who, by some queer process of reasoning, seem to want to back the Chinese Communists against the Chinese Nationalists in spite of the fact that this country has favored Chiang. Certainly, it favored Chiang's government during the Japanese threat.

Certainly China does not have the democracy of the United States, but, after all, it was only in 1911 that the Revolution abolished the imperial office, and it was as recently as 1928 that it adopted the Kuomintang Constitution. Dr. Sun Yat-sen, founder of the People's Party, believed in national emancipation and racial equality; political rights for the people and economic rights for the workers. The Chinese Nationalists, handicapped by a sprawling and undeveloped country, and a virtually illiterate populace, have naturally been unable to achieve the complete democracy which Mrs. Roosevelt believes they should have. Even so, the democratic tendencies shown by Chiang's government have been far ahead of any displayed by the Yenan group of Communists.

---

## Problems of Aluminum Plant Disposal

EXTENSION OF REMARKS

OF

### HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

*Friday, December 7 (legislative day of Monday, October 29), 1945*

Mr. MITCHELL. Mr. President, today I conferred with President Truman upon the urgent problems of aluminum plant disposal and operation. The President expressed his firm conviction, which he had gained as chairman of the National Defense Investigating Committee, that war plants must be transferred to peacetime work to the maximum extent and in the shortest possible time, for the maintenance of full production and full employment.

I ask leave to have printed in the Appendix of the CONGRESSIONAL RECORD the memorandum which I presented to the President, outlining the problems of aluminum plant disposal.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM ON ALUMINUM PLANT DISPOSAL

SCOPE OF THE PROBLEM

To meet wartime needs, the Government built, and now owns, about 50 aluminum producing and fabricating plants, plus scrambled facilities, at a total cost approximating $700,000,000. (An allocated share of Government power facilities to service these plants would bring the investment to about $1,000,000,000.) Government-owned plants represent a major position of aluminum capacity. Today these plants are idle, many of their workers unemployed. The Government must transfer these plants quickly to private producers.

BACKGROUND EVENTS

*Surplus report*

1. In October 1944 Congress passed the Surplus Property Act vesting the Surplus Property Board with property-disposal responsibility and directing that disposals be made in a way to safeguard national security, stimulate full employment, encourage competition and private initiative, discourage monopoly, and so forth. For designated lists of property, including plants costing more than $5,000,000, the Board was to report to Congress within three months after passage of the act, before proceeding to dispose of such properties.

*Court attitude*

2. In March 1945 the United States Circuit Court of Appeals for the Second Circuit, sitting as the court of last resort, decided that Alcoa, on the basis of prewar activity, had a monopoly in primary aluminum production. However, the court deferred remedial action pending execution of disposal policies by the Surplus Property Board. The court considered that the Board was striving for the same objective as itself in

attempting to insure competition rather than monopoly. In effect, this was a mandate to the Board to proceed with a plan of disposal which would break the Alcoa monopoly.

COMPANIES FAVOR STOCK PILE

3. In August 1945, 6 months after the due date for the Surplus Property Administrator's report to Congress, nothing had yet happened. Whereupon a subcommittee on light metals and aviation of the Senate Committee to investigate the National Defense Program, with myself as chairman of the subcommittee, held hearings in the Pacific Northwest. This region has a considerable portion of the Government aluminum and power facilities and a serious unemployment problem. We found a number of private producers including Kaiser, Olin Industries, Reynolds and Columbia Metals, interested in leasing some or all of the Northwest plants, as a first step to subsequent purchase, provided they could be assured of an adequate supply of power and raw material, and a market for aluminum. There was general agreement among these witnesses that the best way for the Government to support an interim market was by purchasing aluminum for the stock pile recommended by the Army-Navy Munitions Board. Alcoa offered to buy the plants outright, but advised against hasty disposal of aluminum plants, feeling fortified in its position because the leases it held on the aluminum-producing plants still had 2 or 3 years to run. Goodloe of RFC seemed disposed to think that no move on disposal could be made while these leases were still in effect. The committee was critical of the continuing leases.

*Alcoa refuses to operate*

4. On August 30, 10 days after our hearing, the RFC suddenly discovered that Alcoa was not maintaining an average of 40 percent production over a 6-month period, as required in the leases, and gave notice of cancellation effective as of October 31. Alcoa refused an alternative offer to operate the plants for a year on 60-day cancellation notice. The leases had to be modified or canceled, to free the Government's hand, but the RFC was obviously reluctant in taking this move, because it invited Alcoa to convince it (the RFC) that this was a wrong action. This invitation appeared in the letter of August 30 giving notice of lease cancellation.

*Attorney General's report*

5. On September 14 the Attorney General, pursuant to section 205 of the War Mobilization and Reconversion Act of 1944, directing him to report to Congress on factors that tend to foster monopoly, submitted a report on the aluminum industry. The report recommended splitting up Alcoa into a number of competing companies. A letter in the form of a brief against this recommendation was written to Attorney General Tom Clark by Alcoa on December 3.

*Board suggest stock-piling*

6. On September 21, the Surplus Property Board's report, about 9 months overdue, was submitted to Congress. It proposed to sell or lease plants to competitors of Alcoa, permitting certain facilities to go to Alcoa only upon approval of the Attorney General. The Hurricane Creek, Ark., alumina plant was to be offered to a competitor of Alcoa under terms that would guarantee the sale of alumina to others on a competitive price basis. The report was no optimistic as to success in disposal but foresaw possibility of direct Government operation or Government subsidies to private producers.

*Joint hearings*

7. On October 19 or thereabouts, joint hearings were held before the subcommittee on surplus property of the Military Affairs Committee, the Small Business Committee, and the industrial reorganization subcommittee of the Postwar Economic Committee. These hearings concerned the reports of Clark and Symington. Since the 30-day review period for Symington's report expired about then, it was decided by joint resolution to extend this period until November 21, another 30 days. This time having expired without further action by Congress, Symington's report is considered approved.

*Bill to allow purchase*

8. On November 20, I tried to break the log jam in aluminum disposal by introducing for myself, and Senators FULBRIGHT, MORSE, and CORDON, S. 1612. This bill authorizes the RFC to purchase up to one and a half billion pounds of primary aluminum for stock pile, such aluminum to be purchased from Government-constructed plants, at current market prices, and from stocks in excess of current industrial demand. The RFC disclaimed authority to make such purposes under its present act. And pending stock-pile legislation is of a broad, general nature. My bill would fill a gap in existing legislation, and contains a specific instruction for the stock pile to be taken over by any subsequent authority that is set up. A companion bill (H. R. 4841), was introduced into the House on November 28, by Representative COFFEE.

*Mitchell committee chairman*

9. On November 23, I made a speech on the floor of the Senate, urging prompt consideration of this proposed stock-piling legislation, and pointing out, among things, that a do-nothing policy with reference to disposal was playing into the hands of the Alcoa monopoly. Senator WAGNER, chairman of the Banking and Currency Committee, has appointed a subcommittee to study this bill (S. 1612) consisting of MITCHELL, chairman; MCFARLAND, FULBRIGHT, BUTLER, and MILLIKIN.

THE PRESENT SITUATION

While the events above indicated were taking place, occasional negotiations were being conducted by the RFC with potential operators of Government plants. At the present time, Reynolds is the most active bidder having submitted a number of proposals. Columbia Metals has also made a proposal. The RFC appears on the verge of concluding a lease agreement with Reynolds with respect to the Hurricane Creek, Ark., alumina plant and the Jones Mills, Ark., reduction plant. In a prior proposal, Reynolds had offered to lease, in addition, the Spokane, Wash., and Troutdale, Oreg., reduction plants. The RFC was unwilling to make a deal on the basis of the earlier proposals. Reynolds is unwilling to take over the northwest plants in the present offer.

The details of all these offers are too numerous to review here. Generally speaking, if the RFC were willing to accept terms which would (1) guarantee the operators against the greater part of their losses, and/or (2) guarantee a market by purchase of excess production for stock-pile purposes, Reynolds, Columbia Metals, and probably other potential operators would agree to take over the bulk of the plants that are economically situated. In terms of present negotiations, these would include the Arkansas alumina and aluminum plants, and the Northwest plants. The RFC is unwilling to accept such terms on the grounds that these amount to Government subsidies. It takes great pride in announcing that the present deal about to be concluded with Reynolds does not include any such subsidies. The present position of the RFC is open to serious criticisms, a few of which I will try to indicate briefly.

*Special treatment for Alcoa*

1. During the war, in the Alcoa contract, the Government assumed 85 percent of the losses and took 85 percent of the profits. In a memorandum dated August 2, 1945, Husbands proposed to Symington that this Alcoa-type contract was a sensible and practical proposal to get takers for Government aluminum plants, even though the howl of subsidy might be raised in some quarters. Now the howl is being raised (e. g., in a letter of Alcoa to Symington dated October 15), and RFC is no longer interested in applying the Alcoa-type contract. Reynolds made earlier offers, on September 25 and October 23, both of which were inspired by Husbands' original memorandum when our subcommittee publicized it. There were departures in details from the Alcoa-type contract so far as Reynolds' proposals went, but apparently the RFC is not even disposed to negotiate along the lines of its previous recommendations. On subsidies RFC is playing the Alcoa game.

*Tie stock pile to operation*

2. If the Army-Navy Munitions Board considers aluminum stock piling essential to national security, it seems reasonable to tie in purchases for stock pile with helping aluminum plants get into private, competitive operation. If the Government needs the metal, to call guaranteed purchase for stock pile a subsidy is playing with words. In any event, it is preferable to subsidize competition by action than to subsidize monopoly by inaction. There are paramount objectives in the Surplus Property Act, with respect to stimulating employment, encouraging competition, etc., which override the narrow interpretation of subsidy. If the RFC would accept the stock-pile idea, that would go a long way to disposing of the aluminum plants. But it shies away from stock piling, will undoubtedly oppose my bill, and, in fact, has requested that its comment on the bill be delayed until some other possible negotiations are carried through.

*Waste of RFC program*

3. The narrow attitude of the RFC on subsidies is part of a penny-pinching approach while dollars are going to waste. It haggles over terms and jockeys around to get a little better deal for the Government, with the result that Reynolds refuses to take over the Northwest plants. The Government owns power as well as plants, and probably a third of the Northwest power is now running over the dams at a yearly loss of $8,000,000, while the plants stay idle. And these idle plants are costly to maintain, not to mention unemployment costs. Already more money has been lost than is involved in the difference between proposals that would work all the plants and those that would work some or none.

*Piecemeal approach bad*

4. By adopting a piecemeal approach to plant disposal, the RFC successively creates conditions more difficult and less likely to effect the disposal of remaining plants. The technical and financial requirements calls for integrated operation in the aluminum industry. Reynolds and Columbia Metals originally proposed to take over the Northwest plants as well as the Arkansas plants. With the Reynolds deal about to be concluded, excluding the Northwest plants, other takers for those plants will be harder to find if they have to depend on competitors for alumina. It is true that Reynolds will be obliged to furnish alumina from Hurricane Creek to competitors at cost plus 6 percent. Even here the present cost agreement is 2 percent more than Reynolds' earlier proposal of cost plus 4 percent.

CONCLUSION

5. By refusing to relate stock piling to plant disposal, by trying to save Government money in one place and causing it to go to waste in other places, by negotiating disposal on a piecemeal basis instead of on an integrated plan, the RFC is making policy, albeit undesirable policy.

But policy, in plant disposal according to Congress, is really Surplus Property's function, and it is getting nowhere. Under the present set-up, where buck passing and shifting responsibility is at a premium, the Sur-

plus Property Administrator performs no useful function.

Disposal policy which involves so many billions of public moneys, must be taken much more seriously. And policy must be integrated with actual disposal and the economic necessities of a nation in need of permanent jobs. At the present time the RFC is causing Government effort to work at cross purposes, and the Surplus Property Act, good in declared objectives, is a hollow mockery.

The work of these agencies must be given an over-all objective which is in the Nation's interest. This can only be accomplished by assuring administrative responsibility for both policy and disposal.

## National Hospital Center

EXTENSION OF REMARKS

OF

### HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

*Friday, December 7 (legislative day of Monday, October 29), 1945*

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Hospital Center," published in today's Washington Evening Star.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOSPITAL CENTER

Witnesses before the House District Committee have made out a strong case in support of the long-pending bill to create in Washington, with Federal aid, a great national hospital center, embracing several of the larger nongovernmental hospitals in the city. As Senator TYDINGS told his fellow legislators at the hearing, conditions at some of the older of Washington's privately maintained hospitals are deplorable. Staffs and patients are compelled to endure almost unbelievable hardships in antiquated buildings which lack up-to-date sanitary, lighting, ventilation, and clinical equipment, and which, because of their age, are difficult to keep free from dirt and even vermin. Furthermore, Washington's hospitals are congested to the point where it is estimated that more than 1,600 additional beds are needed to meet the nationally recognized hospitalization standard of 5 beds per thousand of population.

Under the National Hospital Center bill, which passed the Senate nearly 8 months ago, the Emergency, Garfield, and Episcopal Eye, Ear, and Throat Hospitals, and possibly several more of the 12 nongovernmental hospitals in the District would be expanded and grouped together in a center which would be financed in part by Federal funds and maintained thereafter by the hospitals composing the center. By using a central heating plant and common laundry, kitchen, and laboratory, operating room, and other facilities, large economies in overhead costs could be effected.

That the Federal Government should defray at least part of the capital investment in such a project, with the hospital paying its own way thereafter, seems but fair when it is considered that surveys reveal that approximately 44 percent of the patients treated consider Washington as their permanent home. There is no Government hospital in the Washington area for general treatment of these employees, although Cabinet members and Members of Congress are able to obtain treatment at the Navy and other service hospitals in and around Washington. The National Hospital Center would provide 1,500 beds and modern equipment to meet the urgent and deserving needs of Federal workers and others. Early passage of the hospital bill is highly desirable.

## DAR Negro Policy

EXTENSION OF REMARKS

OF

### HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

*Friday, December 7 (legislative day of Monday, October 29), 1945*

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very wise, timely, and patriotic article by Westbrook Pegler, published in his column, entitled "Fair Enough," in the Washington Times-Herald of October 29, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FAIR ENOUGH

(By Westbrook Pegler)

NEW YORK, October 28.—The National Society of the Daughters of the American Revolution is a private organization of restricted membership, devoted to patriotic and educational works. It has never been accused of allegiance or subservience to any foreign political or national interest, but twice in recent years it has been the victim of savage propaganda, promoted by New Deal ideologists because the rules for the management of its privately owned concert hall in Washington, D. C., provide that it may be leased for performances by "white artists only."

On the first of these occasions Marian Anderson, the Negro singer, came under the ban and Harold Ickes, in the Department of the Interior, took a leading part in agitation which made Miss Anderson famous, whereas, up to that time, she had been comparatively obscure to the public in the United States, although celebrated among artists. Mrs. Eleanor Roosevelt, by way of personal protest and personal political promotion, resigned her honorary membership in the DAR. By contrast with the course of conduct which she urged on American members of the American Newspaper Guild who resigned or thought of resigning in revolt against the domination of the guild by Communists.

Mrs. Roosevelt held in that case that the thing to do was not resign but fight for reform and control within the guild. * * *

Recently another application on behalf of a colored-woman performer for a date at the DAR's Constitution Hall in Washington was denied for the same reason that prevailed in the Anderson case.

The subject was Hazel Scott, who recently married a New York Negro Congressman named POWELL. * * *

The situation now is such that any Negro jug-band or musical-saw virtuoso from any catfish joint or any troupe expressing the degenerate and altogether discreditable jitter and jive themes, given a nimble press agent and the cooperation of any Congressman, may make publicity at the expense of the DAR and its honorable reputation as a patriotic group of American women.

The press, generally, has lent itself to these exploits, failing, almost without exception, to note that the DAR did not originate this separation of the races in Washington or elsewhere but merely followed legal custom in Washington.

In this connection, the DAR has cited a decision of the Court of Appeals of the District of Columbia which takes "judicial notice of the fact that those accepted practices are not intended to imply the inferiority of either race to the other."

The court observed their existence in public housing and public schools in Washington and that "separate churches are universal and are approved by both races."

In this propaganda, however, the fine patriotic principles of the Daughters are ignored or jeered by persons and groups whose own policies and associations have been responsible for riots, the teaching of dirty doctrines in the schools, in print, and on the air, and the penetration of unmistakable Communists into positions of dangerous power in the Government.

And many among the most active exploiters of these incidents are hypocrites whose personal devotion to the cause of opportunity for the dignified, loyal, and ambitious Negro has never been able to induce them to hire Negroes for any but the most menial jobs.

The impression cannot be escaped, therefore, that among those who have attacked the DAR for its enforcement of a familiar Washington custom, the motive of some is not so much to protest against discrimination or "liberate" art as to discredit an institution which is more purely American than most others of our time because it is purely and serenely American and unashamed of its patriotism.

There are other halls to be had and the fact naturally comes to mind that if artistic freedom were the issue in these disputes those who thirst for such music and abhor discrimination could solve the problem in some edifice owned by any of the many offshoots of the Communist Party.

To mention this possibility is to demolish it, however, because in that case there would be negligible publicity and mediocrity or, worse, vulgarity and mere noise would be assessed at their true value.

None of the agitators of the DAR's difficulties has yet had the effrontery to propose that because, like Constitution Hall, certain religious buildings in Washington are tax exempt and the property of private groups, the congregations which own them should be compelled to lease them for political rallies to be addressed by Congressman POWELL. Yet, consistently, that would follow.

For Constitution Hall and the churches are in the same category as to ownership and tax exemption, and the religious group owning a cathedral would deserve no less abuse than that which the DAR has suffered over these years.

On the record the DAR is incomparably more worthy of popular respect and support than most of those who have attacked it. And Americans who are not descended from Revolutionary soldiers, but patriots nevertheless, could encourage a fine organization by inquiring into their work in their home cities and towns and helping them in aims which call for no apology to the Political Action Committee, Mrs. Roosevelt, Henry Wallace, or the Communist Party.

## While the Wounded Wait

EXTENSION OF REMARKS

OF

### HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein an article

appearing in a recent issue of the Washington Daily News entitled "While the Wounded Wait." The article follows:

WHILE THE WOUNDED WAIT

Maj. Gen. Paul R. Hawley, acting surgeon general of the Veterans' Administration, threatens to resign if Congress insists on treating hospitals for sick and wounded veterans as political pork.

General Hawley is too good a man to lose. We hope he won't have to carry out that threat in order to jolt Congress to its senses.

The logrolling policy of scattering small hospitals among towns in many congressional districts was a mistake, so proved by experience after World War I. Under conditions certain to obtain after this much greater war, the Veterans' Administration will not be able to staff such hospitals with enough thoroughly competent doctors to give the patients thoroughly satisfactory service.

That's why the Administrator of Veterans' Affairs, Gen. Omar Bradley, and General Hawley proposes to locate major new hospitals near large-established medical schools, where the services of skilled specialists will be available. They are right.

The American people want our war casualties to have the best treatment the country's brains and resources can provide. They won't get it if pork-hungry Congressmen, responding to pressure from business interests in their districts, grab veterans' hospitals as sops to local pride and cupdity.

"I, for one," says General Hawley, "will not experiment with the medical care of the veteran. Either he gets the quality of medical care that he deserves, or I quit—and quit at once."

We wouldn't want to be a Congressman listed as opposing Generals Hawley and Bradley on that issue.

## Four Years After Pearl Harbor

EXTENSION OF REMARKS
OF
**HON. GEORGE H. BENDER**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. BENDER. Mr. Speaker, 4 years ago today, our country was plunged into a war for which we were utterly unprepared, both physically and spiritually. Just how completely unprepared we were is even yet not fully known to the people, by and large. Every day, the Pearl Harbor investigating committee has been revealing shocking demonstrations of our unpreparedness. We were fortunate that the enemy himself did not realize the extent to which we had been injured on that early Sunday morning, 4 years ago.

If we have learned anything from the horror and misery of these war years, it is difficult to find convincing evidence of that learning in our national policies. The enemy has been beaten. In the process of beating him, we have invented a new weapon whose terrible possibilities frighten even the victors. No enemy can be permanently beaten in a world where a scientist, working in his laboratory, may discover a weapon capable of reversing the result overnight.

Out of this horrible war, there has emerged nothing comparable to the principles we set forth in 1918. Woodrow Wilson's Fourteen Points were a statement of fundamental beliefs which could be applied to the complex problems of 1918. The right of nations to self-determination furnished a guide to the treaty makers. What guides have we today? What moral doct ines are we relying upon in our treatment of the Indonesians, the Burmese, the Jewish refugees of middle Europe? How can a good world be created unless it is a moral world?

I am not one of those who believes that Great Britain and Soviet Russia are to be condemned while we excuse ourselves for every violation of basic human rights throughout the world. Today, in an almost literal sense, we in America are our brother's keeper. We cannot disclaim responsibility for the treatment of Hindus in India or Malayans in Singapore, because in a very real sense we have made more possible that treatment. The British Government maintains its empire today because Russian and American lives were lost to maintain it, and, having expended those lives, we in America have a right to be heard on the management of affairs everywhere that human beings are involved. The day when we might sit quietly by and say that the treatment of natives in colonial empires was a matter of "purely internal concern" is over. It is over because out of the discontents and hatreds of those millions of human beings there arises a menace to the future security of the entire world.

Here at home in our own country there are problems no less vital to the security of our own people 4 years after Pearl Harbor.

Only a few days ago one of our leading American newspapers asked the question: "Have we a consistent foreign policy?" I ask the question: "Have we a consistent foreign policy at all?" This very week Maj. Gen. Pat Hurley has been testifying before the Congress on the complete contradiction between what we have been saying in Washington about our policy in China and what our representatives on the spot are doing right there. Certainly there are thousands of Americans who would like to know exactly what our soldiers are still doing in India; they want to know just what there is to the story that soldiers returning home were removed from their transports in order to load them with ammunition and equipment for the British in Java.

These general questions are bad enough in themselves. But there is something much more difficult still to understand. To this very day there has been no clear stand taken by the present National Government on the program for the future of Germany. There is not a man in Washington who can tell you what our Government proposes to do with its particular occupation unit of Germany. Certainly you would believe that this one problem—the problem which is most basic to the entire future of Europe—would be a matter of complete agreement by this time. The Allied control machinery in Germany has virtually collapsed; the deindustrialization of the Reich is still in dispute; France is demanding the assurance of military security along the Rhine.

And yet in the face of all these major difficulties our President has recently announced that there is no present need for a conference of the so-called Big Three. He insists that these are matters which can be deferred. Apparently he hopes that the United Nations Organization which is to meet some time right after the 1st of January will seize the initiative and relieve our Government from responsibility for decisions.

I say this is little short of chaos.

This is nothing but abdication in the midst of a major crisis. We, as the most powerful nation in the history of the world economically, physically, and strategically, cannot abandon our role of leadership.

In Washington we have taken on a position of timidity when the hour calls for courage. We have refused to insist upon elementary human justice when the times will not tolerate continued injustice. The policy of appeasement certainly has been amply discredited by this time. Yet we go on playing the game of appeasement indefinitely on the theory that our destiny is somehow tied up with the strength of other groups who are now and always have been in opposition to the expansion of American interests.

For more than 100 years of our history, whenever the British lion roared, our State Department wagged its tail. Only during the Civil War did we recognize that the British Government was definitely hostile to the growing strength of our United States. For the most part, our diplomats took their lead from Downing Street. But it is certainly time for us to recognize the major changes which have taken place in world history since 1776.

Today our country is no longer a small debtor nation, with no important interests throughout the world. Today we are concerned about the Chinese civil war; we are dividing up the responsibilities of government in Korea with the Soviet Union; we run Japan on behalf of the Allies; we have vital interests in many Pacific islands; we are deeply concerned over the future of the Philippines; we are disturbed by the revolt against western rule in the Dutch East Indies; we are bothered by the need for demobilizing troops, including those of Russia, Britain, and our own in the German occupied areas; we are thinking hard about the recent outbreaks in Iran; we are sitting tight on about 50,000,000 barrels of oil in the Middle East, and the oil film is blinding our eyes to the human problems of Palestine; we are trying to figure out some way for Russian ships to get into the Mediterranean area without troubling both Turkey and Britain. These are issues which require an independent and vigorous foreign policy, a policy which is certainly nowhere in sight today.

What about problems at home?

All of us are very much concerned over the serious labor-management disputes that are holding back our reconversion to peacetime industry. I share that concern most deeply. I am certain that all of us are determined upon a course of action which will be fair to all concerned and in keeping with our traditions of free enterprise.

What are the facts behind the disputes? Are the arguments jurisdictional fights between various unions, battling for control, or are they genuine efforts to continue the high American standards of living which have made us a great nation?

It is very simple to lump all the many facts into one mass trial and hand down a blanket verdict. Unfortunately, the issues are not that simple.

Living costs are high today. Veterans returning home to find job offers paying $25 per week are not going to support their families on this kind of pay. Nor are workers laid off from war jobs where they took home $75 to $100 a week going to maintain their homes on $25 a week either. It must be accepted as fundamental that wages must remain at a high level so long as living costs continue on that level. High wages and high profits to industry have gone hand in hand for a long time. It is not possible in our economy today to support any other kind of program.

I believe in the peaceful settlement of industrial disputes. I believe that the methods of collective bargaining must be supplemented by additional resources if they break down. Completely disinterested representatives of the public should be consulted before the final show-down of a strike vote becomes necessary. The decisions of these representatives should be presented to the workers as findings for acceptance or rejection. If they are rejected, they should then be submitted to a final board of arbitration for absolute determination. Such a plan would make possible far more objective consideration of all the many issues involved than the present procedure.

Whatever may be the merits or demerits of my plan, it has this one great advantage over the present method of handling labor-management disputes. This is a plan. What our present national Government is proposing is exactly what it has proposed in foreign affairs.

It shuns all responsibility. It refuses to take a stand because it is trying to be all things to all men.

This is the state of the Nation 4 years after Pearl Harbor. It is not a pleasant picture. But there are elements of strength in it. The Nation is growing alert to its problems. It is becoming increasingly difficult for anyone to "kid" us. We know that all is not well in the world, and that the prospects are that it will become worse before it gets better.

I look hopefully at this side of the portrait. A people who are determined to find out the truth will eventually discover it. A people who are not satisfied with an administration policy amounting to no policy at all will ultimately get an administration ready to take an understandable position on the major issues before us.

Pearl Harbor is 4 years behind us now. We have come out of the valley of the shadow with many saddened hearts. Yet we have also learned that a nation determined to survive can do so. We have watched our factories convert from years of nonproduction to a 3-year effort unparalleled in the history of mankind. We have shown that almost overnight we could build an arsenal of democracy strong enough to preserve freedom throughout our lands. Perhaps in the years ahead we can make it possible from our strength to establish freedom everywhere else. Our strength abroad depends upon our strength at home.

The Republican Party has traditionally been the great party of reconstruction. After the Civil War, after the Spanish-American War, after the First World War we rebuilt our economy. We must join our hands to rebuild our peacetime economy once more. Together we can surmount any obstacle.

---

## The Rehabilitation Problem

EXTENSION OF REMARKS

OF

### HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. WASIELEWSKI. Mr. Speaker, early in the debate, a question was raised as to how the efficiency of UNRRA compares with that of the Hoover Relief Committee after World War I. Comparisons are odious, but nevertheless in justice to UNRRA it must be stated that its job is far more difficult and involved. The destruction in this war was far more devastating and the looting more thorough. During the last war there were no blacked-out areas. Our relief agencies were permitted to carry on their work everywhere, unmolested and without military and police supervision. UNRRA's situation is quite different; it was several months after the shooting stopped before its representatives were allowed to bring relief in the Russian dominated areas of Europe and Asia. The starvation and suffering so rampant should have been tended to much earlier, but for the Soviet barriers. Even today, the bars have not been removed. UNRRA is permitted to give relief only in such areas as the Russians will allow.

The principal purpose of UNRRA is, first, to give immediate relief to the suffering, needy people, and, second, give them such equipment and facilities as will permit them to rehabilitate themselves so that further relief will be unnecessary. The second purpose is particularly important if the need for the continuation of UNRRA is ever to cease.

There is no question but that the greatest need for aid and the greatest suffering today is experienced by the peoples whose countries are dominated by Russia.

Let us but briefly review the experience of one of these Soviet-controlled countries and examine its prospects of being able to rehabilitate herself under the existing conditions. Let us look at Poland. The conditions in the other lands are parallel.

Today more than 2,000,000 Russian soldiers and 1,000,000 Russian civilians are policing Poland. Russians, unlike American armed forces, do not have their needs supplied from their homeland. They live right off the people and land they occupy. With the Polish people greatly impoverished and starved, the presence of these 3,000,000 nonproductive parasitic foreigners is like a cancer gnawing at the vitals of the Polish Nation.

Two of our country's leading newspapers recently sent their representatives to Poland to get first-hand information on the situation. Gladwin Hill, of the New York Times, and Edward Kerstein, of the Milwaukee Journal, have given graphic, eyewitness accounts of the tribulations of a proud, courageous people valiantly trying to lift itself out of the ashes of war against great odds.

On November 4, 1945, Mr. Hill wrote in the New York Times that the Polish peasants who made up two-thirds of the country's population and on whom the whole nation depends for food face a grim future despite all that the Government and UNRRA can do to alleviate their distress. About 75 percent of the livestock, about which their farming revolves, providing food, motive power, and fertilizer, was destroyed or carried away by the Germans and Russians. He states that—

> Russians can be seen constantly driving farm animals out of Poland and the general impression is that they have taken considerable, too, but this is hard to prove, since the stock may have come from Germany.

In the new Polish territory, it is estimated that there is an average of only 2 horses to 250 acres of farm land. It is estimated that there are 1,000,000 farms without even a cow. At the rate cattle is now coming into Poland, animals that should be kept for breeding, must be slaughtered for food. One wonders how much of this slaughtering is required to maintain the Russian military and police personnel. It has also been charged that much of the food UNRRA intended for the starving Poles finds its way into Russian stomachs.

The Polish peasant without beasts of burden, machinery, and tools is obliged to work his land with his bare hands. Eighty percent of the crop goes to the Government. In some instances, where a peasant is favored and permitted to retain a head or two of cattle, high quotas of production are set for him. According to an account of Edward Kerstein in the Milwaukee Journal, the quota fixed for a farmer he spoke to was so high that he was obliged to sell his cattle in order to buy the produce needed to meet his quota for fear he might be punished. He told Mr. Kerstein it was physically impossible to get the yield required by the Government.

In an editorial on October 25, 1945, the New York Times had this to say about the new Poland:

> The Polish Nation never ceased fighting. Now it is making an uphill fight for national reconstruction * * * yet the present-day picture of Poland is not a pretty one. A small minority, imposed on the country from outside, hold the Government captive and the people cowed in fear. Man hunts and mass arrests are matched by the retaliatory excesses of the remaining underground, which after having fought for Poland's freedom, now does not dare show itself. To all this is added the immense destruction of the war which is further intensified by the presence of Russian Armies living on the country, armies whose discipline is beginning to give way in some cases.

Mr. Speaker, can a people living under such circumstances, exercise any initiative or freedom? Can a people, under such conditions, ever rehabilitate themselves? The answer is obviously "No." It is, therefore, imperative that all Russians leave Poland, a free election held as promised under the Yalta and Potsdam agreement in order that these valiant people might take their proper place in the society of nations.

October 23, 1945, Gladwin Hill writes, "The Russians stripped the Polish ports of Gdynia and Danzig of most of their cranes and other maritime equipment and have taken at least three of the harbors' four important floating drydocks." The effect of this can only be to paralyze Polish commerce and deter rehabilitation. Gladwin Hill further writes, "This correspondent has visited Polish hospitals that have been stripped of their linens and other essential supplies by the Russians." Meanwhile, 10,000 Poles are dying monthly of tuberculosis because of the lack of adequate hospital facilities.

Mr. Hill writes further about the Russian-Polish trade agreements which extend to the end of 1945, while nominally calling "for an equal exchange of goods on the basis of 'world prices' seems curiously one-sided in some respects."

Under the trade agreements, Russia is to supply 25,000 tons of raw cotton to Poland in exchange for 45,000,000 meters of cotton cloth, although Poland is desperately short of textiles. Poland gives Russia 5,000,000 tons of coal and coke amounting to 75 percent of the total coal production, for about 65 cents per ton whereas it costs $1.75 per ton to mine. Meanwhile, thousands of Poles are going to freeze because of lack of clothes and fuel. The irony of it according to Mr. Hill is that "the Russians are selling a lot of the same coal in southeastern Europe for 10 times that price." Mr. Speaker, can any people reconstruct or rehabilitate itself under such conditions?

It is reported that instead of cash the Russians are transferring to the Polish Government their outmoded submarines and naval vessels of 1916 vintage at greatly inflated values. These vessels, suitable only for junking, can prove to be nothing but a liability and totally useless as instruments of defense.

We read in the press that the present Polish regime is asking the United States for a half-billion-dollar loan. Is this money to be used to meet the deficit created by the existing "trade agreements" it now enjoys with Russia? A continuation of this kind of trade can lead only to depletion of Poland's few remaining natural resources and ultimately bankruptcy.

Mr. Speaker, I supported the request of UNRRA for funds, but I believe it is important that we help these people who are aided by UNRRA to become self-sufficient as quickly as possible. Return these governments to their own people. The surest and most efficient way to do this is to free them from Russian domination. Let us demand that the Russians clear out of Estonia, Latvia, Lithuania, Poland, Czechoslovakia, and Jugoslavia in order that free elections might be held and governments selected that will work for the benefit of their peoples. Mr. Speaker, we owe that to these people as a result of our oft-repeated pledges. Common decency and the security of lasting peace demands it.

## United States Foreign Service Academy

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter that I have received from a former Army officer, who resides in the Commonwealth of Massachusetts, in support of H. R. 4843, to provide for the establishment of a United States Foreign Service Academy. I am satisfied that the writer knows whereof he speaks, and judging from his 5 years of experience with the Army service, 1 year of which he was stationed in India and Burma, he has been afforded the opportunity to make his own personal observations.

The letter follows:

IPSWICH, MASS., *December 5, 1945.*

DEAR CONGRESSMAN LANE: A small item in the Salem News about your bill to provide for the establishment of a United States Foreign Service Academy prompts this letter.

Congratulations to you on your foresight and fine judgment. I wish you every success. Small as it is, you can count upon my support.

After 5 years of Army service, over a year of it in India and Burma, I have become very conscious of my duty to support deserving public men and to help get rid of the undeserving. I will follow our leaders carefully from now on. I am very happy to say that my wife and friends have told me of your energetic and fine service.

Overseas I had a chance to observe United States foreign policy in action. It is no secret that foreign nations think of us as "Uncle Sap." Even the most ignorant of the Asiatics recognizes our weaknesses—the extravagant wastage of United States money and materials and the lack of qualification of our representatives.

The average ambassador, envoy, and representative from the United States does not know the language of the country in which he is stationed, the customs, traditions, philosophies of those peoples. He is nearly always a very wealthy man, picked as a political award, who entertains and is entertained by the ruling class, the wealthy, and the blocs of the country. His ideas of the country are those gained from those few sources, plus newspapers and pressure groups. As conscientious as he might be, he cannot report to our State Department a true account of conditions. He doesn't know and understand the farmer, laborer, middle class, etc. He doesn't know why the people do and think as they do.

Your bill would accomplish the greatest reform in United States diplomacy. It would furnish qualified, interested men to the service—men who would make it their profession and men who would explain the United States to the people of the country to which assigned; and them to us. It is an urgent need. Good luck.

Sincerely yours,

DR. JOHN J. KEANE.

## Veteran Returns Home To Find Wife and Children Living in Two Unfurnished Rooms Without Cooking Facilities Due to Housing Shortage—Mass Meeting of Veterans Demands Congressional Action

EXTENSION OF REMARKS
OF
### HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. PATMAN. Mr. Speaker, I should like to lay before the House a typical example of what is happening in an American city caught in the crisis of our Nation-wide housing shortage.

On November 29 in Fort Worth, Tex., hundreds of veterans, unable to find homes, held a mass meeting. They unanimously adopted a resolution declaring that the veterans' housing problem is "the responsibility of the United States Government," and demanded that the Congress take immediate action to provide the sum necessary to relocate the 50,000 vacant temporary housing units.

Today—

Said these veterans—

the first duty of Congress is to see that we who fought have a place to come home to. Present conditions now existing are beyond the control of the returned veteran and he necessarily must look to the Government for which he fought to fill his present need.

Gentlemen, I wholeheartedly agree with the sentiment expressed by those servicemen. It was our action that sent these boys to battle fronts across the world, and it is our responsibility to see that they have shelter when demobilized.

Under permission to extend my remarks in the RECORD I should like to include a news story from the Fort Worth Star-Telegram of November 30 describing this meeting. I should also like to include the story of the typical plight of a 38-year-old veteran, D. D. Brown.

He came home from Germany with nine battle stars, the Bronze Star, a Good Conduct Metal, and the Purple Heart with three clusters, as the result of shrapnel and bullet wounds in three different battles. He found his wife and two children living in two unfurnished rooms in Fort Worth without cooking facilities. He said of the rooms, "I wouldn't try to raise a dog in them."

In addition, I would like to include a letter from Mr. Drew S. Clifton, one of the outstanding attorneys of Fort Worth, describing the housing situation in that city.

The situation in Fort Worth is not an unusual one. It is typical of the problems that are confronting our cities from Maine to California, and I present it for your consideration:

SEVENTEEN HUNDRED VETERANS NEED PLACES TO LIVE HERE

Most stories "make the papers" because they're unusual. These stories make the

paper because they're all too usual—typical stories of more than 1,700 World War II veterans who need places to live in Fort Worth.

D. D. Brown, 38-year-old former private first class and gunner in the Army Air Corps, was discharged and came home October 29 to find his wife and two children living in two unfurnished rooms—without cooking facilities.

Says Brown of the rooms: "In that I wouldn't try to raise dogs. But what can we do?"

BATTLE WOUNDED

Brown spent 3 years, 1 month, and 17 days in service, almost all of it in the ETO, where he suffered shrapnel and bullet wounds on three occasions and won these awards: Nine battle stars, the Purple Heart with three clusters, Bronze Star, Good Conduct Medal, and American Theater Ribbon with two stars.

The Browns have two children—James Davis, still recovering from a tetanus attack which may leave him a cripple, and Joyce LaValle, 7.

"And when I get home," said Brown, "I not only can't find a place to live; so far I haven't even been able to get a job." Brown's address is 519 Louisiana.

STORY ONE OF DOZENS

Brown's story was but one of dozens told by veterans at the veterans' housing meeting Thursday night. Others were told by:

Bert M. Smith, 21, who served 2 years Atlantic patrol duty and who can find no more space for his wife and two small children than two-room quarters at 3801 Meadowbrook Drive.

"The doctor says our living conditions are retarding my recovery," says Smith. "We're moving out of Fort Worth to find a home."

Robert Degge, 21, who had to move his wife in with his parents, Mr. and Mrs. W. B. Degge, 3801 Rutledge. He was discharged October 3, after 37 months in service, mostly in the Southwest Pacific.

INADEQUATE ROOMS

B. W. Mason, 27, with a service record of 3 years and 4 months, mostly against the Germans, who has three inadequate rooms for his mother and 24-year-old sister, Pearl.

L. M. Hall, Jr., 20, a former gunner's mate, third class, who saw 3 years' Atlantic convoy duty in the Coast Guard, was discharged October 15, to find he had no place to live except with his wife's parents, Mr. and Mrs. Albert Moore, 5700 Calmont.

A. O. Bicknell, 32, former Air Corps technical sergeant with 3 years and 11 months' service, whose duplex quarters at 2615 East Vickery are being sold, forcing the eviction of his wife and 14-month-old daughter, Pamela.

Jimmy Johnson, 21, former marine who had 2½ years' service from Tulagi to Tarawa, was discharged 1½ years ago, but his quarters at 531 Beddell also have been sold and the new owner is awaiting possession.

---

HOUSELESS VETS CALL FOR ACTION—$150,000,000 DEMANDED FROM CONGRESS TO EASE UNITED STATES HOUSING SHORTAGE

Hundreds of houseless Fort Worth veterans at a mass meeting here Thursday night demanded that Congress appropriate $150,000,000 to relieve the Nation's housing shortage and "give it priority over relief to foreign countries."

The veterans unanimously adopted a resolution declaring that the veterans' housing problem is "the responsibility of the United States Government" and urging Congress "to at once provide the sum necessary to relocate at least 50,000 vacant temporary war housing units."

Asking that the $150,000,000 for temporary housing be appropriated, and given priority over aid to any foreign nation or government, the resolution declared.

SACRIFICES CITED

The sacrifices made by the veterans and their families were for the purpose of freeing peoples of other countries from oppression and dictatorship.

"Today," said the veterans, "the Congress' first duty is to see that we who have fought have a place to come home to."

"Present conditions now existing are beyond the control of the returned veteran and he necessarily must look to the Government for which he fought to fill his present need," the resolution asserted. It also pointed out that as of today there are "approximately 1,700 veterans in dire need of housing facilities here."

Also unanimously adopted was a resolution introduced by James Floyd, commander of the American Legion Bothwell Kane Post, which he termed "an interim emergency resolution."

CITIZENS URGED TO AID

Every Fort Worth citizen was uged to "help out in the housing shortage by making available to veterans and their families any available space in their homes here." A similar resolution was passed earlier in the week by the General Ministers Association.

Drew Clifton, vice commander of the American Legion's twelfth district, was chairman of the veterans' mass meeting, held at Hotel Texas. Heads of all Fort Worth's veterans' organizations took part in the meeting which was jointly sponsored by all the organizations.

Henry Love, past State commander of the American Legion, told the assembly:

"This housing situation is equally bad over most of the Nation. Congress has apparently taken the position that it is a municipal problem. It is not a problem that any city or community can solve. It is the responsibility of the Federal Government because it is part of the cost of winning the war."

Loud cheers revealed that hundreds of veterans agreed with Love.

Said Clifton: "We veterans knew how to fight for democracy. And veterans ought to know how to make it live. For us to enjoy that democracy, we must have housing conditions that mean a veteran doesn't have to live with his mother-in-law."

Floyd, in urging Fort Worth residents to "help the boys until congressional aid gets them houses," pointed out that it will "take many weeks—maybe months—to get the places set up here."

Amvets, Veterans of Foreign Wars, Disabled American Veterans, and Legionnaires were represented en masse at the meeting.

The Thursday night action will be supplemented by a program of every veteran writing Congressmen asking for immediate action. Copies of the resolution specifying a $150,000,000 appropriation also will be sent congressional appropriation committeemen.

Love got a show of more than 40 hands when he asked how many veterans present would be interested in considering possibility of building modern three-room homes if the cost of lot and construction were approximately $2,500 and loans could be obtained under the GI bill of rights.

Love explained that under a plan now being considered by R. J. Newton's chamber of commerce housing committee, such minimum requirement facilities may be developed on lots now owned by the city.

Capt. J. M. O'Brien, of the city fire department, offered a plan under which two veterans may obtain materials and arrange for construction of their own three-room homes at a cost slightly over $1,000 in addition to the lot.

---

FORT WORTH, TEX., *November 30, 1945.*

Hon. WRIGHT PATMAN,
*House of Representatives,*
*Washington, D. C.*

DEAR CONGRESSMAN: Enclosed is news story and pictures which appeared in the morning issue of the Fort Worth Star-Telegram on November 30, 1945, describing our housing problem.

The situation is deplorable and is not one that can be taken lightly; nor is it one that can be solved by an unprepared municipality. We have got to have relief and plenty of it in a hurry. The veteran did not fight for these unbearable conditions. It is not the part of the city government to remedy this situation, but rather the part of the Federal Government. The veteran does not object to this country aiding other countries as long as it does not take away from his family what is rightfull, theirs by the veteran, but the trouble is that the liberated peoples are being helped without regard to the men who freed those people. The veteran wants to become a useful citizen to our country in peace as he was in war. For that veteran to be of value to this country he needs a home to call his own, and the Government could, if it would, help him at this time so that he can start his rehabilitation to civilian life on an equal level with other people and not have to overcome the obstacles which now confront him. Yes, you—you and every Congressman could help us. You called on us in war and now we are asking you to meet us half way by answering our plea with action to alleviate the deplorable and oftentimes untenable conditions which we are now forced to live under.

Enlist your service in helping us as unselfishly as we enlisted our services to free the world of tyranny.

Sincerely yours,

DREW S. CLIFTON.

---

## Where the Ships Are Going

EXTENSION OF REMARKS

OF

## HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. WEICHEL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a copy of a news item that was prepared for publication in a service paper in the Pacific called the "Homeward Herald," published at the Twenty-eighth Replacement Depot, but permission to print the article was denied by the officer in charge, and the story is as follows:

It has been learned authoritatively that the converson program for Liberty ships has resulted in nine ships being converted for transportation of POW's, while only one ship will be used for American troops. Although volunteers are not being used in this work, Army personnel is remodeling the ships.

Present plans call for the conversion of five Liberty ships to be converted by the Army, and four Liberty ships by the Navy. The ships which are to be converted by the Army came from the Port of Manila and one from Batangas. One ship that the Army is converting came from Manila. Ships coming from Manila are shipping under the authorization of base X and AFWESPAC, controlling the movement of troops in this area.

One ship to be converted by the Army is the *Chatten Lyons*, and will be used as a POW ship, according to orders issued for the conversion. The *Horace Lurton* will be converted for the use of transporting American troops State-side. The other ships to be converted by the Army for POW ships are: *Ed Everett, M. Stewart, R. L. Stevenson,* and *Frank Sprague.*

The Navy will convert four POW ships: The *Harry Kirby, Stephen M. White, Keith Palmer,* and the *William H. Allen.*

The dates scheduled for completion of the ships are: *Chatten Lyons,* indefinite; *Horace Lurton,* indefinite; *Ed Everett,* November 6; *M. Stewart,* November 10; *R. L. Stevenson,* November 14; and the *Frank Sprague,* indefinite.

The dates for the completion of the conversion of the Navy ships are all indefinite: *Ed Everett* and *Chatten Lyons* will carry 2,000 POW's each; *Stewart, Stevenson,* and *Sprague* will carry 1,500 POW's each.

At this, November 4, 1945, the *W. L. Gable* is awaiting Navy orders—a ship which has been converted to carry POW's.

The foregoing article recites as to what is being done with ships to bring our boys back home. The item says that four ships are being converted for the use of prisoners of war, while only one ship is being converted to bring our boys back home. Yet the officer in charge denies the publication of this item, even though the facts were taken from the daily status report of the office of the base port command, under base K in the Philippines, covering the period 1200 hours, November 3, 1945, to 1200 hours, November 4, 1945. After the denial, the officer in charge said that something could be printed in connection with one ship—*Horace Lurton*—for the return of our boys to the United States, but nothing could be printed about the conversion of four ships for prisoners of war.

With such conduct on the part of our armed forces, it is no wonder that these boys become bitter overseas awaiting return home.

These boys have fought to free the world from autocracies and they are now subjected by their own Government to the same type of cruelty for which they fought to free others. They are evidently censored and punished for attempting to make known the treatment they receive.

## Loans to Foreign Countries

REMARKS
OF
### HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. RICH. Mr. Speaker, I was very much concerned upon reading in the morning paper a statement purported to have come from England, to the effect that arrangements had been made for the United States to make a loan to that country of $4,400,000,000 for a period of 50 years, and that for the first 5 years of the loan there would be no interest and thereafter interest would be charged at the rate of 2 percent.

Now in the first place, I would like to know on what authority and by whom such a loan was granted. It seems to me the Congress should know something about such a deal—a deal that involves $4,400,000,000—and yet none of the Members knew anything about it and they get their information that this agreement was made from the London daily papers. There is something wrong when anyone in the Government who is not a representative of the people can make such a deal.

The loss alone in interest rate on that amount for the first 5 years, when no interest is to be charged, will amount to $110,000,000 a year at 2 percent; and for 5 years would amount to $550,000,000. That would be a direct loss to this country of ours, as it costs us about 2½ percent to borrow our money; and we would be losing one-half percent for the balance of the time, or about $2,000,000,000. Therefore our first loss is going to be $2,550,000,000. We can figure on that amount if such a loan is granted and assuming that it will be paid.

Remember the arrangements that were made by the former President under lend-lease. Thank goodness I never voted for the former President or for lend-lease. That piece of legislation was one of the poorest ever enacted. Under it we gave to Great Britain $29,000,000,000 and up to date we have received credit for about $5,295,000,000 from Great Britain. In other words, there is a balance owing us from Great Britain of $23,705,000,000. I ask you, Members of Congress, will this ever be paid to the Treasury of the United States? I say, ask your Uncle Samuel. You know it will not be paid, and I know it will not be paid, and such a scheme as lend-lease is a travesty on American business judgment.

In addition to the money we loaned through lend-lease, our Army during the war built war installations in the United Kingdom amounting to $23,000,000; in Australia and New Zealand they spent $238,000,000 on war installations; in Canada, $370,000,000; in India, $126,000,000; in Bermuda, $77,000,000; in British Caribbean possessions, $186,000,000; in British Pacific islands, $146,000,000; in Newfoundland and Labrador, $123,000,000; and in other British areas, $38,000,000. In other words, we spent a total of $1,327,000,000 in war installations on British possessions. We have been a veritable Santa Claus to Great Britain, and I ask you why should we now loan them $4,400,000,000, at a loss of annual interest? I am fearful that the whole sum principal will be lost if we make the loan.

The American people should also take this fact into consideration, that during the World War we have run up an indebtedness in this country of $265,000,000,000. Great Britain's war debt, notwithstanding the fact she was in the war 1½ years before we got into it, is about $85,000,000,000. After all, who is responsible for winning this war? Certainly if it is financial figures, the answer is the United States of America. When we look at the action in the field of battle. America was always at the front.

In my estimation we do not owe Great Britain $4,400,000,000 additional, and we should not make the loan unless we get a guarantee that the money is going to be returned to the United States Treasury. Certainly we cannot tax the American people for this sum of money to be paid to any ally. Is this money being loaned to Great Britain to carry out the mandates of the party in power under Mr. Attlee, the Socialist Party who have promised to take over the railroads of Great Britain, the coal mines? They have promised the people of Great Britain many of the public utilities. Are we furnishing our money so that the Labor Party may make its promises good in Great Britain? None of it for mine, gentlemen.

After World War I we reduced Great Britain's indebtedness to us in many instances, and then finally came to the conclusion they owed us $2,452,714,782.58. Remember, they have not paid us the principal or any of the interest on that debt. Now I say to the Congress and to the American people, if you are not careful, you will bankrupt America. We will be taken over by the British and then we will be subjects of Britain once more. I shall never betray my ancestors and those who signed the Declaration of Independence. I am going to keep my eyes open, and open wide, to protect America and not give this country away on a silver platter to those statesmen of Great Britain who are too slick for the New Deal, who have and are continuing to give America away. The only way to save America is to get rid of the New Deal before it is too late.

American public wake up, you have been sleeping for 8 years at least, and you could not have been aware of what is going on. I sounded the warning 12 years ago, what to expect from the incompetence of the New Deal and the inefficiency of the party in power in America.

Which way shall we chart our course in America from here on to bankruptcy and ruin or will we turn to solvency? It is up to the voters. It may be possible that the $4,400,000,000 contemplated loan to the British, will be used to put them in the Bretton Woods bank—well, the United States will pay one-third of the capital. So if we pay Great Britain's share with a big loan and then grant a loan to Russia of the same size so they will pay their share, it is just too bad that America has such legislators. I am convinced if we do that that we need a change of administration at once and then we will need enlarged hospitals for the mentally sick, asylums if you please for the New Deal, for that is the best place I could suggest for them.

For goodness sake American voters wake up.

## A Promise Made Is a Debt Unpaid

EXTENSION OF REMARKS
OF
### HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. McDONOUGH. Mr. Speaker, the responsibility of the Congress and the public to our returning servicemen must be kept in the foreground at all times. We must not forget that it was these boys, now men, many of them with family responsibilities, who met, fought, and defeated our enemies and preserved the honor and dignity of the Nation. Those

fortunate enough to return must be given the consideration they have earned and which they deserve. I believe our debt to them is best expressed in the following editorial from the Veterans Employment News, written by Perry Faulkner. All Members of Congress should read and remember it:

A PROMISE MADE IS A DEBT UNPAID

(By Perry Faulkner)

A unit in the great army of democracy was born here.

He knew the fondness of his Father and the caresses of his Mother. Went off to grade school; stubbed his toe on the uneven streets; learned about life and the value of simple things from his parents, his teacher, and his boy scout master.

On the playing fields of the high school he ran his mile; carried the ball—or batted a long one at a tense and important moment of the ball game.

Grown strong and stalwart he emerged into manhood.

World turmoil came. His nation beckoned. It needed defenders.

He became a living unit in an army engaged in the preservation of freedom.

We promised him some things—and owe him many.

We can partially discharge our obligation by giving him the best possible chance to live a full life according to his capacities for achievement.

A soldier, a sailor, a marine, a coast guardsman, a member of the Air Corps.

A piece of paper called a discharge—a veteran.

Much thinking on the part of the statesman and the citizen.

A great deal of legislation passed bespeaking the mind of Government as it sought to care for the inequalities brought about by time spent in the service of his country.

Plans and preparation in every community. Organized efforts in every State.

The earnest desire of industry as expressed by costly and elaborate plans to fit once more the veteran into civilian occupations.

Returned to the old job—seeking a new job—that the knowledge gained from technological war could be used to the utmost in civilian pursuits.

The governmental agency charged with the responsibility of giving the veteran a maximum job opportunity in the field of gainful employment is the Veterans' Employment Service.

The vehicle to be used at the actual point of contact in placing the veteran in the job is the United States Employment Service.

If our responsibilities are to be met—if the veteran is to be served—there must be adequate funds to staff and maintain the United States employment offices of America.

The Veterans' Employment Service engaged in job counseling and placements for veterans must be of such size as to give assurance that no veteran shall be neglected.

Coming home from the wars by the thousands now—and ultimately by the hundreds of thousands—we stand upon the threshold of the most enormous task of readjustment in our history.

If there is understanding on the part of everyone—that the problem of the veteran is the most important consideration in our national life—then we can believe with some reasonableness that the proper adjustments can be made.

Failure may mean social dislocations—world shaking in their import.

A promise was made and the debt must be paid.

The same ingenuity that shaped and molded the pliable young flesh of our strongest youth into fighting men must be used in bringing them back to civilian status, proud—decent—dignified.

## Wooster, Ohio, Editor Thinks "We Would Better Forget Pearl Harbor A While"

EXTENSION OF REMARKS

OF

### HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. THOM. Mr. Speaker, if the instigators of the Pearl Harbor investigation feel that their efforts are receiving the applause of the people at large, it would be well for them while on Christmas vacation to test out the sentiments of their constitutents. There is a rising dissatisfaction with the course of the investigation, and a feeling openly expressed much in sympathy with the following editorial from an independent newspaper, the Wooster Record, published at Wooster, Ohio:

MAYBE WE'D BETTER FORGET PEARL HARBOR FOR A WHILE

We read with considerable gratification former Secretary Hull's blistering and contemptuous statement in answer to those who would malign him.

The whole Pearl Harbor investigation is getting to the sickening stage. While some of Hull's critics were trying to blame him for writing the final note which drew Japan into war, Norway awarded him the Nobel Peace Prize.

"A prophet is not without honor except in his own country." It proves itself a true statement over and over again.

What we need is to forget the Pearl Harbor disaster, get right with each other at home and go to work. It was as if Congress were afraid to tackle the real problems ahead and spending its time with trivialities.

"Poor, innocent, peace-loving Tojo," as Hull called him, caught us while we were napping. That seems to be pretty well proven. But nobody could prove to anyone that we drew Japan into the conflict.

## Who's To Make the Watches?

EXTENSION OF REMARKS

OF

### HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of December 6, 1945:

WHO'S TO MAKE THE WATCHES?

As odd a scene as history records took place a few days ago in the State Department's press room at Washington.

An indignant gentleman, armed with a copy of a statement soon to be issued by the Department, made a strong protective tariff speech to reporters gathered there.

The State Department, he declared, has cut the tariffs on foreign-made watches—principally Swiss—to the point where the American makers are being put out of business.

The statement to which he objected was to the effect that the Department, instead of taking vigorous action, was politely asking the Swiss manufacturers to forego some of the profits which lowered tariffs made possible and voluntarily cut down on the flood of Swiss-made watches being shipped to this country.

Who was this industrialist? What American company did he represent?

As a matter of fact, he wasn't an industrialist at all, and he didn't represent American watch-making companies.

He was a union man.

His name is Walter W. Cenerazzo, and he is national president of the American Watch Workers Union.

There is where the significance of the incident lies. Labor, at long last, has begun to awake to the harsh fact that importing competitive foreign goods is simply a way of exporting American jobs.

Mr. Cenerazzo had figures to back up his charge that the State Department's attitude is "weasel-worded."

The number of importers of Swiss watches has increased from 50 in 1940 to more than 500 at present.

A total of 28,000,000 Swiss watches have been brought into the United States since the start of the war, he said, representing a total of 14 years of work for 8,000 American watchmakers. Imports in October alone amounted to 2,100,000 watches.

The State of Pennsylvania has a direct stake in this matter. Lancaster used to be one of the three great watchmaking centers of the Nation, the others being Elgin, Ill., and Waltham, Mass.

The future of those centers—and the future jobs of the men and women who might get employment in them—depends almost entirely on whether our American State Department is going to continue to throw the business to Swiss concerns by low-tariff trade agreements, or will give protection to the American industry.

Last summer President Truman asked for and received an extension of the Reciprocal Trade Agreements Acts by which the protective tariffs have been cut more than half.

The State Department at that time promised the congressional hearings and witnesses that under no circumstances would imports be allowed to put American working people out of jobs.

There was a good deal of suspicion at that time that the "global free trade" boys of the Department had their tongues in their cheeks when they made the promise.

Now is a good time to find out.

The protest in this case does not come from a "special interest" or "capitalist" group, but from the representative of skilled workmen who want a chance to get back to work.

The watches they might be making are being made by employees of foreign concerns.

What is the State Department going to do about it?

Nothing, probably.

The cult of "internationalism," what Congresswoman Luce called "globalony," has led the national administration into some astonishing decisions in its foreign affairs.

President Truman had the opportunity of correcting some of the extremes. Between his good friend Byrnes and other spearheads of bureaucracy, he was coaxed away from the point of view of Congress and persuaded to go to bat for various left-wing schemes fringing on state socialism.

In few of the matters, however, is he likely to reap so quick a harvest of difficulty and disaster as in the free-trade experiments.

The stage is set for a repetition of what happened after the First World War. President Wilson slashed the tariffs before the war began; war-frozen shipping couldn't give foreign producers a chance to take advantage of this ripping down of our protections.

But shortly after the war ended there came one of the sharpest and most needless panics in our economic history. All over the Nation, American firms had to shut down because foreign goods were being dumped on the markets at less than the American costs of production.

The panic stopped as soon as Republicans were able to restore a protective tariff.

Exactly the same sort of depression may now be in the making.

If labor is waking up to the fact that working people's jobs are the real stake in the arguments over protective tariffs, it may be that the President and the State Department can be forced to undo some of the harm their policies threaten.

## And Thou, Too, Brutus

EXTENSION OF REMARKS
OF
**HON. DEAN P. TAYLOR**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. TAYLOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from The Saratogian of November 29, 1945:

AND THOU, TOO, BRUTUS

The Navy Department's announcement that the aircraft carrier *Saratoga* has outlived its usefulness and will probably meet death under assaults of atomic bombs left Saratoga County, Saratoga Springs, and the town of Saratoga aghast.

So instead of finding a resting place on the banks of the Hudson River or in some historic Valhalla as did *Old Ironsides* and other ships, the *Old Lady, Miss Sara*, as she was known to the Navy, is to meet an ignominious death. While the Navy announcement does not specifically state the *Saratoga* will be A-bombed to death, it does say "the development of the atomic bomb has necessitated an intensive search for countermeasures—and to be of value these tests must be made with ships—and the *Saratoga* falls within this category."

That, in our opinion, is the last word in the lack of appreciation of a great ship; it is as treacherous a blow as that Italian thrust at a prostrate France; it is a double of the Brutus blow.

We wonder if Admiral Bieri, who made the announcement, has ever "fought a ship"; we wonder if he knows how men who fought her, who flew from her decks, feel about the future of the *Old Lady*.

Certainly no sailor, be he captain, executive officer, or enlisted man, who took part in the *Saratoga's* battles in the Pacific will stand silently by while this great exponent of America's sea power dies under attack of our own bombers.

Destruction of the *Saratoga* means destruction of a youngster's belief that she was one of the mighty; death bombing means loss of a great name, yes, a great person who took our men out and brought them back again.

For a ship is a person. Ask the men who fight them.

## Philippine Status After Independence—Continued Relations With the United States Through Military Establishment

EXTENSION OF REMARKS
OF
**HON. JOHN PHILLIPS**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. PHILLIPS. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an article on the Philippines which appeared in the Washington Post of November 30, 1945, and an editorial in the same paper on the day following.

The article is by Mr. Vincente Villamin, Filipino attorney and economist, of California. It brings up the point that after the Philippines becomes an independent nation on July 4, 1946, a military relationship will subsist between that country and the United States and that, therefore, the economic relationship between the two countries should not be dissolved but, on the contrary, strengthened. The editorial adopts that view. They follow:

PHILIPPINE STATUS—WHAT ITS INDEPENDENCE INVOLVES

(By Vincente Villamin)

On July 4, 1946, the Philippines will be an independent nation. But its independence will be limited. Under a congressional Joint Resolution 93, dated June 29, 1944, the United States, according to plans, will erect a military establishment on Philippine territory that will be much greater than the one she had there before independence. This means that the Philippines will be a part of America's plan of defense and offense and will inevitably be involved in any war which America may wage in that section of the world. Thus the Philippines, under an American law, will not have the first attribute of sovereign independence—the power to desist from or to declare war on her own volition.

For all practical purposes, therefore, there will be what amounts to an unwritten military alliance between the two countries. The Philippines will in effect be an American protectorate and be so regarded by other nations. America's aim, besides protecting the Philippines, is to push her strategic spearhead 5,000 miles beyond Pearl Harbor, so that in the event of war the battleground will be that much farther away from the American mainland.

It is obvious that a strong and friendly Philippines is a vital element in America's military position in that country as well as in her foreign policy in the Pacific and Asia. This basic fact should underlie plans for the Philippines after independence which the United States Congress is now considering.

The Congress has before it two bills: A Senate bill providing partial compensation for damages caused by the war, the restoration of highways, harbors, and the health service, the establishment of interisland air and sea facilities, and the training of Filipinos in certain essential occupations and services, and a House bill defining the trade relations between the two countries.

While the Senate bill promotes the reconstruction of the Philippines, the House bill liquidates its vital trade with the United States, ostensibly in 33 years, but effectively in a few years after the increasing tariff duties are applied. It is clear that the House measure will run counter to the military relations between the two countries, for it will sunder their economic bonds and blast the economic life of the Filipino people.

Once the full meaning of Joint Resolution 93 is recognized, the Philippine-American economic relations might instead be more or less on the following basis:

1. A free trade between them, not for a limited period but indefinitely, coexisting with America's Military Establishment. That will not violate, by reason of their special relations, the most-favored-nation principle nor any commitment to abolish trade preferences.

2. A Philippine program to diversify its production of tropical staples needed but not grown in the United States, to reduce its shipments to this country of commodities considered competitive with American products, and to build a sound producer-consumer economy by expanding domestic economic activities.

3. Congress giving the Philippine government the power to impose import duties on luxury goods coming from the United States, as it does on imports from foreign countries, this to be complemented by a Philippine policy of encouraging the importation of all sorts of agricultural and industrial equipments, tools, fertilizers, chemicals, and the like, supplemented by the employment of American industrial and business managers and technicians.

This three-point plan will build a complementary instead of a conflicting economy, increase the mutual trade appreciably, and develop the Philippines naturally, thereby lessening its disproportionate dependence on markets overseas. A strong and friendly Philippines will be the result.

This is the time to consider such a plan. After independence it will be too late. To implement it there are two assets available in the Philippines which together amount to over three times the dollar value of the country's annual production: (a) The approximately $500,000,000 which the American Government and members of the armed forces spent since the war and which is now mostly in the hands of Filipinos, and (b) the roughly $500,000,000 which the Congress is expected to appropriate for the payment of Philippine war damages.

If there is no plan and things are allowed to move along the line of least resistance, these assets will be dissipated in nonessential purchases and extravagant expenditures instead of being utilized to build that new producer-consumer economy which will create many small industries, businesses, trades, occupations, and services.

To conclude, the liquidation of the Philippine-American economic relations will weaken or wreck the Philippines and possibly throw that nation back as a problem on the United States; and if the economic relations are to continue parallel to the military relations, it is imperative that there be a definite plan to make the Filipino people strong, satisfied, and self-sustaining.

PHILIPPINE FUTURE

One key to the future of the turbulent Far East is certain to be the relationship between the United States and the Philippine Islands. It follows that this relationship ought to be thoughtfully analyzed now that Congress is interesting itself in rehabilitation of the Philippines and readjustment of trade relations between the islands and the United States. We do not believe that either of these problems can be solved satisfactorily without a realistic understanding as to what the basic relation between the two countries will be.

It is well known that the Philippines will become independent next July 4. Some Filipinos and some Americans regret this fact, but it is unlikely that the law will be changed. The Filipinos still cherish the idea of independence. Certainly they have earned the right to manage their own affairs. The United States, for its part, is thoroughly committed to the principle of self-government for all peoples capable of it. That is the key to the policy which we have tried to establish through the Atlantic Charter and the United Nations Organization. The fact remains that the United States and the Philippines have mutual interests which continue to tie them together.

Powerful American bases are to be built in the Philippines for the purpose of keeping enemies more distant from our shores, for protection of the islands and preservation of peace in the Pacific. Use of those bases will necessitate unity of action between the United States and the Philippines in any future war in the Pacific. In fact, the islands will continue to be dependent upon the United States for defense and the United States will be dependent upon them for sup-

port of our foreign policy in the Far East. The relationship might be described as that of associate nations.

We think this overshadowing fact should guide Congress in adjusting our economic relations with the Philippines. The Bell bill before the Ways and Means Committee gives fleeting recognition of this fact by providing that free trade with the Philippines shall continue for 8 years after independence becomes effective. Such trade would then be gradually strangled by applying 4 percent of the normal duty and increasing it 4 percent each year. In short, this measure attempts to encourage the development of Philippine industries that could not be expected to continue operating after the full duties became effective. There would certainly be much confusion, too, from the annual shift in duty rates. If a staggered duty system is to be applied, we think it would be much better to start with a low rate of, say, 5 percent, with increases every 5 or 6 years. But the special relationship between the two countries makes it doubtful whether full duties should ever be applied.

We appreciate the fact that the United States is urging Great Britain and other countries to liberalize their preferential tariff systems. If this movement should succeed on a world-wide basis, the effect would be to ease the trade problem everywhere, including the Philippines. Meanwhile it appears essential to give special consideration to Philippine trade. Overextension of such industries as sugar and coconut oil can be prevented, as contemplated in the Bell bill, through the maintenance of quotas.

The rehabilitation bill, too, can be used to strengthen the islands economically. As reported to the Senate, it calls for $480,000,000 to pay Filipino claims for damages, for public works and training of Filipinos to speed up reconstruction. Actual wartime damages in the Philippines, however, are variously estimated from $800,000,000 up. Why should not compensation be made in full, except to collaborators, with the proviso that funds granted because of industrial destruction be reinvested in Philippine industry? The United States clearly has a powerful interest in restoring the islands to economic health and in retaining the good will of the Filipino people. For we shall not be cutting them loose next July. We shall only be entering upon another type of relationship which must remain intimate and cordial for the sake of both peoples and for the sake of world peace.

## Newport, R. I., Is Ideal Site for United Nations Organization Permanent Home

EXTENSION OF REMARKS
OF
### HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. FORAND. Mr. Speaker, indications are that the United Nations Organization will decide to make its permanent home in the United States. A final decision of that question is expected in the near future. In anticipation of that action several American communities have invited the UNO to establish its headquarters within their boundaries.

We of Rhode Island believe we have the ideal location for this great organization. In addition to offering its fine, large estates, we can offer climatic conditions that would make for the health and comfort of the members and employees of the organization that would be at headquarters.

In a study of the main objectives that should be considered in choosing a seat for the United Nations Organization, Ellsworth Huntington, of Yale University, places Newport, R. I., as his first choice.

Because his paper on the subject contains so much interesting information, I include it here as a part of my remarks. It follows:

THE SEAT OF THE UNITED NATIONS ORGANIZATION

(By Ellsworth Huntington, Yale University)

In choosing a seat for United Nations Organization within the United States the following seem to be the main objectives:

1. The best possible physical conditions for health, work, and recreation.

2. A location as convenient as possible for the greatest number of foreign nations.

3. A location readily accessible to major cultural advantages.

4. A site with well defined boundaries and with sufficient size for a large city.

1. PHYSICAL CONDITIONS

*A. Climate*

From the standpoint of general health and efficiency at all seasons the best part of the United States seems to be the Atlantic coast from Boston to New York. Other sections which for one reason or another are entitled to consideration in this respect include the southern shores of Lakes Erie and Michigan; a North Central section extending from Minneapolis to Omaha; the Northwest, that is, a strip from Puget Sound southward to Portland; and a narrow coastal strip centering in San Francisco, but not including the actual coast.

The evidence for the preceding conclusion includes extensive studies of the weather and climate in relation to (a) hourly rates of piecework in factories, (b) marks of students, (c) death rates and incidence of disease, (d) the use of libraries, and (e) other conditions such as fatigue. Sound conclusions cannot be drawn from a single criterion, from short periods, or from crude statistics which have not been analyzed as to their accuracy and the degree to which they indicate climatic versus cultural effects. Moreover, no climate is ideal. Several sections of the country can rightly claim superiority in one particular respect, but no section stands first in all. Places which are best from the standpoint of temperature are usually imperfect from that of rainfall, humidity, or variability. Steadily ideal temperatures lead to one set of illnesses, too many storms and changes of temperature to other kinds and too great seasonal extremes to still others. Ideal temperatures lead in the long run to a lessening of mental alertness; too many storms and sudden changes of weather lead to a harmful degree of overactivity both mental and physical.

The difficulties of the climatic problem and the kind of evidence on which final conclusions are based may be illustrated by the death rate, which in the long run provides the best measure of general health. The infant death rate (deaths per 1,000 infants born alive) affords one of the best indexes of general health. When proper allowance is made for under registration in the less progressive sections of the United States the rates range from 31 to 102. The figures for white children during 4 years (1940–1943) in the five sections that may be considered as candidates for first place climatically are as follows:

I. The Boston-New York strip: Connecticut 31, New Jersey 32, New York 33, Massachusetts 35, Rhode Island 39.

II. Lake shores: Wisconsin 35, Illinois 36, Indiana 40, Ohio 40.

III. North Central States: Minnesota 32, South Dakota 35, Nebraska 35, Iowa 37.

IV. Northwest: Oregon 31, Washington 34.

V. California 36.

Perhaps the best of all measures of general health is the "age-specific" death rate, that is, the relative death rate after allowance has been made for the fact that some sections contain a high percentage of children and others of old people. In this respect, as I have explained in Mainsprings of Civilization, we find a significant difference between persons below and above the age of 45 during two thoroughly typical years, 1940 and 1941. The average rate at older ages is given in parentheses:

I. Boston-New York strip: Connecticut 29 (33), Rhode Island 29 (35), Massachusetts 31 (35), New York 32 (36), New Jersey 33 (36).

II. Lake shores: Illinois 34 (35), Ohio 36 (34), Indiana 37 (34).

III. North Central States: Nebraska 27 (29), South Dakota 28 (27), Minnesota 28 (29), Iowa 28 (29).

IV. Northwest: Oregon 32 (32), Washington 33 (32).

V. California 37 (34).

In this table the North Central States make distinctly the best showing, but this cannot properly be ascribed to climate. The scarcity and small size of cities, the absence of the less healthful types of manufacturing, and the dominance of the healthful agricultural mode of life all play a part. Moreover, any region which has been settled comparatively recently has an advantage, because migrants are normally people with better than average health and their children take after them.

If these considerations are borne in mind, a careful study of the two preceding tabulations leads to the conclusion that if the degree of urbanization and industrialization were as low in the strip from Boston to New York as it is in States such as Nebraska and South Dakota, that strip would show decidedly the lowest death rate in the entire United States. Inasmuch as other types of evidence indicate that industrial productivity per hour and mental activity in general seem to be at their best under conditions of climate and weather like those of the Boston-New York strip, we conclude that, other things being equal, the climate there is the best in the United States from the standpoint of general health and activity.

It is not easy to rank the other sections climatically, and I do not speak with confidence. On the whole, the evidence thus far available seems to put the Northwest section next to the Boston-New York strip. That section is more healthful than the parts of Washington and Oregon farther east. Uncertainty as to the magnitude of the ill effects of city life and lack of available statistics that separate either the lake shores from the rest of their States, or the suburban area of San Francisco from the rest of California, make it impossible to say which of the other three stands highest.

*B. Recreation*

Although the speed and ease of modern transportation make it more feasible than it would ever have been before to base the location of the seat of the United Nations Organization on the most important of all criteria, namely, health and mental alertness, other criteria should not be neglected. Opportunities for recreation are an important factor in health and in making people permanently efficient. From this standpoint the relative positions of the five sections here discussed seem to be as follows: (1) The Northwest with its marvelous combination of island-studded Pudget Sound and great mountains; (2) the San Francisco region with its beautiful bay and its easy access to the coast range and the Sierras; (3) southern New England with a beautiful island-studded coast and the White Mountains, Berkshires, and Adirondacks within an hour or so by plane; (4) the lake shores where land and water

meet, but mountains are far away; and (5) the North Central States with lakes or mountains only at a considerable distance from the sections that are climatically best.

2. LOCATION IN RESPECT TO FOREIGN COUNTRIES

In spite of modern facilities for travel the eastern coast of the United States still remains more accessible to Europe and no less accessible to Latin America than either the interior or the west coast. Moreover, although the problems of Japan, China, and the Far East in general are bound to be important, the success of the United Nations Organization depends primarily upon the attitude of Europe. If the seat is located on the west coast or in the interior, European nations are almost certain to feel that it is far away. Their interest will be greater if the seat is placed as conveniently for them as possible. Therefore the order of precedence on this score is the Boston-New York strip, the lake shores, the North Central States, San Francisco, and the Northwest.

3. LOCAL REGIONAL ADVANTAGES

It is highly desirable that the seat of the United Nations should be located within easy reach of great libraries, research institutions, and sources of all sorts of supplies and equipment. In this respect the Boston-New York strip has a great advantage, the lake shores come next, and then the San Francisco region, with the North Central States and the Northwest less favored.

4. GEOGRAPHIC INDIVIDUALITY

Another vital consideration is that the seat should have plenty of room for growth. Large airfields, beautiful parks, and spacious grounds for noble buildings will be needed, as well as space for office buildings and homes surrounded by grass and trees. If the United Nations is even a moderate success, its seat is sure to grow. At first a square mile or two will be enough, but after a generation we may expect a fairly good-sized city and in due time a large city. The growth of Washington and of practically every other capital illustrates the matter. It would be extremely shortsighted to locate the seat in a constricted area of only a square mile or two. It ought to have plenty of room for expansion. Moreover, it would help to promote international harmony if the capital could have the exclusive use of some island, valley, or other well-defined geographical unit with natural boundaries.

A SUGGESTED LOCATION

On the basis of all the preceding considerations the location that seems most appropriate for the seat of the United Nations is the island of Aquidneck with Newport, R. I., at its southern end. Climatically Newport comes close to being the best place on the east coast of the United States, and perhaps in the whole country from the standpoint of steady work and good health at all seasons. Its temperature is ideal in summer, being cooler than that of New York, Boston, or Los Angeles, and a little warmer than that of Seattle or suburbs of San Francisco, such as Petalumna. In winter Newport is about like New York, and considerably colder than any of the west coast locations. The coolness and dampness at this season are draw-backs, but it must be remembered that up to a certain point a cool, stormy winter is a distinct stimulus to both physical and mental activity. It must also be remembered that the monotony of a dry summer with little change in temperature from day to day is distinctly unfavorable in these same respects.

The fame of Newport as a summer resort is well known. That city, to be sure, has nothing to compare with the mountains around Seattle or San Francisco, but nevertheless it ranks as a real beauty spot.

The position of Newport in respect to both Europe and South America speaks for itself. It would be hard to choose any site which is otherwise appropriate and which is also more readily accessible and more acceptable to a large number of countries.

The local regional advantages of Newport include (a) plenty of level space for air fields, (b) many beautiful houses that can readily be purchased, (c) a flourishing little city large enough to supply local needs, but not large enough to overshadow the seat of the United Nations, (d) easy access to New York, Boston, and many other cities, (e) an island which forms a distinct geographical unit that might be taken over as a whole by the United Nations Organization, (f) an area which is large enough for a good sized city, and is not yet densely populated.

## Bring the Soldiers Home

EXTENSION OF REMARKS
OF
### HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. CLASON. Mr. Speaker, every Congressman is receiving hundreds of letters from frantic parents and service men and women, all of whom believe that the War and Navy Departments are not properly handling the transportation of overseas personnel to the United States. As a result they feel that thousands of families will be broken up unnecessarily at this Christmas time.

I have on different occasions brought this matter to the attention of the House and have set forth particular letters and newspaper articles which have come to my attention. Today I wish to bring an editorial before you which was published in the Springfield Union on November 23, 1945. It expresses at some length several of the complaints which we Congressmen are receiving piecemeal in numerous letters from home and abroad. I believe that the time for excuses is past. I would like to see divisions like the Thirty-first Division, which has been waiting for weeks for shipping facilities, sent home without further delay. Why have these men been told, time and time again, that their sailing date was immediately before them if the Army and Navy were not prepared to make good on their plans? The editorial is as follows:

BRING THE SOLDIERS HOME

Let's all insist that this great Nation bring the boys home. We're fed up with weak, bumbling excuses from the Army, the Navy, from this and that great man in Washington, from this and that pipsqueak bureaucrat, explaining why the men in all the far corners of the earth, who won the war for us, "can't" get home. We're tired of all the talk—and so are the fighting men sweating it out in many climes.

Bring them home.

We took them over all right. We rushed them over, old and young, big and little, trained and half-trained, loaded with equipment, crowded into huge transports. We sent them everywhere—quickly, efficiently—and they fought like hell, bled, suffered, died. There were no feeble excuses then telling why they "couldn't" be sent to Tarawa, New Guinea, Iwo Jima, France, England, Belgium, Holland, Germany. Not on your life there weren't. Our Navy and our transport service were most efficient, always on the job, and over they went—millions of them. That was war, and this peaceful Nation was 100 percent efficient in fighting that war. But, as we noted in these columns the other day, we are about 23 percent efficient now as we try to get going in peace-ways style again.

What's the matter with Washington, anyhow? Why doesn't it get a move on, a hustle on? If, in time of stress, strain, and emergency we could take men away from home, why can't we, in time of peace, show a little intelligence, a little enterprise, to say nothing of a little decency, and bring them back? Why?

Is it politics? Is it that the brass hats don't want the men brought home and discharged, because when the Army shrinks, it can get along with less brass? Is there something sinister, something the people don't now, that is responsible for the cruel delays and many postponements of the homecoming of so many men?

The men who are being held in far-away places are more than restless—they are bitter, rebellious, and their morale is understandably at an all-time low. They see great ships idle near them; they know that many times ships sail from Europe and from Japan and the islands nearby with empty cargo space which could be used to carry men back to the United States. They know that there are many idle ships in American waters. They are rapidly losing all faith in their Government, and so are many of their relatives here at home.

Members of Congress are besieged daily by their constituents, assailed with the question, "Why aren't the boys coming home?" And Members of Congress go to the various departments in Washington and bring back explanations that aren't really explanations—simply excuses.

This unwarlike nation became warlike overnight and amazed the world with its efficiency as it fought and won the greatest war in all history. But now this unwarlike nation, the greatest and most efficient business nation on earth, cannot line up many of its marvelously great fleets of ships and bring back those men whose job abroad is done, and who by right should be home and out of uniform, and it doesn't make sense.

And the situation may become very serious at any moment, for soldiers far from home, smarting under a sense of injustice, aren't in a pleasant mood. They were willing to fight and die for freedom but they are not willing to sweat and wait and rot for inefficiency and bungling, and you can't blame them.

Bring them home.

## American Legion Proposes Real Preparedness System

EXTENSION OF REMARKS
OF
### HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Oregon Sunday Journal of December 2, 1945:

AMERICAN LEGION PROPOSES REAL PREPAREDNESS SYSTEM

(By David Lawrence)

WASHINGTON.—The American Legion, through its national commander, John Stelle, has just come forward with a sensible program for military training that eliminates virtually all the objectionable features of the plan presented by President Truman and General Marshall.

Instead of taking a whole year out of the life of American boys and giving them no further training that could be useful 5 or 10 years later, the American Legion is to present to Congress a bill which requires only 4 months of basic training but provides for integration of the trained youth into some organization which has a continuing relationship to preparedness.

Under the proposed bill by the American Legion, a boy of 18 who is physically qualified would take 4 months of training and then he could return to school or college or join a National Guard unit or a Naval Reserve unit, or, if at college or school, he could join a civilian military training corps unit or an ROTC unit. If he were not going to college, the boy could spend 8 months or the equivalent working in some industrial plant engaged in national defense work of a type set up by the civilian authority.

APPROACH REALISTIC

This is a realistic approach. It recognizes that training in modern times doesn't consist merely of drilling and marching and saluting but of mobilizing young men in mechanical pursuits as well. Training in certain trades is just as essential to a mechanized military service of the future as marching or drilling. Certainly air power needs men in ground crews for repair and maintenance who have had the background of work in factories and plants.

The Legion's proposal is significant because it offers the first important digression from the administration's plan which, incidentally, has no chance of passage anyway. Another interesting proposal is that which comes to the writer from the Regular Veterans Association, an organization founded by but by no means confined to officers who have served in the regular Army and Navy. It says:

"We are convinced that some form of military training is a very real must for this country * * * but we are not agreed upon placing the whole burden upon young men of high school or college age. These boys, for that is all they are, have their lives ahead of them. They are at the place where an education means a great deal to them, especially the ones who are choosing careers in medicine, law, science, and many other professions which require more than the usual 4-year course, and a year from their lives at this time would be a very real loss. Not only that, but they are not yet men with an adult sense of values and to train them fully in the art of killing would be foolhardy indeed."

HITLER PLAN CITED

"Hitler proved what one can do with the younger generation by training them in certain arts. In Germany the youth, not the older folks, were the backbone of his plan of conquest and cruelty. Why then should we teach our youngsters this same science and expect them to return calmly to commonplace things without ever having a chance to practice the lessons thus learned? Taken at a time when their minds are pliable, they may wish to use their knowledge at the slightest provocation.

"We endorse a plan, proved by the Swiss to be workable and which has kept them at peace for many years, whereby the adults, who after all are the ones who should carry the burden of responsibility, comprise the civilian army of defense.

"We ask that all men between the ages decided upon as being physically able to fight be given military training each year until they reach an age when they no longer need be called upon to take the training. By this means no undue hardship is placed upon any one group. Not only that but returning yearly for a few weeks' training, we will have a male population in better physical health than ever before. By spending a few weeks of each year, in this way the men thus taught will not forget the lessons learned nor will they become 'rusty' which is what will happen under a plan whereby a man receives a full year's training, then forgets about it until such time as he may be called upon suddenly and without warning to use what was taught to him maybe 10 years before."

Congress will have before it many plans, but the two foregoing proposals begin to tackle the problem on a practical basis, and out of many ideas may ultimately come some form of training that does not establish a militaristic tradition but accomplishes the main purpose—preparedness for defense.

## Compulsory Sickness-Insurance Costs

EXTENSION OF REMARKS
OF
### HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a part of four editorials from the Kansas City Star, the New York Times, the San Francisco Chronicle, and the Milwaukee Journal, on the subject, Compulsory Sickness-Insurance Costs.

Mr. Speaker, I am certain that when the people of the United States realize just what may happen under the Truman compulsory health plan, they will have no part of it.

I have, on three different occasions, had the opportunity to visit Europe and investigate, at close range, just the type of medical aid which is given when the medical profession and hospitals of the country are regimented and controlled under Government machinery. I can assure you that the quality of care given to the people in these countries is far inferior to that received in our own country.

The matter referred to follows:

COMPULSORY SICKNESS INSURANCE COSTS

The basic question is whether this expansive and compulsory system is needed in America, to be superimposed on all the medical, hospital, and health prepayment plans now in effect and serving ever-increasing millions of the people. The country's public health showing today is better than it ever has been in the Nation's history—and better than that of European countries which have the Nation-wide health insurance. In the light of these basic facts, it has never been shown that any urgent or real need existed for the compulsory system in America. * * *

Whatever the method, people who did not want this service would have to pay for it just the same, with others getting the benefit of their money. They would be forced to pay into the system, however much they might dislike it and to whatever extent others might cash in on it.

The need must be proved urgent and the program itself the best possible means of supplying it before the country can afford to launch out on such a gigantic and lopsided undertaking. (Kansas City Star.)

What of the cost of the President's program? Here doubts will necessarily arise. We are presented with the familiar argument that with a deduction of 4 percent from salaries up to $3,600 we shall pay little more for medical care than we do now, which is about $2,800,000,000 annually. The argument seems much too cheerful. It overlooks the fact that in normal times 50,000,000 families could not call a doctor except in cases of catastrophic illness. With at least 100,000,000 insured, physicians will be consulted more and more. The cost of insured medical care may therefore well amount to $4,000,000,000 annually. Add the cost of building and operating the proposed hospitals and medical centers at Federal and State expense, and lastly, money allowances when sickness or disability prevents a man from working, and no one knows what the ultimate figure may be. (New York Times.)

We have a profound distrust of remote control by a vast Washington bureaucracy of a concern touching so intimately the lives of the citizens. * * *

The President repeats Wagner in asserting that this plan is not socialized medicine. To us these assurances are nothing more than attempts to soothe persons who do not like the terms "regimentation" and "socialized medicine." They should not fool anyone who can put two and two together.

Similarly unfrank seems the President's assertion that the system must be "highly decentralized in administration" though the fund "should be built up nationally." These two elements are completely incompatible. Whoever holds the purse runs the show, and from the place where the money is held. Nothing run by Washington is ever decentralized. * * * We do not want another national bureaucracy to create another huge pressure group in Government. (San Francisco Chronicle.)

Before we embark on any expansion of social security, we should first figure the costs, as accurately as is possible. If we must have old-age, survivor, unemployment, disability, health, and perhaps still other coverages, we must know the cost of each and the cost of the combination. We must know these things as they bear on pay checks and we must know them as they bear on the national economy.

Incidentally, in deciding on them, we must inquire into their more remote social implications. Security is a desirable thing, but so are the independence and initiative of the individual. In securing aids to the people, we must so operate as not to weaken the people's drive and energy and desire to accomplish things for themselves.

The national interest demands more than a reduction in the financial worries of citizens in the emergencies of illness, unemployment, and old age. (Milwaukee Journal.)

## Universal Military Training

EXTENSION OF REMARKS
OF
### HON. ANDREW J. MAY
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. MAY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement by Brig. Gen. Luther D. Miller, Chief of Chaplains, on universal military training, before the Military Affairs Committee of the House of Representatives, Friday, December 7, 1945:

Gentlemen, my purpose in appearing before your committee is not to argue the necessity for universal military training. Men better prepared than I will speak to that important point. I cannot refrain, however, from expressing my personal conviction as to the necessity for adequate preparedness gained in the hard school of experience.

Those of us who in 1939 saw the frantic haste with which we sought to prepare for inevitable conflict after years of shameful

neglect of our defenses know how close this Nation came to disaster in those crucial days. We watched with apprehension men training with dummy rifles and with trucks for tanks to meet the mechanized might of the best-prepared armies in the world. That experience strengthened our conviction that it is perilous to trust the safety of our country to hasty improvisation in the fatal days of decision.

Those of us who watched from the ramparts of Australia the rising tide of Japanese aggression sweeping all before it in the early months of 1942 while we stood impotently by unable to stem their swift advance, know how possible it is for an essentially second-rate power to defy the might of America successfully when that might is only potential and totally unprepared.

I was with the forces of General MacArthur which slowly and painfully fought their way from one bloody beachhead to another in the long, long road which stretched from Guadalcanal and Buna to Leyte and Luzon. Most of this effort was spent in regaining territory we never should have lost had we been even partially prepared. I cannot forget the graves of brave young men which mark that way. Each one is not only a sacred monument to heroism and sacrifice but each is also a grim reminder of the price we paid in the days of too-little-and-too-late for our former folly of unpreparedness.

I was with the Sixth Army on Luzon which had the honor of liberating from living death the prisoners of Cabanatuan. I saw those men as they emerged out of Japanese bondage into the light of freedom. I see them now, ragged, starved, but with spirits unbroken. These were the men who fought grimly and courageously against overwhelming odds on Bataan and Corregidor waiting vainly for help which never came because we had none to send. They suffered the humiliation of surrender, the agony of the death march, and the long ordeal of imprisonment through no fault of theirs but because the Nation they served so nobly was forced to abandon them, having neither supplies nor men to send to their assistance.

I mention these facts since anyone who has shared in any way the suffering and sacrifice of 4 years of war in the Southwest Pacific knows the price we have paid in the past for our unwillingness to retain the military strength essential to command the confidence of friendly nations and the restraining fear of those who might become our enemies.

All of this I feel very keenly from personal experience but my primary purpose in appearing before your committee today is to testify out of my experience as Chief of Chaplains on the important question of the probable moral and spiritual effects of a year of military training on our youth. No question your committee can consider relative to universal military training is more important than this as I think you gentlemen realize. The parents of America are vitally concerned on this point as they should be. Not even the defense of our Nation should be purchased at the expense of the character of her citizens.

I am here today to state my earnest conviction gained from 26 years of experience ministering as a clergyman to our servicemen that far from being a peril to character a year of military training could become an important adjunct to the constant efforts of the home, the school, the church, and the community to enrich the character of our youth. If I did not believe this, I would not be here.

Frankly, I am a little weary of hearing the repeated libel of those who insist that a year of training would degrade or debauch our sons or transform them into regimented robots or goose-stepping militarists. Upon what evidence do the critics base these assertions? We who have served through training and combat with the men now in the Army know better. You who are receiving these men back into your homes again know better. There are weaklings among them but the vast majority are returning to their homes stronger physically, mentally, and morally than when they went away and far more peace-loving and democratic for their experiences. They have learned discipline and comradeship through service, patience and endurance through suffering, initiative and confidence through achievement. You do not win victories with moral weaklings. It takes character to stand the test of battle and these men had what it takes. They are one and all typical of the kind of men who emerge from either training or service with the American Army.

Much publicity has been given to such evidences as there are of delinquency among our soldiers. We tend to forget that the moral breakdown apparent in our American life is not confined to the Army. Indeed the most pressing social problem facing us today is that of juvenile delinquency among our boys and girls of high-school age. When we consider the perils to youth of separation from their homes and the beneficient influences of church and school, it is well to recall the alarming evidences of moral disintegration among those who never left home.

When you are considering the atmosphere of a military camp with all of its disadvantages, let us remember a few salient facts too often overlooked.

An Army training center is one of the few places in America where there is a planned and supervised program of education and recreation to provide youth with facilities for the worthy use of their leisure time. An Army training center is one of the few places where a strenuous effort is made to drive vice out of the communities adjacent to it or to police these communities for the protection of the soldier when he is off duty. An Army training center is the only place where a religious program for men of all faiths is conducted by the Government with trained clergymen constantly in attendance and chapels provided with equipment and personnel to carry on a comprehensive spiritual ministry among our young men.

Illustrating that final point, I would present to you with a pride, which is not personal, the achievements of the Chaplains Corps. The records in my office show that in the 4 years since Pearl Harbor 8,000 Army chaplains conducted more than 5,000,000 services, with over 300,000,000 men in attendance. These same chaplains with signal devotion made more than 73,000,000 pastoral calls on the sick and the wounded on the battlefields and in the hospitals all over the world. They have held more than 279,000,000 conferences with individual soldiers in which they have brought to lonely, puzzled, fearful, or seeking men the comfort, counsel, and encouragement of a strong and steadfast faith. At no comparable period in our history have so many churches been built, so many services conducted for soldiers, so many Bibles and other sacred literature distributed or a greater program of religious education and inspiration carried on.

I mention these significant figures because they demonstrate conclusively that the moral and spiritual welfare of the men in service has not been neglected in the past and will not be in the future. Indeed it is abundantly evident as many have pointed out that most men were nearer to the church and its ministry in the Army than they ever were in civilian life. Of course, the fact of war accounts in some measure for this unusual concern for spiritual things. Men facing death quite naturally turn to religion. But it would be a mistake to imagine that this is the only or the best reason for the very marked increase in religious interest so evident in the Army. More important, in my opinion, is the fact that the churches through the chaplains brought religion to these men where they were with a vital and practical faith preached and practiced by men who were comrades with the soldiers in a common endeavor.

The chaplain went where your son was. He didn't wait for the boy to come to him. He went to the boy. They were with the men in training and learned to know them on many a long march and lonely bivouac. They sweated it out with your sons in barracks, assault courses, parade grounds and in the field. When the transports sailed for unknown destinations the chaplain stood beside your boy on the deck. And when, in one instance the transport sank, 4 chaplains, Protestant, Catholic, and Jewish, gave their lifebelts to men who had none and went down to their death with those who were forced to stay behind. The chaplain was with your boy in prison camps. I remember on Luzon when we brought the men out of Cabanatuan that some were too ill to make the trip to freedom and one of our chaplains insisted on staying behind because he would not leave them alone. The chaplain was with your boy in combat. As one citation accompanying a minor decoration awarded one of many chaplains so honored, stated: "With a total disregard for his own safety Chaplain ——— remained with the assault troops, bringing spiritual ministration to the living, comfort to the wounded and consolation to the dying. He personally assisted in the evacuation of many wounded men under enemy fire." This is typical of our chaplains. I mention it because soldiers listen to the spiritual message of men like that especially when it is couched in a language they understand. It is that sort of service which gets results and it is that sort of service translated to a peacetime situation that we may expect from the Chaplains Corps in such a training program as you are considering.

I am in no sense suggesting that the universal military training program should be adopted in order that men may receive educational, recreational, or religious benefits. These are incidental to the primary purpose which is military preparedness. I am emphatically stating that past experience demonstrates that the Army is deeply concerned with the welfare of the men committed to its care. I am reminding you that no army in history, not even that of Cromwell or the Crusaders, has ever conceived and carried out so extensive and effective a program of education, recreation and religion. What we were able to do in the demanding days of total war will be done much more successfully in the days of peace.

The responsibility for accomplishing this will not be left to the Army and the Navy, alone, able and willing as they have proved themselves to be. The Secretary of War in his testimony before this committee has strongly recommended the appointment by the President of a civilian board made up of leaders in every movement for the betterment of our national life which would assist the services in the task of planning and administering that portion of universal training not essentially military. On this board would be men and women from the fields of education, social service, recreation, religion and so on who know the needs of youth and how best to serve them. They would be concerned with the conditions in the training centers and adjacent communities which affect the morals of men. They would integrate the program with educational interest whether it be the elementary schooling of illiterates or the advanced study of those who intend to continue to college. They would cooperate with the chaplains in a vital religious effort. In conjunction with the Special Service Division they would provide the finest in recreation. Surely we need not be apprehensive about the moral and spiritual well-being of men served and safeguarded by the most intelligent and interested agencies and individu-

als in our national life cooperating with the Army and Navy which have given ample evidence of their ability and willingness to care for the physical, intellectual, and moral life of the men committed to their care.

I can say for the Chaplains Corps that we would continue, as in the past, to cooperate with churches of all faiths to secure the finest of their ministers for service in the Army. With a universal military training program making unprecedented peacetime demands and offering unprecedented opportunities, we could and would present the challenge of Army service to all of our theological seminaries, seeking thereby to recruit the very best of ministers, priests, and rabbis for this important work. I am confident that the seminaries would assist us in preparing these men.

We will ask for, and I feel certain we will receive, an additional quota of chaplains so that parents may be assured that with every battalion of trainees there would be a minister or priest of their son's faith. These clergymen would be principally Reserve chaplains, serving for a limited period, combining a knowledge of military usage with an intimate understanding of the thinking and habits of civilian communities from which the trainees would come. In conjunction with the civilian board already mentioned the Chaplains Corps would bring to every training center outstanding leaders of religious life to conduct special preaching missions among the men. The splendid cooperation between the various churches and pastors in communities adjacent to the camps and the chaplains so evident in this war would be continued to the spiritual and social benefit of your sons.

It goes without saying that the chaplains would conduct regular religious services and sacraments for the men. These would be held in the fine chapels which already exist on every Army post. They would be enriched by music from the organs with which each chapel is equipped and from choirs composed of trainees and conducted by music masters. When the men are absent from the post on exercises or maneuvers, the chaplains would accompany them and conduct services wherever they might be. While there exists in the Army a fine fellowship between chaplains and men of varied faiths, insofar as it is possible to do so, your sons would be ministered to by men of their own particular denomination and there would be on every post services conducted according to the rites and ritual of whatever faith the men might profess.

Formal religious services, however, are only a part of the program provided by the chaplains. They are concerned with religious education and would conduct classes and study groups as well as young people's societies similar to those at home. They would stimulate an interest in the reading of religious literature and distribute, as in the past, the best available to the men. With the certainty of such a program the Chaplains Corps would plan to cooperate with the religious education agencies of established denominations to develop a well conceived and integrated educational program designed particularly for these men. I know that we can confidently count on the assistance of the churches and with that assistance there is no limit to our possible accomplishment.

Most important of all, perhaps, would be the personal relationship of the chaplain with his men. Remember his whole time would be devoted to them. He has one job and only one and that is to minister to the religious needs of the trainee. Unlike the civilian pastor he does not concern himself with finances. His salary, his church, and his equipment are provided by the Army. Everything possible is done to free him for his all-important ministry. Remember the chaplain lives with the men. He doesn't only see them in his congregation on Sunday, he is with them all the week. Day and night he is available to those who need him and we have evidence to show that he is used. I quoted the figures which show that during the war chaplains held more than 270,000,000 heart-to-heart talks with men. What that kind of ministry means to the lives of men I think you will understand. It means that the lonely and homesick are cheered. It means that the perplexed and bewildered receive counsel. It means that the defeated and discouraged are given the will to try again. It means that those with moral problems and spiritual difficulties receive the guidance which transform lives.

We recognize the peculiar problems incident to young men of 18. We have worked with such men in this war. There are changes in Army usage which are essential to their finest nurture. It is with this in mind that the President has recommended for them a distinctive status as civilians in training and not soldiers in service. It was with this in mind that the Secretary of War urged the Civilian Board to which I have made reference.

This consideration has prompted the plans for the extension of special service providing wholesome recreation and the proposals for an educational program calculated to prepare men for citizenship and for life. It is in deference to the peculiar needs of young men in peacetime that I would recommend the enlargement and extension of the Chaplains Corps. I would go further than that. I would strongly advise that the civilian board should study with care the problem of the moral atmosphere in the communities surrounding the camps where the trainees will live and work. Every safeguard must be given the men when they are absent from the careful supervision of the Army. I would strongly support the decision of the War Department to select the officers for the training program with a thought of choosing men best qualified to live and work with youth.

I would further recommend that insofar as it is possible to do so we should seek to make the atmosphere of the training camps similar to that of college campuses. I see no reason why we cannot. In this connection I believe that it would be wise to adopt the preceptor or counselor system which would place in every barrack where trainees would live a carefully selected leader. He would be a man to command the respect and emulation of young men. He would be one whose character was without question. His presence would help to create an atmosphere which would be clean and wholesome.

Universal military training is something new in American life. It will inevitably become what we choose to make it. There is no good reason why it should differ in any essential from the life at any school or college which has had military training in some form. Few feel that the youths who attend these institutions will return to their homes debauched or degraded by their experience. No intelligent person believes that they will be transformed into jingoistic Prussianized militarists. Indeed, it is the consensus that such training produces the finest type of disciplined, intelligent, manly men useful to civilian life as they are to military forces. This should be true of your boy in training. He should emerge more democratic for the experience he has had with men from all walks of life. He should come home more self-reliant, more disciplined, more intelligent, and better prepared in every way for the certain demands of citizenship in peace as well as for the possible demands of a future war.

From a moral and spiritual standpoint, I am certain that this will be true. I have confidence in the ability of the Chaplain Corps in cooperation with the churches of America to safeguard and foster the character of our sons. I believe with Dr. Dan Poling, a great Christian leader of youth, who stated before a congressional committee considering this subject: "If the Chaplains Corps receives in the peace the recognition, opportunity, and support given it in wartime by the Government and by the commanding officers, and if the churches of our faiths give to the chaplains their loyalty and support, then, gentlemen of the committee, we shall have in universal military training America's greatest moral and religious opportunity since Independence Day 1776." This will certainly be our earnest endeavor. I believe we shall not fail.

## Who Is the Coward?

REMARKS
OF
### HON. LYLE H. BOREN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. BOREN. Mr. Speaker, the President has recommended to the Congress specific action which he hopes will end the Nation's industrial strife. Having studied his message with earnestness and care, Mr. Speaker, I rise to say it is my deep conviction that the President is right. His recommendation should have immediate and favorable action by the Congress.

The present exigencies demand expeditious action and I hope the gentleman from Georgia will have full cooperation from the Labor Committee in his desire to bring a bill, incorporating the President's suggestion, before the House immediately during the coming week. I hope the Rules Committee and the leadership will give precedence and priority to that bill.

The President's recommendations are positive, plain, and direct, and they are wise and sound. His formula does not go far enough to please some and goes too far to please others, but that fact in itself verifies its wisdom and practicality. It is enough for me that it is a step in the right direction.

Epithet and invective and abuse have been recklessly hurled at the President by the CIO czar and by others amongst the power-hungry rulers of labor. These are ever the weapons of error.

Only a completely irresponsible and unreliable tongue could utter the baseless charge of cowardice against such a frank and straightforward action taken by our unassuming, modest, but courageous leader in the White House.

I do not believe Mr. Phillip Murray was intoxicated when he hurled that hysterical charge. Though I confess his wild irrational allegation might make it seem so. Murray's words were not the result of calm deliberate thought, nor were they the findings of judicious consideration; they were born of fear—stark, real, and unadulterated fear.

The CIO czar is afraid. He is afraid a required cooling-off period will prevent strikes. He is afraid fact-finding will expose him and his puppets in cupidity, in untenable positons and irresponsible actions. He is afraid that if the President and the Congress act to protect the public interest, that that action can only be a direct assault on the citadel of his personal power.

Amongst other statements issued is the vicious, bitter attack on the President by the would-like-to-be dictator of the CIO:

To all this arrogance, the Federal administration yields in abject cowardice. This was Murray's reply to the President's message to Congress calling for legislation which would create fact-finding commissions to inquire into major disputes.

What brought on this vicious attack? The President merely asked the unions to go back to work so that we could finish the job of reconverting from our wartime existence to a normal peaceful life. The President told them that if they would go back to work, he would, since they had failed to resolve their differences in conferences, set up a board of impartial men to investigate the grievances of both labor and industry. That he would appoint an impartial board whose sole duty would be to ascertain the facts.

The CIO czar ranted like a madman against this proposal. He is the coward. He is afraid of the facts because the facts will be against him. He is frightened silly of a fact-finding board. He knows the facts will show that he has threatened ruination to any industry or business that dares resist his demands. He knows that the facts will show that his program denies employment to the individual workingman and the returned veteran, except as such employment is conditioned on the payment of dues and fees in order to get a job to earn a living. He knows the facts will show that vast sums of money taken from the hands of toil have been ruthlessly used to destroy Members of Congress and other elected officials who refuse to be intimidated by him and such as he. He knows that the facts will show that such as he have only one objective—to control, to dominate, and to direct the Government of the United States to their personal gain of power. He knows that the facts will show that such men as he and Petrillo wield dictatorial power over American workingmen who do not have under the dominance of these men an opportunity for democratic action to arrive at decisions that affect them and the public interest.

If he has nothing to hide, why is he afraid of a fact-finding board? He is afraid for those facts to be found and weighed in the light of the public interest and welfare, and he is even afraid for those facts to be found and made fully known to the thousands and thousands of good and honest citizens who hold membership in the unions which he dominates.

Murray says: "The CIO is opposed," but he means that he is the CIO in his opinion. He made that statement without giving the millions of workers that are members of CIO an opportunity to ballot on the issues involved. He presumed to express their opinion for them without permitting them any opportunity to consider the questions and express their own opinion, even to him. The individual worker cannot afford to let the arbitrary will of a single man like Murray direct their thinking for them and speak for them and control their action for them.

Certainly one of the outstanding lessons clearly taught by Hitler's rise to power is to be found in the history of how he arose to power. First, he sold himself as the champion and savior of labor by painting rosy pictures on the canvas of lies and promises which he could not fulfill. Later, of course, he sold labor out and enslaved them.

The czar of CIO is throwing up a smoke screen so the facts cannot find him out and hit their mark. He knows that the sole defense for his arrogant and "contemptuous attitude toward the American people and the Government itself" will be found out by the facts and the facts will destroy him. He knows that "in the wake of his policies will come economic disaster" to the workingman. He knows that the individual union laborer will be able to see that mass unemployment and human distress will follow in the path where Murray leads. He does not want the union laborer or any laborer to know the facts because that knowledge would weaken his power and end his domination of them.

Harry Truman said, "It is the Government's duty to act for the people," and Philip Murray is opposed to that.

Mr. Truman said we must defend our Nation against actions that "cripple our reconversion program," and only those who mean to cripple, hamper, injure, and plunder can be opposed to that.

The President's proposal is a careful, restrained, and temperate program of action. Yet some few who are diseased with the lust for power have answered it with threats. They would browbeat, pressure, and cudgel our Government into submission to their dominance and into surrendering the public interest to their wanton self-interest.

When a "high?" CIO official said, "the President's proposal would alienate all of labor's 14,000,000 members," he uttered a false and contemptible threat. In behalf of the millions of honest, honorable, noble, and patriotic workers of our great country I deny and denounce that lie for them.

Speaking to organized labor in convention in Cincinnati, Ohio, just before Pearl Harbor, I said:

The man who would agitate a strike in a war plant today is the greatest enemy the American worker has.

And I have been sad in seeing irresponsible leadership and minority numbers bring blame and reproach on the great body of American laborers.

The President here demonstrates that he is labor's friend. He wants labor protected against wanton acts that bring severe condemnation and retaliation on the innocent worker, the honorable man of toil, the respected and deserving producer of goods.

Harry Truman is a quiet, unassuming, cautious, patient, anxious, earnest man. If Murray thinks he can browbeat him, he just does not know Truman. I know him. I know he cannot be deterred by the threats or the cudgel of a bully. Truman is trying to do what is right and what ought to be done, and Congress ought to help him.

Mr. Speaker, I stand with the President. I stand opposed to the czar of CIO, and I am proud to say that I entertain no doubt at all but a complete confident certainty that the American people, including the working men and women, will with courage and sincerity stand up and be counted—choosing as I make public choice today to stand by the President and right, and against the CIO czar and wrong.

---

## Proposed Peace Department

EXTENSION OF REMARKS
OF
### HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

*Friday, December 7 (legislative day of Monday, October 29), 1945*

Mr. WILEY. Mr. President, there appears in the January 1946 issue of Tomorrow magazine an article by Jack H. Pollack entitled "Do We Need a Peace Department?" This article quotes at length from speeches that I have made on the floor of the Senate relating to my bill, S. 1237, which would establish a Department of Peace, which bill is lying dormant in the Senate Committee on Expenditures in the Executive Departments.

There are some statements in this article with which I do not agree, but because the article brings to its readers the vital subject about which we are all concerned, namely, how to find the road to peace, and because the article will cause its readers to pause and think about the ideas contained therein, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DO WE NEED A PEACE DEPARTMENT?

(By Jack Pollack)

Traditionally, America has been a creative, pioneering Nation. Whether it was a Yankee whittler perfecting a flying machine or an impassioned Midwesterner heralding one world, we have never lacked for imaginative torchbearers. United States industry has handsomely rewarded its "idea men," and the Government has welcomed them to its inner circles.

Americans are perennially bobbing up with various plans, projects, and programs to solve a given problem, or to bring about a desirable situation. Prominent among these are proposals for creating new Federal departments. Plans to establish departments of education science, public welfare, national defense, fine arts, etc., are continually advanced. For years, well-meaning educators have urged establishment of a peace department to counterbalance our War Department. As early as 1936, Dr. Frederick Kettner, an American ethical-culture leader, recommended at the Inter-American Conference in Buenos Aires, that nations appoint secretaries of peace.

Peace department advocates present a logical, if somewhat familiar, argument. Why spend billions preparing for war, but nothing trying to prevent war, they ask. If a war department is needed to keep abreast of the

best implements of war, why not a peace department to maintain, at all times, the best implements of peace? Pointing out that an affirmative-peace program would cost less than a single battleship, peace department champions hold that the Charter of the United Nations Organization cannot function effectively today, unless nations immediately appoint secretaries of peace.

As an atom-stunned world gropes for a practical peace plan, the idea has now taken legislative shape. Senator ALEXANDER H. WILEY, a Wisconsin Republican, and Representative JENNINGS RANDOLPH, a West Virginia Democrat, have thrown bills (S. 1237 and H. R. 3628) in the hopper to create a Department of Peace headed by a Cabinet officer.

To date, Senator WILEY has taken the lead in thumping for a Secretary of Peace. A consistent noninterventionist prior to Pearl Harbor, reflecting his region's traditional isolationism, 61-year-old Legislator WILEY—like his more renowned colleague, Senator VANDENBERG—has now devoted his energy to promoting the cause of internationalism. An ex-lumberjack, dairy farmer, and small-town lawyer, before reaching the upper Chamber in 1938, his only previously held public office was district attorney in his native Chippewa Falls. Today this white-haired, impressive-looking Wisconsin lawmaker is a member of the influential Senate Foreign Relations Committee.

Senator WILEY envisions his proposed Cabinet officer as a peace trouble shooter and right-hand man of the President. Under the Wiley bill, the Secretary of Peace would be appointed by and answerable only to the Chief Executive. Drawing $15,000 a year like other Cabinet officers, he would be the United States representative on the United Nations Security Council, as well as chairman of America's five-man delegation in the General Assembly. To start this project, WILEY suggests as our first Secretary of Peace, Edward R. Stettinius, Jr., former Secretary of State. An Under Secretary of Peace would also be Presidentially appointed with the Senate's consent, and receive the customary $10,000 annually.

These two would be assisted by a small group of experts devoting their efforts exclusively to peace. Cooperating closely with other peace-seeking groups, private and governmental, their duties would be:

1. Concentrating and specializing in maintaining world peace;

2. Promoting better understanding of other peoples of the world, and better understanding of fundamental principles of international relations and cooperation among nations;

3. Using the full weight of moral force in encouraging international freedom of the press, in removing international frictions and misunderstandings which make for war.

Senator WILEY believes that passage of his bill would stimulate the cause of world peace. Appointment of a Secretary of Peace, he says, would be the most effective way we could confer prestige upon the United States delegate to the United Nations Security Council, and permit America to take its appropriate position of leadership in the international picture. Moreover, it would remind our neighbors that this time America means business and is determined to insure a warless world—and that we expect other nations to do likewise. Senator WILEY predicts that shortly after we establish a department of peace, other countries will do likewise.

Asked what his peace department would do that a good State Department couldn't do, Senator WILEY replies, "Is maintaining peace the exclusive duty of the State Department now? Our State Department, with its day-to-day diplomatic chores, can hardly be depended upon to give its undivided attention to such a vast job as maintaining peace."

Some of the State Department's daily chores, many unrelated to preserving peace, include working on commercial treaties, handling passports, keeping an eye on citizens' interests abroad, establishing rights for landing of airplanes, etc. Scattered throughout the State Department are the Offices of European Affairs, Far Eastern Affairs, Special Political Affairs; Divisions of River Plate Affairs, Protocol, Cryptography, American Republics Analysis and Liaison. Even the Secretary of State has sundry domestic chores such as custody of the seal of the United States and publishing the laws enacted by Congress.

An administration critic, WILEY denies that he would be creating another bureaucratic agency. "This peace department," he avers, "would not be a vast propaganda headquarters. Rather, it would be staffed by a small group of experts—specialists—who would assist the Secretary in concentrating on maintaining world peace. I would like to see this great Nation be the first on earth to establish a department of peace. And I would like to see the world peace capital on free American soil, not at Geneva, Vienna, or the scene of past failures, hates, fears, intrigues."

Though he insists that creation of a department of peace would be heralded throughout the globe, as war Woodrow Wilson's League of Nations, thus far the Wiley bill has elicited scant Senate support. Introduced in the upper body over 2 years ago, and again in July 1945, it has attracted little attention. Even the atomic bomb's earth-shaking implications—which make mockery of mortal existence—have failed to awaken support for the bill. Other than a sympathetic column by David Lawrence, publisher of the United States News, and an endorsement by such well-meaning but legislatively ineffectual groups as the Biosophy Society and Institute for the Advancement of Cultural and Spiritual Values, the Wiley peace department bill has not received much attention from the Capital press. At present, the bill is pigeonholed in committee, with little likelihood of emerging unless some mass pressure is generated for it.

Not unmindful of this, Senator WILEY on the Senate floor recently challenged, "I only wish that some good Democrat would take hold of it. Perhaps it would then lodge in fertile ground where it might grow."

Behind this inactivity is a bitter legislative truth. Since they lost control of the Senate, Republicans have mainly blocked rather than championed forward-looking legislation. If the Wiley bill is to make any headway on Capitol Hill, some "good Democrat" would have to sponsor it with administration backing. "I only wish one of them would grab it and carry the ball," sighs Republican WILEY.

Democrat Jennings Randolph, a jolly 43-year-old aviation enthusiast from West Virginia, introduced the peace department bill in the House of Representatives, but has done little with it so far. He has, however, requested the House Foreign Relations Committee to hold hearings on his bill which he introduced largely at the suggestion of an influential constituent, R. M. Davis, coal company president, from Morgantown, W. Va. Davis was an observer at San Francisco and is the author of the pamphlet, Constitution for a United Nations Government.

Believing in a broad educational program to keep the peace, Davis urges creation of an office of peace education—which is covered by neither the Wiley bill nor the United Nations Charter. Emphasizing education more than the Wiley bill, the Randolph-Davis measure sees the Secretary of Peace's duties as:

1. Formulating and publicizing educational programs for promoting better understanding of the other peoples of the world, and better understanding of the fundamental principles of internatibnal relations and of cooperation among nations.

2. Encouraging the interchange of ideas and persons between colleges, churches, civic organizations, and other institutions, organizations, and groups in the United States, on the one hand, and similar institutions, organizations, and groups in other countries, on the other hand.

3. Assisting educational institutions and religious organizations in the United States in formulating educational programs dealing with international relations, international cooperation, and the problems of peace.

Adherents contend that a department of peace is an insurance policy for peace—with a comparatively small premium. Warning that the United Nations Charter must not suffer the bitter fate of the League of Nations Covenant or the Nine Powers Pact, advocates claim that peace departments would help "rebuild a sad and disillusioned world." They imply that if the nations of the earth had had peace departments, we might have curbed Mussolini, Hitler, and Tojo in time to prevent the recent war.

Cynics consider a department of peace too naive for a brutally realistic world. They contend that it will take more than Secretaries of Peace, no matter how noble, unselfish, and unambitious they might be, to overcome the poisons in national systems. And they seriously doubt whether secretaries of peace could place the cause of international peace above their own national interests.

Obviously, a real department of peace would fearlessly expose any trends toward war. This might, for example, bring it into sharp conflict with another Government agency—one having a dangerous policy toward Spain or Japanese scrap iron. Or it might embarrass a respectable American corporation with cartel connections that put its pocketbook above its patriotism.

A department of peace raises many interesting questions. For instance, isn't it really the job of the State Department to do all the work any peace department could do? Shouldn't those who are popularly portrayed as suave diplomats be as aggressive in preserving peace as in preserving the social traditions of diplomacy?

Yet it is dangerous oversimplification to castigate diplomats for lack of international amity, when their actions only reflect the selfish policies of their respective countries. Witness the recent unsuccessful Big Five London parley.

Consideration of the abstract idea of Governments having departments devoted exclusively to world peace is actually an advance for civilation. However, the real answer may lie far deeper than in creating departments of peace. Norman Cousins reminds us that modern man is obsolete, and says that we had better speedily establish a world government, if we wish to survive. One wonders how immediate this prospect is, in view of the difficulty in achieving even elementary international cooperation in feeding starving Europeans this winter. There are still too many of us who cannot comprehend that a few painless economic sacrifices are a small price to pay for peace.

Perhaps, one day, a permanent peace will be established. Before that occurs, we will have to learn to live without our economic and spiritual fists clenched, and to forsake the creed of "Loot thy neighbor." When that day comes, departments of peace will be unnecessary.

The alternative is returning to the caveman, cliff-dweller stage of civilization. For when the atomic bomb dropped in Hiroshima, it bore the warning that free men and women would have their last chance to sit around a table and talk of peace—or peace departments.

## James F. Scanlon

EXTENSION OF REMARKS
OF
**HON. CLIFTON A. WOODRUM**
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. WOODRUM of Virginia. Mr. Speaker, under leave to extend my remarks, I include the following poem by Horace C. Carlisle:

(A man that hath friends must show himself friendly; and there is a friend that sticketh closer than a brother. (Prov. 18: 24).)

Upon the first day of December
Was clever James F. Scanlon hired,
And on the last day of November
He's set apart to be retired—
Up to their highest expectations,
He's served efficiently the great
Committee on Appropriations,
For whom he's labored long and late.

He worships at the shrine of duty,
From which life's true successes pour,
Which makes his life a thing of beauty,
Yea, and a joy forevermore.
For thirty years the commendations
And worthy praises of the whole
Committee on Appropriations
Have helped him to attain his goal.

The Capitol's entire connection
Holds him in unreserved esteem—
For James F. Scanlon their affection
Is sweeter than a fairy's dream—
He's been, and is, an inspiration
To his acquaintances and friends,
And has made this a better Nation,
By his unselfish aims and ends.

—*Horace C. Carlisle.*

## Postwar Policies Affecting Territories and Insular Possessions

EXTENSION OF REMARKS
OF
**HON. HUGH PETERSON**
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. PETERSON of Georgia. Mr. Speaker, the Committee on the Territories has for the past several months been making extensive investigations into the various angles of the affairs of the Territories of Alaska and Hawaii, both of which occupy strategic positions in world affairs. There is a growing interest in the question of the postwar policies of our Government in dealing with the Territories, insular possessions, and other areas which have been brought under the influence of our Government.

It is most important that our Government formulate definite policies on this vitally important subject.

Among the many suggestions that are being made to our committee from various sources is a most interesting letter which I have just received from Dr. Nicholas Murray Butler setting forth in a clear and forceful manner his views on this question. Dr. Nicholas Murray Butler is recognized as one of the Nation's soundest thinkers and most progressive citizens. I wish to include his letter in my remarks, and I am sure it will be read with great interest throughout the country:

NEW YORK CITY, *November 20, 1945.*
Hon. HUGH PETERSON,
*House Office Building,*
*Washington, D.C.*

MY DEAR CONGRESSMAN: Following some mention in the press as to the possibility of the admission of Alaska to statehood, I beg to submit for your careful consideration the statement which is given below.

The United States of America is now a complete and compact geographic unit. It is bounded on the north from east to west by the Dominion of Canada, on the southwest by the Republic of Mexico, on both east and west and on the southeast by the two great oceans and the Caribbean Sea. It is, therefore, a geographic unit complete in itself.

In my judgment, other territories which are or may become subject to the jurisdiction of the United States—such as Alaska, the Hawaiian Islands, and Puerto Rico—should be set up by our Government as independent, self-governing democracies under the protection but not the control of the Government of the United States. There should be two limitations upon their complete independence—first, their relations to foreign powers should be subject to the approval of the President of the United States; and, second, litigants in these communities should have the right, if they so desire, of final appeal to the Supreme Court of the United States. This already exists in the case of Puerto Rico and works exceedingly well. By adopting such a plan as this, the American people would have very substantial influence over these outlying islands and territories, but they would not become part of the United States of America itself. In my judgment, this is vital for our future.

May I say that in 1934 I outlined this plan in speaking to the Legislature of Puerto Rico. That body received the proposal with great applause and apparent approval.

I earnestly commend this matter to your careful attention.

Faithfully yours,
NICHOLAS MURRAY BUTLER.

## Conscience Honored

EXTENSION OF REMARKS
OF
**HON. HOMER D. ANGELL**
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by J. R. Ferren from Signs of the Times for December 4, 1945:

CONSCIENCE HONORED—HEROIC SEVENTH-DAY ADVENTIST RECEIVES CONGRESSIONAL MEDAL OF HONOR FOR SAVING LIFE ON BATTLEFIELD

(By J. R. Ferren)

Unique among the 15 members of the Army Ground Forces decorated by President Truman on October 12 was Medical Aid Desmond T. Doss, now a corporal, the first conscientious objector ever to receive the Congressional Medal of Honor. His citation was also different in that it featured the saving of life under the most desperate circumstances.

Corporal Doss, after the impressive ceremony held on the White House lawn, told newsmen that he feels himself a "conscientious cooperator" and not an objector. To call a man an objector, he said, groups him with men who are unwilling to wear the uniform, salute the flag, or submit to military authority. When pressed to speak into a microphone for a newsreel story, he gave public thanks to God, declaring that it was only by divine protection that his life had been spared.

What of the background of this young soldier, who since May 12 of this year has been heralded by the press as "the conscientious objector hero," and whose devotion and bravery have won him the highest honor the Nation bestows? The influence of a Christian home, regular attendance at Sabbath school, and the privileges of a church school about tell the story. Doss is a member of the Seventh-day Adventist Church and went through the grades of the church school in his home city, Lynchburg, Va. His attendance at Sabbath school was so habitual that during his Army experience he has kept up his Bible lesson study and observed, though largely alone, the Sabbath school hour and its usual exercises. With this religious background, it has been only natural for Corporal Doss to turn to God for help in every experience on the battle front.

"Prayer is the biggest lifesaver there is," he told his lieutenant one morning on Okinawa as their company was about to climb a cargo rope to attack a Japanese stronghold in the face of almost certain death. "Hadn't we better stop and have a word of prayer?" he urged. The lieutenant gave the word to halt and quietly told the men it was for prayer. Doss was asked to pray. He petitioned the Lord to give them trust, to give the lieutenant wisdom and understanding for the job ahead, as lives were at stake in every order given. "Then I prayed for my men," he said, "and asked that all of us come back alive." They did.

The citation read at the White House ceremony to the high Army, Navy, and Government officials assembled, together with close relatives of the honored men, says this of Private First Class (now Corporal) Doss:

"CITATION FOR MEDAL OF HONOR—CORP. (THEN PRIVATE, FIRST CLASS) DESMOND T. DOSS

"Pfc Desmond T. Doss was a company aid man with the Three Hundred and Seventh Infantry Medical Detachment when the First Battalion of that regiment assaulted a jagged escarpment 400 feet high near Urasoe-Mura, Okinawa, Ryukyu Islands, on April 29, 1945. As our troops gained the summit, a heavy concentration of artillery, mortar, and machine-gun fire crashed into them, inflicting approximately 75 casualties and driving the others back. Private Doss refused to seek cover and remained in the fire-swept area with the many stricken, carrying them one by one to the edge of the escarpment and there lowering them on a rope-supported litter down the face of a cliff to friendly hands. On May 2 he exposed himself to heavy rifle and mortar fire in rescuing a wounded man 200 yards forward of the lines on the same escarpment; and 2 days later he treated four men who had been cut down while assaulting a strongly defended cave, advancing through a shower of grenades to within 8 yards of enemy forces in a cave's mouth, where he dressed his comrades' wounds before making four separate trips under fire to evacuate them to safety. On May 5 he unhesitatingly braved enemy shelling and small-arms fire to assist an artillery officer. He applied bandages, moved his patient to a spot that offered protection from small-arms fire, and, while artillery and mortar shells fell close by, painstakingly administered plasma. Later that day, when an American was severely wounded by fire from a cave, Private Doss crawled to him where he had fallen 25 feet from the enemy position, rendered aid, and carried him 100 yards to safety while continually exposed to enemy fire. On May 21, in a night attack on high ground near Shuri, he remained in exposed territory while the rest of his company took cover, fearlessly risking the chance that he would be mistaken for an infiltrating Japanese and giving aid to the injured until

he was himself seriously wounded in the legs by the explosion of a grenade. Rather than call another aid man from cover, he cared for his own injuries and waited 5 hours before litter bearers reached and started carrying him to the rear. The trio was caught in an enemy tank attack, and Private Doss, seeing a more critically wounded man nearby, crawled off the litter and directed the bearers to give their first attention to the other man. Awaiting the litter bearers' return, he was again struck, this time suffered a compound fracture of one arm. With magnificent fortitude he bound a rifle stock to his shattered arm as a splint and then crawled 300 yards over rough terrain to the aid station. Through his outstanding bravery and unflinching determination in the face of desperately dangerous conditions, Private Doss saved the lives of many soldiers. His name became a symbol throughout the Seventy-seventh Infantry Division for outstanding gallantry far above and beyond the call of duty."

Corporal Doss is returning to the Woodrow Wilson Hospital, Staunton, Va., where he will remain until fully recovered from his injuries. His wife, Dorothy, will continue to teach in the Seventh-day Adventist church school in Richmond, Va.

Doss is one of twelve thousand or more Seventh-day Adventist young men and women who served their country during the war in a similar way. While conscientiously holding to their religious convictions against bearing arms, they made no effort to avoid the fighting fronts. They went into battle without weapons of defense, trusting in the armor of heaven. They ministered to human suffering and need. Hundreds are serving as physicians, some as trained nurses, and thousands in other lines of medical service. Many of them received preinduction training by their church education system, which has especially fitted them for this phase of service.

The noncombatant position taken by Seventh-day Adventists is based on deep religious conviction. No man who sincerely holds it will attempt to evade the patriotic duty and responsibility which is both the obligation and the high privilege of every able-bodied citizen—cooperation for the common welfare of his country. It leads to neither moral nor physical cowardice. On the contrary, it engenders loyalty and courage. It holds men true to duty even at the jeopardy of life, inasmuch as that duty, both to fellow men and government, is at God's call.

## A Precedent for Peace

EXTENSION OF REMARKS
OF
**HON. A. WILLIS ROBERTSON**
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 7, 1945*

Mr. ROBERTSON of Virginia. Mr. Speaker, every discussion of a lasting peace eventually reaches the question "What about Russia?" My answer is, Russia is no more anxious to fight us than we are to fight Russia. Then how are we to deal with the Soviet Union? Are we simply going to say that they have a different system and that their national policies are incompatible with ours? No, let us quit criticizing Russia and predicting war with Russia. We must try, despite all apparent obstacles, to work out a solution with tact, with patience, and with friendliness, but without appeasement that might be construed as weakness.

A precedent for such a program was established more than a hundred years ago during the administration of President Monroe. The United States, a republic, negotiated a treaty with Great Britain, a monarchy, for an unfortified boundary between the United States and Canada which was just as essentially a part of that "era of good feeling" as the more publicized Monroe Doctrine.

The fact is often overlooked that prior to the negotiation of that peace treaty we had fought two wars with Great Britain, as a result of which there were many in this country who distrusted Great Britain and many in Great Britain who distrusted us. For instance, Henry Clay wrote a private note to President Monroe protesting against the proposal to disarm upon the Lakes on the ground that it would deliver the whole western country up to the mercy of the Indians friendly to Great Britain and hostile to us. When Napoleon escaped from Elba, Madison wrote Monroe: "If Napoleon is restored, England and France will again pillage America." He urged that the United States maintain her ground and fight for her rights. In an article published in 1898 by Johns Hopkins University entitled "Agreement of 1817," it is stated:

Peace had been concluded at Ghent amidst the festivities of Christmas Eve in 1814, and as soon as the slow-sailing craft of that day could traverse the waters of the Atlantic the news was proclaimed in America on each side of the Lakes. But entire peace could not be guaranteed by proclamation. How was the temple of Janus to be kept closed? Manifestly the most apparent danger of future collisions lay in the relations of the two peoples along the northern limits of the United States. While Jefferson was trying to eradicate the war feeling which the newspapers had nourished, and wishing for the two countries to shake hands together, what measures should be adopted to lessen the possible sources of future misunderstandings, as well as to accelerate the return of fraternal feelings, desires, and actions? The development of the Northwest was affected by the presence of British troops in Canada and of British vessels on the Lakes. How should this danger be avoided?

Perhaps no better leaders could have been selected for the hour. They consulted only the interests of the country. They had no ax to grind at the expense of public peace. Their statesmanship did not sink into morbid abuse of some fancied enemy. They and the people for whom they stood, when they looked back and saw that the world had moved, began to look forward for the things that should grow in the new era of quickening activity, when great cities would be erected along the south shores of the limitary Lakes.

The statesmen of that period, sincerely desirous of establishing a lasting peace, applied their minds on both sides to effective arrangements which would render these waters neutral. They saw at once that if peace were merely to lead to a perpetual race in naval construction such a peace would be only temporary and expensive. Building of naval vessels would have gone on ad libitum, possibly ad infinitum, greatly to the emolument of shipbuilders perhaps, but at the risk of strained relations between the United States and Canada.

Reporting on March 30, 1816, to President Monroe, our Ambassador to Great Britain, Mr. Adams, wrote:

In all the late debates in Parliament upon what they call their military and naval peace establishment, the prospect of a new war with the United States has been distinctly held up by the ministers and admitted by the opposition as a solid reason for enormous and unparalleled expenditure and preparation in Canada and Nova Scotia. We hear nothing now about the five fir frigates and the bits of striped bunting. The strain is in a higher mood. Lord Castlereagh talks of the great and growing military power of the United States. The Marquis of Lansdowne, an Opposition leader, and one of the loudest trumpeters for retrenchment and economy, still commends the ministers for having been beaten into the policy of having a naval superiority upon the Lakes. * * * All this is upon the principle of preserving peace by being prepared for war. But it shows to demonstrate what will be the fate of the proposal for disarming.

It is a source of personal pride to me that it was a Representative from Virginia—John George Jackson—who laid the foundation for the wise course subequently followed by President Monroe. Representative Jackson was a grandson of John Jackson, the Scotch-Irish emigrant who was the great-grandfather of the immortal General Stonewall Jackson, whose fame, like that of Lee, rests as much upon his superlative character as upon his military genius. On February 17, 1815, Representative Jackson, of Virginia, offered a resolution that the Naval Committee be instructed to inquire and report to what extent the United States Navy on the Lakes could be reduced consistent with public interest.

Fortunately, those like Jackson, Jefferson, Monroe, and other leaders who had a will for peace prevailed. As a result, for more than 100 years, the relationship between the United States and Canada has been as friendly as that between Virginia and Maryland, and there has been no more occasion for forts on the Canadian border line than there has been for forts on the Potomac River. After the Revolutionary War friction existed between Virginia and Maryland, between New York and New Jersey, and between other States over State tariffs. They did not go to war; they yielded some of their sovereignty and joined a union that provided for free trade between the States.

It is true that the United States and Canada had the same concept of personal freedom and were members of the same continent. But the radio, the airplane, and the atomic bomb have wiped out boundary lines and we are, in the words of Wendell Willkie, living in one world.

We want a lasting peace. The masses throughout the world want a lasting peace. Representatives of the Allies in World War II are discussing the basis of a lasting peace, but as Voltaire once remarked: "The adjective is the enemy of the noun." There is no reason why we cannot reach a world peace as Monroe reached a peace between the United States and Canada by submerging distrust and by refusing to qualify the simple word "peace" with such terms as "national sovereignty" and "trade advantages."

Pleading for a program to support democracies that were resisting Hitler, I said, in a speech delivered in Woodstock, Va., on June 2, 1940:

Last week a well-meaning but misguided woman in Illinois wired Speaker BANKHEAD "Please save America. Let God save the King." Of course, the safety of America, the

protection of our own firesides, will always be our primary concern, but * * * in the new world in which we live we are not an independent, isolated, and self-contained unit. Many years ago it was recorded "None of us liveth to himself, and no man dieth to himself." Those words were spoken in a small world dominated by the Roman legions—in area and population about that of the United States. Science has brought the mighty nations of our modern world jostling together, and man's mastery of the air has given a new significance to the ethical teachings of the first century.

A wide gap separates our ideologies from those of the Russians, but I wonder if it be any wider than the one that separated the Revolutionists in this country in 1776 from czarist Russia of that day, and Russia was our friend and unofficial ally. Again it may be said that in that struggle Russia acted from the standpoint of self-interest, since she, like France, feared the growing military power of Great Britain. But what greater self-interest could any nation have than a lasting peace? Russians are brave, but Russians would rather live than die. Russians are self-sacrificing, but Russians would prefer domestic prosperity to the crushing burden of a huge military establishment.

There is no defense against the atomic bomb. International anarchy must be supplanted by international law or civilization is doomed. "Nations," said Edmund Burke, "do not learn by experience." In this crisis we should not ignore a plan that worked.

## Troops Enthuse Over Troop-Ship Food

EXTENSION OF REMARKS

OF

### HON. ELLSWORTH B. BUCK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. BUCK. Mr. Speaker, we hear so many complaints concerning the repatriation and demobilization program that it is gratifying to learn that one part of the job is being performed superlatively. The following letters testify that Mr. Harold J. O'Connell, Director of Food Control for the War Shipping Administration, has been giving the kind and quality of food they want to boys returning home on WSA ships:

S. S. "ANTIOCH VICTORY,"
*October 29, 1945.*

From: Antioch News.
To: Chief Steward.

Food for a 13-day trip amounts to some 150,000 pounds—including (happy thought) some 54,000 shell eggs. If you have hated the thought of powdered eggs all these months overseas, just concentrate on the thought of 54,000 lovely eggs—probably hard boiled. (How many have we eaten already!)

Sunday, the schedule called for 225 cans of fruit juice—but you fellows actually gulped down between 280 and 290 cans of this delicious fluid.

It was asked whether the call for food varied from day to day—particularly those first few stormy days. Our host says he is unable to notice any great difference in the amount of food eaten by the men—under the weather or not.

In fact, he went so far as to say that he had never seen such a determined group of appetites—cited an instance where a soldier was carelessly throwing his last meal into a convenient corner while holding a full mess kit in his free hand.

The above case will give you a fair idea of the high quality of the food on this ship—the men just enjoy eating it—even if they don't expect to keep it long.

S. S. "A. P. HILL,"
*October 22, 1945.*

From: Capt. Stuart T. Hynes, Transport Commander.
To: War Shipping Administration.

I wish to comment on the excellent service rendered by the steward's department of the steamship *A. P. Hill* to the troops returning from Europe under my command. The food was well prepared and the quality and variety was excellent.

[Extracts taken from ship's paper Down Hill]

"Such things as we haven't had in the ETO were now ours when we boarded ship on October 6, 1945. We had left Camp Top Hat and Belgium far behind us, and here was ice cream, fresh salads, fresh milk (the first in 2 years for some of us), sugar-cured ham, ice-cold Pepsi-Cola, candy, and more cigarettes than you could smoke in a month of Sundays. Here was a taste of a life that had been long forgotten by many of us, and those are the things which really surprised many. Of course, there were the usual gripes about standing in the chow line, but we're all used to that, and there is not a man aboard that could complain about the chow, for it was always of the highest quality—and better than most of us expected."

S. S. "BRANDON VICTORY,"
*October 20, 1945.*

From: Maj. Irvin Gold, Commander of Troops.
*To Whom It May Concern:*

The food that was prepared and served to the officers and enlisted men on board the steamship *Brandon Victory* was excellent, and on behalf of the officers and enlisted men I wish to extend my appreciation to the chief steward, Arnold Sorensen, and his staff, for the good meals and services rendered to the officers and enlisted men aboard the steamship *Brandon Victory*.

[Extracts taken from the ship's paper]

"GI'S UNANIMOUS IN PRAISE OF BV'S CHOW

"They say it's so good it will take the edge off the home cooking they've been looking forward to. Little things we haven't seen in years add to the swell cooking—honest-to-heaven milk, real eggs, celery, cookies, and even olives. Beaucoup bouquets to the ship's galley gang, and beaucoup bouquets to the whole ship's crew. No sign of inedible chicken anywhere. * * * Just dawned on us we're going to get him in time to do a lot of quail hunting. Boy!

"GENERAL HARRIS LAUDS SHIP'S PERSONNEL

"On behalf of the members of the Sixty-third Infantry Division and myself, I wish to express appreciation to the personnel of the *Brandon Victory* for the efforts expended in making this journey a pleasant one. * * * The messing of enlisted men and officers under the supervision of Steward Arnold H. Sorensen and Assistant Steward Charles B. Hilton and Assistant Steward Theodore Velasquez was excellent and an outstanding achievement. The preparation of food was definitely superior in quality. * * * The combined efforts of all concerned in rendering this voyage an enjoyable one have far surpassed the expectations of the passengers. It has indeed been edifying to witness the concerted attempts of the members of the personnel of the *Brandon Victory* to make this homeward journey a brief and hospitable interlude prior to arrival in the United States."

S. S. "CHAPEL HILL VICTORY,"
*November 2, 1945.*

From: Maj. Marvin J. Hubbard, transport commander.
*To Whom It May Concern:*

In spite of the fact that the vessel was overloaded 30 percent above normal capacity for the three voyages, and a terrific strain was placed on the Army galley, the chief steward performed his duties in an excellent manner. Nothing but praise was received from the Army officers and men with regard to the preparation and serving of meals aboard the vessel, even under the most trying conditions.

S. S. "CLAYMONT VICTORY,"
*October 28, 1945.*

From: Capt. Nelson D. Johnson, Transport Commander.
To: Joe Miller, Chief Steward.

Each meal was carefully planned and served and was thoroughly enjoyed by every officer and enlisted man on board, as was attested to by the innumerable reports received in this office.

S. S. "CODY VICTORY,"
*September 27, 1945.*

From: Capt. Charles P. Mooney, Jr., Transport Commander.
*To Whom It May Concern:*

The food aboard the *Cody* has been excellent. The GI passengers extend a vote of thanks to Chief Steward Thomas H. Gordon and his able assistant, Horace S. Curry.

S. S. "EDWARD RICHARDSON,"
*September 27, 1945.*

From: The Richardson Recorder.
To: Orchids to Our Mess.

As far as the kitchen and the food was concerned, it couldn't have been better. There was always plenty of it, and the manner in which it was prepared was very good. Our hats are off to the men who did that wonderful cooking.

S. S. "GEORGE G. MEADE,"
*October 30, 1945.*

From: Lt. William J. McGrath, transport commander,
To: Weyerhaeuser Steamship Co.

During my two voyages aboard the S. S. *George G. Meade* as transport commander I made frequent observations of the functioning of the steward's department. Daily inspections revealed excellent conditions. Comments from the officers and men were full of praise for the quality and quantity of the food.

S. S. "GEORGE SHIRAS,"
*June 1, 1945.*

From: Lt. William V. Skillman, transport commander.
*To Whom It May Concern:*

It is with great pleasure that I heartily recommend Lt. Fred R. Erb, USMS. He has never been found wanting in his untiring efforts to please everyone that he has had dealings with. His operation of the mess for the Army personnel has been above reproach.

## "After the Army—What?" Women in Uniform Ask

EXTENSION OF REMARKS

OF

### HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by

Doria Higgins from the Washington News Digest:

"AFTER THE ARMY—WHAT?" WOMEN IN UNIFORM ASK

(By Doria Higgins)

A prediction that by mid-November more than 2,500,000 women will be looking for jobs has been made by Miss Frieda S. Miller, Chief, Women's Bureau, Labor Department. The dearth of postwar employment will be felt first by civilian workers, for the servicewomen will be discharged more gradually. The thought uppermost in the minds of the nearly 100,000 women already in the Women's Army Corps is, When do I get out of the Army and after that—what?

They all are eligible for benefits under the GI bill of rights, and if they wish can complete or further their education at the expense of the Government.

The time has come when the women who left their homes and donned uniforms to travel, who accepted the regimentation and discipline of Army life, the responsibilities of a large organization, will return to a life of personal decisions and responsibilities.

The impression gained from interviews is that they are eager to resume "a regular, normal life," to return to their husbands, or to get married and start a home.

A recent First Air Force questionnaire on the postwar ambitions of the Wacs declares 73 percent want marriage and home-making. That finding is in accord with the opinion of a young infantry lieutenant. "Aw, lady," he drawled, "you know as well as I do a woman's place is in the home."

Although most of the Wacs joined for patriotic reasons, some said restlessness had been a secondary factor and that the restlessness was with them again. They want to travel. One group is planning to buy a car and leisurely tour the United States.

One definite note was struck in the words of a young corporal who said, "I don't feel prepared for the peace. I don't want to get out because I don't know what I want to do."

The question of a regular Wac army is still undecided. At a recent press conference Gen. Stephen C. Henry, assistant chief of staff in charge of personnel, said that it was a legislative matter, and so far Congress has made no moves.

At the other extreme an attractive sergeant, asked if she was glad to get out, cried, "Are you kidding? I bought my first dress in 3 years yesterday—black and slinky."

Regardless of what they do and any temporary bewilderment, they'll take with them not only new and valuable training in different trades, but a sense of independence and a greater tolerance toward people and ideas.

## The Capitol's Popular Elevator Man

EXTENSION OF REMARKS

OF

### HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. WOODRUM of Virginia. Mr. Speaker, under leave to extend my remarks, I include the following poem by Horace C. Carlisle:

There is an elevator man,
As jolly as a jay;
If he can live up to his plan,
On Washington's birthday
He'll reach his threescore, ten, and four,
And yet he thrills with cheer
His many girl friends, more and more,
With every passing year.

The teen-age girls all love to ride
With him from day to day,
And he takes an increasing pride
In them—and what they say
To him, as they ride up and down,
Make him behave, as tho
He were a comic circus clown,
Performing in a show.

The passing years have failed to dim
His fascinating eyes—
The girls all fall in love with him,
Of every age and size—
There's something in him that enshrines
Itself in all their hearts,
Sweet as the song that love designs
When its emotion starts.

—*Horace C. Carlisle.*

## Future Policy Affecting the Air Forces

EXTENSION OF REMARKS

OF

### HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

*Monday, December 10 (legislative day of Monday, October 29), 1945*

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the RECORD an article prepared by me entitled "The Same Mistake Again?" published in the December issue of the magazine Flying.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SAME MISTAKE AGAIN?

(By ELBERT D. THOMAS, United States Senator from Utah)

The few weeks left in this year—packed with historic drama through 1945 has been—may well be the most crucial in our national history, if not in the history of the world.

In that brief period the ground work policy concerning the future role of the airplane in our civilization must be determined.

If decision is delayed we are threatened with a chaotic present and a potentially disastrous future. And what we decide to do with aviation inevitably will guide our future economic, social, political, and diplomatic decisions in all aspects of our national and international life.

Five major questions must be faced immediately and policy laid down toward their solution:

1. What are we going to do toward maintaining our air forces?

2. Are the AAF and the Navy air arm going to be separated from our other defense groups, will they be made the controlling factor in our fighting structure, or will they be relegated to their prewar status of military stepchildren?

3. What measures are going to be taken to control the airplane in its relationship to the atomic bomb?

4. What international regulations are going to be laid down concerning the freedom of the air in which planes, both military and commercial, move?

5. Domestically, what measures are going to be taken toward full-throttle aircraft production and the employment that such production implies?

If we answer these questions correctly, we will have the answers to scores of other parallel questions concerning machines, radar, radio, and other developments in the scientific new world upon whose threshold we now stand. Answer them quickly and accurately and we can, for generations to come, enjoy the fruits of that world. Postpone the answers—delay bringing our political, economic, social, and diplomatic thinking abreast of the breath-taking advances of science—and the result may well be anarchy.

It is one of the ironies of modern civilization, and an index to how far our social thinking is behind the scientists, that it is necessary to cite the above alternatives at this late hour. Despite the prophecies of Peary, Douhet, Mitchell, Seversky, and Ziff, to say nothing of the history of the past 10 years, people are still debating the value of air power. It still is necessary, before facing our present dilemma, to review the record, to repeat the predictions that such far-seeing men as Admiral Peary made at the beginning of the century.

Peary's predictions are most clear in my mind because I heard him make them in person, and because they impressed me as strongly as did the unbelievable opposition which arose after he uttered them. His words typify what advocates of aviation are saying today, and his opponents' words typify that benighted opposition which, even now, threatens to block our progress.

My meeting with the admiral occured several years before the Wright brothers flew at Kitty Hawk. I was a student at the University of Utah and he was on a tour of the country lecturing on the Arctic; but in a special forum for students after his regular address he surprised us by speaking, not of the far north, but of aviation.

He spoke dramatically of the coming air age, said that future generations would learn to fly with as much ease as we had learned to swim, and predicted an unlimited future for heavier-than-air craft both in war and peace.

He never changed his views. By 1916, on the eve of our entry into World War I, he was saying, "He who commands the air commands all."

"Our Army and Navy," he declared, "are virtually blind. We have less than 200 trained aviators in the services. These 200 will be busy training other men to fly. We have not a single airplane equipped with a gun."

As early as 1915 he insisted that the best defense of this country would be an aerial coast patrol, and anticipated the use of bombers.

"In no way can we as a nation stand so effectively for forcefulness, for strength, and for world influence as by command of the air. Great and important as is a sufficient Navy for our safety, I speak advisedly when I say that our air service of the near future will be more vital to our safety than our Navy and our Army combined."

He went further, predicting the role of the airplane in a peacetime econmy:

"The work of air preparedness," he said, "is not just for the present (World War I) emergency with Germany. This is only a present incident which should spur us to more immediate readiness. This work of air preparedness is for preparedness on our part for that great realignment of powerful, conflicting, and impoverished interests which is surely to come at the end of this war, and which is a far greater contingency for us than a possible war with Germany under present conditions. This matter is for preparedness even beyond that—preparedeness also for that commercial air power which is coming in the future and in which we should lead."

He went on to visualize a network of airmail lines around the world, advocated Federal control of pilot licensing, a Secretary for Aeronautics in the Cabinet, civil-aeronautics committees in Congress, and foresaw the need of air laws to fit a three-dimensional world.

He was hailed as a visionary and a crackpot for his pains. "Apparently man was built to stand upon the ground," declared the editor of the North American Review a few months after the admiral had spoken to us in Utah. "Strife against the force of gravity,

therefore, may be regarded as contrary to the intention of the Creating Power." "Winged angels or demons" would have to be used as policemen, he suggested, if the wild dreams of the air enthusiasts were realized. Even scientific men at that time, while admitting that men could fly in heavier-than-air machines said that they would probably never do it because after they once got in the air they could not with safety set down on the ground again. The problem to them was not flying but landing.

Succeeding, although against great odds, in establishing his wartime flying coast patrol, Admiral Peary did not succeed in avoiding ridicule. An article in the Bellman magazine as late as 1917 decried his campaign on the grounds that it "merely tends to create alarm and spread the spirit of panic."

Nor is his career as an advocate of aviation reviewed here in some detail simply for amusement. Down through the years, and even to this day, aviation and its supporters have been subjected to similar opposition. Gen. Billy Mitchell is a classic example. Perhaps more classic still is the exclamation of Admiral William B. Shoemaker on reading the report on Mitchell's bombing experiments on warships off Cape Hatteras in 1923.

"It's true, every bit of it," groaned the admiral, "but, my God, we can't let this get out or it would ruin the Navy."

"If a storm doesn't come up and blow these damn planes away," said another admiral attending the bombing demonstrations, "the Navy will go out of business." And Secretary of the Navy Josephus Daniels led the opposition by offering to stand on the bridge of a ship while an attempt was made from the air to bomb it, later getting confirmation from Navy Secretary Wilbur in 1924, who said, "I regard the statement that the next war will be in the air as an absurdity, partaking of the Jules Verne type of literature."

On the Army side, Maj. Gen. John L. Hines contributed the startling opinion that "the airplane is never going to take the place of the cavalry."

Yet General Mitchell was court-martialed by a distinguished panel of his peers—including none other than Gen. Douglas MacArthur.

Nor did the developments of the thirties and the spectacular advances of the German Luftwaffe drown the protests of those favoring land and sea equipment over airplanes.

"Army aviation," declared Admiral King at the beginning of World War II, "should end at the shore line. I shall do what I can to make it so." As late as 1942 he stated: "It is not fundamentally true that air forces can control either permanently either land or sea."

The same old-line opposition that aviation faced in World War I arose again to dog it in World War II. The difference was that aviation was too strong to play a second fiddle and so effective that it overwhelmed those opposing it.

This is not to say that aviation should be ensconced on a throne and everything else be relegated to a minor role. Teamwork won the war and only teamwork can win the peace. But it does mean that aviation should be assayed at its proper value and the less argument about it the better. Our five major questions should be answered promptly and without qualification.

I believe that it is for the greatest good of the country and of the world at large that they be answered as follows:

1. Our air forces, both Army and Navy, should be maintained, regardless of cost, at the highest possible peak so that pilots may be trainer in large numbers, equipment will be immediately available in large numbers in case of a national crisis, and scientific advancement in the field may go forward unhampered by monetary considerations.

2. The AAF and the naval air arm, not to mention all other national defense groups, should neither be separate units nor controlling factors in our defense plans. All should be combined in a single national defense unit, making teamwork in our military and naval activities an organizational reality as well as a personnel goal. Specifically, the Military and Naval Affairs Committees in the Congress should be abolished immediately and a single Committee on National Defense in each House should replace them. Similar consolidation toward streamlining should be effected in the Army, Navy, and the Cabinet.

3. In considering the control of the airplane in its relationship to the atomic bomb, it should be remembered that the bomb would be of dubious military value without the airplane. Without control of the air—which we must maintain—control of the atomic bomb would be comparatively useless. At the same time, let us not assume that the bomb is the be-all and the end-all of military offensive. The bitter fact is that if we launch a future war on the atomic bomb level we will be forced to sink to biological, chemical, and bacteriological warfare and to face the possible destruction of modern civilization. We must at all cost, therefore, lay immediate and airtight plans for channeling aviation and atomic energy into peacetime activities and design all our planning away from war. So doing, we may look forward to a civilization fostering life more pleasant than ever before in the history of man. The alternative is death.

4. What international regulations are going to be laid down concerning freedom of the air? This may turn out to be the most important question before the world in establishing and maintaining the peace. The airplane can, given the opportunity, contribute as much to lasting peace as it contributed to winning the war. But its contribution will be nil if we hamper it with dog-in-the-manger nationalistic taboos. Of primary importance to world trade and world peace are a set of free-air cities or free-air islands which permit entrance and exit of planes of all nations without trade or immigration restrictions. Air over the poles and over each of the former Axis Powers should also be free, as well as over the Rhine and the Danube and over all mandated territories. Freedom of the air must be more than a phrase, it must be a slogan, the basis for a world program.

5. Domestically, every possible measure should be taken toward full-throttle aircraft production and the employment that such production implies. We must do this or face a depression more severe than any in our history. To cut aviation production back to its prewar level is to court domestic economic disaster. Nor is the problem economic only. If such a cut-back is enforced, it means that some 2,000,000 of America's finest youth trained to perfection in their specialties as airmen, will have their talents and their trained skills thrown on the junk heap. These talents are as valuable—indeed, they should be of more value—to our society in peace than in war. They should be neither junked nor squandered. They should be used at all—or any—cost. To jettison them at this time would be as stupid as it would have been to junk the railroads and railroaders after the Civil War. That talent should be used to the full to develop aircraft that will rival the automobile for utility, will make life in our civilization more livable and pleasant, and keep us at all times equipped with facilities and manpower to meet any challenge from other powers that the future may bring forth.

Aviation history will record 1945 as the year when the AAF smashed the Luftwaffe and, carrying its deadly atomic bomb, blasted the last Fascist stronghold and brought imperial Japan to its knees. It would be tragic indeed if world history does not also record that, as the year came to a close, we who now control the air failed to make it a highway to permanent peace and sustained world prosperity.

## The Draft Not Needed

EXTENSION OF REMARKS

OF

## HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

*Monday, December 10 (legislative day of Monday, October 29), 1945*

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "We Don't Need the Draft," prepared by me and published in the American Magazine of the issue of December 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE DON'T NEED THE DRAFT

(By ELBERT D. THOMAS, United States Senator from Utah)

Must we depend on conscription to maintain our occupying forces in Germany, Japan, and other foreign lands? I don't think so. Compulsory military service in peacetime is undemocratic and un-American, and it will not provide the type of police force best suited to handling the sober responsibilities of sustaining peace in the world. Conscription should be abolished as soon as possible.

The Army, however, contends that we cannot achieve our purposes in Europe and the Pacific without indefinitely continuing the draft. Basing its estimates on prewar experience, the Army expects to get no more than 300,000 of the 1,000,000 needed for occupation forces from its present campaign for voluntary enlistments. The rest must be drafted, say Army officials.

But the Army's enlistment campaign is not offering the kind of inducements that will interest a large number of alert, ambitious American boys. The Army is relying on its old prewar system of recruiting, which merely offered a token salary of $20 a month, barracks life, and three meals a day. That system, I admit, will fail to attract enough men.

Furthermore, it will attract the wrong kind of men. It will appeal to the misfits and failures in civilian life who take refuge in the Army because of its security and freedom from responsibility. It will also appeal to the malcontents who learned to like the excitement of war and cannot adjust to the slower pace of normal civilian life—the "foreign legion" boys.

These are not the kind of men who can sell America to suspicious Italians, cynical Germans, and bewildered Japanese. For such men, unable to face the sober responsibilities of maintaining peace, most readily accept un-American notions themselves. Only men who are proud of America and what she stands for and who relish the idea of foreign service to preserve peace will really help in solving the many problems involved in straightening out the world.

How can we obtain such men?

I believe we can induce hundreds of thousands of alert American boys to volunteer if we strive to enlist their enthusiasm by making the service so attractive that they will flock to volunteer. I propose that we take these steps to make overseas service appealing to the right types of boys.

We should confine volunteers to unmarried high-school graduates between 17 and 22. The reason I propose that only high-school-educated boys be accepted is that we should use informed men as our occupation agents. High-school courses during the coming years will cover such subjects as air-age geography, the proposed federation of nations, our own Federal system of Government, and the inter-

dependence of all the national components of this atomic world.

We should guarantee to volunteers for occupation service that they will be in uniform only 2 years, part of which will be spent in Europe and part in Asia. This will offer young men just out of high school a grand opportunity to see the world, without being confined to any one spot long enough to become bored.

Before the volunteers leave America we would give them a brief course in military forms and training similar to that developed for FBI agents. This type training, in itself, may appeal to many youths. The training will be important, because a crucial part of the job of occupation is to see that no underground coalition of Axis financiers shall escape detection. We must not again be outwitted by the Axis powers as we were deceived by Germany after World War I. The caliber of our policing forces will largely determine our success.

While serving with the occupation forces, each volunteer would receive an attractive salary (higher than present Army pay), part of which would be withheld against his return home, to complete his studies or to go into business.

At the end of his foreign service he would be given the option of applying for a commission in the Army Reserve Corps.

I believe that most boys would jump at a chance to take a round-the-world tour at Government expense. By 17 or 18 most boys feel wanderlust. Only a few youngsters of the privileged classes can travel to Europe and the Orient on summer vacations from school, yet my proposal would make such travel possible for any boy.

Some critics may object that this voluntary service abroad would interrupt a boy's education. But certainly it would not interrupt his schooling any more—and probably less—than if he were drafted. As I see it, most boys would volunteer for his service upon completing their high-school education. The bulk of them would not go on to college anyhow, but even if they did plan to, the 2-year intermission for travel abroad would not set them back seriously.

For those boys who do not plan to continue beyond high school, but want to start work upon their return, their occupation in the service will be an asset, not a liability. Talent scouts for Standard Oil, Ford, General Electric—in fact, all the big exporting industries—are always looking for young men whose knowledge of the language and customs of foreign countries qualifies them to represent American business abroad.

The big question, of course, is whether even the inducements I have cited will produce enough volunteers to meet our needs. I think they will. No one knows exactly how many police troops we shall need, once the initial stages of occupation have passed. I think the policing can be done with far fewer men than is generally thought, particularly if we share the policing in Europe and Asia with our allies.

I believe that a fair division of occupation duties among the victors of the past war will accomplish more for the peace of the world than all the propaganda posters put together. You can preach the brotherhood of man until your breath gives out without creating real fellowship. As has been demonstrated in this war, the opportunity for Englishmen, Americans, Russians, Netherlanders, and Greeks to work together, to share their rations, their music, and their off-duty fun is the thing that makes men understand their kinship as men.

I do not propose that we immediately cut off conscription and substitute volunteer methods. Rather, I propose that we give volunteer methods a real chance, and taper off conscription as the number of volunteers rises. But let's make our volunteer methods so successful that conscription will be abolished.

## If You Want Peace, Prepare for Peace

EXTENSION OF REMARKS
OF
## HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

*Monday, December 10 (legislative day of Monday, October 29), 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "If You Want Peace, Prepare for Peace" by Austin J. App, Ph. D., which was published in the November 11 issue of Our Sunday Visitor, a popular national Catholic action weekly periodical, published in Huntington, Ind.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IF YOU WANT PEACE PREPARE FOR PEACE

(By Austin J. App, Ph. D.)

This is the time for all good men to write to the President and the Congress, "We don't want peacetime military conscription." On October 23, President Truman told a joint session of Congress, "I recommend to the Congress the adoption of a plan for universal military training."

"Such action," declared Booth Tarkington, best loved of American authors, "will change every American's life even more than the war itself has changed it. * * * No matter what we like to think, this will make the United States a permanently warlike country." (See CONGRESSIONAL RECORD, 79th Cong., 1st sess.).

Senator ROBERT A. TAFT, on May 30, 1945, gave a speech entitled, "Compulsory Military Training in Peacetime Will Destroy Government by the People," in which he remarked, "Whether we become a militaristic and totalitarian country depends more on this measure than any other."

CONTRARY TO BEST AMERICAN TRADITION

Bishop Aloisius J. Muench, member of the Bishops' Peace Committee, writes emphatically:

"Men in responsible positions are advocating peacetime conscription. What our forefathers fled from in Europe is now to be introduced into our country; it is contrary to American traditions of more than sixteen decades. Warlike measures are not a guaranty of peace. (Pitfalls for Peace, 1945, p. 2). Senator TAFT further insists that "militarism has always led to war and not peace." He adds, "Conscription was no insurance of victory in France, in Germany, or in Italy." Booth Tarkington shows that in the two world wars every peacetime-conscription country was defeated once or twice, whereas the only countries which were twice victorious were the nonconscription countries—England and the United States.

Nevertheless many of our generals and admirals are calling for peacetime conscription. Booth Tarkington says that that's natural: "Every dancing teacher thinks everybody ought to learn to dance," and so similarly the generals want a lot of soldiers to drill (ibid, p. 2). Bishop Muench says: "Every war produces a large number of professional army men who, not caring to go back to civilian life, want to hold their jobs."

Even the atomic bomb hasn't discouraged the militarists from thumping for universal military training. When everybody was saying that atomic power made huge conscripted armies ridiculous, the conscriptionists went into a worried huddle and have come out to meet this huddle by simply demanding bigger and better armed forces than ever. With each new invention in the past, says General Marshall, the number of men required was increased.

ATOMIC BOMB CHANGED HIS MIND

But Charles G. Nolte, chairman of the American Veterans' Committee, once a conscriptionist, says the atomic bomb changed his mind. In an article entitled "Post-Atomic National Defense" (the Nation, September 29), he writes:

"In these circumstances, the present squabble over outlying bases will seem childish. A large navy would be an interesting target, although the aggressor might simply choose to ignore it. A conscript army could hardly be assembled, and if assembled would hardly find a place where it could fight to any good purpose—I hasten to withdraw my argument in favor of universal military training, advanced in these columns some months ago."

According to the Chicago Tribune's report of the convention of the Veterans of Foreign Wars, October 2, "some veterans are skeptical of the military value of a huge reserve because of the bomb's discovery."

But the immensely powerful American Legion organization (of which, incidentally, I am a member in good standing) greatly perplexed that the overwhelming mass of religious and educational leaders should oppose them in this, are the chief lobby force for peacetime conscription. "Universal military training is major objective in Legion's legislative program for this year," was the headline in the National Legionnaire of December 1944. In a speech entitled "The Legion and Labor," at New Orleans, November 22, 1944, the national commander, Edward N. Scheiberling, advocated peacetime conscription as insurance against war, and reminiscent of Cromwell's "Trust in God—and keep your powder dry," added:

"Quite obviously millions of young men being trained in a vast system of citizen-militia will help relieve the pressure of jobs in the immediate years ahead."

IT'LL BE HARD ON THE TAXPAYER

"When the bill to make universal peacetime military training a national policy is introduced in Congress let's all get behind it, and make sure that once it is passed the law is implemented with adequate appropriations." (Legion magazine, December 1944.)

Adequate appropriations for this peacetime conscription which the generals and the Legion want, and the clergymen and the educators dread, are a sufficiently capacious pie for many to be able to get their finger in. Speaking of it, Representative LOUIS LUDLOW said:

"It is estimated by experts that the cost would be at least $2,500,000,000 and perhaps as high as $3,000,000,000 a year * * * the National Industrial Conference Board estimates * * * the wealth of the United States at $300,750,000,000. If compulsory military training should be made permanent, as the proponents hope it will be, its cost in one century would consume the equivalent of the total wealth of the United States. * * * The annual cost alone of the compulsory military-training program would equal the total wealth of four States—Delaware, Wyoming, Nevada, and New Mexico." (CONGRESSIONAL RECORD, September 12, 1945.)

NOW, IS COST OF EDUCATION SO HIGH?

This is a lot of money. Conscriptionists keep trying to suggest that for a rich nation like ours three billions for military training (above the cost of the Regular Army and Navy) is a bagatelle. But when anyone asks for a mere million for a school or a library they bemoan the "high cost of education." A comparison will show how really terrific is the cost of this conscription.

In 1933–34, the year for which I have the figures, endowment for higher education in the United States amounted to $1,539,727,565. That means the total endowment of American colleges and universities is only

half as much as the conscriptionists want to spend every year on civilian militarism.

The stupendous cost of peacetime conscription becomes still more accentuated when compared with the cost of public and parochial school education. In 1934 in all the grade schools and high schools of the land, public and private, there were 29,125,226 pupils. "The average cost per pupil in 1934 was $73.58" (New York Times item dated March 13, 1935). The total cost, therefore, of our whole elementary- and high-school system was $2,133,091,701, or less by about half a billion than the conscriptionists will need for their compulsory military training. Such training, which needs almost as many highly paid officers as inductees, is a moloch compared to which wholesome education is an ascetic.

And this supercostly training may be worse than useless, for, as Robert Maynard Hutchins suggests, "by the time the student comes to use what he has been taught, technological change has produced a situation in which he cannot use it," trained at 18, he may even be "a positive handicap to the Army at the age of 28" (Fellowship, Feb. 1945, p. 25).

SOLDIER ADVANCED, TEACHER RETARDED

That is why a nation which, like France from 1919 to 1939, goes in powerfully for peacetime conscription retrogresses educationally in peace and eventually becomes inefficient in war. Whenever in a nation the soldier steps forward, the teacher is forced back. With the teacher science and invention also slow up. Thus, while the generals of conscription countries prepare for the last war, the teachers and scientists of the nonmilitaristic, the more-money-for-education countries open up the new horizons which both in peace and in war go farthest.

We realized this for a hundred and fifty years. Let's not forget it now. We used to call the peacetime conscription of European countries a brutal, an immoral thing. Even now we speak of educating peacetime conscription out of Germany and Japan. What horrid hypocrites those who call wrong for others what they are busy doing themselves.

Bishop Muench says: "The maxim of militarists, 'Si vos pacem, para bellum—If you want peace prepare for war'—has once more been proved to be untrue," as it has a thousand times in mah's bloody, tragic history. Isn't it more than time, after 2,000 years of Christianity, to change the slogan to: "If you want peace, prepare for peace"?

## Tribute to George M. Putnam, President, New Hampshire Farm Bureau Federation

EXTENSION OF REMARKS

OF

### HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

*Monday, December 10 (legislative day of Monday, October 29), 1945*

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the RECORD the editorial which appeared in the Manchester Union, Manchester, N. H., on November 29, 1945, concerning the reelection of George M. Putnam as president of the New Hampshire Farm Bureau Federation.

George M. Putnam's long retention as president of the New Hampshire Farm Bureau Federation is not only a merited recognition of his personal ability, but is indication of the high esteem in which he is held throughout the country, which has benefited much from his long and useful life.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"UNCLE GEORGE"

He was christened George Martin Putnam. Now, at 81, he is "Uncle George" to more people in New Hampshire and throughout the country than he could shake a stick at, as the saying goes. But George Martin Putnam, just reelected president of the New Hampshire Farm Bureau Federation, wouldn't shake that stick even if he could. He knows that there are more persuasive methods; among them well-founded arguments backed up by personal know-how.

It is no accident that Uncle George is now starting his thirty-first year as head of the State farm bureau. Neithe. is it by chance that he has arisen to high position in numerous other fields of responsibility, or that he has received two coveted medals, New Hampshire's own Charles Holmes Pettee medal, by the University of New Hampshire, and the American Farm Bureau award for distinguished service to American agriculture. And, as an insight into his character, it is not surprising to know that he himself has established the Putnam Agriculture Foundation in memory of his wife.

Uncle George Putnam is a busy man. Few at 81—or 61, 51, or 41, for that matter—would care to keep to his busy day-to-day schedule. He learned to work hard as a farm boy in Hopkinton, and never has forgotten that lesson. He is in demand as a speaker, as an expositor, as an arbiter, as a farmer, and as a businessman. In the course of a year there are few of those demands that he doesn't heed.

Uncle George will be 82 years old on the 18th of next January. That is to say, he will be 82 as far as standard measurements of time are concerned. A man is only as old as he feels, and today George Martin Putnam has the zest of youth, but more than that, the benefit of long years of varied experience.

The farm bureau—State-wide and nationally—knows a good man when it sees one.

## The Passing of Mrs. Charles Evans Hughes

EXTENSION OF REMARKS

OF

### HON. HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Monday, December 10 (legislative day of Monday, October 29), 1945*

Mr. BUSHFIELD. Mr. President, we are grieving today over the death of a very lovable and charming American mother and wife. I refer to Mrs. Charles Evans Hughes. Horace Carlisle has prepared a poem on this fine American woman, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

She openeth her mouth with wisdom, and in her tongue is the law of kindness. (Proverbs 31: 26.)

THE PASSING OF MRS. CHARLES EVANS HUGHES

Death's called the wife of our recognized greatest
Living American, and she is gone—
And now our peace-loving Nation's sedatest
Living exjurist is left all alone—
She was to him what the sweet Martha Custis
Was to George Washington, down till he died—
She largely made the Supreme Court's Chief Justice
All that he was, which he never denied.

She felt his hold on the hearts of the people,
Throughout the length and the breadth of the land—
Her voice, like chimes from a village church steeple,
Echoed approval to all that he planned—
He, in the still hush of silence, will hear it,
Echoing on in the deeps of his heart—
Through the years, will the Chief Justice revere it,
Until the time comes for him to depart.

She has gone on, just to be there to meet him—
When he steps inside the great Pearly Gate,
She, with that same gentle, sweet voice will greet him,
And the reunion will be passing great.
Death is the entrance to God's long tomorrow—
December there is as sweet as is May—
There perfect peace abides, and not a sorrow
Clouds the clear sky of the great perfect day.

—*Horace C. Carlistle.*

## The National Grange Legislative Platform

REMARKS

OF

### HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. CRAWFORD. Mr. Speaker, the Congress has, of course, always been conscious of the needs of agriculture. I think it can be said that for decades past both major parties have been very responsive to the needs of the people engaged in agricultural operations. The National Grange at its recent annual convention adopted what, in my opinion, was an important and absolutely constructive set of proposals. It advocates sound legislation. For the information of the public, I include it in the RECORD:

Following are excerpts from the address of National Master Albert S. Goss before the seventy-ninth annual session of the National Grange in Kansas City, November 14 to 23. The address received the endorsement of the delegate body, making the position taken by the national master the policy of the National Grange.

"The farmer and the laborer have much in common. Both must work in order to live. Both face hazards beyond their control which threaten their ability to make a living. The farmer's market price may drop to a level below cost, so that he has no income upon which to live. Wage rates may go down to ruinous levels, or the laborer may lose his job. Both are responsible for producing most of the new wealth upon which civilization exists, and historically for extended periods, neither has enjoyed an equi-

table share of the income which they have been largely instrumental in creating.

"There are also important differences. Farmers, like industry, must furnish capital in order to provide themselves an opportunity to work. Labor has no such responsibility. Farmers risk the capital they have saved, and may not only lose their year's labor, but the savings of former years. Labor has no such problem. Farmers must meet certain overhead expenses before they receive any of the reward of their labor. Labor has no such responsibility. On the other hand, labor may find its income completely terminated without notice while farmers enjoy what might be called temporary security, and frequently are able to continue in possession of their farm with little or no income over long periods. * * *

"Both should realize, however, that this pay must come from what they produce; that there is no other source of income except through production. * * *

"If this could be done on a basis which is fair to labor, to industry, and to agriculture the Nation would enjoy uninterrupted prosperity far beyond anything known in human experience. * * *

"With such cooperation there should be no need of legislation with the inequities and injustice which would inevitably flow from any attempt to standardize rules of procedure. Success depends on the compensation being definitely related to output. * * *

"There has been too much lining up for or against the various proposals for labor legislation without enough effort to cure the defects and strengthen the good features. There have been too many threats by labor pressure groups for reprisals unless Members of Congress accepted all labor proposals as presented. There has been too little recognition on the part of labor that all income must spring from the production of wealth and that higher wages must depend on increased productivity. There have been too many slow-downs and too much "feather bedding." There have been too many hot-headed strikes in violation of labor contracts. In the case of new and inexperienced labor unions, there has frequently been almost a complete lack of responsibility and a total disregard of the welfare of the public. In many instances labor can secure justice and equity only through organization, but labor must grant justice and equity as well as receive it. If a labor union signs a labor agreement, ways must be found to compel compliance with the terms of the agreement. Employers, too, must be expected to live up to their agreements, or expect strikes and labor trouble.

"The whole public is vitally interested in this question. No lasting solution of the labor problem can be attained by force. Any lasting solution must be based on equity. The policies outlined in the three Grange Guide posts are as truly applicable in the field of labor and management as they are in the field of agriculture, and the Grange can play an important part in supporting a program which is fair and equitable to all groups within the meaning of these basic principles. Both labor and industry are shortsighted indeed when they fail to invite agriculture to sit in their councils, for agriculture has a very direct interest in labor relations, and the peculiar position it occupies often enables it to be a sound balance wheel in an unsettled economy.

"The right to quit work is the inalienable right of a free man. The denial of this right is slavery. Because a single individual is at a disadvantage in dealing with a powerful employer, the Congress has exempted both farmers' cooperatives and labor from the provisions of the Sherman antitrust law which prohibits conspiracies in restraint of trade, but such exemptions were granted to make fair play possible, and it was never the intention of the Congress to create monopolies which could impose their will on the rest of the community with no regard for the rights or the welfare of others. The right to strike is the right to quit work collectively. It carries with it no right to engage in violence, nor any right to deny anyone else the right to work * * *."

"It is not our purpose to hold employers blameless in all these strikes, neither is it our purpose to pass upon the merits of the many issues involved in the wave of strikes which threaten our whole reconversion program, and may well lead directly into another economic tailspin if permitted to go uncontrolled. However, when unions without any claimed grievance strike for the announced purpose of demonstrating their strength, it has an ominous appearance. When unions create work stoppages and shortages over jurisdictional disputes in which the employer has no interest, or when unions sign a contract and then deliberately break it, they show a dangerous lack of responsibility. Some means must be found to assure union responsibility, if unions are to enjoy the privileges they now enjoy under Federal law. When the power of organized labor is used to engage in racketeering or to compel employers to pay for labor not needed, they should forfeit these privileges * * *."

"A survey would probably show that most strike abuses have been among new organizations which have suddenly come into being in the enormous expansion of organized labor under Government cultivation. They have suddenly become aware of their power and the lack of Government restraint, and are apt to engage in excesses which will become less frequent with experience. Probably the well-meant Smith-Connally Act providing for strike votes under Government auspices, is being used by agitators to stir up trouble, and should be amended to cure the weaknesses which have developed, or be repealed. However, the present situation is serious and demands action.

"First. The Government should see that the law is promptly and fearlessly enforced.

"Second. The effect of the various Federal labor statutes should be studied and any amendments needed to assure fair play for labor, the employers, and the public should be promptly enacted. Under present law, when a strike threatens, the first effort is usually an attempt to mediate. If this fails, the next effort is to arbitrate. If this fails, it is suggested that the law might provide for a fact-finding commission to make sure that all the facts are clearly understood, both parties being under obligation to continue operation until the facts are developed.

"Third. Recognized leaders of labor and industry should take vigorous steps to eliminate broad causes of disagreement which may exist, and either reach a common understanding, or clearly define their differences so that the Congress can establish a sound policy. Incidentally, agriculture made up of both employers and workers has a very direct interest in this problem and should participate."

---

The National Grange at its recent seventy-ninth annual session adopted the following items with reference to labor problems:

"The existing unrest on the industrial front and the growing prevalence of strikes is a matter of grave concern to every thinking American.

"We won the war through cooperation and team play, and that is the way we should strive to win the peace.

"Group selfishness and greed for power should be held in abeyance and subordinated to the general welfare.

"As a former President of the United States used to put it, 'In the long run this country is not going to be a good place for any of us to live in unless it is a reasonably good place for all of us to live in.'

"It should be remembered that in every dispute between capital and labor there is a third party that has an interest at stake, and that is the general public. Like the innocent bystander at a riot, the public is often the first to get hurt.

"Without attempting to fix the blame in every instance, it is sufficient to say that the public is rapidly getting fed up on the existing situation.

"Labor and industry should sit down together at the council table in a spirit of mutual helpfulness and cooperation and peaceably adjust their differences, paving the way for the giant task of reconversion.

"If the present situation is allowed to continue much longer, there will be an irresistible demand for a revision of the Wagner Labor Relations Act, so as to make it a two-way act instead of a one-way act, which is at present the case.

"We call for immediate action on the Hobbs antiracketeering bill, which is necessary legislation to correct a legal loophole in existing legislation.

"Any horizontal wage increase over even one industry is certain to contain inequities, and there can be no doubt but that the 30-percent horizontal increase now being demanded is highly inflationary and unsound.

"Within recent months certain groups in large eastern terminal markets have made demands on commission houses and receivers of perishable foods that they abandon their long-established 6-day week and adopt a 5-day program.

"This move, sponsored by labor-union representatives, has cost growers and shippers millions of dollars and denied consumers hundreds of cars of badly needed foods.

"The 5-day week is forcing growers to change their cropping systems, to modify their marketing operations, and is causing heavy losses of perishable products that must be sold on a daily basis.

"Whereas labor unions are forcing many terminal markets to operate on a 5-day market week by unfair and uneconomic practices; and

"Whereas these practices result in heavy losses to both growers and consumers with no opportunity to meet these added burdens: Therefore be it

"*Resolved*, That the National Grange go on record as being opposed to the 5-day week in perishable food markets and supports legislation that will curb activities of unions in interfering with normal and essential food-marketing services.

"We all have a vital interest in a high level of employment. With a large consumer demand existing today and a productive plant in America capable of providing the essential agricultural and industrial contributions to a high standard of living we must strive for:

"1. Close cooperation of labor and management to secure increased productivity per worker.

"2. A stable general price level.

"3. Slowly rising wage rates based on increased productivity.

"4. A high level of employment of a growing labor force.

"Thus a high level of employment seems axiomatic so long as we do not permit violation of the Grange guide posts.

"First. All prosperity springs from the production of wealth, or consumer goods. Stating it another way, any program which retards the production of wealth is unsound.

"Second. The compensation of each should be based upon what he contributes to the general welfare.

"Third. The prime purpose of government is to protect its citizens from aggression, both physical and economic."

## Shortage of Penicillin

EXTENSION OF REMARKS

OF

### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. FLOOD. Mr. Speaker, there is a severe shortage of penicillin to an extent that endangers the health and safety of the people in my district and possibly the entire country.

There is widespread grippe in my part of the country of a more severe type. I am advised that there is a great deal of this sickness here in Washington, D. C., and other sections of the Nation.

It has only been through the grace of Almighty God that the citizens of the United States have not been decimated by some kind of epidemic during the war years. With resistance lowered by war work, lack of food, and other items, we have been well-favored in heaven that disease has not swept the country. The policy of the Army and Navy in hoarding to a degree that was and still is fantastic, doctors and nurses could only contribute to the danger. The civilian population was and still is woefully lacking in a sufficient number of doctors and nurses to care for it. And this crisis is not yet passed by any means. Now is the time of the year when the dread scourge of respiratory diseases, in particular, lays low millions of our people.

In my district today there is no supply of penicillin for the public. All pharmaceutical houses say they have none for the public and say they do not know what the reason is. That is a most unsatisfactory answer for me, and I refuse to accept it for the families in my district. The only penicillin being shipped is to hospitals, and even these are cut one-fourth of their requirements. If there is any left the doctors come next—only there is never any left. And none is being sent to the drug stores by the pharmaceutical houses.

People and the doctors are told to send the seriously ill to hospitals—why there is a list of at least 150 applicants waiting to get into the hospitals.

When penicillin was made available to the public a few months ago, the price dropped from $4 to 60 cents per phial. Now, if by chance, you can get a phial, and that is impossible in the area I speak of, it is $1.35 a phial and going up. Who is to blame for this? Certainly not the doctors nor the druggists. Why is there a shortage of penicillin in Luzerne County, Pa.? What answers will the pharmaceutical houses give? These companies should not be allowed to make a racket out of this life-saving drug. Now they make tablets of the drug and sell 12 tablets at $12.60 or $1.05 each. A phial of the drug in liquid form has 27 doses and costs $5 per dose if the price is $1.35 the last I heard per phial. The tablets therefore cost 21 times as much.

There is more than mere convenience to this tablet plan—that is excess profit with a vengeance. Then, too, these big drug companies are scattering a little penicillin here and there in all kinds of ointments, salves, pills, and so forth. And these bring high prices and excessive profits. Could it be that these drug manufacturing companies are sitting back like certain other manufacturing companies and doing nothing in the line of production for the balance of this year because of the excess-profits tax which will be lifted in January 1946? Could it be that they are selling to the English market at a higher price than the domestic market?

In the name of the good people of my district I demand an answer to these questions. But more right now than even that, I want penicillin made available to those in need of it in Wilkes-Barre and the surrounding area—and at once. A reputable physician from Wilkes-Barre was in touch with me by telephone yesterday and protested the circumstances which have produced this penicillin shortage.

If I do not get action in 24 hours, I am going to demand a congressional investigation of the drug-manufacturing companies and the production and distribution of especially these new and miraculous drugs that must be made available to the public.

## Legion Says OPA Rules Operate Against Veterans

REMARKS

OF

### HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. VURSELL. Mr. Speaker, we are facing the Christmas season, millions of people are trying to buy practical Christmas merchandise, including clothing and textile articles, electrical appliances, stoves and washing machines from hundreds of thousands of merchants throughout this land whose stocks, to a large extent, are depleted and the merchants' shelves in many instances, are bare of goods.

Plant machinery is ready to turn out the goods, labor is plentiful, much of which cannot be employed because the OPA insists on holding price levels back to 1942 which, in many instances, prevents the manufacturer from making the goods because of increase in his costs, prevents the distributor and wholesaler from shipping them to the merchants and necessarily deprives the merchants of an opportunity to sell the goods. Worse than this it prevents millions of citizens throughout the Nation from buying possibly a billion dollars worth of goods, ranging from children's wear through the clothing line, and electrical appliances from irons, to washing machines and radios and through the hardware line, from toys to stoves.

During the past 2 months volumes of testimony have been taken before the Banking and Currency Committee on a resolution to correct these abuses which is buried in that committee of the House.

A case has been made out in the interest of the people, yet nothing can be done to give them relief because the proposed legislation cannot be brought to the floor of the House.

As evidence that the people are interested, I hold in my hand petitions which have been signed by the customers of retail merchants in southern Illinois who have sought to buy merchandise but cannot secure it. Over a thousand names have been filed with me from a small territory in Illinois urging the Congress to take such steps in causing a modification of the regulations of OPA so that they may buy the necessities of life ranging from clothing which is seriously needed by them up to furniture and household equipment.

Proof has been given before the Smith committee that reconversion is being held back which is preventing the employment of thousands of workers who are anxious to produce civilian goods but are denied the opportunity because the manufacturer, the wholesaler, and retailer cannot operate on 1942 price levels in a great many instances.

Something must be done to change these conditions and it is apparent that it will not be done unless the Members of Congress get together and force such action.

The matter is so serious that it has been brought to the attention of the national employment committee of the American Legion by Commander Ralph A. Sentman, national director of veterans' affairs.

Commander Sentman pointed out that the prices fixed by the OPA are a handicap to the World War veterans who are returning and are trying to open up small businesses throughout the Nation. He points out that the 1942 prices fixed by the OPA as of 1942 presumes:

1. That the veteran has shared in the abnormal volume of wartime sales, which he has not.

2. That the veteran earned abnormally good wartime profits and as a result has ample cash reserves, which he has not.

He says:

These are the handicaps under which veterans currently go into business. Most young businessmen make up for short resources by giving unusual services. They sell more than merchandise. Under present pricing regulations they will be unable to bear such expense. OPA regulations are based upon the experience of merchants who have not been giving such services.

The serviceman faces another handicap. He is going into business in the face of the tightest supply situation that has existed since war broke out in Europe in 1939. Reconversion is not clicking, and inept, uneconomic price controls largely are responsible. OPA says that goods must come back to the market at 1942 prices. Meanwhile labor and raw materials costs have gone up sharply.

The OPA policy denies the manufacturer a chance to recover his cost of making goods and earn a fair profit in many cases. As a result they simply refuse to make the goods and the economy actually has been drying up since VJ-day instead of expanding as it should. This, unless checked, will result in unusual unemployment conditions and veterans will suffer.

The young veteran will find it hard to get satisfactory goods to sell in the face of this situation. Suppliers naturally may be expected to sell their short stocks largely to their old customers. Meanwhile, the veteran will be approached by the "snow birds" of industry with bootleg goods of questionable quality for sale in black markets at all the traffic will bear.

The national economy is suffering from overcontrol at the moment. It must remain stabilized until supply begins to reassert itself and competitive conditions return. But trying to hold a fictitious level of 1942 is not stabilization. A sound stabilization policy merely is a process of permitting manufacturers and distributors to recover the full cost of the goods they sell plus a fair profit.

This is not inflationary. Actually, attempts to hold unrealistic price lines that dry up production are a strong inflationary pressure at the moment. Stabilization that insures recovery of cost plus a decent profit will provide sufficient incentive to start goods rolling. Such a policy also is sufficiently tight to protect the consumer against persons who might take speculative or windfall profit.

The interests of veterans who want to go into distributive or service trades best would be served by adoption of the following policies:

1. Manufacturers and producers of all types should be permitted to recover the full cost of making or producing goods with a fair allowance for profit.

2. Distributors should be permitted to recover the full cost of the goods and services they sell plus an allowance for decent profit.

These policies would insure everyone in the economy a fair deal, encourage production, stimulate employment, and return the country to its normal democratic pattern of free enterprise under competitive conditions.

It is apparent to the people and should be apparent to the OPA that its policies are dangerously inflationary. A slight increase in prices which would increase the production and supply of goods might bend the line a bit but it would be better to bend the line with a supply of goods than to break the line by denying the goods to the public which has the money with which to buy. It would be better to bend the line and encourage reconversion and the employment of millions of people rather than to keep them unemployed and prevent a supply of goods equal to the demand.

The OPA should attempt to stimulate production rather than to restrict it as it has been doing. It has insisted on retaining wartime controls of prices that discourage civilian production at a time when it should readjust controls to provide incentives for greater production.

The line has not been held because the quality of the goods has been greatly reduced. It cannot be held unless production is increased. Prices should be readjusted upward in many instances to give impetus to production and distribution. Control at higher levels is not inflationary when it brings a much greater production of civilian goods and a better and more fair income for both the maker, the seller, and the employer. What this country needs now to prevent inflation and against which the Government can tax to carry our enormous governmental expense is more goods, more men employed, and higher incomes for all to prevent inflation and to help carry the current expenses of Government.

What the retailers want is not necessarily elimination of controls now—they want honest, new, peacetime readjustment of controls that recognize economic laws. They want these changes to insure production. If OPA will make these changes production will come forth in such volume that practically all controls can be eliminated in the very near future.

It is indeed unfortunate that in this country of ours with billions of dollars worth of machinery capable of mass production, with men ready to man the machines, that one bureau in Washington can stifle reconversion, deny the people of the goods they want to buy and deny our laboring men and returning soldiers an opportunity for employment and an opportunity to succeed in business.

The Members of Congress should insist that the resolution be reported out promptly from the Smith committee so that we may get on our way toward an economy of abundance by production rather than an economy of scarcity that ultimately may envelop the country in ruinous inflation.

## Public Demands Support of Small Business Committee

EXTENSION OF REMARKS

OF

### HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include a feature article which appeared in the Cassapolis (Mich.) Vigilant, under heading "Personal observations of the Vigilant editor." This is typical of the public demand throughout the country for full support of the House Small Business Committee:

Thousands of small towns like Cassopolis and small cities like Wowagiac, Niles, and Three Rivers depend for their prosperity upon business enterprises that are small in comparison to those in our larger cities, and the future of these small businesses depend largely upon the consideration and treatment they receive at our National Capital. Congressman WRIGHT PATMAN, of Texas, chairman of the House Committee on Small Business, on November 18 said:

"I am definitely of the opinion that big interests of the country are endeavoring to persuade the House of Representatives to scuttle the Committee on Small Business of the House.

"There is a sinister force in this country that is trying to break down any sincere efforts to help small business during the transition period, thereby aiding big business and monopoly.

"Small business has no Washington lobby, and its interests can be protected only if those who sincerely desire to see justice done to small firms are permitted to proceed with their work."

Norman C. Wolfe, president of the American Coach Co., in Cassopolis, in his efforts to procure much needed materials, has had reason to feel the effects of big business procedure. In discussing Congressman PATMAN's statements with the writer of this column, he said:

"I fully subscribe to Congressman PATMAN's statement. Had it not been for an investigation conducted by the House Committee on Small Business to certify to the urgent need for mobile housing to aid in the war effort, the trailer-coach industry, including our company, would undoubtedly have been delayed another full year in its effort to return to normal conditions. The findings of the committee were so effective that we were permitted by the War Production Board to a full civilian status in April 1944, under a ration plan that required our coaches to be channeled into the hands of war and other essential workers to relieve acute housing conditions. This rationing plan was revoked on May 16, 1945. We are now limited only in our ability to produce coaches by serious material shortages.

"The present outlook," said Mr. Wolfe, "presents an even more uncertain future. Small industrial business and merchants in nearly all lines must face and overcome the tremendous pressure forced at all angles on Washington agencies to gain preferential treatment in getting supplies and raw materials. An eager government can easily 'control or take over' a dozen large companies but the strength of our country, politically and economically, lies in the small businessman and the thousands of small merchants scattered in thousands of communities throughout our Nation. We must fight to keep from being overrun by large industrial and financial interests who seem to be able to reach listening ears in Washington. Small business will be controlled or taken over only to the extent it accepts or rejects the doctrine of defeatism. Defeated, the country may well be expected to take an entirely different course; to win is to guarantee not only the sanctity and right of the small businessman and merchant, but to add immeasurably to the preservation of free government, free enterprise, and democracy itself."

We believe Mr. Wolfe's experience of the past few years enables him to know the situation, and what he told us is worthy of the consideration of all good citizens.

## Demobilization of the Armed Forces

EXTENSION OF REMARKS

OF

### HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. JONKMAN. Mr. Speaker, the old General Hershey formula that it is cheaper to keep our boys in the service both here and overseas than to bring them home and keep them on relief, is still working.

Some of our boys, especially in the Pacific, were told 6, 8 and 10 weeks ago that they had sufficient points and would be home for Christmas. Now they are being told bluntly that their hopes are being blasted. Some are told cruelly that that promise was made only to bolster up their morale, others that they are still needed, others that there are insufficient ships to take them home, and so forth.

Some are discouraged, other depressed, many in despair. Many write home, "I had so expected to be home by Christmas, but it is not to be and I thought I would let you know so you will not make any plans."

I have received hundreds of letters from various families of servicemen

relaying the foregoing and other similar statements.

Our political leaders will be asked a lot of questions when these boys finally do get home. They are aware of the Hershey formula notwithstanding the above-named alibis of their commanding officers. They do not like the labor situation because they believe New Deal politicians are using it as a part of the formula.

Members of Congress could help our servicemen in no better way than to sign discharge petitions at the desk.

## 1945 Resolutions of Winneshiek County Farm Bureau

EXTENSION OF REMARKS
OF
## HON. HENRY O. TALLE
OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted on November 13, 1945, by the Farm Bureau of Winneshiek County, Iowa:

1945 RESOLUTIONS OF WINNESHIEK COUNTY FARM BUREAU

I. DEVELOPMENT OF PERMANENT PEACE PLANS

(a) Because we are interested in every possible means of avoiding the terrific cost of life and property which would result from another World War, we favor the general plan which has been drawn up to maintain world order which was proposed and adopted by the delegates of the 50 nations at the San Francisco Conference.

(b) We continue our support of legislation for world trade which will make for better international relationships through more freedom of exchange of goods between nations.

II. PRODUCTION AND PRICING POLICY

(a) As farmers we favor the continuation of the present parity formula as a guide for agriculture pricing because it still stands as the fairest yardstick which has been so far developed.

(b) Should it be to the general welfare to change the parity formula we favor its adjustment on the basis of securing effective consumption, which, in the long run, determines the price of farm products.

(c) We favor the policy of governmental control in the adjustment of agricultural production and urge that support prices and some form of production control must go hand in hand to be effective over a period of years.

(d) We believe that a pricing program for agricultural commodities should be based on development of foreign markets and a commodity loan program tied to production control if necessary.

(e) Because of the extreme weather risks which all farmers must take in the production of their crops, we favor a simple crop insurance program with emphasis on as much local control as possible for its best operation.

III. EMPLOYMENT AND INDUSTRIAL PRODUCTION

(a) We are concerned with the strife which is now going on in industry and labor relationships and believe continued conferences of responsible leaders in labor, industry, and agriculture should continue to be held in order to clarify and work out over-all national policy to the best interests of the three groups.

(b) While the manpower shortage is very much in evidence now, we believe unemployment will be one of the major problems in the Nation in the years ahead. We urge curtailment of monopoly in industry, production of goods as efficiently as possible, fair wages for workers, and Government aid to returning veterans in assuring them of their jobs when they return from service.

(c) We believe that because of development of labor-saving equipment, a fewer number of persons will find jobs on farms in the years ahead, and urge development of more industry as a solution to unemployment rather than a policy of trying to put more persons on the land.

IV. SOIL CONSERVATION

(a) We believe great emphasis should be placed on soil conservation in any general or special farm program which may be developed.

(b) In our opinion, any program of price support or production control should go hand in hand with stress on the conservation of soil resources.

(c) Experience during the past few years has proven it is good national policy to make conservation payments for effective soil-building practices because it will be to the best interests of everyone to maintain a productive soil.

(d) We believe that an effective program in soil conservation depends on continued educational work, and urge that Extension Service give more assistance in educational efforts toward soil conservation.

(e) Because we feel that materials used for commercial fertilizer are natural resources, we support the national fertilizer policy adopted by the American Farm Bureau Federation which would assist in making available the right kinds of fertilizer for every farm at a reasonable cost.

V. STATE LEGISLATION

(a) We reaffirm our stand of previous years in supporting the principle of taxation on the basis of ability to pay rather than continuation of the heavy load on property. For this reason we urge our Representatives and Senators to support the full collection of the Iowa net income tax. We favor reasonable tax exemption for World War veterans and continue our stand for exemption of cooperatives as well as religious and educational institutions.

(b) Schools:

1. We commend the last Iowa General Assembly for legislation passed to take Iowa out of forty-eighth place in its State aid for schools program. We believe further legislation is necessary to secure tax equality in support of schools and urge passage of bills as recommended by the Iowa school-code committee, members of which made a thorough, nonpartisan study of the school problems.

2. We commend members of the Winneshiek County school-study committee and school officials for their efforts in getting these facts before the people of Winneshiek County.

(c) Our observations lead us to believe that noxious weeds are at an all-time high in seriousness and because of the potential spread of new noxious weeds such as creeping jonny and horse nettle, we urge serious thought on the part of those responsible, toward organized action and an educational campaign on noxious weeds in Winneshiek County. Study indicates that an effective county weed commissioner system is making more general progress than the township system and we urge the local board of supervisors to consider this plan in 1946. We also urge continuation of AAA payments for weed-control practices.

(d) In order to complete an adequate network of secondary roads in the county, we commend the last legislature in its appropriation in matching Federal funds for this purpose and urge that this fund be expanded to complete this improvement as soon as possible.

VI. ADMINISTRATION AND COORDINATION OF FARM PROGRAM

(a) We commend the recently approved plan by the AAA of allocating of a definite sum of money for soil building, with the determination of these practices to be paid for being decided through local administration.

(b) We commend the conservative policy of the Farm Security Administration in helping to hold down inflation, as well as its plan to assist returned veterans who need credit for farm uses.

(c) We urge continued study of governmental credit agencies in an effort to combine some of the credit activities into one local office because of the confusion on the part of farm people as to where to go and what agency to contact in filling their credit needs. We commend the Farm Credit Administration in its effort to hold down inflation through its conservative appraisal policy.

(d) Because the job of supplying technical assistance is important for a successful soil-conservation program, we approve the work of the Soil Conservation Service as an agency specifically assigned to this job. We appreciate the efforts of the district soil commissioners in administering the district program and pledge our support to an effective and expanding conservation program.

VII. INFLATION CONTROL

(a) As farmers, we believe general inflation control measures have been effective and that in general these measures have been fair to agriculture.

(b) We urge that every effort be made to continue inflation controls into a period sufficiently long in the future to hold down inflation which might easily get out of hand and wipe out many of the gains already made. We see no reason for enactment of legislation to prevent inflation on real estate as the control measures might be worse than the results.

VIII. RURAL HEALTH PROGRAMS

(a) We urge the study by and the organization of, rural groups in order to make better use of the public health facilities which we already have available. When the need arises, we urge that these services be expanded. We commend the local Board of Supervisors for maintaining the county health program which is of much service to the people of Winneshiek County.

(b) In order that farm people enjoy adequate medical care and attention we favor the study and the working out of arrangements whereby farm families may secure voluntary prepayment health insurance. These plans have proven satisfactory and we expect will be more effective and useful in the future. We are opposed to any compulsory governmental health insurance program.

(c) Our studies show that health authorities recommend 40 hospital beds for each 1,000 people. In Iowa there are less than 3 hospital beds per 1,000 people. This is evidence of the lack of adequate facilities for rural families. We urge that hospital authorities study with rural leaders, ways and means of making recommended facilities easily accessible in the years ahead. We favor the passage of the Hill-Burton bill which would provide financial help to health centers to be of more service to rural areas.

IX. IOWA STATE COLLEGE—EXTENSION SERVICE

(a) We express our appreciation for the effective educational program which has been carried on through the leadership of Iowa State College and urge that in order to reach all farm families each county have funds available for a full time 4-H club agent in addition to the county home economist and extension director.

(b) In order to provide experimental information on crops, soils, and other subjects we urge location of an experiment farm in the soil type area most prevalent in Winneshiek County and pledge our cooperation to this type of program.

X. LIVESTOCK, CROPS, AND MARKETING

(a) Under our present marketing system, producers of top-quality livestock receive little reward for their efforts and we urge study toward eventual marketing of livestock on a graded basis.

(b) We urge continuation of the study of marketing facilities in order that cooperatives may use their federated resources in the marketing of products. In the future, quality products will be one of the important goals if good prices are to be received by producers.

XI. IMPORTANCE OF IMPROVING AND MAINTAINING AN EFFECTIVE FARM BUREAU

(a) We commend the House of Delegates in establishing a State membership goal and believe a long-time membership goal should be set for 125,000 members for the State.

(b) We urge further study in regard to ways and means of keeping members informed on national and State legislative proposals and methods of securing their discussion on these issues.

XII. GENERAL

(a) We believe that competent service is the first consideration in the qualifications to handle a county office, and for that reason county officers should be elected on a nonpartisan basis.

(b) We take this means of expressing our sincere appreciation to the newspapers of the county. Their cooperation has meant much in extending information to the farm homes in the county.

(c) Luther College officials have continued their fine cooperation in making radio station KWLC available for weekly radio broadcasts and our appreciation is hereby expressed for this courtesy.

(d) We commend the committees and the individuals whose vision made possible the purchase of the desirable property near the Decorah Post Office and urge the support of all members in attaining the goal toward the worth-while Agricultural Memorial Building. We urge a continued campaign in order that funds may be available to make this building possible as a memorial to World War II veterans and a useful building of which all Winneshiek County would be proud to have had a part in planning.

## Old-Age and Survivors' Insurance

REMARKS

OF

## HON. WILLIAM J. GALLAGHER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. GALLAGHER. Mr. Speaker, I am including as a part of my remarks a resolution adopted by the Hennepin Board of County Commissioners, Hennepin County, Minn., in reference to the so-called Townsend bill.

Hennepin County includes half of my district and all of the Fifth District of Minnesota. I have been trying for a long time to see if I could not speed up action and get a vote of the House on the Townsend bill.

The resolution following is an endorsement of H. R. 2229, known as the Townsend bill:

Whereas during the 10 years that the old-age and survivors insurance law has now been in operation it has collected $7,083,000,000 from the citizens of this country. Of this vast sum it has returned only $367,000,000 to the channels of business and employment back home, through benefits to beneficiaries; and

Whereas to extend and broaden this present old-age and survivors insurance law to cover more millions of our citizens, as now proposed by some, would mean an even greater flow of tax dollars to Washington with a correspondingly small return in benefits to recipients back home and, thus to business and employment channels throughout the Nation; and

Whereas greater buying power among our lower income groups in every city, town, and village over the country will be an immediate and vital factor in creating more business, employment and prosperity in our postwar era; and

Whereas the operation of the present old-age and survivors insurance law shows clearly that this law is insufficient and wholly inadequate to provide this buying power or meet the future demands and needs of our people; that plans are now being considered in Washington to revise and improve this law; and

Whereas there is now before the House Ways and Means Committee Congressman CANNON'S Federal insurance bill, H. R. 2229, which provides for adequate social insurance for all unemployable citizens over 18 years old, widows with one child or more to support and voluntary retirement at 60 years; and

Whereas all tax revenue collected under this bill each month (less administration costs) will be prorated among the qualified beneficiaries and returned to the channels of trade, creating more business and employment throughout the Nation, all within 60 days time: Therefore be it

*Resolved by the Hennepin Board of County Commissioners in regular session assembled,* That we hereby respectfully urge the Congress of the United States to pass the Cannon Federal insurance bill, H. R. 2229, at the earliest possible time, in order to give adequate social insurance to all our citizens and to provide the necessary buying power to insure increased business and employment at home in postwar America; and be it further

*Resolved,* That copies of this resolution be sent to SAM RAYBURN, Speaker of the House of Representatives; Senators HENRIK SHIPSTEAD and JOSEPH H. BALL; and Congressmen WALTER H. JUDD and WILLIAM J. GALLAGHER.

## The St. Lawrence Seaway and Power Project

REMARKS

OF

## HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. PITTENGER. Mr. Speaker, I started out to make reports to the American people on the state of the Union concerning the St. Lawrence project on November 12, and I have made a report each week since that time. My report today makes the sixth time that I have found it necessary to remind that American people that somewhere in Washington there is a boy named Rip Van Winkle. As I recall it Rip Van Winkle slept for 18 years, but I am rusty on my globaloney, and one of the students tells me that that old New York boy, Rip, slept for 20 years. It begins to look as though the men in charge of the administration program looking toward the development of the are thinking about a 20 years' nap. That is a long time, but the American people have put up with a lot of atrocities on the home front and I suppose a choice of having the St. Lawrence seaway and power project murdered in cold blood, die of starvation and neglect, probably the intelligentsia, speaking in the language of the administration leaders, have just decided to put this old knight known as St. Lawrence to sleep for 20 years. I vigorously and vehemently object to giving him any long period of rest like that. Why? He might not even wake up.

Now, Mr. Speaker, on the 2d day of October 1945, with the rattle of drums and blare of trumpets and the noise of the sabers, we were told that the St. Lawrence seaway and power project had the blessing of the administration. I do not believe it. There has not been a thing done from that day to this on the part of responsible administration leaders, except to mark time.

A lot of people are wearing out their shoes drilling around like wooden soldiers, and while we seem to have plenty of shoe leather, I do not like to see the boys wear out their wooden shoes. Let us have some action. Measured in point of days, it has been 69 days as of today, December 10, 1945, since we were assured that everything was all right. Now, on the sixty-ninth day, right here in the city of Washington, the weatherman favors us with a big snow storm. Even the weatherman is laughing at these protestations of speed which appears to be in reverse motion.

Just to get things in chronological order, and by way of repetition, I again call attention to the fact that I introduced a House bill, H. R. 671, which does not differ materially from present pending legislation in the House and Senate. This bill provided for the immediate construction of the St. Lawrence seaway and power project and was introduced January 4, 1945. That was 11 months and 6 days ago.

But turning aside from ancient history and coming down to date, we note—and I quote from the CONGRESSIONAL RECORD, Appendix page A5258, for December 4, 1945, where this language is used:

This legislation has strong bipartisan sponsorship. In the Senate, Senate Joint Resolution 104 was introduced on October 2, as a joint resolution, by Senator BARKLEY, Democrat, Kentucky, for himself and Senators WAGNER, Democrat, New York; HILL, Democrat, Alabama; TAYLOR, Democrat, Idaho; AIKEN, Republican, Vermont; FERGUSON, Republican, Michigan; LANGER, Republican, North Dakota; VANDENBERG, Republican, Michigan; SHIPSTEAD, Republican, Minnesota; and LA FOLLETTE, Progressive, Wisconsin.

This resolution, Senate Joint Resolution 104, was referred to the Foreign Relations Committee, where it now reposes, and, as I have said, 69 days have now elapsed.

October 3, 1945, President Truman sent a message to Congress calling for construction of the St. Lawrence project.

October 4, 1945, I called for immediate action on the Barkley resolution, Senate Joint Resolution 104. See Appendix of the CONGRESSIONAL RECORD, page A4170.

On November 12, 1945, I called attention to delay, and no action on the Barkley resolution. See CONGRESSIONAL RECORD, page 10601; also Appendix, page A4835.

On November 19, 1945, I called attention to delay. See CONGRESSIONAL RECORD, page 10810; also Appendix, page A4938; RECORD for November 19.

On November 20, 1945, this matter was discussed in the Rivers and Harbors Committee of the House of Representatives. Appendix, page A5231; CONGRESSIONAL RECORD for December 3, 1945.

On November 26, 1945, I called attention to continued delay. See CONGRESSIONAL RECORD for November 26, page 10985; also CONGRESSIONAL RECORD, same date, Appendix, page A5109.

On December 3, 1945, I again called attention to the unexplained delays. See CONGRESSIONAL RECORD for December 3, 1945, Appendix, page A5231; also CONGRESSIONAL RECORD for December 3, 1945, Appendix, page A5246.

FARMERS OF THE NATION AND OTHERS WANT TO KNOW WHY THE DELAY

Mr. Speaker, some forty or fifty million people in the midwestern part of the United States want to know the answer to the $64 question, "Why this delay?" Among these people are farmers, businessmen, small manufacturers, and people in every walk of life who want the Midwest to have the advantages of water transportation rates in order to promote their economic welfare. Next year, the politicians will be around in the Midwest looking for votes. We are making the record now for or against the St. Lawrence seaway and power project. The voters will decide next fall who has short-changed them on this great undertaking, unless, of course, Rip Van Winkle wakes up and goes to work. Will we have to say next year that we have a Rip Van Winkle administration?

RIP VAN WINKLE AND THE SEAWAY

While we are waiting for developments on the St. Lawrence seaway and power project, Mr. Speaker, it will do not harm to turn to literary pursuits and I now observe that Washington Irving wrote some documents which are rated as masterpieces. The one which will give him a place among the immortals is the story of Rip Van Winkle. Rip is an imaginary character, and when Washington Irving wrote it he credited the authorship with another imaginary character, Diedrich Knickerbocker. I fortified myself today with the Sketch Book from the Congressional Library, and I refer to the introduction which is in these lines:

RIP VAN WINKLE—A POSTHUMOUS WRITING OF DIEDRICH KNICKERBOCKER

By Woden, God of Saxons,
From whence somes Wensday, that is Wodensday,
Truth is a thing that ever I will keep
Unto thylike day in which I creep into
My sepulcher.

—*Cartwright.*

Then follows an explanatory note to the effect that the story of Rip Van Winkle was found among Diedrich's papers. Then, of course, is the delightful story of the Catskill Mountains and a recital that at the foot of the mountains was a little Dutch village; that Rip lived there for many years; that everybody liked the fellow, and that not a dog would bark at him throughout the neighborhood. However, Rip fell out with work and was one of those boys who liked to live in idleness. There is the story of his wife who tried to reform Rip, but without success, so Rip strolled away into the woods in order to escape work on the farm and the lectures of his good wife. He took his gun, accompanied by his dog Wolf, one fine autumn day and went into the mountains, and he encountered a strange figure and naturally Rip and this fellow struck up an acquaintance and rambled through a ravine, until they met some odd-looking personages. Rip had no trouble adapting himself to the new and strange surroundings, and, as Washington Irving says, he was a thirsty soul and started to take a few drinks with the folks and he fell into a deep sleep. This kept up for 20 years. Finally he awoke and then follows the portrayal of Rip's adventures and the progress the world had made in that period of 20 years. As I have indicated, if you want to read this story while you are waiting for the St. Lawrence seaway and power project, go over to the Congressional Library.

WHERE WILL WE GET THE MONEY?

To get back to business, Mr. Speaker, someone is going to ask where we are going to get the money for the St. Lawrence project. Well, we could get it the same place that this administration is getting $500,000,000 to pour down a rat hole (called a loan to France; the same place they will get $4,000,000,000 for another country that is hard up, Great Britain; and the same place that they will get the money for poverty-stricken Joe Stalin, who only wants $6,000,000,000). When the boys want to waste money they do not have any trouble finding it.

I realize that the American taxpayers are entitled to consideration. However, there is a sharp line of distinction. There are those projects which are worth while and which will benefit the American people. When we spend money on those projects, which is an investment which will pay large dividends in way of increased wealth of our country. Then there are those projects and other methods of spending money, which have no economic value. These loans for example belong to this latter class. So do boondoggling like raking leaves from one side of the street to the other. We need have no hesitation in appropriating money when the investment is going to come back in dividends.

## British Duties on Gifts to Needy

EXTENSION OF REMARKS
OF
## HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include some interesting correspondence regarding duties levied by the British Government on gift packages sent by Americans to needy relatives in England:

MINNEAPOLIS, MINN., *November 6, 1945.*
DR. WALTER JUDD,
*Washington, D. C.*

DEAR DR. JUDD: During the war I have been sending 5-pound parcels of groceries and Christmas gifts to my elderly brother and his family, to help them out in a very needy situation, as I understood Britain was glad for us to do all we could to help our relatives out during such a critical period.

I did not learn until the 1st of October that for every parcel sent they have had to pay duty on them.

My brother, a retired doctor, has been bombed out of three homes. One he occupied, himself and family, the other two he rented. Those he rented were smashed to atoms. The one he lived in was so badly damaged he could not remain in it. So they moved to another part of the county, Surrey by name, just outside of London, and have lived part of the time in an air-raid shelter in the yard. Although an old man, he has contributed to the war effort filling out prescriptions for the doctors in the different dispensaries in their city.

I am much disappointed that they in their position must pay duty on the little help we are allowed to send them. Remember, these gifts are unsolicited.

I hope England, who has urged the United States to send gifts of c'othing, etc., will be generous enough to cancel the duty on gifts to some of her people if she wants to be good friends of the United States of America.

Thanking you for any influence you can exert, I am,

Yours sincerely,

Mrs. A. G. YOUNG.

NOVEMBER 23, 1945.

Mrs. A. G. YOUNG,
*Minneapolis, Minn.*

DEAR MRS. YOUNG: The British Embassy has replied to my inquiry as to why duty is charged on gift packages sent to English citizens. It states that British customs officials report the duty on foodstuffs is so low that the people have not been objecting to paying it. For example:

| | *Percent* |
|---|---|
| Dry fruit and raisins | 10 |
| Hams and bacon | 10 |
| Other meats | 10 |
| | *Cents* |
| Tea, pound | 13 |
| Sugar, pound | 4 |
| Butter, pound | 2 |

The duty on new clothing made of wool and cotton is 20 percent, plus purchase tax of 16⅔ percent. The purchase tax is levied on the total value plus the 20-percent customs tax—making it about 40 percent in all. A much higher tax is levied on clothing made of silk or fur, which of course is not generally sent by Americans to their needy relatives in England.

No duty is levied on used clothing. If it is declared "worn clothing, no commercial value" and shows definite signs of wear, it will be admitted free of duty and the pur-

chase tax is levied at the discretion of customs officials.

I am having your letter placed in the CONGRESSIONAL RECORD. I hope that may help get a change of policy by the British customs officials. It seems to me unjustifiable to charge duty on gift packages from the needy recipients of them.

Incidentally, inquiry from the French Embassy reveals that the French Government levies no duty on such gifts to its citizens, except cigarettes or fur and silk garments.

Very sincerely yours,

WALTER H. JUDD.

## Committee on Un-American Activities

EXTENSION OF REMARKS
OF
### HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following appeal for the dissolution of the House Committee on Un-American Activities:

We, the undersigned citizens of Massachusetts, call for the immediate dissolution of the Committee on Un-American Activities (Representatives WOOD and RANKIN). Most of us joined the fight which helped to defeat the Dies committee. It took time to expose the true nature of the Dies committee. No further time is required to expose the Committee on Un-American Activities whose personnel and tactics indicate fidelity to the Dies tradition, which is the Fascist tradition. It attacks progressive action on the ground that it is communistic. It divides the progressive forces. It intimidates liberals, particularly those in Government service. It is a menace to civil liberty.

It gives no promise of investigating the dangerously subversive American Fascist movements. It uses the term "communism" as a name-calling technique directed against progressive movements in an effort to deceive the American people and bring reaction draped in the American flag.

This technique operated by Hitler on an international scale nearly cost us our civilization. Used inside many nations, it laid the ground work for his later conquests. We know the method now, and the failure of the House of Representatives to dissolve this committee will bring discredit on its own head. We urge the House to remember the Dies committee and to dissolve the Committee on Un-American Activities now.

Seaward, Director, Barnard Memorial, Dorchester; Henry R. Silberman, Director, American Jewish Congress, New England District; Edward Spiegel, Attorney; Harry Shumann; Mrs. Arthur Shurcliff; Frank Siegel, New England Director, WOPWA; Benjamin L. Schwalb; Paul Seymour, Executive Director, United Electrical & MRWA; Alan Steinert; Rev. John H. Taylor; Morris R. Taylor; Robert Gould Shaw House; Harry B. Weiner, United Packing House Workers; Katherine Welles, Executive Secretary, Good Neighbor Association; Mrs. Andrew N. Winslow; Rev. Charles P. Wellman, Channing Church, Dorchester; Rolland E. Wolfe, Professor of Old Testament, Tufts College School of Religion.

I would like to commend these people, for the perception and intelligence they have shown in calling on Congress to abolish the un-American committee.

## Adequacy in Our Time

EXTENSION OF REMARKS
OF
### HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Monday, December 10 (legislative day of Monday, October 29), 1945*

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Adequacy in Our Time, delivered by me before the Association of the Oldest Inhabitants of the District of Columbia, on the occasion of their eightieth anniversary, on December 7 last, at the Willard Hotel in this city.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Four years ago today, Pearl Harbor came upon us like a thief in the night—and America went to work.

Three years ago Hitler was knocking at Stalingrad, Rommel at the gates of Alexandria, and the Japs were pounding on the door of Australia.

Two years ago the war situation had changed for the better, and 2 years ago I had the privilege of comrading with you, and I want to say I feel distinctly honored to be asked to address you again. It is good to be with you. It is a privilege to break bread with you and a greater privilege to exchange ideas. Old friends surround us. This is like a homecoming—a homecoming of old friends.

On the occasion when I last spoke to you, I said that the people of this District were entitled to representation in the national Congress. I repeat that conviction tonight.

Many of you remember the nineties—the horse and buggy days, when the War, Navy, and State Buildings were the glory of Washington's architecture.

We have traveled a long way since then. Today this city is the finest capital in the world.

In the intervening years, each of you have lived much, witnessed much, and contributed much.

On December 7, 1943, when I was your guest speaker, I said, "On your founding day 2 years ago, Japan struck at Pearl Harbor. It is my heartfelt prayer that on other founding days, the Oldest Inhabitants may serve the District of Columbia blessed with normal and secure living, by perpetuating the American traditions of liberty in a world of peace."

In these brief 2 years since I addressed you the wish that I then expressed has been partially fulfilled. Victory has perched upon our banners. The chief exponents of fascism have succumbed, and over this land the dove of peace hovers. But a new world has been discovered. The advance of man's knowledge and the utilization of atomic energy have swept us ahead a thousand years. New problems, such as we never conceived of 2 years ago, are before us for solution. But I have no fear; America has ever been adequate. The inspiration of builders like you will serve to make sure that this and coming generations will meet head-on the problems that arise and will solve the same.

War always disrupts. It muddies the stream, but time will make the water clear. Our strike situation, our failure to get quick reconversion, the unsettled condition of the world in the Far East and in the Near East, or failure to provide adequate housing facilities for our increase in population and especially for our returning veterans—are all symptoms of the aftermath of war. But we'll settle down and clean up the mess. How?

All problems will have to be solved—by work. Edison said 99 percent of genius was work. It was work that built the political, economic, social, and religious structure of America—work, coupled with the initiative and inventive genius of this great race. Those who would substitute anything else for work are saboteurs fo America's future.

The human mind has the faculty of making solutions complicated. We've been trying complicated methods for a long time. We've tried to settle economic problems by legislation. It's time to wake up and try industry, work, and common sense. Dooley says that they call it common sense, but, by jimminy, it is the scarcest commodity on the market. But, in my opinion, it is growing in volume. It has lain dormant for some time, but recent years indicate it is no longer asleep. With the tremendous pent-up buying power of a hundred and fifty billion dollars, coupled with the tremendous demand for goods, there is no other way except to settle down to work and produce.

We are facing, however, a labor situation in America that does require that American leadership handle it in the same way that we handled a similar situation, when wealth menaced the individual liberties of our people. Some of you recall that period very well, when strong men became possessed of exceedingly large fortunes and developed the fascist complex. As one such man said, "The public be damned." Then there arose men of vision and courage who say that if this power were not curbed it would lead to the downfall of the Republic. As a result, the Interstate Commerce Act, the Clayton Act, the Elkins Act, the Robinson-Patman Act, and other legislation were passed to protect the public interest and restrain the fascist activities of men who owned and used great wealth.

It has ever been so in the history of the race when political power has been centralized in the hands of a few. Our forefathers saw that, so they established a government of checks and balances.

They saw that in government they could not leave full and complete power in the Executive or in the legislative branches or in the judiciary. Time has proved their wisdom. When men get hold of power (unless they have the character of Jesus, Socrates, Washington, or Lincoln), power gets hold of them, and unless checked, the rights and liberties of their fellowmen are jeopardized. Such were Hitler and Mussolini and other small fry dictators. History's pages are filled with men drunk with the power who have gone berserk.

When the Wagner Act was passed in 1935, it served a useful purpose. It provided an opportunity for labor unions to bargain collectively. But now we see instance after instance where there appears to be no check and balance upon the power of leaders of great groups of men. We see instance after instance where the rights of the public and the rights of private citizens are put in jeopardy because power is exercised arbitrarily without respect to the rights of others.

Of course, if men were shot through with the Golden Rule and it were operating in the hearts and minds of men, restraints would be superfluous. According to a recent poll, some 74 percent of our people have marched up to the definite conclusion that something must be done to protect the public interest in relation to strikes. I have, therefore, suggested that the Wagner Act be reevaluated and that additional legislation be passed that would establish the legal responsibility of unions. The Anglo-Saxon concept of the validity of a contract must not be lost in this age. When individuals break contracts they are held responsible by the courts.

I have also suggested that compulsory arbitration be written into the law of the land and that in order to protect union labor and the public there be full and equitable accounting of union finances; and, too, that union funds shall not be used for political purposes.

In this strike situation, we have a return of the old concept that the king can do no wrong. The President's suggestion last Monday doesn't go far enough. It is a step in the right direction, but it is a meager step. There must be legal responsibility of unions, the same as there is of corporations and individuals. Congress should act without further delay in order that Americans can settle down to work.

The argument that only a fraction of 1 percent of labor stirs up the mess is an argument for taking the steps I've suggested above. Every legislator knows that by and large labor wants law and order, the same as every right-thinking person. But to get rid of this Fascist disease we must pass legislation along the lines I have suggested.

I've spoken to you, my friends, on this serious subject because you are young in the spirit, you love your country, and the capital city of your country. You've lived much and deeply, you've seen the years come and go, and out of your vast experience you've garnered the wisdom that your country needs now. And you have something more—you have the courage to stand up for principle; to speak up, not in hate of personalities, but in righteous indignation against wrong. You believe in the devotion to great causes—love of country. And you want to see preserved for the generations that come after this, the Republic intact. You know that the time to put out a fire is before it starts. One of your oldest inhabitants originated the movement to toll the bell on all river craft passing Mt. Vernon. You are the kind of gentlemen who will always be ready to toll the bell of alarm when danger threatens and who will march out to meet the danger.

In the Senate recently we have been discussing the subject of backing up this Nation's commitments under the San Francisco Charter, whereby we would provide for the appointment of representatives of the United States in the organs and agencies of the United Nations. The enactment of this bill merely fulfills the commitment we have already made by our signature to the United Nations Charter. By enacting this bill we have demonstrated our good faith as a Nation, preaching again the Anglo-Saxon concept of the inviolability of a contract. But, all of us know, that the mere enactment of any bill will not of itself make for peace any more than the San Francisco Charter of itself makes for peace. Both the bill and the Charter are merely the mechanisms for peace—a mechanism which has no life unless the nations activate it with their will, intent, purpose, and desire for peace.

The American people have measured the consequences of these documents and accepted them—consequences that may mean the expenditure of more blood and treasure in the defense of the peace. The postwar world of today is woefully in need of means for the peaceful settlement of disputes.

We have heard much said about the need for world government. Those who call loudest for that seem totally oblivious of the fact of how unready the world is for such an adventure. We still have to prove our adequacy under the new League, and when I say "our" I mean mostly the other nations of earth. America is ready to go the limit. But are the other nations? We are taking leadership. We will keep the faith. We will not crawfish out of the obligations that are ours. But we must make sure that we do not make a fetish of the mechanism and forget the lesson of Pearl Harbor. Rather, we must make sure that the spirit of cooperation among the nations vitalizes the mechanism. The best way for America to be adequate is for the American people to be made fully aware of our obligations and commitments and also made aware of all facts in the foreign picture.

A look around the world today shows the existence of civil wars, revolutions, riots, famine, and pestilence. Then there is the problem of the atom bomb. We know that wars do not make for peace. If we were to judge from the world picture as it is now, with its prejudices, its hatreds, and its feuds, we would say that the world as as unready for cooperation now as it was 20 years ago. But the present sad state of affairs does not provide a good index of the world's adequacy for peace. The real issue is this: Are the peoples and the nations of the world now ready for the new League? The only way for America to get the answer is for America to take the leadership that is hers, to live up to her obligations under the United Nations Charter, and by reason and judgment, and, if necessary, by using force, make this new instrumentality a thing of vitality. No matter how desperate the situation, no matter how inadequate the nations appear to be, no matter what additional problems are raised by the discovery of atomic energy and the use of the atom bomb, America cannot fail in the slightest degree to approach head-on these international problems.

Recently I had a letter from Gen. Douglas MacArthur, the one man on the court-martial board who stood out against court martialing Billy Mitchell two decades ago. I placed that better in the CONGRESSIONAL RECORD. General MacArthur would be glad to see Billy Mitchell posthumously elevated to the rank of major general. But it is not of that incident I speak.

On General MacArthur's wall in his office, there is a message that I think has particular application to you, my friends. I give it to you verbatim.

"Youth is not a time of life—it is a state of mind; it is a temper of the will, a quality of the imagination, a vigor of the emotions, a predominance of courage over timidity, of the appetite for adventure over love of ease.

"Nobody grows old by merely living a number of years; people grow old only by deserting their ideals. Years wrinkle the skin, but to give up enthusiasm wrinkles the soul. Worry, doubt, self-distrust, fear and despair—these are the long, long years that bow the head and turn the growing spirit back to dust.

"Whether 70 or 16, there is in every being's heart the love of wonder, the sweet amazement at the stars and the starlike things and thoughts, the undaunted challenge of events, the unfailing childlike appetite for what next, and the joy and the game of life.

"You are as young as your faith, as old as your doubt; as young as your self-confidence, as old as your fear, as young as your hope, as old as your despair.

"So long as your heart receives messages of beauty, cheer, courage, grandeur and power from the earth, from man and from the infinite, so long you are young.

"When the wires are all down and all the central place of your heart is covered with the snows of pessimism and the ice of cynicism then you are grown old indeed, and may God have mercy on your soul."

Yes, this message has special meaning to all of you. You are young in the spirit. You enjoy the pleasure of accomplishing things. You like the responsibility of looking after your own—the maintenance of the traditional American ideas—the American way. You love beauty, good cheer, good deeds. Enthusiasm is yours, and you are undaunted by the challenge of events.

Mr. President, for 80 years your organization has been in being. May it continue for that many centuries.

May I wish for all of you a Yuletide rich with blessings.

## The Congressional Viewpoint

EXTENSION OF REMARKS
OF

## HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

*Monday, December 10 (legislative day of Monday, October 29), 1945*

Mr. WHERRY. Mr. President, on December 7 the senior Senator from Nebraska [Mr. BUTLER], before the Golden Anniversary Congress of American Industry of the National Association of Manufacturers in New York City, delivered an address entitled "The Congressional Viewpoint." I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Before anything else, I want to tell you I regard it my privilege, not yours, to be able to address this greatest of industrial forums, because I have eagerly anticipated this occasion.

You manufacturers are a select and influential body. It so happened I was looking for a chance to do a little lobbying of my own at your annual Congress of Industry.

It has always been brought to my attention that you men of industry are good at changing things. As they say in our brainy bureaucratic language known as "gobbledegook," you fellows are good at activating ideas, or maybe it is motivating, or maybe it is implementing ideas.

At any rate, I have read that you are able to take a hunk of coal, a pinch of salt, and stir them up with a breath of fresh air, and behold, you have nylons—and a line of frenzied women from here to Omaha.

You change dreams into realities. The point is, we need some practical changes down at Washington to get a bigger and a better output from the biggest business in the world—our Federal Government.

### THE KINSHIP OF FARM AND INDUSTRY

In a slightly different sense, we Nebraskans get most of our income from the processes of change, too. In our case, we mix seeds and soil to produce steak, cheese, flour, ham, and such. Speaking gastronomically and metabolically, or whatever the medical term is, I wouldn't be at all surprised if most of you were at least half Nebraskan.

But I'm sure our relationship is more than being just "belly" cousins. Our farmers talk production, production, and more production. You factory men pound your desks and talk production, production, and more production.

About all I've got to show for this life is my Nebraska ranch. It is really a beef factory, and its output has got to be a carload of fat cattle to market every week or we uncork the red-ink bottle again. Farm and factory talk is the same language, with exactly the same considerations of investment, reserves, depreciation, overhead, hired men, and market risks.

We have the same perplexing dilemma over Government subsidies and hand-outs. We are both concerned about taxes and their effect on our business futures.

### THE CORE OF OUR FINANCIAL PROBLEM

One of my duties as Senator is to serve on the Senate Finance Committee, which reviews and recommends taxation bills for passage.

In recent weeks the Congress passed a tax bill which gave business and individuals some measure of tax relief. The Congress went further than the Treasury wanted us to go in granting relief from high wartime rates.

But Congress could approve only a limited reduction. You who had your contracts terminated know how sharply war spending is being curtailed. Nevertheless, the Congress had before it the Budget Bureau's forecast of a $66,000,000,000 Budget for this fiscal year ending next June 30. Of this $66,000,000,000, about $30,000,000,000 will be a deficit.

In short, the 1945 tax amendment was the most tax relief we could offer on a strictly short-range basis.

Real tax relief will not come until the Federal Government curbs its spending. Lowering operation costs is the only way to lower taxes. Otherwise, endless deficits pile up and we are chained to interest charges from which we cannot escape.

And when I say tax relief, I mean all those elements that will free our enterprise and preserve our inventive and productive strength.

I mean the preservation of small business—and that of the whole Nation for that matter—from the dangers of big government. I mean the riddance of excess-profits taxes and the double take on corporate income and dividends.

But we can't cut taxes and escape deficits until appropriations—Government expenditures—are brought into line.

You may ask: Since Congress controls the spending and must authorize all appropriations, why doesn't Congress itself just balance the Budget?

Well, I'm glad you asked. It is a good question.

It is true that Congress does have the power of approving the expenses for ordinary government in its three historic branches—the legislative, judicial, and executive. But in the past 16 years, out of emergency, depression, and war, we have erected a fourth branch—an extraordinary government, if you please, which answers to no audit nor to any conscience save its own.

It is said that the magnitude of this extraordinary Government is now so great as to rival Government proper.

There are 101 of these Government corporations, all financed by taxpayers. Our first step toward sound government was to drive as many of them as we could into a corral, where Congress and the people could keep an eye on them.

Let me tell you about this, briefly.

### THE BYRD-BUTLER BILL

In 1943, some of us got interested in the "good neighbor" policy and journeyed down to South America to examine the fruits of this activity.

Possibly some of you may remember the startling disclosures that resulted from this trip. The whole Nation gasped at the size of our spending program in Latin America.

What I want to add to the record now is that in spite of those colossal revelations, the thing that impressed me most was a telephone call to my office from one of the "discovered" corporations. The party on the telephone wanted to know—"where in the world did you get the information about us—we're supposed to be secret."

It was then and there, gentlemen, that I knew big government was getting away from Congress. It was up to Congress to recapture those secrets. In the following months the Byrd-Butler bill was framed. I shared with the distinguished Senator from Virginia, HARRY F. BYRD, the sponsorship of that measure.

Comptroller General Warren says it is the most important piece of legislation of its kind presented in Congress in the past 25 years. I suppose the canny general dates it from women's suffrage.

At any rate, I regard it as Congress' declaration of independence from big government or, perhaps it is only the preamble to the new Magna Carta of free enterprise that will chart our postwar evolution. It is only evolution, thank God.

The Byrd-Butler bill provides that the 101 Government corporations henceforth must come under the scrutiny of Congress in their financial operations. They must toe the same line of budgeting, financing, and auditing that the Constitution draws for the other three branches of Government.

It will, we hope, write the end to Extraordinary Government with its extracurricular activities.

May no other Senator ever again be told that some billion-dollar enterprise of Government is a secret from him and the taxpayers.

### THE ROAD AHEAD

But the costly mistakes of the past 16 years of wasteful spending, with their debts, are bygones, after all. Instead of bitter recrimination, let's just make sure they are forever gone, pay the cost, and learn our lesson.

So, where do we go from ne ?

When I sit and squirm in my Senate seat, thinking about us taxpayers, I am convinced that the Byrd-Butler bill is only a starter.

Now that the war agencies are on their way out, it is going to be far easier to say "no" to them and the rest of government, than for Congress to resist the appeals of pressure groups for new spending.

Depression and war gave us big government and not a few imported ideas for making it bigger. Emergencies, both real and fancied, opened the door for the do-gooders. There was so much reform in the air you couldn't cut it with a corn knife.

Under sweet and noble titles, Congress is still getting these legislative lures to Paradise. But these rosy paths always lead to the pay roll and pay check. The big slice is for big government which is to pay off in the distant future, when the Almighty knows what the value of the dollar will be. Let us recognize these social stunts for what they are—taxes for big government.

Out our way, and I believe out your way, too, the folks want government in the open. Money on the barrel head.

The spending spree is over, and the pendulum is swinging back. The majority party, whichever it be, must take the responsibility for discouraging pressure groups and privilege legislation.

These boys who are coming home from the wars are convinced the American way is best. If they have one hard and fixed opinion, it is that no way of life or kind of government they saw overseas even remotely interested them.

We get a great deal of mail from them in Congress, and you can take it from me most of our veterans will be happy to get away from Government controls.

They want a chance to make money. Plain old profits—enough to send a shudder down the spine of any soap-box Socialist.

They saw first-hand the results of the plundering of thrifty citizens by taxation in Fascist countries, and they saw the fawning, faceless freaks of humanity that it spawns. They saw nations disintegrate, because men's dreams of progress were stifled by the state. They saw big governments that bogged down in debt and moral decadence.

These boys fought to be free.

### STREAM-LINED GOVERNMENT

And so it is up to us, citizens, voters, and Congress, to see that this war-swollen bureaucracy of ours is cut down to peacetime size.

It has three times too many employees, with all the attendant evils of duplication and harassment of citizens. Before the war there were less than a million civilian job holders on the Federal pay roll. Now there are more than 3,000,000. Depression and war agencies still honeycomb the regular Government structure. They must be eliminated, along with their orders, edicts, rules, and surveys, deviously tied up with taxpaying and penalties which often have more weight than the laws passed by your Congress.

Much of this big government derives from the war powers of the President. Most of them will continue for 6 months after those war powers are ended either by congressional resolution or by Presidential proclamation.

The President has not indicated when he might proclaim officially that hostilities have ceased. But I wish to point out that the war powers quite likely will run into the next fiscal year.

A $50,000,000,000 BUDGET

The daily press reports a Government spokesman as saying that the forthcoming Budget would total about $50,000,000,000. This compares with estimated revenues of about thirty to thirty-five billion dollars, and indicates a deficit of fifteen to twenty billion dollars to be piled upon our mountain of debt.

A $50,000,000,000 Budget, plus about $10,000,000,000 that State and local governments will spend, will give us a national tax load of about $60,000,000,000, if that spending is to be balanced by tax revenues.

Sixty billion dollars, folks, is 46 percent of the national income which the Treasury estimates for next year.

I submit our Government spending should be brought more in line with our ability to pay.

In Nebraska, our constitution says the State's debt can't exceed $100,000. Our State capital, one of the wonders of the West, was paid for the day it opened. We build our roads the same way, and we have good roads. That is the way Nebraska likes to do business, and I represent Nebraska.

Let me quote to you what the Nebraska Bankers Association wants in Washington. This is from its resolutions of less than a month ago. It puts into words what I've been thinking—

"Now that the war is over * * * we feel that deficit spending should stop and that when existing commitments have been fulfilled, all Government subsidies should be discontinued.

"Consideration should be given to reduction of taxes. Government corporations * * * should ge discontinued unless approved directly by Congress; our National Budget should be brought in balance at the earliest possible date; and all the broad powers granted the executive department, and under which most of these spending agencies exist, should be returned to Congress so that we may have a government by the will of the people through their elected representatives and not by Executive order."

THE DEBT AND THE BUDGET

The stupendous new element of postwar budgeting will be the debt. Next June 30, the end of the current fiscal year, it will have reached $275,000,000,000, or thereabouts.

It defies definition. It is more money than our Government spent in the 150 years prior to 1940. The biggest debt of any nation at any time.

There is currently some fashionable double talk which we Nebraskans fail to understand that this debt may be lightly regarded since we just owe it to ourselves. On such a theory no debt ever should trouble us so long as it is internally held.

By all that's honorable in government, it must be a sound debt. We can't play around with bankruptcy and 85,000,000 bondholders.

Congress must find a way to amortize this great block of credit in a manner as painless as possible to the Nation's welfare. We need the counsel and guidance of statesmen who are financiers and of financiers who are statesmen. We can't pay off with catchwords and slogans and repeated bond issues.

We are not balancing the Budget until we provide for the handling of the debt, and we will never lick inflation until we balance the Budget.

It may take a debt commission or a special committee of Congress, but the problem of our postwar Federal finance will be that of squeezing debt repayment into the National Budget—for the next 50 to 100 years, if necessary.

FOREIGN SPENDING

At such a critical stage of our national finance it does not seem prudent that we should separate our considerations of foreign and domestic spending. They come from the same pocket. Foreign relief, too, must be carefully distinguished from foreign loans. It would be a disservice to any nation to extend loans above its ability to repay, and would win for us again the title of usurer and Shylock.

I hope some of your special-study groups will write me your opinions, particularly about the debt. But there is only one direction that I am prepared to take, and it is my theme henceforth. It is "Balance the Budget."

THE FULL-ACCOUNTING BILL

In the beginning of my talk I told you I came here to plead a special cause, and to lobby your Congress of industry.

Then I have tried to say that free enterprise and tax relief are the Siamese twins of the return to sound government. Let no more fancied crises separate them—and us—from fiscal sanity. Why, a 1-cent change in the corn or cotton market under the touch of big government's propaganda machine, can be made to look as if disaster and chaos will return if big government doesn't take over. Let us dismantle this oppressive machine in a careful and businesslike manner, by the simple means of testing each part for efficiency before we remove it.

I think I know how to do it.

That is why I decided to make your Congress of Industry my pulpit of what I hope will be my next legislative venture. I think it as important as the Byrd-Butler bill. With your indulgence, I shall send up the first trial balloon.

I am proposing a full accounting bill, which would place all Government financial operations on a businesslike basis. Every year at one time and in one specific measure Congress would consider the full operation of Government which would be out in the open for everyone to see.

As soon as I return to Washington I shall introduce a measure asking the responsible fiscal officials of Government—the Secretary of the Treasury, the Director of the Budget, and the Comptroller General—to report their recommendations on this full accounting of Federal spending. I hope that Senator BYRD will join me as a sponsor.

This plan is to provide for suitable legislation to:

1. Include all appropriations in one general appropriation bill. Congress never gets the full financial picture of the Government for which it is financially responsible. It votes appropriations in dribbles; the money can be spent 3 years later, when another Congress is unaware of it and might possibly be appropriating other moneys for the same purpose. Bear in mind, Government finance is Congress' exclusive job.

2. Make each year's budget be a complete operation by discontinuing permanent appropriations.

3. Relate the handling of long-term projects (such as contract authorizations for building ships) to proper annual appropriation.

4. Integrate deficiency and supplemental appropriations into the annual budget.

5. Improve the execution of each Annual Budget and secure a more prompt and efficient annual accounting both by the expending agency and the Comptroller General, to show whether funds were expended properly.

With these improvements, gentlemen, the Congress and the public will know the true state of the Nation's finances.

It will not know the state of the Nation until this, or some other method, provides a way for drawing a complete total on the complicated arithmetic of Government. You do it in business—you've got to.

We have got to do it in Government to save it from consuming itself.

I earnestly solicit your support.

Here is a final thought.

Seventy-five minutes have elapsed since this afternoon session began. During this time the Federal Government has spent over $9,000,000. It has added over $4,000,000 to the debt—your debt.

---

## United States Action To Speed Housing Urged

EXTENSION OF REMARKS

OF

### HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Capt. Harold E. Stassen, from the Washington Star of December 9, 1945:

UNITED STATES ACTION TO SPEED HOUSING URGED

(By Harold E. Stassen, captain, USNR)

There are 250,000 homeless heroes in America today. Throughout the Nation these veterans of every battle on every front have returned to their families or have married the sweethearts who were waiting for them; but they are unable to establish homes because of the acute shortage of housing. Obviously, the number of home seekers will rapidly increase as the demobilization continues, so that by next spring there will be between 1,500,000 and 2,000,000 of these veterans looking vainly for a house to call home.

These homeless veterans are, of course, only the more dramatic and appealing portion of the total housing problem in America. There are and will be at least an equal number of others of our fellow citizens who, either because they are moving from a war-plant area to their previous location, or for other reasons, are unsuccessfully searching for a home.

In approaching the situation we should recognize that it is one of our primary domestic problems. The construction of homes to meet the tremendous needs, not only this year but potentially in the next 20 years, can and should be one of the major factors in maintaining a healthy domestic economy and in providing directly and indirectly a good proportion of those millions of jobs we hear discussed in attractive and glowing terms. Furthermore, the lack of good housing has very major social implications. It is reflected promptly in lower standards of health, in social unrest, in crime, juvenile delinquency, and unemployment.

The problem can best be met by the intelligent use of the powers of Government to stimulate and make possible the rapid and

continuing creativeness of our American system with free workmen, individual enterprise and private capital. But to do this means that Government must not hesitate to step in and take the essential action to permit these forces to work.

I specifically suggest the following preliminary measures:

First. That the President immediately appoint a national housing expediter, preferably utilizing one of the members of the Cabinet who is not now very busy. This national housing expediter should be charged with moving promptly to coordinate all elements of Government to meet the present emergency and to plan for the longer-view action of Government in the housing field.

Second. That the shortage of skilled tradesmen in many of the building trades be met by immediately directing the armed forces to release at once all men skilled in these trades, who are not busily engaged in essential high-priority military construction. There should be very little essential military construction now under way, and the people as a whole, including the men in the armed forces, need an intelligent exercise of priorities and release because of the domestic need just as much or more than occupations and types were given consideration in induction into service.

Third. Extensive apprentice programs should be promptly initiated, with the cooperation of management and labor, to train additional men in the skills that are needed. Those few labor unions which engage in narrow restrictive policies as to the numbers that are permitted to qualify in their craft must be required, for the sake of better homes for their own fellow workmen and for the returning veterans, to open their ranks, reduce their initiation fees, and meet the needs of shelter for the people of America.

Fourth. The Army and Navy and all other governmental agencies should be required to report at once all unused space in barracks and other buildings throughout the country and this space should be leased on a short-term basis to individuals who will manage it and make it available for temporary living facilities. The military plans should be so arranged that facilities which they hold, remote from populous centers, are used for military activities to a major degree, while facilities near or in population centers be made available for civilian purposes.

Fifth. There should be an immediate national survey of all unoccupied temporary housing in former war-plant or military areas. These should be made quickly available at hard-pressed population centers.

Sixth. Building materials in military supply depots should be rapidly placed on the market and made available for housing.

Seventh. A national campaign should be started at once to revise and modernize the building ordinances of our metropolitan centers. Many of them were drawn up under entirely different conditions as to construction, materials, sanitation, and fire control. Some of them appear directly to favor monopolies of material or construction, or of labor. A small committee of competent architects, engineers, fire chiefs, builders, and craftsmen might well prepare a model modern building ordinance for metropolitan areas.

Eighth. Plans should immediately be made, and their execution commenced, for clearing out vast areas of the slums of our metropolitan centers and turning the real estate over to private enterprise for rapid and efficient construction and management of thousands of modern housing units.

These are a few suggestions for action on this pressing domestic problem. What I am trying to emphasize is that we must approach this problem with the same kind of imagination and of drive and of scope as that with which we met the terrific challenge of the war we have just won.

We cannot build America by drifting.

## Science and the Government

EXTENSION OF REMARKS
OF

### HON. JAMES M. TUNNELL

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

*Monday, December 10 (legislative day of Monday, October 29), 1945*

Mr. TUNNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech entitled "Science and the Government" delivered by the senior Senator from West Virginia [Mr. KILGORE] before the Science Society of Washington, the Technical Reserve of the Naval Ordnance Laboratory, and the section on social and economic sciences of the American Association for the Advancement of Science, at Washington, D. C., December 5, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A large number of scientists have recently visited the Halls of Congress, and have talked to some of the people's representatives in Washington. I feel, therefore, that I am perhaps only making a return visit when I appear before you this evening. I think it has been a good thing, and a healthy thing, for the scientists and the politicians to get to know each other better. The urgency of the times has forced us together, and I hope that the acquaintance will develop into a lasting and fruitful relationship.

There may be some scientists here this evening who want to know why the Government is concerned with affairs of science. I want to quote you a sentence from the writings of George Washington, who died in 1799. Washington believed, and said, that the "arts and sciences are essential to the prosperity of the state and to the ornament and happiness of human life."

The founding fathers believed that the Government should sponsor scientific research, and they incorporated into the Constitution a clause to the effect that the Congress should provide for the common defense and promote the general welfare. It is under the general-welfare clause that most of our peacetime research has been inaugurated. Expeditions and surveys have been sent out to explore and examine the national domain, and this examination has continued in greater detail as the various sciences developed.

Military necessity early called for Federal support of research. The first Federal research agency was for military ordnance and was established during the War of 1812. Three wartime research agencies were created during the Civil War, 6 during World War I, and 12 during World War II.

Between wars there has been a consistent growth of Government research agencies for the general welfare. The first Federal grant in support of peacetime research as such was made in 1836, when steamboats were constantly blowing up and causing one disaster after another. In an attempt to remedy this situation, the Government made a grant of $10,000 to the Franklin Institute to find out the reasons and try to remedy them for the safety of steamship passengers.

The Department of Agriculture, an agency of research for farmers, was established in 1862. The Weather Bureau was established in 1890, the National Bureau of Standards in 1901, and I could name many other scientific agencies which have helped do the things which common citizens and taxpayers could not carry out alone.

With the increase of industrial activity in the twentieth century, the Government's participation in research was also accelerated, mainly in agriculture, conservation, reclamation, mining, and forestry. Industrial development of the automobile forced the Government into research on roads. The Nation's stake in the development of the airplane led to Government-planned technical advances by the agencies of aeronautical research. Airport engineering developed largely during the depression. A logical development in the use of natural resources in a region is the applied research done by the Tennessee Valley Authority.

As science grew in importance, its recognition in the structure of the Government at a high level has been urged repeatedly. The National Academy of Sciences in 1884 recommended a Department of Science. The Congress, in 1903 and again in 1903, recommended a more "rational correlation" of Government scientific work. President Roosevelt's Science Advisory Board in 1933 and again in 1935 urged a permanent scientific advisory organization.

My own strong interest in Federal scientific activity dates from my early investigations as a member of the Senate War Investigating Committee headed by Senator—now President—Truman. Our studies in 1941 and 1942 of the mobilization of our resources showed weaknesses in the use of scientific data. In the synthetic rubber program, for example, a number of false starts were made because of the lack of adequate data in the hands of responsible Government agencies.

In the fall of 1942 I introduced a science mobilization bill, and the Senate created within the Military Affairs Committee a special subcommittee of which I have had the privilege of serving as chairman, to study the scientific and technological problems of the war effort. Many of the objectives of better organization and enlargement of wartime research which have been set forth by the committee have been achieved, under the War Powers Act, by administrative action.

When the defeat of the Axis was imminent, the committee focused its attention upon the problems of the reconversion of research activity from war to peace, and the maintenance of high levels of scientific research in the postwar years necessary for our national security and welfare. The committee's studies of the Government's research functions, and recommendations for the postwar era, were embodied in the committee reports of January and July of this year. Our major conclusion, which closely paralleled that of Dr. Vannevar Bush's committee studying the problem for the executive branch of the Government, was that the Federal Government should greatly increase support of science, particularly in the basic sciences, in health and medical research, national defense, and other research fields of recognized public interest.

Both the studies made for the legislative and for the executive branches of the Government found that science is playing an ever more important part in the life of the Nation, and that increased funds are needed to finance the Nation's scientific activity. It appeared that for noncommercial-type research, whether for basic science or for such applied science as medical research, the sources upon which we have relied in the past, notably private philanthropy, cannot meet the need in the future. It was accordingly recommended that public funds be used to create a widespread wealth of skills, ideas, and facilities, as an investment in national prosperity and peace.

During October, our subcommittee held public hearings on bills embodying the recommendations for increased peacetime support of science and providing for the creation of a Federal scientific foundation.

Senator WARREN G. MAGNUSON, of Washington, and I jointly heard more than 100 witnesses from all sections of American life, including many eminent specialists who testified on the need for such a foundation and the problems involved in its creation. With a single exception, these witnesses, representatives of industry, agriculture, labor, veterans' groups, governmental agencies, and scientific and educational groups and institutions, urged the creation of a Federal scientific foundation.

During the past 2 weeks I have been analyzing the testimony. The hearings have provided a public record on the basis of which recommendations can be made to Congress, and on which Congress can act with every assurance that it is meeting a vital national need in an effective manner. Let me give you a short summary of the testimony urging Congress to create a Federal science foundation to finance increased scientific activity:

1. The witnesses believed that support of science was an essential of any national defense program.

2. They believed that such support would make manifold contributions to the national welfare, particularly in public health, cultural development, and the technical development of regional resources.

3. A considerable number of witnesses pointed out that the foundation would contribute to international understanding and cooperation, and would help to avert another war.

4. As to the functions of the foundation, those who spoke of it at all were unanimous in their agreement that basic or fundamental research should have Government sponsorship. Widespread support was given to the proposition that the social sciences should be represented, as well as the physical and biological sciences.

5. There was almost unanimous agreement that the foundation should support scientific training through a Federal-aid program of undergraduate scholarships, postgraduate and postdoctoral fellowships.

6. A great many witnesses urged that the Foundation should maintain an up-to-date roster of scientific personnel.

7. All witnesses agreed that the freedom of the individual working scientist must be maintained. Some were afraid of "political control" of science, but were reeassured by other witnesses who pointed to the freedom of scientists working in Government departments and agencies.

8. A majority of witnesses agreed that the Foundation should coordinate research financed by the Government. The best way to do this, they agreed, was through voluntary joint planning and full exchange of information.

9. And, finally, it was generally agreed that the Foundation should promote the widest possible dissemination and utilization of scientific discoveries and techniques.

These are the things that you and your colleagues told me and the other Senators in Washington recently. I am not a scientist and I will not pretend that my approach to this problem is identical with yours. Yet it is my firm belief that the needs of the American scientists and of the American people, part of whom I have the honor to represent in Congress, are identical. I have become convinced, and I think many of my colleagues are convinced, that the free and unrestricted development of basic scientific research is such an important part of our potential national resources that we cannot afford to neglect it. I feel that in order to discharge my responsibility to my constituents and to the people of America I am obliged to do whatever I can to encourage the growth of basic scientific research.

Now what does this mean? Will it be adequate merely to increase the funds available for scientific research? I think not.

There are, of course, many ways in which Federal funds could be used to support American science. During the last 5 years I have given this matter much thought. I have considered many alternatives, and in each case I have abandoned them in favor of a National Science Foundation.

For instance, we could simply appropriate funds to each of the 48 States and tell them that they are to be used to support science. In effect, this would necessitate the establishment of 48 State science foundations.

Or we could make appropriations direct to each of the colleges and universities of the country in proportion to their enrollments. Then, instead of 48 local science foundations, we would have hundreds. I doubt, and believe you doubt, that such schemes would result in equally effective programs of research in national defense, health and medicine, and other fields of national interest.

Or again, we could make appropriations for nonprofit institutions which would, in effect, include private research foundations such as the Rockefeller, Sage, or Carnegie foundations. Although I have the greatest respect for the purposes and practices of those and similar great organizations, I cannot bring myself to believe that the American people would want, or Congress would defend, this manner of expending Government funds.

Finally, we could appropriate Federal funds directly to the National Academy of Sciences or its operating organization, the National Research Council. I assure you that this possibility has received serious consideration. The reason for not following this procedure is that, although these agencies were established by an act of Congress and by Executive order, they are not true Government agencies but have a quasi-public status. I shall discuss this point later.

An entirely new Government agency is needed. It is needed not only to provide the necessary Federal support for science, not only to assure that the funds are spent on programs related to national welfare, but because science itself has now become such an integral part of government. I believe that you scientists want and deserve more than a Government dole for your research.

I do not feel that the Government should tell you what to do or that the proposed Federal agency should exercise scientific judgment and attempt to make decisions which can only be made by the individual investigators. No; I am not proposing that you pay for these funds by giving up that freedom without which true scientific research would soon cease to exist. I think I can best explain what I mean by reference to the urgent scientific problem of the day—atomic energy. This problem is not only a major scientific problem but also the most important political issue of the day. You know better than I what this problem has meant to the scientists who have worked on the atomic bomb. These men received tremendous financial support from the Government. They did their job and they did it well, but it was a one-way affair. They were hired by the Government to do the job, but were given no opportunity to have a voice in what would be done with the new knowledge that they produced and applied. And now these men—and I applaud them for it—are making every effort to find some means of making their voices heard.

Science has reached such a stage of development that we must expect huge and far-reaching developments to come out of our laboratories. If we accentuate this process by increasing the financial support given to scientific research, the scientists will be continually faced with a similar situation. What is the solution? I propose that the Government not only give the scientists more money and better laboratories; I propose, too, that the Government make a place for the scientists in its very structure so that, as scientific knowledge advances, we shall also provide for a voice for the scientists. I think scientists deserve it, and the country needs it.

The need for bringing more scientific men into the Government is a critical part of the problem of the proposed science foundation. The foundation simply cannot be administered by laymen. Its entire operation requires the scientific insight and knowledge which only the trained scientist can contribute.

Now is has been argued that we cannot solve this problem by bringing scientists into the Government to operate this agency. It has been suggested by some that, instead, we shall have to depend on the part-time assistance of a scientific board who will hire administrators to run the Foundation for them. I think, however, that the Government needs more than the part-time services of scientists. I think that we need some of you in Washington all the time, and one of your jobs should be to run the Science Foundation.

I know that this is something of a new departure for scientists. I know that it is a great deal to ask of a man who has spent a lifetime building up a career which is in many ways far removed from matters of public administration. Yet, without the full-time services of men who understand the scientific laboratory from the inside, any scientific foundation is doomed to failure. This issue cannot be avoided. Many scientists have said at our recent hearings that the proposed Scientific Foundation must be under the control of scientists. With this, I heartily agree.

Science must have, and must have now, a full-fledged Government agency run by scientists. I think that this is necessary because, without it, the Government scientific activities cannot be properly guided.

I will not discuss further the major areas of agreement revealed in the testimony. This evening I shall take the opportunity to discuss with you those aspects of the proposed Foundation in regard to which there is a lack of general agreement, or in regard to which misunderstanding exists. These include:

1. The best form of organization for the proposed Foundation—and here the principal discussion concerns the top management.

2. The best way to assure in the legislation creating the Foundation the full publication and free dedication to the public of the results of federally financed research.

3. The best way to deal with the human—the social and economic problems which scientists can help solve.

Before final congressional action can be taken to create the needed foundation, agreement must be reached on these features. I believe that the extensive public record provides an adequate background for intelligent legislative action on these moot points. Before discussing them in detail, let me say a word about the manner and the degree of precision of the results which must be obtained.

Legislators—like scientists—must seek not only yes and no answers but must also make determinations within practicable limits. In the various scientific disciplines, methods have been arrived at for achieving the necessary degrees of precision. Similarly, in Congress, we have an elaborate process for achieving results with the degree of precision appropriate to legislative action.

A bill introduced by a Member of Congress is seldom voted on in its initial form. First through public hearings, then through deliberations of the committee and of the Chamber as a whole, it is shaped toward its final workable form. Even after its enactment, its practicable application is reviewed annually when appropriations are made. Further, Congress can—and often does—modify the original enabling legislation by subsequent amendments based on the year-to-year experience of the agency. It is in the light of this process that we must seek

to create for the new foundation an initial organizational structure so designed that it will have the greatest possibility of successfully accomplishing its purpose.

If we agree, then, that a National Science Foundation is needed and that the financial support of this foundation must come from Federal funds, let us turn to a consideration of the problem of how the foundation should be administered in order that its functions may best be realized. Before attacking this problem directly, permit me to digress into a brief discussion of just what a Government agency is, noting where it differs from a private corporation whether of the industrial or institutional variety.

In order to appreciate the unique characteristics of a Government agency, let me ask each of you to imagine yourself for a moment a Member of the Congress of the United States. As the elected representatives of a segment of our people, I am sure you would feel, as I do, a heightened sense of responsibility to see that all agencies of the Government are operated not only in an efficient manner but in the best interests of the Nation as a whole. From such a vantage point I am sure you would realize how very vigilantly we, as the Members of Congress, seek to protect the rights of all of the people in the enactment of any legislation involving the appropriation of taxpayers' money. Thus, in establishing a Federal agency to which we commit ourselves to make annual appropriations, one of the thoughts uppermost in our minds is that the agency be a true servant of all the people; and that, even under the most unfortunate selection of administrative personnel, we must protect the public from the possibility that the agency may become the instrument of special-interest groups, which, as you may know, are rather plentiful in our democracy. It is for this that the sine qua non of any government agency is that its powers be vested in full-time Government employees whose principal responsibility is their public function, and who have severed all previous connections with private financial interests. From the Government standpoint is is unthinkable that the powers of the proposed National Science Foundation be vested in a board of noncompensated persons, whose principal responsibilities would lie in some other direction, as some scientists have so urgently and so honestly recommended. This is not to say that we, the trustees of the taxpayers' money and interests, impugn the integrity of those scientists who might be appointed to such a board. It is to say that we feel under the highest obligation to assure the people of the United States that under no conditions, at any future time, could the foundation conceivably be regarded as the agency of any special group.

Many scientists testified in the hearings and many have written to me personally that they are convinced of the superiority of the board form of organization. I respect the sincerity of their testimony in this matter and believe I understand why their analysis of the situation leads them to prefer this form of organization. Most scientists have spent their lives in universities and have worked with or under research foundations administered by a board of trustees or directors. In most instances, these groups of men are appointed or elected to serve as trustees of certain funds which private philanthropy has bequeathed. As trustees of these funds, it is their duty to assure that the funds are spent for the purpose or purposes specified in the bequest. In order to utilize the funds, the board of trustees establishes an operating agency, i. e., a university or foundation, and then selects and hires an administrative officer who in turn selects and hires the technical operating staff. But note that it is this highly trained operating staff which carries out the actual work of the organization. The board of trustees simply meets from time to time, reviews policy, and in approving budgets gives its approval or disapproval to the programs proposed by the operating staff of the organization.

A foundation under a single administrator will have a board of trustees, and the board of trustees appropriate for all Government agencies is the Congress of the United States. Congress cannot delegate its constitutional responsibilities or turn them over to any subsidiary board of trustees, no matter how distinguished its members may be.

Let me again emphasize that the success of any operating organization, whether a private industry, a university, or a Government agency, depends primarily on the quality of the technical personnel which makes up its operating staff. It is not the board of directors or the trustees which do the scientific work of a university or a foundation; the same holds for the proposed National Science Foundation. The foundation will succeed only if, after its establishment, we are able to staff it with the very ablest scientists in the United States.

It will be the business of the foundation to administer a large segment of federally sponsored research. Just as the business of the Federal Trade Commission is carried on by full-time Government employees with the training and experience in economics and financial transactions, the National Science Foundation must be administered by a staff composed of first-class scientists devoted to the public service. And unless there are enough able scientists in this country who recognize the importance of this job of administering scientific activities, and unless such men are willing to accept full-time jobs on the staff of the National Science Foundation, it cannot succeed in carrying out the functions which our recent hearings show to be so greatly needed. Now that science has come of age, there must be those among you who are willing to forego the role of the working scientist to accept the challenge of a new career in the administration of scientific research. I do not know how large a staff it will have to be. In the bill S. 1297, we have specified only a full-time administrator, a deputy administrator and a director for each of the separate divisions. Obviously these men will need many assistants in all fields of science. I do know that we cannot expect the business of the foundation to be properly conducted by part-time employees who come to Washington a few days every month and then go back to their regular jobs. The activities of the proposed foundation will be so manifold and so important that they must be administered ably, continually, and efficiently if the foundation is to succeed. I say to you frankly, if I were not convinced that there are those among you who are willing to accept the challenge of these tasks, I would not support the legislation to establish a science foundation.

If we agree that the National Science Foundation must be a Government agency, rather than a quasi-public foundation receiving Government appropriations, and if we agree that the powers of such an agency must be vested in full-time Government employees with no responsibilities other than to science and the Nation, we must still face the problem of the best form of top administration. This problem is not unique to the proposed National Science Foundation; it is a problem which concerns us every time a new agency is established. Many experiments in administration have been tried in an effort to find the best answer to this difficult problem.

There are two general solutions to the problem of top administration. Both are known to be workable solutions, yet both have very real advantages and disadvantages. The first solution is that of having the President appoint, with advice and the consent of the Senate, a single administrator in whom all powers of the agency are vested. This administrator in turn selects and hires other Government employees as his divisional chiefs. These in turn select and hire subordinates, and thus there is created an operating organization with a direct line of responsibility centering in the single administrator. This form of organization works. It is used in all governmental departments and in certain of the bureaus of these departments. It has also been successful in many agencies of the executive branch of the Government.

The advantages of the single administrator form of organization are clear-cut. All responsibility for the success of the agency is immediately identifiable. If the work of the agency is successful, the administrator gets the credit. If the work of the agency is unsatisfactory, the administrator gets the blame, and if the work is too unsatisfactory we get a new administrator. Everyone working in the agency knows the lines of responsibility under which he works. This in general has been found to make for more efficient administration.

The disadvantages of the single administrator form of administration are simply stated. It involves placing tremendous responsibilities in the hands of one man. If he is a good man, that is, if he selects able administrative assistants and accepts their counsel in arriving at decisions, he will run a good agency. On the other hand, if the wrong man is selected and he fails to build up an efficient operating organization, and furthermore if he refuses to seek and accept advice as to the manner in which the agency should be administered, he will fail as the responsible individual. Fortunately, because he is immediately identifiable, he can be removed by the President and a new administrator appointed.

The alternative general solution which has been found successful in the administration of Government agencies is the board or commission form of organization. In this case the President, with the advice and consent of the Senate, appoints several full-time Government employees to constitute the top administrative organization. In some cases, members of the commission elect their own chairman, and in some cases the President designates the chairman. In general, the board or commission form of administration has been found to be successful when it has judicial functions, such as passing on rate questions, determining rights as between individuals or corporations. All the members of these commissions or boards are full-time Government employees.

The advantage of the board or commission form of administration is that it permits combining the wisdom of several at the top level of administration. In establishing the size and characteristics of commissions, the President and Congress attempt to include representatives of all interested groups in the hope that the special biases or predilections of the individuals will be canceled out in the deliberations of the board, thus resulting in decisions more nearly reflecting policies in line with national welfare.

The disadvantages of the board form of administration can also be simply stated. It is somewhat more unwieldly form of administration, and it is more difficult to identify the responsibility for satisfactory or unsatisfactory policies, decisions, and programs. In case the program of the agency becomes too unsatisfactory it is necessary to replace at least a majority of the board before achieving the needed correction. As you can see, this requires considerably more time, and I may say replacement is less likely to happen than in the case of a single administrator.

I assure you that many of us have given a great deal of thought as to which general form of administration will be most satisfactory for the proposed National Science Foundation. As I see it, there are three general alternatives:

A. A single Administrator, appointed by the President, with the advice and consent of the Senate, in whom will be vested sole authority for operating the Foundation.

B. A Board of three to nine full-time members, appointed by the President, with the advice and consent of the Senate; at the time of appointment one of the members of the Board shall be designated by the President to serve as chairman.

C. A single Administrator appointed by the President with the advice and consent of the Senate and a top advisory board of 5 to 15 representative members appointed by the President, to serve in a part-time capacity while continuing their regular professional work with universities, industries, or other organizations.

These three general alternatives seem to be the only feasible forms of top administration for the proposed Foundation. I honestly believe that, with the selection of the proper persons, any one of the three forms of administration would work and work effectively in the best interests of both science and the Nation. I would be willing to join my colleagues in recommending that the bill about to be reported out provide for any one of these three alternatives. In the light of our general discussion of the problems of administering government agencies, however, I wish to explain why I personally believe alternative C represents the best possible setup for the proposed Foundation.

I prefer a single Administrator, not only because it promises to make the administration of the Foundation more efficient, but primarily so that all of us—the President, Congress, scientists, and the public—will know at all times exactly who is responsible for the program of the Foundation. Because of the manifold facets of science, I cannot conceive a Board of even nine men adequately representing all of its interests equally and fairly. A single Administrator, because he would operate under the spotlight of both public and scientific scrutiny, would not dare to omit an essential type of scientific endeavor from the program of the Foundation.

On the other hand, I do not feel that this administrator should be asked to carry on the work of the foundation without the advisory service of the country's ablest scientists. Although I feel that any competent administrator would seek and utilize the advice of such an advisory board, even thought he were not legally required to do so, I believe the law should include this feature and be so written that this advisory board could never become a mere perfunctory body. It is for this reason that we propose to require at least monthly meetings and to give the advisory board the privilege of direct access to the President and Congress. Under this organization, an administrator would not necessarily have to act in accordance with the advice of his advisory board, but, if he failed to do so, he would be obligated to defend to the public any alternative actions. It seems to me that we can depend upon such continuous public surveillance of the activities of the foundation to assure a minimum of unwise administrative action.

I believe that an advisory board, on which it is quite appropriate for citizens to serve on a part-time basis, would enable the foundation to secure the part-time assistance of any of the country's most able working scientists. To my mind the foundation would be more vigorous and would keep more closely in touch with the important problems of all fields of science if this advisory board were composed of men regularly engaged in administering or doing scientific work in the country's academic and industrial laboratories. It is for this same reason that we have recommended part-time advisory committees for each of the divisions. Even though we are able to hire the most able scientists as Government employees to staff the operating organization, they will require the continual stimulation of outside working scientists if they are to continue to serve as effective members of the organization.

The composition of the top advisory board, it seems to me, might reflect the interests of the country as a whole. Of course, this means that scientists should be included on the top board, but, at the same time, it means that industry, agriculture, and labor might also be represented. They are the consumers of the fruits of scientific research. By contrast, at the divisional level, I would conceive the advisory committee to be made up almost exclusively of scientists. It is at the divisional levels that the truly scientific decisions of the foundation will be made. Not only must the Government employees who staff these divisions be competent scientists in their own right—they must have the advice of leading scientists both in and out of the Government laboratories in the planning and administration of the divisional programs.

In brief, I prefer alternative C because I believe it will result in the best administered foundation and provide the best opportunity for scientists to assist in the operation of the foundation both as Government officials and as advisers. And if we provide for limited single terms of office for advisory committee members, the foundation will retain a vitality which cannot be achieved under any other form of administration.

As I have said, the other alternative forms of organization will probably work; and, if in the judgment of those who support the foundation, one of them should be clearly preferred, I should not be adverse to incorporating it in the legislation.

I think that we can all agree that the single administrator without an advisory board (alternative A) is a much less adequate proposal. On the other hand, a full-time board or commission has certain advantages, but, frankly, I think they are outweighed by inherent disadvantages. In the first place, a full-time board would mean that several of the Nation's outstanding scientists would have to give up their present positions to become board members. Furthermore, unless we give such board members unlimited terms of office, it means that scientists appointed to the board would have a difficult time in returning to nongovernmental positions after a term of board service. Over a period of years these board members would, as a group, become so identified with the foundation that they would assume a defensive attitude toward its program. It seems to me far better that we provide the foundation with a proven, efficient operating type of organization, but protect it from becoming bureaucratic by providing for a truly functional advisory board which would continually aid, scrutinize, and criticize the program of the foundation.

Now, a few words on the utilization of research findings. The pure scientist is interested only in the truth, and we are agreed that the foundation should support a very strong program of basic research. But we must not overlook the fact that the group support of science is based on the belief that all knowledge of nature will eventually result in making our existence safer and more satisfying. There may be a few scientists left who are content with the mere discovery of a new fact or law—but I think that most scientists realize that even the most abstract discovery may have a world-shattering impact on civilization and society.

In spite of the fact that applied science has contributed increasingly to the destructiveness of successive wars, I am sure that most scientists are honestly concerned that their work be used for the welfare of mankind—not for its destruction. The problem of assuring the widest and wisest utilization of the fruits of research is indeed a knotty one. Because it is enmeshed with almost every phase of our culture and economy, I shall not pretend to solve it here this evening. I do, however, wish to comment briefly on the so-called patent issue associated with this science legislation.

Let me make one point clear, because it seems to have been misunderstood by some. The proposed legislation is in no sense a patent reform. It is not patent legislation, and it in no way changes the over-all picture with respect to privately developed or privately owned patents. This was stated clearly by Commissioner Ooms of the Patent Office in the course of the hearings on these bills.

My bill to establish the National Science Foundation includes a provision to standardize the handling of all patentable discoveries growing out of all federally financed research. It is no more than an attempt to give the Government a logical and business-like policy which, at the moment, simply does not exist. Your fellow scientists working in governmental laboratories need such a uniform policy. It is not equitable that a scientist working in one bureau receive the commercial rights to inventions which he makes and an equally competent fellow scientist in a different bureau be compelled to dedicate his patents to the public. Yet that is the situation as it exists today.

Granted that a uniform policy is desirable, to be of most value to science and the Nation it must also be equitable and based on sound business principles. After much consideration and discussion with representatives of all interested groups, I am convinced that this basic policy should be one of full publication and free dedication of all findings, including patents, which result from federally financed research. This conclusion is based primarily on two general lines of reasoning:

1. A fair proportion of scientific discoveries are not patentable. Therefore, why should a scientific worker be rewarded because he happens or chooses to work on projects which yield results that can be commercially exploited? Would there not be a danger that good men would be enticed to work in the applied, rather than the fundamental, fields of research? Is there not the further danger that the possibility of patentable results would tend to conflict with free intercourse among scientists and the full publication of research? In other words, is not the policy of free dedication the one which most nearly conforms to the ideals and practices of scientists themselves?

2. What policy with respect to patents represents good practice for the Government? Industrial laboratories require that patents developed by employees be signed over to the industry. This, they argue, is only fair to the stockholders, whose money not only builds the laboratories but also pays the salaries of the employees. It would seem that the policy of public dedication is dictated by the Government's responsibility to its stockholders—the taxpayers. To put the question another way, why should the taxpayer contribute to the cost of a development and then later be forced to pay for it again because of a royalty which the manufacturer pays to the holder of the patent? Or worse yet (and this is not unheard of), would it be fair to the taxpayer if a patent based on Government-sponsored research should become the exclusive property of a company which refused to use it because it would not be to its economic advantage? Or can we defend exclusive patenting of an important medical discovery? So, we have proposed the basic policy of full publication and free dedication.

However, it has been necessary to provide for certain exceptions to this basic policy. Certain types of developmental work needed by the military services can best be carried on in industrial laboratories, which are better equipped for some special kinds of work than nonprofit laboratories. Such industrial laboratories, because they contribute a plant, an experienced staff, and "know how" to the

project, are deserving of at least a portion of the commercial patent rights resulting from the research. Assuming this to be the case, we have made provision for exceptions to the basic policy of public dedication by stipulating that in those instances where the head of a Government agency (including the foundation) finds that a research project cannot be carried out properly except in a private industrial laboratory, he is empowered to include special clauses in the contract to provide for a fair disposition of any resulting patent rights. However, to keep this provision from being unwisely used, it has been provided that each agency be required to publish the details of all such contracts within 30 days after executing them. In this way I believe that we can be sure that special clauses will be used only when they are really in the public interest.

I wish that there were time to speak of the many other aspects of our problem. But there is one point to which my thoughts keep returning: Science is today at a crucial turning point, and we must find the road which will lead to its continuing advancement. If we are to find this road, we cannot define science too narrowly. There are some who sincerely believe that the proposed legislation should exclude research in the social and economic fields. I wonder if this can wisely be done.

If studies of public health are found to involve social factors, should the foundation be prohibited by statute or hampered by lack of duly constituted research personnel and facilities from pursuing investigations in this direction? I am sure you will answer this question as I have answered it—in the negative. If surveys of our resources reveal the need to examine economic problems that are intimately related to their development, is the Foundation to stop short of its goal because Congress failed to make provisions for economic research?

Congress would not meet its responsibilities to the public if it excluded research in those fields which are most directly concerned with human welfare. There is, I may say, reason to believe that a majority of scientists feel this way for one of the scientific organizations represented here tonight testified at the hearings that two-thirds of those members of its governing body who responded to a questionnaire on this point favored inclusion of the social sciences in the Foundation. Probably these activities should be set up in a separate division coordinate with the natural sciences; but they should be there carrying their fair share of the burden of research.

We stand at the threshold of a new era of achievement in scientific research. Almost every field of science has at hand the basis for rapid advance. Even some of the less spectacular byproducts of scientific research can be the starting point of new experimental methods and even of whole new sciences. The production, in significant quantities, of radioactive isotopes opens up a vast new field of research in biology, chemistry, medicine and industrial sciences. I have listened enough to your colleagues to realize that the production of a radioactive isotope of carbon can make possible experiments which will plunge deep into the innermost secrets of physiological processes, and of the behavior of organic chemicals. Yet, as one of the witnesses at our hearings pointed out, the cost of such isotopes is so great, that only Federal support can supply the funds which will make such experiments possible. Here is a clear case where the very progress of science depends on the establishment of Federal support of basic research.

John Quincy Adams, in his first message to Congress in 1825, said: "In assuming her station among the civilized nations of the earth it would seem that our Nation has contracted the engagement to contribute her share of mind, of labor, and of expense to the improvement of those parts of knowledge which lie beyond the reach of individual acquisition." Now, as the boundaries of knowledge are being rapidly pressed back, it is our obligation to provide the means for solving those problems "which lie beyond the reach of individual acquisition." I do not mean that we must find a substitute for the labors of individual scientists, for this is the very essence of scientific research. Rather I believe that the Federal Government must provide whatever the individual scientist needs to make his efforts bear fruit.

I know there are some who say that science has now become such a terrible instrument of destruction that we must now call a halt to its advancement. No scientist can support such an idea, and history has shown that every such attempt to restrain human progress is doomed to failure.

Rather I think that we must face the issue squarely. If we have now learned how to harness the very forces of the sun, if we can now achieve such scientific miracles, then certainly it lies within our power to solve the economic and political problems which threaten to turn our knowledge into destructive channels. This is an obligation which all of us must meet. And you, as scientists, have begun to play an evermore critical role in this great project. I think that you and, indeed, the people of our Nation should be proud of all the men of science who have begun to find the means of explaining to the world that scientific progress and human progress cannot follow separate paths.

It is my firm purpose to do what I can, within the Congress, to provide for all science and for all scientists the support which they need and deserve. The proposed Science Foundation can be a national investment that may yield undreamed of returns in knowledge, in wealth, and in human progress. But its immediate value may be dwarfed if it will also make science a more vital part of our Nation's heritage—if it draws scientists ever deeper into the stream of democratic advance that has made our Nation great.

## Soldiers Complain Ships Lying Idle in Okinawa

EXTENSION OF REMARKS

OF

## HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. VURSELL. Mr. Speaker, military forces have been telling the Congress they were using every available ship to speed the boys home.

From a letter I received this morning from a fine intelligent soldier whose home is in my district, I am satisfied that we are not being given all of the facts by the military leaders and that they are not using every available ship to get the men home.

Some weeks ago it was suggested that a committee be appointed to make an investigation which would call in those of the military service in charge of seeing to it that transportation was increased. I understand that many Members of Congress were assured that every possible ship was being mobilized.

This letter shows conclusively that there is neglect and, in my judgment, something should be done at the earliest possible moment by the military leaders and Congress should insist that it be done.

Promises not kept will not bring any of these men home. The soldier says in his letter, which I insert in the RECORD, that "more than 200 ships are lying at anchor here at Okinawa and have been for some time."

I also have a letter from a lawyer in my district complaining bitterly of the food rations supplied to the men on Okinawa. I am also inserting this letter in the RECORD.

These two letters touch on two points which must be cleared up at the earliest possible moment:

Hon. CHARLES W. VURSELL,

*House Office Building, Washington, D. C.*

DEAR SIR: My father forwarded your letter of November 16 on to me along with the article that was contained in the CONGRESSIONAL RECORD entitled "Speed Up Return of Overseas Men." If you knew the jubilation that everyone here felt on reading it you would be amply repaid for your trouble. Even though the effects of your efforts have not been felt here on Okinawa as yet, it is good to know that we have a friend and champion in Washington.

I will try to inform you of conditions as they exist now, so that you will have a clear picture to present.

Here as the facts: As of December 1 men with over 80 points are still on Okinawa. At the rate they are shipping men home the men with 60 points, who were eligible for discharge 1 month ago, will not set foot on American soil before Easter or Mother's Day. More than 200 ships are lying at anchor here and have been for some time. Thousands of bitter and disillusioned men in exile here are condemning those responsible for this outrage. The Nation that once depended upon them to stop a vicious enemy now has forgotten them. Living conditions, not too good before the typhoon, are hardly bearable now.

The GI's here on Okinawa feel that their major problem is to get home. They are not so much concerned with getting out of the Army, once they get home, for they feel that priority will be given them.

We suggest that a survey be made of shipping, including airplanes, to determine if every available means is being utilized to get the boys home, and that the Army be required to get a man home and discharged 2 months after he becomes eligible. Then the Army and War Department could have no excuses for failure and could make no exorbitant promises to pacify the Congress and the people.

I want to thank you for myself and the 150,000 other fellows here for your efforts in our behalf, and for your morale-building article.

Your friend and constituent.

P. S.—I'm sorry to have to correct you on the number of battle stars I have, but I have three and not five. Thank you.

---

SALEM, ILL., *December 8, 1945.*

Hon. C. W. VURSELL,

*Member of Congress, Washington, D. C.*

DEAR SIR: You are no doubt besieged by relatives of servicemen seeking special action on their behalf, but I have one here which I think deserves attention.

A friend stationed on Okinawa wrote me a letter today in which he stated that the food situation there is terrible and that the men are forced to dump half of their rations because they are inedible. Shortly after the typhoons the supply of provisions improved but now it is bad again.

The ones most seriously affected are those with low-point scores who will not soon be evacuated, and my friend is only one of thousands there in the same situation.

Such a situation is inexcusable when supplies are adequate elsewhere. They managed to get service during the typhoons and there is no reason why it cannot be done now.

If you can build a fire under the War Department and get these men some decent food you will have their fullest gratitude.

Sincerely yours,

ALFRED S. PFAFF.

## The Sunset of Life—Speech of Dr. W. L. Orr

EXTENSION OF REMARKS

OF

### HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. RANKIN. Mr. Speaker, one of the finest addresses of its kind I have ever read was delivered by Dr. W. L. Orr, a practicing physician, at Fulton, Itawamba County, Miss., my old home county, before a Sacred Harp Singing Convention in Fulton on October 14, 1945.

Thomas Campbell, one of the greatest of all English-speaking poets, once said:

'Tis the sunset of life gives me mystical lore,
And coming events cast their shadows before.

Dr. Orr is a Christian gentleman. He has carried his Christianity with him through life in practicing his profession, ministering to the sick and injured and inspiring them to better ways of life. His address follows:

I wish to address a few humble remarks today to the elderly people of this audience—we who stand before the sunset, we whose shadows are casting far to the east, we who have completed, or have almost completed, our allotted span of 3 score years and 10.

Our experiences and observations have convinced us that all material things are vanities.

Wealth has a way of eluding those who pursue it and escaping those who possess it. It never has and it never will bring peace of mind and contentment of heart.

Glory fades and vanishes at last, leaving its devotees cloaked in obscurity.

Fame is a gayly colored bubble which when it bursts leaves naught behind save airy nothingness.

The smile of public opinion popularity is as subject to change as the winds which blow from every quarter of the compass. Public opinion defies today and damns tomorrow. Today public opinion makes the welkin ring with its paeans of praise and tomorrow hisses its anathemas to hate. Public opinion today scatters the palm leaves of adulation upon one's pathway and tomorrow weaves for that selfsame brow a cruel crown of thorns and crucifies upon a cross of shame.

Power and pomp perish and pass away.

We have lived long enough to know the profound truth expressed in that famous quotation from William Shakespeare:

"The cloud-capp'd towers, the gorgeous palaces,
The solemn temples, the great globe itself,
Yea, all which it inherit, shall dissolve,
And, like this insubstantial pageant faded,
Leave not a rack behind."

We have lived long enough, too, to know that the things which are really worth while, the things which live forever, the things which are enduring as the eternal hills of God, are not the material things of this world—not stocks and bonds, not gold and silver, not the cattle of a thousand hills; but to the contrary they are the invisible and intangible things of the heart and soul—instilled there by the teachings, precepts, and examples of the meek and lowly Man of Galilee.

We who dream of immortality and a better life in some blissful Aidenn beyond the pale where burn the stars, have not found in materialism a firm foundation upon which to build our castle of hope; we have found naught but sands, shifting sands, treacherous sands, sands against which the tempest can and will prevail, but we have found that firm foundation which we sought upon the "Rock of ages cleft for me" which lives in the land where we never grow old.

Here we have grown old. Our step has lost its elasticity and its spring. The passing of the years has dimmed the acuteness of our vision. The flight of hurrying seasons has left its imprint upon our furrowed cheeks and brows.

Our backs are bent and our shoulders are stooped by the burdens, cares, and responsibilities incident to living.

Physically we have declined, but thanks be to God, we have grown in faith, faith in those things which lie behind that veil which no human eye can ever penetrate—faith in the assurance, "Lo, I am with you always even unto the end of the world"; faith in the promise, "In my Father's house are many mansions. If it were not so I would have told you. I go to prepare a place for you and if I go to prepare a place for you, I will return again and receive you unto myself that where I am there ye may be also"; and the tired, footsore old pilgrim is cheered by his faith in that ringing invitation, "Come unto me, all ye that labor and are heavy ladened, and I will give you rest."

And when the last act in the drama of life has been played and the curtain marked "Finis" falls to close the play sustained by that faith, we shall not move to a realm of darkness, gloom, and despair, but we shall walk, exulting, to greet the glorious burst of a new dawn, the dawn of an eternal and an an unclouded day. Walk to hear a plaudit from the lips of the Master—a plaudit which the world in all its vaunted power cannot remotely approximate and which heaven, itself, can not surpass or transcend—"Well done thou good and faithful servant—thou hast been faithful over a few things, I will make thee ruler over many things; enter thou into the joy of thy Lord."

God bless you my elderly friends, and you younger ones as well.

## How Aid China?

EXTENSION OF REMARKS

OF

### HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ernest Lindley, from the Washington Post of December 7, 1945:

HOW AID CHINA?

(By Ernest Lindley)

The unity of China is an American objective of long standing—one which the United States has promoted and defended at various times against the opposition of all of the imperial powers. After the First World War, the cornerstone of peace in the Far East was supposed to be the Nine-Power Pact, in which the signatories pledged themselves to respect the territorial and administrative integrity of China.

It was as a result of American leadership and pressure that China was recognized as one of the Big Four—now the Big Five—in World War II.

Roosevelt and Hull knew China was not a great power; that it could become a great power only with help from outside. They considered it important to recognize a great oriental people as a full and equal partner of the great white nations. They looked upon a united and stable China as a bulwark of future peace in the Far East.

The British and Russians were persuaded to follow the American lead. Both not only endorsed Chinese unity but accepted the Central Government as the legitimate instrument for achieving unity. With the agreement of the other major allies that all Chinese territories conquered by Japan, including Manchuria, should be restored to the Central Government, the last major foreign obstacles to the territorial and administrative integrity of China appeared to have been removed—at least temporarily.

WAR POSSIBLE RESULT

But neither the Central Government nor any other group in China is strong enough to unite China and keep it united without foreign aid. It is not enough for other nations to forego imperialist ambitions in China. If they want a united China, they must give positive help.

The United States, therefore, cannot be indifferent to civil struggles within China. The "hands off" policy which some now are advocating would almost certainly leave China in chaos for a long time. Rival groups would fish for foreign support. Other nations—and groups—would be continually tempted to give support to this faction or that to promote their particular group.

Almost unavoidably China would become again the scene and subject of the ambitions of other great powers. And the final result might well be another major war.

The cry "Hands off" is coming, within the United States, principally from two groups: the unreconstructed isolationists and active supporters of the Chinese Communists. This is an odd alliance. The only characteristic which its two elements seem to have in common is indifference to the interests of the United States and to organization of a stable peace.

This observation must carry two qualifications. The first is that some honest American observers who cannot be accused of Comintern connections think the Chinese Communists are the best foundation on which to build a united and democratic China. They were overruled, however, by Roosevelt, who consistently regarded Chiang Kai-shek as the better bet.

NEEDS DEFT HANDLING

The second qualification is, of course, that no one wants American lives expended in a civil conflict within China. It might as well be recognized that prevention of another major conflict will involve the risk of lives—only a tiny fraction, however, of those which would be lost in another great war. At the same time, every effort should be, and is being, made to keep American troops out of the lines of fire in China. Our aid should be confined to weapons and supplies followed by help in developing transportation and manufacturing.

"Hands off" is a complete negation. It is an abandonment of a historic policy at the very time it has been accepted by other major powers, and therefore has its best chance of fruition.

The real question is: Can China best be unified by unconditional support of the central government or by the use of American influence, with the consent of the other great powers, to bring together the Central Government and the Chinese Communists and—

still more important—democratic groups in China which are presently unarmed? The second choice is the better. It may not succeed. But it should be more thoroughly explored and more deftly pursued.

## The Sad Muddle of Demobilization

EXTENSION OF REMARKS
OF
**HON. ALVIN E. O'KONSKI**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Stars and Stripes:

THE SAD MUDDLE OF DEMOBILIZATION

In the mind of the Pacific GI the demobilization program is in a sad muddle. He is thoroughly confused by the contradictory pronouncements being handed him, and his morale has suffered accordingly.

The latest bombshell was the announcement that the Army critical point score for discharge would drop only to 55 on December 1.

No explanation has been offered as to why the drop is to be only 5 points instead of 10 as in both October and November. Now every enlisted man with 50 to 55 points must readjust himself to spending a month longer in the Army than he had expected. Those with less than 50 points face even more drastic delays, if future point drops are to be kept to five a month.

This five-point drop has been announced in the face of repeated assurances that the discharge rate would reach a new high in December * * * and in the face of Brig. Gen. Robert W. Berry's indication to the Senate Military Affairs Committee that the critical score would be reduced to 50 on December 1.

Of course, men with 4 years' service and men with three children also become eligible for discharge December 1. But the vast majority of these are either in the States or eligible for discharge on points anyway.

It isn't as though this is the first time the GI has been confused and felt cheated. It's been happening all along.

For instance, more than a month ago, he read that General Marshall told a joint Senate-House session that shipping space was not an urgent problem and that Admiral Nimitz said there would be "ample troop lift." Yet, when he asks his commanding officer why he can't go home, he's told there's no shipping available or "wait until the points drop."

Navy admirals once told him that it would be far too "uneconomical" to use carriers and battleships as troop transports. Now he reads Navy press releases boasting of the thousands of men being ferried home aboard both carriers and battleships.

The pay-off came when Navy's "magic carpet" officials explained the use of the carrier *Hornet* to transport civilian workers from Hawaii to the west coast by saying, "Whereever space is used for the transportation of civilians, it is because it is surplus."

To which Army officials added, "But this will be scheduled so as not to delay military personnel."

Does this mean that demobilization is being delayed primarily by failure to lower points and make more men eligible for return to the States, rather than any shortage of shipping? Or what does it mean?

As a result of all this, GI's are asking, how about all this double-talk? What goes on?

One of the chief troubles seems to be that no one bothers to explain these policies and changes of policy. The GI doesn't know where he stands, or why.

Since VJ-day the only thing he's really wanted is to go home. Occupation of Japan, cleaning up the bypassed islands and other necessary jobs were to be done by low-point men and replacements, he thought.

Every time a general or an admiral so much as breathes a word about points or ships the rock-happy vet practically falls on his face with anticipation and hope.

The tension has been terrific. And it's not getting any less as time goes by. Because the desire to get home and into civilian life has become a highly emotional subject for servicemen, demobilization disappointments and uncertainties are causing mass jitters and threatening to make psychoneurotics out of many. And this includes officers, whose critical score has dropped only two points in the past 2 months.

In a charged situation like this surely the authorities realize the necessity of full and careful explanation of every new announcement.

A good beginning would be to explain this latest point drop to only 55 points on December 1 when everyone was expecting a drop to 50.

Unless the men are given a better accounting than any offered so far they are bound to conclude there is no consistent demobilization policy, or that someone is delaying their return home purposely, for reasons unannounced and unknown.

## "Waiting for Ships That Never Come In"

EXTENSION OF REMARKS
OF
**HON. JOHN C. KUNKEL**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks, I am including an editorial from the Sun Setter, of Friday, November 16, 1945. As I stated this morning on the floor of the House, this gives a dramatic picture of the mental attitude created by the failure to establish and maintain an accurate schedule for the return of these veterans eligible for release and those with long overseas service.

They should have been home long ago. Certainly bringing them home quickly is the No. 1 postwar job of the Army and Navy. Having a definite schedule and keeping to it strictly would certainly help morale. It is only fair and common sense.

THE LOST SHIP

"I'm waiting for ships that never come in"—these words from a once popular song echo the sentiments of the men in the three class IV units on Palawan, except they are waiting for just one ship. About one-third of these men have been eligible for discharge since VJ-day or before, the other two-thirds became eligible on October 1.

On November 1 a rumor circulated that a ship would dock here on November 5 to take home all the men on the island in class IV units. Later in the day this report was confirmed. The watch began on November 4. Early in the morning until later that night, both officers and enlisted men were on the beach, scanning the sea for a ship that didn't come in that day. The high tide in the morning and the low tide in the evening reflected their spirits; nevertheless, there were celebrations and farewells that night. And when the men went to bed, they were confident that it would be the last night they would sleep on Palawan.

The next morning they were up early and down on the beach again. No ship had come in during the night, and as the day lengthened, more and more did they realize that none would come in. In the afternoon an explanation was made that the arrival date previously given was erroneous. No new date was given at the time, and no explanation was offered for the original mistake.

We know a soldier who used to keep a morale chart. Its range was from poor to very stinkingly poor. In his words, then, the morale of the men here on November 5 dropped to very stinkingly poor. A few nights later, however, it rose sharply again, when the local radio station, WVTS, announced that a telegram had just been received which ordered all the men in class IV units on Palawan to be ready to load on the U. S. S. *General Langfitt* on November 13. Later at least one telegram confirmed this report.

On November 12 a thousand men lined the beaches to watch for the ship. They were like men who had been shipwrecked and who were about to be rescued, and their vigil was as diligent as that of shipwrecked men waiting for the ship which will rescue them. The sun went down in a bank of clouds, but no ship appeared on the sea, only a storm. And the storm that night seemed foreboding, a foreshadowing of disappointment in the morning. And though the watch was resumed again on November 13, the men looked upon the sea with less hopeful eyes than they had gazed upon it the day before. Rumors, some facetious, some serious in their implications, grew as the day wore on. By its close and no ship, morale had dropped to a low which cannot be described even by very stinkingly poor. Officers and men alike had ceased to believe. Optimists had become cynics. Pessimists have become even more convinced that this is the worst of all possible worlds.

It is late in the afternoon of November 15, now, and the ship has not yet docked. For the past 3 days planes have searched the sea in vain for it. As yet no official public explanation has been offered for its failure to arrive here on November 13. As yet, as far as we know, no one in authority has found out why it didn't reach here. No one seems to know where the ship is despite the fact that some 2,300 officers and enlisted men are waiting and daily becoming more and more discouraged.

For these men "when I get home" has become "if I get home." The prospects of another tropical Christmas grow daily, and yet daily these men hear and read reports about men with far fewer points than they have receiving their white-paper goals. They want to know, and they have the right to know, why they weren't sent home before. They want to know, and the whole island of Palawan wants to know, where the ship that failed to reach here on November 5 and again on November 13 is. They wonder now whether there ever was a ship scheduled to take them home on either of these days, and some wonder whether there ever will be.

## Universal Military Training

EXTENSION OF REMARKS
OF
**HON. ALVIN E. O'KONSKI**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Tomahawk (Wis.) Leader:

MILITARY TRAINING

President Truman, in a joint session of the House and Senate Tuesday, advocated universal military training for the youth of this Nation. He proposed:

1. A year's military training for all young men when they reach 18 or when they graduate from high school, whichever comes later. In any event, a youth would have to enter training before his twentieth birthday. If a boy finished high school in his seventeenth year, he could enter training with his parents' consent.

2. A continued, small professional armed force.

3. A greatly strengthened National Guard and organized Army, Navy, and Marine Corps Reserves.

4. Establishment of a general reserve of all men who have passed through the universal training system.

On the face of the foregoing four-point proposal the Leader would hesitate to voice approval. Militarism is not at all to be desired. Militarism itself is a dangerous reef which can bring tragic consequences to a ship of state—witness the fates of Germany and Japan as due examples of militarism.

Youth training? Yes; but training in usefulness to peace as well as to war!

In this writer's opinion the redeeming feature of Mr. Truman's proposal lies in his further suggestion, that "the year's period could be used for self-improvement in the way of education and development of skills, raising the literary standards and improving the physical well-being of the Nation's youth." With the accent on the broadest interpretation of those points, and with a softer pedal on militarism, more peaceful use can be made of a year's training period! This we might favor.

Few boys are ready to fully resolve themselves to their futures when they graduate from high school. A year's "cooling off" period, prior to college entrance—with that year spent in becoming more familiar with the firmer realities of existence—would better qualify them to become more serious-minded in college work. It would temper them to a wiser choice of future professions and more earnest application of their abilities. This we know from personal experience!

Imagine—if you will—how much better we might have been prepared for war, had the hundreds of thousands of CCC youths throughout the land been taught even the meagerest details of the military code and manual of arms prior to December 7, 1941! But wait! Do you recall that such training was proposed in Congress prior to the bombing of Pearl Harbor? Yes, indeed, it was proposed prior to the Nation's draft which took effect much later.

And who opposed the training and teaching of military rudiments to the CCC boys? The loudest objector was Mrs. Eleanor Roosevelt—look in the record. She said, in effect, that to train the CCC youths in militarisms would be to invite war. And her late husband came into America's highest office in the spring of the same year—1933—that found Adolf Hitler elevated to the highest political office in Germany. Hitler and Roosevelt traveled parallel paths for 8 years—the former with militarism, the latter with pacifism (?)—until the bombing of Pearl Harbor rocked America on its heels. But Mrs. Roosevelt cried the loudest against military training, until a Congress invoked the Selective Service Act and called for 1 year's training.

History is an open book revealing the cycles of man's strength and weakness. And history teaches "again and again and again" that national regimes founded on militarism were and are doomed to suffer when they sought and seek oppression and conquest of peaceful nations.

Yet the more recent pages of history likewise show what tragic suffering befalls the peaceful nation that is not prepared to defend itself—and Poland, Belgium, and China are sufficient examples.

Let us have preparedness, particularly in this modern era of sudden invasion. But let that preparedness be a potential, only to be used to strengthen and enforce peace. Training for youth? Yes; there can never be too much training of youth, but let that training be focused on the building of peaceful and useful men—not aggressors.

---

## The Foster Parents' Plan for War Children

EXTENSION OF REMARKS

OF

### HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mrs. LUCE. Mr. Speaker, the following statement was received by me from the American Headquarters, 55 West Forty-second Street, New York City, of the foster parents' plan for war children. It describes the terrible need of Europe's children and offers one practical suggestion as to what we can do to meet that need in part.

The statement follows:

One million European children will perish this winter unless Americans send food, clothing, and vitamins overseas immediately to France, Belgium, Holland, and Italy, according to the Foster Parents' Plan for War Children.

This information comes to Mrs. Edna Blue, Plan executive chairman, from staff members in these countries who have just completed reports on the conditions of children overseas.

From Eric G. Muggeridge, plan executive secretary in England, who has just returned from a trip through France, Holland, and Italy, comes the following report:

"There is no peace where children are hungry and naked. The war is over but the children in Holland, Belgium, France, and Italy, would never believe you. One million children will die this winter in these countries unless help comes immediately from America. In every country that I have been in, the soldiers who fought to bring this war to its successful end have taken their own rations to feed the children.

"Witness if you can, men who have known battle, scraping their plates in the mess hall to make a stew for the hungry children who gather outside. Lines of hungry children begin to form at least 5 hours before the stew is ready to be given out.

"The only way I can tell you what it is like is to say that swarms of starving, ragged children devour every scrap of food, fit or unfit, that they can get hold of. Perhaps this must be seen first-hand before the world really knows that it must share with these starving children. I entreat you as I have always done—do not fail them, please."

Mrs. Ivy Mason, who is in charge of the work in England, writes:

"It is all very amazing to us to read about the reconversion in America, and how soon there will be more than enough food and clothing to go around—something really to look forward to now that the war is over. For ourselves, the outlook is rather bleak. In some ways the British people seemed happier and braver during the actual dreadful war than they do now. I sometimes wonder how I will be able to stand in line for hours and hours, and how I will be able to get along on such short food rations, to say nothing of clothes. I have long since stopped thinking about them.

"You mentioned in one of your letters that your efforts sometimes seemed very small as you shipped cases of clothing to us. I must certainly tell you right away that one decent item of warm clean clothing is a very big thing to us here. As you know, I have been able to send complete outfits to Belgium for the children and have also used a great deal of clothing for the Dutch children. You also know that clothing was shipped to France, so as you share with us we share with all those that it is possible for us to reach."

Letters from the Channel Islands report that conditions are grave. Although the children have been returned to their homeland, they are still desperately in need of help. Many children have no homes to return to. Many fathers and mothers have died through the long and bitter struggle. Others are missing, and it is hoped that they may be alive and in Germany where they were sent for enforced labor. Only the first step toward the rehabilitation of these children has been taken, and we are anxious to stand by them until they no longer need a helping hand.

Madam Madeline Bogaert reports from Belgium that she is meeting untold difficulties, but worst of all has been a widespread epidemic of infantile paralysis. All work for a while had to be suspended because of this. This was shocking news, and there seemed so little the plan could do about it. We hastened to send blankets and bed clothing which were badly needed. Many of these children will be confined to bed for some time and we are hoping to send toys and games to them in the near future. Not so long ago we were sending children toys and games to keep them occupied and diverted during air raids. The road back to normalcy for these little ones who have suffered the ravages of war does have many unlooked-for bumps which must be overcome.

To help in meeting the situation the foster parents' plan for war children has two suggestions. It appeals to Americans to support one or both.

First, it asks for clean, used clothing of all kinds for men, women, children, and babies. Shoes are needed most of all. Thousands upon thousands of families are trying to start life anew overseas and set up house again.

Have you curtains, towels, clean floor mats, tablecloths, napkins, unbreakable dishes, and children's toys and games? Will you please send your package to the Merchandise Receiving Depot, 991 First Avenue, New York 22, N. Y.?

Second, it asks that public or private schools, other organizations, or individuals, "adopt" children of 14 different nationalities in the 56 children's projects the plan operates in France, Belgium, Malta, Italy, and England. The foster parent receives a picture and case history of the child he is helping, and pays $15 per month. These cash contributions should be sent to the Foster Parents' Plan for War Children, 55 West Forty-second Street, New York 18, N. Y.

Thousands of French, Dutch, Italian, Belgian, and British children face the hardest winter of their young lives. America had a vital stake in the war. It is our duty to help the children of devastated Europe now before it is too late.

More than 30,000 children of all nationalities have been helped by the plan since its inception 8 years ago.

Foster parents include Mrs. James Cozens, Representative Clare Boothe Luce, Kate Smith, Dr. John Haynes Holmes, Allan Jones, Tallulah Bankhead, Cornelia Otis Skinner, Jack Benny, Fred Allen, Mark Van Doren, and Clifton Fadiman.

An international committee composed of the Earl of Listowell, the Viscount Cecil of Chelwood, Mrs. Harry S. Truman, Mrs. Eleanor Roosevelt, Helen Hayes, and Russell Maguire are sponsoring the work of the Foster Parents' Plan for War Children.

## General Motors Strike

EXTENSION OF REMARKS
OF

## HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

*To Members of All GM Local Unions, UAW-CIO, Greetings:*

The national delegates conference of the General Motors department, UAW-CIO, in session in the city of Detroit, December 8, 1945, has received a full report of developments in the strike of General Motors workers recommended by the conference November 20 and begun, by order of the strike strategy committee of the international executive board, at 11 a. m., eastern standard time, November 21.

We have read and considered the telegram of December 3, 1945, from President Truman, addressed to R. J. Thomas, president, and Walter P. Reuther, vice president and director of the General Motors department of the UAW-CIO, in which President Truman proposes to set up a fact-finding board without statutory powers and in which he requests all UAW-CIO workers now on strike against General Motors Corp. to return to work immediately.

We have discussed the President's message to the Congress of the same date, in which certain legislation is proposed which would abridge the constitutional right of workers to withhold their labor.

We have noted, in our discussion of the two items named above, the report of the members of the national citizens committee on the GM UAW-CIO dispute. After reading the 739-page record of the negotiations and seeking all available information on both sides of the controversy, the committee had the following to say under the heading of "Findings and recommendations":

"If President Truman and his advisers had had access to this record (of negotiations), we believe they would have been in a position to insist more firmly on the full use of the collective-bargaining process before suggesting intervention by the Government. We believe that the full possibilities of collective bargaining have not yet been exhausted, and that it is not too late to renew the efforts toward a voluntary settlement."

We believe this recommendation is entitled to great weight, respect, and consideration. The character and independence of the members of the National Citizens Committee on the General Motors UAW-CIO dispute, whose names follow, cannot be impeached: Chairman, Dr. Henry Hitt Crane, Central Methodist Church, Detroit, Mich.; vice chairman, Dr. Harry A. Overstreet, College of the City of New York, New York City; secretary, Mrs. J. Birdsall Calkins, national president, Y. W. C. A., New York City; Prof. Ernest W. Burgess, professor of sociology, University of Chicago, Chicago, Ill.; Rabbi Leon Fram, Temple Israel, Detroit, Mich.; Robert E. Garrigan, assistant director, New Council of American Business, Washington, D. C.; John B. Hanna, church counselor of the council for social action of the Congregational-Christian Churches in the United States of America, New York City; Leon Henderson, Research Institute of America, Washington, D. C.; Mrs. Dorothy S. McAllister, National Consumers League, Grand Rapids, Mich.; Frank W. McCulloch, director, James Mullenbach Industrial Institute, Chicago, Ill.; Mrs. Bonaro W. Overstreet, author-lecturer, New York City; Bishop William Scarlett, St. Louis, Mo.; Mrs. M. E. Tilly, secretary, Christian social relations, Woman's Society of Christian Service, southeastern jurisdiction, the Methodist Church, Atlanta, Ga.; Walter White, secretary, National Association for the Advancement of Colored People, New York City.

The committee's findings and recommendations are relevant to the conference discussion and are of such importance that we incorporate the full text in our report:

"1. After reading the transcript of the negotiations between General Motors and the UAW-CIO, we believe it would be a contribution to public understanding of the dispute if the transcript were published.

"2. The committee was impressed by the serious and statesmanlike approach of the representatives of the union, as shown in the transcript of the negotiations. If President Truman and his advisers had had access to this record, we believe they would have been in a position to insist more firmly on the full use of the collective bargaining process before suggesting intervention of the Government. We believe that the full possibilities of collective bargaining have not yet been exhausted, and that it is not too late to renew the efforts toward a voluntary settlement. We urge that the two parties immediately resume negotiations.

"3. The union's request to participate in a determination of the wage issue on the basis of full knowledge of the basic wage-price-profit relations is not a "taking over" of management. This request is based on a principle widely approved by responsible leaders of business, labor, and government. Although the setting of actual prices remains a managerial function, at a time when there is a threat of inflation, the level of prices becomes a matter of legitimate public concern.

"4. If collective bargaining fails to result in a settlement, we recommend that any fact-finding commission appointed by the President be authorized and directed to determine what increase in wages can be given on the basis of the corporation's ability to pay without increase in prices. The corporation's ability to meet a wage increase is a sound factor in the determination of wages, both in good times and bad.

"5. From the record it is clear that the union, in its refusal to accept a wage increase that involves price increases, has lifted the whole matter of collective bargaining to a new high level by insisting that the advancement of labor's interest shall not be made at the expense of the public. The union has shown a sense of social responsibility that indicates its growing maturity and is certainly to be commended. The public has a vital interest in holding the line of present prices against inflation.

"6. Because of confusion in the public mind, the committee wishes to emphasize that the record of the proceedings clearly shows that the union's proposition was not "30 percent or else." The transcript repeatedly shows that the union's 30-percent demand was subject to reconsideration if and when management proved the 30-percent wage increase was impossible without a raise in prices.

"7. Considerable data from the General Motors Corp. and the United States Government reports were submitted by the union in support of its contention that the corporation can afford a substantial wage increase without raising prices. Outside of a flat denial supported by figures based upon sources not open to the union, to this committee, or to the public, no convincing evidence has been submitted by the corporation to show that the union's wage proposal cannot be met.

"8. While future profits cannot be computed with absolute certainty, it is common practice to base the prospects of them upon experience and estimated volume and costs. The union is asking that wages be projected in such a forecast as other cost factors and profits are projected. It is the consensus of the committee that the union is making a legitimate claim in asking that wages be negotiated in terms of future expectations.

"9. With regard to the union's 24-hour ultimatum on the acceptance of arbitration, the public should be reminded that the ultimatum was on the question of the willingness of the corporation to arbitrate and not on the basic wage demands, which would have required longer consideration.

"10. The committee reviewed carefully the union's supporting argument for the maintenance of take-home pay. It was based on the thesis that purchasing power must be commensurate with production. The committee agrees with this principle of wages since without adequate purchasing power to buy the products of industry there can be neither full employment nor general prosperity.

We note that General Motors management, after taking 4 days to make up its mind, on November 23 replied to our November 19 proposal of arbitration with a refusal of arbitration not only in the form proposed by the union, but in principle as well.

We note that on November 25, 1 day after receipt of the corporation's reply to our offer of arbitration, Walter P. Reuther, UAW-CIO vice president and director of the GM department; wired the corporation, proposing that negotiations be resumed at the earliest possible date.

We note that on November 26 the corporation again violated the National Labor Relations Act in an even more flagrant manner than theretofore by refusing even to go through the motions of collective bargaining. In refusing to resume negotiations the corporation further violated the Wagner Act by setting up conditions to resumption of negotiations, namely, that:

1. We modify our unreasonable demands. (We have offered throughout the negotiations to reduce our demand for a 30-percent increase in wage rates if and when the corporation could show that it could not be paid without increasing prices.)

2. We abandon the attempt to negotiate wages on the basis of our (the corporation's) past profits, assumed future profits, and our selling prices. (We have contended that wages cannot be negotiated in an economic vacuum, but must be arrived at in relation to prices, profits, costs, and volume of production.)

3. We are now prepared to discuss wage demands on their merits. (What merits? The corporation gives no clue. What is the corporation's definition of "merits"? Is it the so-called going wage? With unemployment expected to increase, such a wage would be likely to become a going, going, gone proposition.)

We note that on November 27 the union filed with the National Labor Relations Board a supplemental charge that the corporation management was in violation of the National Labor Relations Act in refusing to resume even the pretense of collective bargaining and in setting arbitrary conditions for resumption at some later date.

This supplemental charge followed the original charge filed November 8, on which the National Labor Relations Board has taken no action. The Board remains silent on our charge that the corporation, by first advancing inability to pay and then refusing to supply factual support for that contention, is violating the Labor Relations Act in that it refuses to bargain collectively in good faith. It is a basic principle of law that justice delayed is justice denied. Every day that the Board's silence continues, in the face of the corporation's refusal to bargain in good faith (renewed as late as 5 p. m. yesterday, December 7) is a new denial of justice to 300,000 General Motors workers and their families.

We note that on November 27 the United States Director of Conciliation invited corporation and union representatives to meet

with him in Washington; that the union representatives accepted at once and did meet with him and the Secretary of Labor, at considerable expense to the union; that the corporation president not only refused to have corporation representatives attend, but we are informed that he subsequently played a record, taken from a tapped wire, of a conversation between himself and the United States Director of Conciliation, in an attempt to prove that the official was wrong in stating that the General Motors president had agreed to attend a conference with him. We suggest that the President or an appropriate committee of Congress may wish to ask the General Motors president for a play-back of records of any other conversations between himself and the United States Director of Conciliation, or to obtain the words or substance of such conversations in some other way.

We note that the General Motors president made his arrogant and contemptuous defiance of the President's agent more unmistakable by adding that he did not plan to go to Washington at any time in the future.

By November 29, the GM snub to the Federal Government had aroused so much public attention that the General Motors president held a public press conference, at which he said (quoting from page 33 of the GM transcript):

"If President Truman asked me to come down to Washington to see him, I would certainly go. If Mr. Warren (the chief conciliator) asked me to come down to see him, well, I have quite a few things to do too, see?

"QUESTION. Well, let's put Schwellenbach in the middle now.

"Mr. WILSON. All right.

"QUESTION. If he asked you——

"Mr. WILSON (interposing). He is gradually getting used to that."

We see that, while the president of the would-be sovereign state of General Motors consents to meet and listen to, if not to treat with, the President of the United States, he contemptuously brushes aside the officials appointed by the President and confirmed by the Senate to conciliate and mediate in industrial disputes affecting interstate commerce and the national welfare.

Significantly, at the same press conference (pp. 34–35 of the transcript) the following colloquy took place:

"QUESTION. Mr. Wilson, what would be your position on a fact-finding board here, to hear the arguments and make recommendations, without any power to carry them out or order the carrying out?

"Mr. WILSON. I discussed that a little bit over the phone with Mr. Warren. I pointed out to him that the trouble wasn't over the facts, because the facts of the past could readily be ascertained. The trouble was over what you did with the facts, and the uncertainty of the future.

"So that this so-called fact-finding idea, while it might be quite useful in something like examining into the question of, we will say, wages and rates for a utility, where you are just talking about a rather simple kind of thing, that might be helpful. But I doubted if it applied very well in a business like ours. * * * The best facts we have are the past operating reports of the corporation. They are clearly facts, and they are gotten up in good shape. But it is an awfully big kind of thing."

To us, this means that the General Motors management is against fact finding and advances the excuse that the corporation is just too big to handle in a fact-finding inquiry.

On November 29 President Truman supported the unanimous recommendation of the OWMR advisory board that negotiations be resumed.

Thereupon the General Motors president immediately announced that the corporation would not resume negotiations on the wage dispute.

On Monday, December 3, President Truman announced a proposal to Congress that the right of American workers to withhold their labor as the ultimate step in collective bargaining be abridged. At the same time he telegraphed to our union officials the proposal and request to which we have referred. The President had not consulted with our union officers, but on October 19 he had conferred with the president of General Motors, while the union was attempting to persuade the corporation to negotiate on our demands.

It is proposed that those who comply with Federal law and policy shall surrender unconditionally in this test of economic strength to which we have been forced and that the corporation management, which has treated Federal statutes, policies, and officials with scorn, contempt, and open violations, shall be declared the victor.

We are asked to retreat from economic democracy as furthered under the courageous leadership of Franklin D. Roosevelt.

We cite and endorse the words of CIO President Philip Murray, speaking of President Truman's legislative proposal for which General Motors and steel workers were to be the human guinea pigs:

"Does the Federal administration condemn the sit-down strike of American industry and put an end to the public financing of these outrageous practices?

"The sole answer of the Federal administration is to seek legislation directed against labor.

"Industry has refused to engage in collective bargaining. Industry has refused to meet with the union in the steel industry though specifically requested by the Federal Government. Industry has refused to accept voluntary arbitration in the automobile dispute.

"To all this arrogance the Federal administration yields in abject cowardice.

"Its rancor is confined to labor."

Examining the President's proposal and request, we find that:

1. The proposed fact-finding body, if it were able to get the relevant facts, would promote public understanding and support for our contention that the corporation can pay 30-percent higher wage rates without increasing prices.

2. If the General Motors workers were to return to work now, as requested by President Truman, General Motors management would, in all probability, treat the fact-finding board with the same scant courtesy it has extended to the President and would fail to furnish that body with any relevant facts worthy of the name.

3. If General Motors workers were to return to work at any time prior to the acceptance of the board's recommendations by the corporation and the union, they would be receiving less assurance of a wage-rate increase from President Truman's fact-finding board than they can get now from General Motors, namely, 13.5 cents an hour, or $1.08 more per 8-hour day, and without any assurance that the board's recommendations would be applied retroactively.

4. In view of the foregoing, we believe that this national conference of elected delegates of the General Motors workers would be acting in disregard of the interests of the workers, the union, and the national welfare, if it were to recommend acceptance of the President's proposal and compliance with his request.

We conclude:

A proposal to go back to work with no settlement of our demands, with no commitment that they would ever be settled, with no undertaking by the corporation to adopt any of the recommendations that might be made, would be unacceptable under any circumstances.

But in the circumstances which now exist, the President's proposal is ill-advised and undeserved, coming as it does after months of conscientious effort by the union to settle the wage dispute with General Motors on the basis of the economic facts and in strict conformity with the Government's wage, price, and collective-bargaining policies as promulgated by Congress, President Truman, Secretary of the Treasury Vinson, Secretary of Commerce Wallace, Secretary of Labor Schwellenbach, OWMR Director Snyder, and OPA Administrator Bowles.

President Truman's December 3 telegram to President Thomas and Vice President Reuther concluded with the words: "I hope very much that it will be possible for you to comply with this request of the President of the United States."

We regret that the facts and circumstances compel us to the conclusion that it is not possible for us to recommend to GM workers that they accept the President's request.

We recommend that you vote "No" on this request that you return to work. We further recommend that President Truman read the verbatim transcript of the negotiations and that he persuade General Motors to begin to bargain collectively in good faith. If that is done, we believe that a fair settlement based on General Motors' ability to pay 30 percent higher wage rates without higher prices can be reached and GM workers will then return to work as freemen.

Hold the picket line.

To the above, we must add a brief comment:

Unfortunately and unfairly, in our opinion, President Truman based his back-to-work request upon an appeal to the patriotism of General Motors workers. The patriotism of freemen enduring sacrifice in defense of their rights needs no defense. The thousands of veterans in our picket lines wearing the battle stars and ribbons of every theater of war answer the implied impeachment of our patriotism. These veterans by their presence prove that the peace will not be won until military victory is followed by victory in the economic field here at home. The American press and radio have fully and fairly informed the American public of our purpose to set a pattern for full production, full consumption, and full employment.

We endorse and repeat the statement of President Thomas and Vice President Reuther in their acknowledgment of President Truman's telegram:

"The American people know the contribution to the war effort made by the GM workers who were forced into the strike. They lost, according to Government figures, only six ten-thousandths of 1 percent of the man-hours worked. Mr. C. E. Wilson, who now defies their justified demands and who defies the law of the land which says he is compelled to negotiate with his workers, admitted at a recent press conference that the wartime record of GM employees was 14 times better than the average for the industry."

That is the wartime record of General Motors workers. It will stand. In the winning of the peace General Motors workers will continue to meet their patriotic responsibility as they see it.

Adopted unanimously by the national delegates conference of General Motors workers, UAW-CIO, in the city of Detroit, December 8, 1945:

Elwin J. Corbin, Chairman, National GM Negotiating Committee; Charles K. Beckman, Secretary, National GM Negotiating Committee; L. H. Adkins; Alfred Frederico; Edward Gurske; Edgar L. Crago; Harold McDougald; Fred Ascough; Charles Oswald; R. J. Thomas, President, International Union, UAW-CIO; Walter P. Reuther, Vice President, UAW-CIO, and Director GM Department; George F. Addes, Secretary-Treasurer, International Union, UAW-CIO.

## The Need for an Experimental Forest in Northern Wisconsin

EXTENSION OF REMARKS

OF

### HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

THE NEED FOR AN EXPERIMENTAL FOREST IN NORTHERN WISCONSIN

The unfolding of military secrets at the end of Warld War II has focused attention on the basic value of scientific research in helping to solve problems affecting the well-being of this Nation.

It is common sense to conclude that research can play as important a role in our peacetime way of life as during the emergency of a total war.

MANY BENEFITS

There are 10,000,000 acres of second-growth forest land in northern Wisconsin that can be rebuilt into a tremendous natural resource. Intensive research on a scale not approached today will help recreate this resource in a minimum amount of time. In terms of greater employment, a larger tax base, assurance of cover for wildlife, and a permanent background of green timber for recreation, it is a factor of immense concern to all of the State. Nearly 30,000 workers owe their livelihood to forest industries. With good forestry supplying raw materials, this number could be doubled.

This folder is published by Trees for Tomorrow, Inc., as a result of meetings and contacts with representatives of public and private agencies, farmers, industries, and individual citizens interested in the establishment of a center for forest research in northern Wisconsin.

The need for such a forest is only too apparent. We have agricultural experiment stations in the State that have proved their worth in the development of field crops and our great dairy industry. We do not have a large scale forest research center where studies, tests, and developments could be made for landowners who have soil suitable only for growing tree crops.

LOCALIZED RESEARCH

An experimental forest for northern Wisconsin will supply a focal point where forestry problems pertaining to our particular kind of trees and our kind of soil can be solved. It will establish a nearby outdoor laboratory where the results of experiments can be studied first hand, where experiments in the process of development can be watched and where questions on the over-all practice of good forestry can be answered.

There is widespread demand for more economic information in relation to the growing and harvesting of tree crops. An experimental forest provides such information. Because it is to everyone's interest, you are urged to investigate the need of an experimental forest and support a program to acquire it. Minnesota and Michigan have such forests. It is practical that all of Wisconsin look to the expansion of research facilities to help advance this State's important forestry program.

HOW A NEW RESEARCH FOREST CAN BE ESTABLISHED

Wisconsin has a huge investment in forest land. State forests, national forests, county forests, industrial forests, farm forests, and timberland owned by individuals represent an outlay of capital that runs into millions and millions of dollars. And Wisconsin is not without a well-rounded basic forestry program. However, foresters and forest technicians are the first to admit that additional research is vitally necessary if we are going to approach the task of reforesting the North in a manner comparable to the size of the job.

THE COST

An experimental forest for northern Wisconsin will cost $50,000 per year. No part of this sum need be spent in the purchase of land. We have thousands of acres of public-owned land that can serve this purpose. The $50,000 will be spent to secure a staff who would work under the direction of the Lake States Forest Experiment Station. This forest can be established through action of Congress. It is recommended that $50,000 be incorporated in the United States Department of Agriculture appropriation bill for 1947 under the heading "Forest Service—Forest management research."

The cost is small, about 0.02 of 1 percent when measured in terms of Wisconsin's $300,000,000 a year forest and wood utilization industry. It is insignificant in comparison to the $13 per $1,000 of investment industry spends on research.

All interested in the rebuilding of a more prosperous and well-developed North are urged to review the need for an experimental forest in northern Wisconsin and support this cooperative plan for acquiring it.

It has been suggested that this new forest be called the Bong Experimental Forest, as a memorial to Maj. Richard Bong—this Nation's ace of aces and northern Wisconsin's own native son—who gave his life in aeronautical research.

## An Amendment to H. R. 2742

EXTENSION OF REMARKS

OF

### HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. MURDOCK. Mr. Speaker, I have today introduced a new bill identical with the original act H. R. 2742, except for the addition of a proviso. In view of the fact that H. R. 2742 passed the House by unanimous consent on April 17 last, having been reported out of the committee unanimously, I am hopeful that the new measure will also pass the House with the same ease and dispatch, as no controversial issue has been added by the additonal proviso.

It may seem a bit strange and calling for an explanation that I have introduced this new bill with an amendment, identical with a measure which has already passed the House, but which has not been acted upon by the Senate. Of course, another way to handle the matter would be for the Senate to amend the former bill to the same effect. That, however, might require a conference and would probably cause a greater delay than for the other body to act upon the latest version of this bill directly.

My reason for proposing this further proviso to the original bill is that the original bill, according to the rulings of the Department of the Interior, does not cover lands in Arizona under the Boulder Canyon Project Act, as I had originally supposed it did. In order to make sure and definite that the preferential rights of veterans shall apply both to lands in Arizona, watered by the Gila Canal, and the lands in California, watered by the All-American Canal, it seems necessary that this proviso be written into the measure either in the House or in the Senate. As a matter of saving time, I have moved to provide for it in the House bill.

## What Should Chiang Kai-shek Do With the Communists?

EXTENSION OF REMARKS

OF

### HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mrs. LUCE. Mr. Speaker, last week it was stated in this House that I wanted the United States to support a one-man dictatorship in China. That statement was made with reference to my repeated urging that the United States support the National Government of China in continuation of the policy followed by the late President Roosevelt, President Truman, and three successive Secretaries of State, Messrs. Hull, Stettinius, and Byrnes, as well as the various acting Secretaries of State during these administrations.

The present Secretary of State, Mr. Byrnes, reiterated the need for continuing this policy when he said on December 7, that "we believe, as we have long believed and consistently demonstrated, that the government of Generalissimo Chiang Kai-shek affords the most satisfactory base for a developing democracy in China." Mr. Byrnes also told the Senate Committee on Foreign Relations that the long-range policy of the United States in China "is the development of a strong, united, and democratic" nation.

There can be little doubt but that this policy has the overwhelming support of the American public, which has little sympathy for one-man dictatorships wherever they may be. In order that there may be no further misunderstanding by anyone as to my exact position in regard to the place which the Chinese Communist Party should be given in the Chinese Government, under unanimous consent, I insert in the RECORD a speech made by me at Trenton, N. J., on October 9, 1945, 2 months before the present controversy on this subject arose in the House. The occasion of this address was the celebration of the anniversary of China's independence from foreign imperial rulers, and the establishment of the Chinese Republic:

CHINA'S CHALLENGE

Tonight on this great Double Tenth many eloquent tributes have been paid to our valiant ally, China. Her long resistance to Japan before we entered the war is our historical debt to her, for it saved us immeasurable costs in blood and materials. But that service to us, tremendous as it was, is only one great episode in the history of mutual aid between China and America. It is that mutuality of aid and obligations between our two great nations that we must all try to emphasize tonight.

For over 80 years America has played a notable part in helping China to be and stay a free nation. Back in 1861, when the freedom and unity of our own Nation was in grave jeopardy, we had still the strength and wisdom to strike shrewd diplomatic blows for China's freedom. Anson Burlingame, whom Mr. Lincoln and Mr. Seward had sent as Minister to China, found that nation weakened by opium wars and by corruption in high imperial places, and almost defenseless before internal dissension and the truculent trade and territorial demands of European powers. Western diplomats suggested that the outright partition of China would be the wisest, as well as to them the most profitable, solution.

But Burlingame, with a courage and vision worthy of Mr. Lincoln, wrought a miracle of diplomacy over the more cynical and experienced diplomats of other greater powers. His views of justice and good will prevailed. He stated and Seward, John Hay, and El hu Root in time established, the great principles of the "open door" for China; noninterference in its internal affairs by foreign nations, guaranties of Chinese sovereignty and territorial integrity, and equality of interest, obligation, and cultural and economic exchange between China and western powers.

After 80 years Burlingame's policy endures, not only as a great doctrine, but a great challenge to America. Have Americans the vision, the good will, the intelligence to walk with China in united friendship and respect toward the great common goals of progress and freedom? There is no time in history when America's answer to that challenge, that question, is more crucial to the future of both nations than in this very year.

For the first time since China became a Republic she has an even chance of becoming a great modern nation. That will not be easy. Her postwar problems are vast. Eight years of war have intensified the poverty of a nation which was, even before those years, terribly poor compared to our western democracies. Uncounted millions of Chinese have been killed and maimed; perhaps 30 million more are homeless. China's railways, mines, industries, roads, factories, dams, power plants, communications and agriculture are all in chaos. To gain the most elementary economic stability, she still needs much help from us, and this we owe her, for at last she has a chance. That chance must of course be predicated on the assumption that China and Soviet Russia will stay at peace with one another—that the present pact between Soviet Russia and China will be honorably observed to the letter by both parties. Surely, after the lessons of the past decade any other assumption is incomprehensible.

But China has notable assets too. She has a government and a leader which have surmounted every hazard ever offered to a struggling nation: revolution, civil war and foreign war, domestic and foreign intrigue, inflation, disease, and famine. China's leader, Chiang Kai-shek, has remained longer at the helm of the ship of state under incomparably greater difficulties than any other world statesman. He has stood the greatest test of statesmanship by bringing peace to his people and guarantees from Soviet Russia and the other great Allies of territorial and domestic sovereignty.

And this Chinese leader has presented his nation and the world with another great challenge—greater than any voiced by any other world leader. On VJ-day, Generalissimo Chiang Kai-shek delivered this message to the Chinese people:

"I am (said the Generalissimo) deeply moved when I think of the teachings of Jesus Christ that we should do unto others as we would have them do unto us and love our enemies. My fellow countrymen know that to 'remember not evil against others' and 'do good to all men' are the highest virtues taught by our own sages. We have always said that the violent militarism of Japan is our enemy, not the people of Japan. Although the armed forces of the enemy have been defeated and must be made to observe strictly all the terms of surrender, yet we should not for a moment think of revenge upon the innocent people of Japan. Permanent world peace can be established only upon the basis of democratic freedom and equality and the brotherly cooperation of all races and nations."

We westerners have talked much in times past of our spiritual superiority to the Chinese—without reflecting whether such superiority existed. Yet it remained for a Chinese leader—among all the leaders of the world on VJ-day, unmistakably to strike the most clear and profound Christian note.

No nation has fought so long, nor endured a tenth so much as China at the hands of the Japanese. Perhaps no other people, except the Jews of Europe, have suffered individually so terribly, and could be less criticized for overlooking the Christian doctrine of forgiveness. Under these circumstances, surely all men who believe that the truest expression of religion is the love of one's fellowman must thrill to these words of Chiang. Surely, if he means it, as he must, he ranks with the Lincoln who could say "with malice toward none and charity toward all." Let us accept his text and examine how Chiang may be expected to apply it not only to his foreign enemies, the Japanese, but to his domestic enemies, the Chinese Communists.

It is certainly not for us to direct any nation as to its forms of government or the solutions of its internal problems—certainly not that of China, the longest standing of all our global allies, the oldest and most sophisticated people in the world.

And yet as Americans we have a duty to the world to set forth our opinion on those forms of government which we have found in the past serve best to meet the demands of a common peace and prosperity. We can justifiably place our own experience at the disposal of China, which, like America, claims to love democracy.

Democracy to us in America means many things. But basically I think it means the civil rights of man—his right to say what he thinks, to think what he chooses, to worship as his conscience dictates, to assemble with like-minded people peaceably wherever and whenever he wishes. It means, as Lincoln said, that the government is the instrument of the people and can be changed by the people at their will through the free exercise of their ballot. It means, furthermore, that majority rule carries with it no right forcibly to liquidate the rights or convictions of the minority, which are always to be safeguarded within the framework of government.

With its blood and its aid and its share in victory, America has surely won the right to speak frankly to her friends. Are we not justified in admitting that these basic civil rights and freedoms have never existed throughout China, and particularly not during the terrible decade of the war for national existence? Is not America justified in believing that China has postponed the realization of democratic freedoms only because war made postponement necessary, and that with the blossoming of peace these basic rights will speedily be granted to the people of China? "Do good to all men" can have no other meaning in a true democracy.

Today, we and our great Chinese allies are no longer bound together by the flaming bonds of war. Our bond now and always must be a still stronger one—the ideals and principles that we both have declared to be our national aims.

Now, and not a year ago, comes the crucial test of China and America and their friendship. If either betrays these ideals, then the bonds of friendship will weaken and fall away.

China, during the war, was a house politically divided. The problems of political unity in China today stands before all others, even the tremendous economic ones which face her. I believe that lasting unity and true peace in China can come only through the basic precepts of democratic freedom.

It goes without question that no nation can exist if two independent governments share its sovereignty, or if two independent political armies stand marshaled face to face along the line of a shaky truce. There must be a basic solution. A China part Communist, part Kuomintang, and both parts armed, cannot endure. From that truth other truths follow: China is too vast and numerous a nation, its communications too inadequate, its local customs too varied to permit, short of tyranny, of one enormously centralized government organ controlling every detail of national life down to the remotest village. We Americans learned that lesson 170 years ago; we wanted unity, and yet our regional variety made impossible that integration of every State and every conviction into one rigid, central framework. We sought and found a solution that has endured to this day, a Federal union.

Within our Federal Union, the most diverse elements live at peace. The customs and laws of South Carolina or Nevada are different from those of Connecticut or Maryland, yet there is no doubt that we are one united people. Our Federal Union has been granted certain basic powers—national defense, foreign affairs, finance, interstate commerce—but other powers are reserved to the States, and sometimes futher subdivided from States to municipality and county. Each State chooses its own governors, makes its own criminal and civil laws, creates its own educational system, permits and regulates the political franchise to individuals, as it sees fit. By this system of unity in variety we have become a great nation.

China is even greater in numbers than America, and far behind us in communications and unity. It cannot wisely be controlled in toto from Chungking, or Nanking, or Peking by one man or even a group of men, however patriotic. Its customs are too disparate, its distances too great for governors of provinces to be selected by one central government, for universities in each province to be the creation of one central government, for its local tax laws and police administration to be the creation of one central government. It needs a central government to provide for its national defense, to direct its foreign affairs, to lay the foundations of national industrial reconstruction, to regulate its commerce, to collect taxes for these projects, and to do all those things without which no sovereign power can exist. But by attempting to do all, it will turn the clock of democracy backward, either to communism or fascism, but in any case to dictatorship.

There are certain areas in China which we all know are now dominated by the Communist Party. There are certain areas—much, much larger—controlled by the Central Government of Chiang Kai-shek; others where Moslem militarists are in control; still others where the people are ethnically and racially non-Chinese. All of these areas must make of their political armies one single force subordinated to a central government. But none of these armies will lay down their arms if they feel that their political convictions and beliefs, indeed, their very lives, are at the mercy of other revengeful political parties—if they believe that all they have gained in local reforms or local self-government during the war is to be wiped out by dictatorial edicts from far away.

It is the opinion of many thoughtful Chinese and Americans that only federal union offers a real solution for China's problems. A federal union, in which each political party should be allowed to organize and govern provinces they now clearly possess and hold, and the citizens of which are loyal to it. Each party must participate in one central government on a basis of representation; and to that one government, all armies in China must be subordinate. Further than that; the federal government should, as it

does in America, guarantee that every province should have a republican or democratic form of government as soon as it is politically possible. And the federal government should guarantee to every person—no matter what his political creed—the right to speak his mind and think his thoughts wherever he may be. Kuomintang papers must be allowed to publish in Communist areas, and Communist papers in Kuomintang areas. The federal government should allow no terrorist policy of any party to operate anywhere in any province. And out of all this, the world might soon see how truly great and noble a code is democracy, in our sense of the word, when practiced in China. If Chiang Kai-shek does unto the common men of China, who honestly believe in Chinese communism, exactly what he would have them do unto the common men of his political party, we need have small fear for the democratic future of China.

I say incalculable forces for peace and happiness have been tapped if 450,000,000 Chinese even partially follow this advice of their leader, if he follows it himself, and if we will follow it too: "Do unto others." There is no other course for China to follow, or America either.

And follow it we must, Americans, Chinese, everybody. The atomic bomb alone has made any other course impossible. The splitting of the atom, which has found the ultimate secret of material destruction, has also destroyed the supremacy of all material values. What remains, in an atomic age, alone indestructible, is mind and spirit. The Golden Rule of all religion, "Do unto others as you would have them do unto you," has become the political law of survival for government, for nations, for all mankind. To follow that law is what we and the Chinese, who owe one another so much in the past, owe the world in the future.

## Low Wages Will Destroy American Economy

EXTENSION OF REMARKS
OF
### HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. SADOWSKI. Mr. Speaker, there must be no drop in purchasing power. Our children and our servicemen must eat no less, simply because the war is over.

The Office of War Mobilization and Reconversion has reported that by the spring of 1946, wages and salaries will have declined thirty to thirty-five billion dollars from April 1945. By that time, weekly wages will be cut 28 percent below April 1945. Prices continue to rise.

As a result, it is estimated that take-home pay of the average worker will be about 10 percent below 1941. This means less food, less clothing, less medical care, in virtually every American home. The effects of such a sharp drop in purchasing power will be felt by the entire community.

These are the facts which confront the Nation in planning for a peaceful, prosperous, postwar America, an America in which our farmers, veterans, workers, businessmen, and others can live free of want and fear.

American labor has demonstrated its patriotism during the war, by its magnificent production record, its service in the armed forces, and its no-strike pledge.

Repressive labor legislation will not solve the basic economic problems which confront us, and will intensify the differences which exist among us at a time when unity is needed more than ever.

## National Benefits From Transportation Advantages of St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. PITTENGER. Mr. Speaker, one of the great frontiers as yet undeveloped, which will contribute to the wealth and welfare of every section of America is the St. Lawrence seaway and power project. It is not a sectional project. True, something like 20 States in the land-locked empire in the midwestern part of this country will be benefited by the St. Lawrence seaway, but so will every other section of the country.

COMPARABLE TO PANAMA CANAL

Some people will recall rather clearly what took place when the Panama Canal was dug and joined the Atlantic and Pacific oceans across the Isthmus of Panama. It was a tremendous undertaking and nothing like it has ever happened that has contributed so much to the progress of transportation not only on the North American Continent but in world-wide directions as well. I pass by the interesting history of that project; the objections to it—and these objections sound like those raised today against the St. Lawrence seaway—or the arguments for the project and other features. No one has ever advocated filling up the Panama Canal on the theory that it hindered human progress. World War II has been finished and the story of moving our Navy from the east coast to the west coast and the fact that such a procedure was almost indispensable, requires no elaboration. The St. Lawrence project is needed to supplement the Panama Canal project.

I quote, Mr. Speaker, from a pamphlet issued March 23, 1933, by Charles P. Craig, executive director of the Great Lakes-St. Lawrence Tidewater Association, in support of the ratification of the treaty signed on July 18, 1932, by representatives of the United States and Canada, for the development of this project. Mr. Craig packs page after page with his striking and challenging sentences, which, in part, are as follows:

I. THE RISE OF THE SEAWAY DEMAND

The civilization of the midcontinental area of North America expanded under conditions that enabled agriculture and industry to meet on a competitive equality with like producing areas in this and other lands. In this picture of opportunity the Great Lakes, one great commercial body of water reaching from within a short distance of the Atlantic to the midcontinent was a prime factor. Rail transportation leading down to these lakes; relatively low rates on bulk commodities moving eastward and ex-continent; low overhead costs of production, were among the remaining prime factors that gave the midcontinent its day of opportunity.

CAUSES OF THE MIDWEST'S DEMOTION

Today this region is demoted in its ability to compete in coastal, intercoastal, and foreign trade. The reasons are obvious:

1. The opening of the Panama Canal changed the transcontinental trade routes from land to water. The Pacific, Gulf, and Atlantic coasts were drawn close together in cost nearness. The interior of the continent, relatively speaking, was pushed far away. Because of this factor alone it became difficult if not impossible for the midcontinent to compete for either Pacific or Atlantic coastal trade, with producing or manufacturing areas favored by ocean transportation. The continental marketing zone of the Middle West was circumscribed. The limitation of its agriculture and its industries began.

2. Costs of rail transportation, increased during the perid of the World War, have remained far above the pre-World War level and the effect upon rates and traffic moving has been immediate and devastating. The midcontinental farmer or manufacturer, competing in overseas markets, finds himself faced by transportation costs that even in normal times place him beyond the zone of profitable prouction, and compel him to direct his production along lines that seemingly promise better returns, with the inevitable result that new congestions are created, new surpluses built up, and chaos, both agricultural and industrial, has resulted.

3. The effect of increased rail transportation costs, falling upon the farmer and manufacturer alike, is still further intensified by the fact that costs of ocean transportation have remained essentially unchanged. Together these two factors are producing a natural, a logical result. Industries of the midcontinental area dependent upon coastal or foreign markets cannot compete with the same industries located on the seaboard. The inevitable result is a continued trek of industries to the coast, carrying with such movement the workers necessary to their operation or leaving them behind to increase the problems of unemployment and lessened consumer demand. Agriculture, being unable to move, sustains the full brunt of this blow to its basic ability to exist.

The agricultural problem of today is fundamentally transportation. The problems surrounding the stagnation of midcontinental industry are fundamentally those of transportation. The restoration to the interior of the North American Continent of that status which it held before the events above-mentioned took place is basic to any and all forms of permanent relief. Extending the ocean 1,000 and 1,400 miles inland is the longest single step which can be taken in the direction of solving, naturally and permanently, the agricultural and the industrial problems of the midcontinental area and of the Nation as a whole. Bringing the Atlantic to all the shores of the Great Lakes restores the transportation equilibrium upset by the opening of the Panama Canal and places the midcontinent upon a competitive basis with relation to coastal and world markets. Such restoration is vital to the retention of the industries of the Middle West within the area in which they developed and from which they are now being driven, and it is absolutely vital to the future of agriculture.

The disadvantage under which the continental interior was laboring became apparent immediately after the World War. Industry and agriculture alike centered upon a possible remedy. The Great Lakes had been improved to the status of an inland ocean. The St. Lawrence River, except for limited

reaches, had every requirement necessary to ocean navigation. Around the rapids in the St. Lawrence were 14-foot canals that afforded insufficient outlet from the Great Lakes to the Atlantic.

MR. CRAIG'S ARGUMENTS CANNOT BE REFUTED

In the foregoing brief discussion by Mr. Craig of the needs of the St. Lawrence seaway and power project, you will get some idea of the intricacies of the transportation question and the way that progress has been stifled in the Midwest. In other parts of Mr. Craig's pamphlet, facts are set forth showing the advantages of the St. Lawrence project to other sections of the United States. Of course, what benefits one section of the country is bound to work to the advantage of other sections of the country. Mr. Craig shows the handicaps of the Midwest in 1933 and now, 12 years later, those handicaps still exist and still work to the detriment of our people out that way, as well as to all of the people of the United States.

When hearings were held by the Rivers and Harbors Committee of the House of Representatives here in Washington in June and July of 1941, a great deal of interesting testimony was developed and Mr. Craig's argument was expanded and fortified by another man from the Midwest. This man was John C. Beukema, of Muskegon, Mich., who represented the National Seaway Council and other groups at the hearings. Mr. Beukema was urging the ratification of the agreement between the United States and Canada for the construction of this project, which agreement had been entered into on March 19, 1941, and Mr. Beukema was urging the passage of H. R. 4927, which had been introduced in Congress for that purpose. He testified on Monday, July 7, and his statement in part was as follows:

MR. BEUKEMA TESTIFIES

The question we propose to discuss is the long-range usefulness of the project. What does this project mean to the United States in terms of increased production, and volume of trade; and in the opportunities afforded residents of one section of the country to purchase the products of other sections at less cost and at lower transportation charges?

It must be remembered that our coastwise trade in the United States exceeds in volume our foreign trade three to four times. It must be further remembered that the cost of transporting bulky commodities in a deep-draft vessel on a continuous water haul is about one-eighth to one-tenth of the corresponding rail charge.

Hence, the seaway has a vital significance to the citrus fruit growers in Florida, the canned-food processor in California, the lumber-mill operator in Oregon, as well as the Detroit automobile manufacturer and every coastwise resident who drives an automobile.

Summarizing, gentlemen, the St. Lawrence seaway and power project is primarily one of those great national investments that bind the people of every section of the country closer together by enabling them to exchange the products of their labor at less cost and inconvenience, thereby increasing the consumption of these products.

1. Growth of foreign commerce of the Great Lakes: This is not a new project. We are not asking the Governments of the United States and Canada to create a new facility, a currently nonexistent waterway. The seaway is operative today. It is carrying the substantial volume of tonnage, aggregating 9,236,318 tons the last postwar year.

Up to the outbreak of the war ships of well-known and established lines made regular sailings during the navigation season between Great Lakes ports and north European ports. The businessmen of Detroit and Muskegon are as accustomed to looking out of the windows of their offices and seeing Dutch and Norwegian flags flying from ships loading and unloading the port as the businessmen of lower Manhattan are to seeing those same flags flying from the masts of vessels in New York Harbor.

The one difference is that the ships which serve the lake ports are small vessels, with limited carrying capacity, usually not to exceed 1,500 tons, capable of navigating the present 14-foot canals in the St. Lawrence River. Most of them were specially built for this trade in Scandinavian yards. This commerce has developed since 1933, or since the previous treaty was defeated. It grew out of it.

IN CONCLUSION

It is submitted, Mr. Speaker, that Mr. Beukema not only brings up to date the arguments of Mr. Charles P. Craig but he develops the advantages of this project to all sections of the United States. In other parts of his testimony, which we do not here quote, he shows how the development of trade will follow, in immense proportions, the completion of the St. Lawrence seaway and power project. One of the familiar arguments against this project is the fact that it is not used now, and therefore is not necessary. This argument, of course, puts the cart before the horse. When the facilities are available, it has been the history of transportation that people will take advantage thereof, and this is especially true in connection with all waterway development in the United States. As Mr. Beukema points out in other parts of his testimony, the Atlantic seaboard will trade with the Midwest; so will the Pacific coastal cities. Vast trade possibilities, which are not now possible because of prohibitive transportation costs, will be opened up and America will be better off when the hopes of the friends of the St. Lawrence seaway and power project are realized.

---

## We Shall Need Professional Men and Women and Scientists If We Are To Keep in Step With the Progress of the Age

EXTENSION OF REMARKS
OF
### HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a letter which I received from my district written by a highly cultured, patriotic woman, whose views are worthy of serious consideration of those who are interested in the education of our youth. I, for one, believe that every young man now in the service who desires to enter college and has the qualifications to do so should be demobilized and permitted to return to his country and complete his education.

The letter reads as follows:

One night last week we who were listening to our radios, heard the announcement of the new directive to draft boards, instructing them to cease the drafting of students of science. This policy will react so unfairly on a group of men, now in the service, that I am moved to make an appeal in their behalf. My son typifies this group. At 16 years of age he had completed high school at Fredonia, N. Y., and a term's study at Fredonia State Teachers College—in a period of 3½ years. He maintained the highest average in Fredonia High School and in Fredonia State Teachers College and the highest regents average in Chautauqua County. He was awarded a State regents scholarship.

At 17, he enrolled at Rensselaer Polytechnic Institute, Troy, N. Y., majoring in mathematical physics. While in attendance there he maintained the highest average in his class of 300 in physics, chemistry, and mathematics—led the school in his last semester—was awarded a school scholarship. He became a special student, taking graduate seminars, and assisted in the laboratory. In an interclass thesis competition, his was judged best in all classes, was printed by the college and placed in the library. Incidentally, the subject matter of his thesis dealt with the potentialities of the atom—and this was in April of 1943. While in school, he took the Navy V-12 test, was called up for a physical examination but was rejected for poor vision. At 18 he had completed 2 years of study at RPI. He immediately volunteered for the draft and was accepted by the Army in July of 1944. He was given 3 months of basic training at Camp Croft, S. C., and was then assigned to ASTP. He was sent to North Carolina State College at Raleigh and enrolled in the fifth form in an electrical engineering group. While there, he received a designation for scholastic excellence and was awarded the good conduct medal. He remained at NCSC for 9 months or until graduation. His next assignment was to a Signal Corps Battalion at Fort Monmouth, N. J., where he anticipated the opportunity to enroll for OCS. However, the entire ASTP graduating class was sent to Camp Crowder, Mo., for a course of instruction in Morse Code. It is interesting to note that at each of the several camps where my son has been stationed the personnel officer has confidentially told him that his AGCT score or rating is among the highest on record.

Then came VJ-day. On the morning of the day he was to have left for Fort Monmouth, all assignments to that point were canceled. In October he received his orders: "T. S. U. Alaskan Communical System, Seattle, Wash., for subsequent shipment overseas." During a year and a half in the Army, he has received no practical experience in preparation for this assignment, with the exception of 8 weeks' training in Morse code. It now develops that he is to become a radio receiver's attendant, whatever that is.

And today, the 5th of December, my son is leaving Seattle for Fairbanks, Alaska. If this follows the established pattern of Alaskan assignments, it means 2 years of isolation, 2 years of stagnation. In 2 months he will be 20, and under the present point system he faces the prospect of several years in the Army. What, except uncertainty does the future hold for him? His talents are being wasted and at the only time in his life when capacity for study is greatest, education is withheld from him.

Yes, I endorse nondrafting of students of science—though I do think it will result in a large crop of would-be scientists out of proportion to the number enrolling for other professions. As you know, I live in a rural community and observed how many healthy young men, heretofore not agriculturally inclined, turned their hands to the plow when proffered farm deferment. I maintain that any national policy that puts its faith for

future scientific development in its unknowns and restrains the education of its potential scientist—students who have already displayed scholastic superiority in this field—is short-sighted and unsound. Are those students who, in time of war, put service to country above every other consideration to be penalized in time of peace? What price patriotism! Extension of privilege in peace is as grave aproblem as division of burden in war—but is this evidence that this problem is being met with the same degree of intelligent foresight that characterized the war effort?

I have been particularly interested and impressed by the news stories carried in our press, telling of the courageous battle you are waging in behalf of the servicemen—your efforts to correct injustices, inequalities, and prejudices now confronting those seeking discharge. Your efforts are to be commended.

## The Bulwinkle Bill

EXTENSION OF REMARKS
OF
### HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. GOSSETT. Mr. Speaker, Mr. Arne C. Wiprud, former special assistant to the Attorney General in charge of the Transportation Section of the Antitrust Division of the Department of Justice, recently made a speech which all Members of Congress should read. It gives some of the reasons for my opposition to the so-called Bulwinkle bill. We should exercise greater care and diligence in protecting the public from domination in transportation matters by the Association of American Railroads.

The speech follows:

PUBLIC TRANSPORTATION AND THE ANTITRUST LAWS

(By Arne C. Wiprud)

A truly great opportunity lies ahead for the transportation industry, greater than ever before. The widespread distribution of war industries now being converted to peacetime use should increase greatly the national production and income and distribute more equitably the Nation's wealth. This means larger tonnages to be transported and increased demands for travel. The exigencies of war have also developed new technologies that can be applied to all modes of transport. These can bring about enormous improvements in transportation facilities and services, and reduce costs, which means further increases in traffic. Whether the transportation industry can rise to its great opportunity depends upon the practices it pursues and the policies of government.

History records that the practices fostered by private groups in the industry have restricted the development of public transportation. They have suppressed technological advancement; they have supported high rates; they have increased the cost of transportation; and they have protected inefficiencies. These restrictive practices have had consequences disastrous to the industry and the Nation.

The question naturally arises, Why should any industry, especially an industry that depends upon and therefore should encourage public support, pursue practices productive of destructive results? The answer leads first to a consideration of railroad finance.

The investigations of congressional committees, notably the Pujo committee, the Pecora committee, and the Wheeler committee have laid bare the methods by which such banking houses as J. P. Morgan & Co. and Kuhn, Loeb & Co. have exploited railroad after railroad in all parts of our land. Their ruthless exploitations—from the Morgan-created New Haven-Boston & Maine railroad monopoly to the recent financial wrecking of the Chicago, Milwaukee and St. Paul Railway Co. by Kuhn, Loeb & Co.—have touched and blighted every major railroad company and every community. In cynical disregard of law, particularly the Federal antitrust laws, these railroad banking houses went about their business of sacking the railroads. Their victims—large and small investors who often lost their all, farmers, small businessmen, and the public, which pays the transportation bill—have protested in vain. No force, not even Government itself, has yet been strong enough to stop their destructive rule.

There are those who say that this is an old story—that it is "rattling the ancient bones of antiquity." But the record shows that it is an old story ever new, for the baneful influence of these banking houses is still with us, like the Old Man of the Sea.

The scheme of railroad financing which these banking houses have saddled on the railroads, with few exceptions, lingers on. It is the source and center of the railroads' difficulties and the real cause of the restrictive practices in the industry. Bonded to 60 percent of their capitalization, with generally no sinking fund provisions to reduce this top-heavy debt, railroads have been hard-pressed to pay interest charges. When the bonded obligations matured, they were promptly refunded or extended, and usually increased, and the refunding or extension bonds sold to the public—at handsome profits to the bankers in the form of commissions and fees.

This scheme of financing, which always increases but never reduces the aggregate of railroad debts, forced railroad managements to suppress improvements, curtail services, and to seek higher and higher rates all to the end of preserving this unsound scheme of financing, thereby insuring a continuous and profitable income to the bankers. If rate increases prove insufficient to pay interest on the bonded debt, the railroad goes into bankruptcy, and the investor pays through the loss of his investment.

On May 8, 1944, the Interstate Commerce Commission required competitive bidding for railroad bonds. Independent railroad managements and independent banking houses long fought for this opportunity, supported by such outstanding national leaders as President Truman, then Senator; Senator Wheeler; Senator Shipstead; Mr. Whitney, president of the Brotherhood of Railroad Trainmen; and Mr. Johnston, chief grand engineer of the Brotherhood of Locomotive Engineers. This should prove a great step toward breaking the control of J. P. Morgan & Co. (more recently Morgan, Stanley & Co.) and Kuhn, Loeb & Co. over the marketing of railroad securities, provided they do not find some way to circumvent it.

Progressive railroad managements, independing of Morgan or Kuhn-Loeb influence, have brought about revisions of their capital structures in accordance with sound financial principles and drastically reduced their bonded debt. Though some were on the brink of bankruptcy, their rehabilitation was accomplished without the outrageous destruction of security values characteristic of financial reorganizations shaped under the guiding hands of railroad bankers. Thus these independent managements have restored the integrity of the railroad dollar. This is reflected in the fact that the market value of the securities of such reorganized railroads are today in excess of Interstate Commerce Commission valuations.

The scheme of collusive railroad rate making established under banker rule to support unsound railroad capitalizations also lingers on. Following the repeal in 1933 of the mandatory provisions of the Transportation Act of 1920, which sought to insure by Commission action a fair return on the value of railroad properties as a whole, the railroads' own private rate-making machinery was brought into full play. Control was obtained through private rate-making conferences of carriers organized regionally and integrated into a Nation-wide set-up closely controlled at the top. The over-all organization is the Association of American Railroads. For the western United States a special set-up was established, called the western commissioner plan. Thirty-five railroads operating in that vast territory signed an agreement to insure monopolistic control over transportation rates in the West. They not only agreed to eliminate all competition in the making of rates but vested ultimate authority in a committee of bankers and businessmen of related interests that held their meetings at 40 Wall Street. Prominent members of the committee included representatives of J. P. Morgan & Co. and Kuhn, Loeb & Co. This situation prompted the chairman of the Senate Interstate Commerce Committee, Senator WHEELER, to state that "it evidences quite clearly the control the powerful nonrailroad interests in the East have over transportation rates in the West." The Federal Government has instituted a suit charging, among others, that this rate-making combination violates the Sherman Antitrust Act. And the State of Georgia has filed an original suit in the Supreme Court of the United States charging that a combination of railroads in the East to fix rates in the South violates the Sherman Act.

Private rate-making conferences, patterned after those in the railroad field, have been established by motor and water carriers. Agreements have been entered into by the organized rail carriers and the organized motor carriers. Thereby motor-carrier rates have been forced upward to the level of rail rates, and water-carrier rates arbitrarily related to rail rates. And an agreement between the Railway Express Agency and the domestic air lines provided that air-express rates should be at least twice rail-express rates.

Thus, rates by all modes of transportation were illegally raised to an artificially high level without regard to the actual cost of transportation.

This colossal rate-fixing scheme is without parallel in the American industrial and business world. But it works—in the interests of Morgan, and Kuhn, Loeb.

The efforts of the banker-ruled railroads to suppress the development of competing forms of transportation has also been a subject of Senate investigation. Busy with suppressing competition, they overlooked opportunities to improve their own facilities and services. The same manufacturers build the same cars, locomotives, and other equipment year after year, with little change in design, efficiency, or price. The whole technology of railroad signaling and communication is an anachronism. Trainmen still go down the track with lantern and flare to protect trains at emergency stops. The Federal Government has to date instituted at least one suit to break up an alleged illegal combination in the railroad equipment field. The monopolistic practices which enabled the Pullman interests to prevent the construction and use of modern lightweight sleeping cars is a matter of court record. By the terms of the western agreement, 35 railroads operating west of the Mississippi River agreed to delay improvements in railroad equipment, curtail new services, and suppress proposals to speed up freight and passenger schedules. Through such collusive practices, the equipment of railroads has become deficient in quantity and quality.

The whole public-transportation program of the banker-ruled railroads is one of planned scarcity and high price. Their monopolistic controls have drained carriers' revenues through financial exploitation, restricted the development and use of modern transportation equipment, retarded air-freight transport, hindered the operations of motor carriers, obstructed the building of pipe lines, and fixed rates in all fields of transportation. Government policies have contributed to some of these results. The Government has supported private group rate making through extensive application of its minimum-rate power and otherwise; and it has discouraged the full use of inland waterways.

What does this history of public transportation mean to you and I who have given thought to the future? The conclusion is inescapable that the continuance of monopoly controls and practices in transportation will destroy the last vestige of private enterprise in public transportation and with it private ownership and operation of our public transportation systems. Only through the restoration of competition can this industry be preserved as a legitimate field for private enterprise. Competition, which is basic in our economic philosophy, is not alone essential to the maintenance of private enterprise in transportation, but to development of truly modern transportation systems to serve the needs of an expanding national economy.

But monopolists, with their profitable monopolistic practices, die hard. Those who dominate "a monopoly toll bridge and collect easy fees" will tenaciously fight for that profitable advantage and ever seek to enlarge it. And this is true in public transportation. Witness the efforts of the so-called Transportation Association of America, in collaboration with its sponsor, the Association of American Railroads, to seize monopoly power over the public domain through the establishment of "competitive (sic) integrated transportation systems." Their plan contemplates the creation of corporations which would control and operate all rail, motor, water, and air transport facilities throughout large geographic areas. The idea seems fantastic even from the standpoint of managerial competence. Yet, to save their monopoly positions and to avoid the competitive challenge of newer forms of transportation, this program is vigorously advocated by these organizations which represent the greatest concentration of financial and economic power in this country. If they succeed all the benefits from past and future public expenditures for highways, airways, and waterways would accrue solely to these monopoly groups. It is encouraging that President Truman, then Senator, publicly condemned this scheme, characterizing the proposed "competitive integrated systems" as "cartel-monopolies."

Another source of danger to the national well-being is the so-called Bulwinkle bill now pending in Congress. This adroitly drawn bill would legalize agreements among competing carriers within and between all forms of transportation subject to the Interstate Commerce Act. Thus agreements relating to transportation rates, technology, and services would be exempt from the prohibitions of the Sherman Act. The Bulwinkle bill would thereby not only perpetuate monopolistic rate making by each form of transportation but would authorize the integration of virtually all forms of transportation insofar as private rate fixing is concerned. In short, rail-, motor-, water-, and pipe-line-carrier representatives would be authorized, if this bill becomes law, to sit around the table for the purpose of fixing the transportation rates of the country. If automobile manufacturers, the steel industry, the processors of food sought such authority the people of the Nation would be shocked. But the Association of American Railroads and its Transportation Association of America assure us that public transportation companies constitute a regulated industry and therefore abuse of such tremendous power is not possible. Of course, they recognize that any attempt to so fix rates without congressional sanction would run afoul of the Sherman Antitrust Act. This was reaffirmed in the now famous case of *The State of Georgia* v. *The Pennsylvania Railroad Company et al.*, decided March 26, 1945, which I recommend every member of this organization read with care. So they propose through the Bulwinkle bill to repeal the Sherman Act as applied to all combinations for the purpose of fixing rates.

Mention should be here made of the effect of the passage of the Bulwinkle bill upon the Government's suit against the western railroads, the Association of American Railroads, J. P. Morgan & Co., Kuhn, Loeb & Co., and others, and upon the original suit of the State of Georgia against the eastern railroads, and others. The Government's suit charges a combination and conspiracy to restrain trade and commerce in the western part of the United States and to monopolize. The State of Georgia case charges a conspiracy among defendants in restraint of trade and commerce among the States so as to discriminate against Georgia. Have any of you read the complaints in these cases? If you have not, you should, and then ask yourself (1) whether the practices therein charged should be continued in the public interest, (2) whether the practices therein charged are necessary to the proper and efficient functioning of the transportation industry, and (3) whether you, as advocates of sound transportation policies, would want the practices therein charged, if proved by the Government, perpetuated. But if the Bulwinkle bill becomes law the Government and the State of Georgia may never get an opportunity to prove them. If you have any doubt on this score read the printed hearings of the House subcommittee on the Bulwinkle bill. Yet, the chairman of that committee did not want to hear testimony on the serious charges by the Government and by the State of Georgia of conspiracy and collusion by carriers, their bankers, and others, which the bill would legalize.

I predict that if the Bulwinkle bill becomes law the private companies operating public services in all fields of transportation covered thereby will raise rates to still higher levels, with greater abuses than existed in the past. This will be so because no public regulatory agency, no matter how competently staffed, could possible police such a gigantic combination to fix the prices that the public must pay for the privilege of using any form of public transportation. Indeed, the power of such a monopolistic combination to resist control would certainly lead to a break-down of regulation, if it did not result in the regulatory agency becoming the subservient captive of the regulated price-fixing monopoly. The Bulwinkle bill is truly the legislative road to economic serfdom.

Can it be that managers of transportation companies take the position that they cannot function as private enterprises unless they can conspire against the people of the United States? I think not. My belief is that all such schemes (including that embodied in the Bulwinkle bill) emanate from the same banker-controlled groups which seek to perpetuate financial exploitation of public transportation. Certainly these schemes are no more essential to the proper functioning of transportation services than in any other industry. There is a legitimate area of collaboration among railroads in the making of joint rates (as provided by Congress in the Interstate Commerce Act) which the Supreme Court clearly recognizes in the Georgia case. But this will not serve the purpose of the bankers. They boldly seek to fasten permanently on the Nation their vast Nation-wide private rate-fixing machinery, with all its coercive appellate machinery, headed by the Association of American Railroads, which has eliminated virtually all competition in the making of rates within and between all forms of public transportation.

Thus it appears that the Nation is at the crossroads with respect to its transportation policies. Which shall it be, monopoly and stagnation or competition and progress in an expanding national economy? In making the choice, it must be recognized that public transportation can and should be more than an instrument of carriage. It can tie industries into an organic economy; it can enlarge market areas; it can help to develop regions and resources; and, finally, it can be a strategic aid in the maintenance of free competition—the very basis of our private-enterprise system. The people, through Congress, should demand that private companies performing public transportation services rise to their great opportunity to perform these functions in the new era that lies ahead.

## An Example of Statesmanlike Long-Range Planning

EXTENSION OF REMARKS

OF

### HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 6, 1945*

Mr. MURDOCK. Mr. Speaker, under permission granted me to extend my remarks, I include therein an address given by Harry M. Bashore, Commissioner, Bureau of Reclamation, Sacramento, Calif. I want to say, prefacing the Commissioner's address, that I wish to furnish it thus for public information not only because of the interesting facts contained therein but as an example of advance thinking on great reclamation projects.

When we see a finished job of construction covering many decades, or possibly centuries, which is a result of long-range planning our admiration is excited almost as much by the planning thereof as by the execution of the plan. This goes for any physical building, whether it be a medieval cathedral or even our beautiful old Capitol Building of the United States in which our sessions are held, but it goes also for other types of building in statescraft or of the things of the mind or of the spirit as well as the works of man's hands.

The reclamation work of our Government in the semiarid western portion of our country has been one of brilliant success during its 43 years of service. It has laid the basis of new communities and has given rise to new wealth, but its earlier achievements are but small as compared with the great tasks ahead. To fulfill those tasks requires long-range planning on a much bigger scale than heretofore. The great Central Valley in California is one of several areas in the West where coordinated planning to achieve maximum results is necessary. I think Commissioner Bashore, in this address, illustrates such long-range coordinated planning. The designer of a medieval cathedral never lived to see the completion of the structure. It will take a long time to complete the greater western projects, so long that few, if any, now

engaged in this reclamation planning will live to see their completion, but in any case those who have a part in the foundational work can envision what they will be on completion.

The Commissioner's address is as follows:

I am grateful to your distinguished Governor for the opportunity to appear before the California Water Resources Council today. As a representative of the Secretary of the Interior and also in my own capacity as Commissioner of Reclamation, I want to speak to you about the plan evolved in the Department of the Interior, in cooperation with many Californians, designed to promote the best interests of your State—one which favors no special interest or locality.

The plan proposed by the Bureau of Reclamation is the only plan for the full coordinated development of the Central Valley resources which California has ever received. It is the only comprehensive plan for the conservation and use of water now before the State.

A few figures will help to make clear its magnitude.

The initial stage of development, which is now under construction and involves the completion of the Shasta Reservoir and power plant, the Keswick afterbay, Friant Reservoir, the Delta cross channel, the Contra Costa Canal and distribution system, the Friant-Kern Canal, the Madera Canal, the Delta steam power plant and part of an electric transmission grid, is estimated to cost between $350,000,000 and $400,000,000 of which more than $160,000,000 already has been expended.

The second stage of construction, which is recommended for authorization in the present basin-wide plan, and is being considered by Governor Warren, will require about 15 years to complete. It involves 30 major projects totaling in cost about $527,000,000.

The third stage of construction which will be undertaken when the projects are needed and funds become available, will involve 36 additional projects at a total cost of some $900,000,000.

These three stages add up to an investment in California of about $1,800,000,000. This is two and one-half times as great as all the money that has been spent by the Tennessee Valley Authority, and almost twice what has been invested by the Bureau of Reclamation in all of our 17 Western States in its 43 years of successful operation. I am sure that your imaginations need little stimulation to visualize what this would mean to California while construction is underway.

But the immediate benefits while this project is under construction are insignificant when compared with the long-time benefits to California for many, many years after the work has been completed.

There is no problem here as to whether the people of California will lose or profit by this enterprise. Some few seem to think there is a question whether they will profit more if their Federal Government undertakes this development for them, or if it is constructed and operated by the State. There is also the question of how the resulting additional income to the people of California is to be distributed, whether the benefits will be widely spread among all of the people of your State, or whether they will accrue mainly to specially favored groups. The plan offered by the Bureau of Reclamation is designed to effect the widest and most equitable distribution of benefits.

Now let is take a look at what some of the benefits of this development can be. When the plan is completed about twice as much farm land in the Central Valley will be irrigated as in the past. During the period 1928 through 1934, irrigation in the valley consumed on the average 7,450,000 acre-feet of water for irrigating 2,970,000 acres. The ultimate plan calls for the use of 16,600,000 acre-feet on 6,580,000 acres. In passing I would like to point out that another plan of development provides water supply for new irrigation of only 1,034,000 acres of land as against water supply and transfer canal facilities for more than 3,000,000 additional acres by the Bureau of Reclamation.

About one-third of the hydroelectric power generated will be used for pumping irrigation water. It is clear, therefore, that there is a direct connection between the cost of water delivered on the land and the cost of electric current. Unless there is low-cost power there cannot be low-cost irrigation water for most of the valley, although a few especially favored areas might benefit by local conditions. The comprehensive plan includes 28 power plants at multiple-purpose reservoirs and afterbays which would increase the capacity of hydroelectric plants in the basin by 1,697,000 kilowatts. These, together with 750,000 kilowatts in supplementary steam plants needed ultimately to firm the hydroelectric output in dry years, would aggregate 8,100,000,000 kilowatt-hours of firm power annually.

Navigation of the Sacramento River also would be improved and many new recreational opportunities afforded. River conditions for fish life would be improved, although reservoirs on some streams might have a detrimental effect by cutting off spawning areas. Most, if not all, of the fish values can be saved only by arranging the proper sequence of construction.

Translating these benefits into dollars and cents we get something like the following: On 2,000,000 acres of land now under irrigation supplemental water would produce an annual increase of about $30,220,000 in crop values. New irrigation water on 3,040,000 acres would produce some $198,000,000 in additional crop revenue each year. These sums can be multiplied several times if one wishes to estimate income produced by transportation, storage, processing and packing, wholesaling and retailing of the products produced, although much of this beneficial income would be to the Nation as a whole.

An annual income of approximately $28,000,000 would be received in revenue from the disposal of power. Flood control benefits measured by reduction of flood damages and by increase in land values would average around $8,000,000 a year as would also benefits from municipal and miscellaneous water supply developments. Benefits from navigation improvement would be about $1,314,000.

This places the annual direct benefits of full development of Central Valley resources at about $275,000,000 yearly on an investment of about $1,800,000,000—a return of more than 15 percent per annum. And this does not include the income and profit taxes that would flow back in hard cash to the Treasury as a result of its outlay on wealth creating properties. When all of this is taken into consideration the Bureau's proposal looms up as just about the most profitable disposal of funds the Government could possibly make, if it were concerned with nothing else than increasing national income and resulting Treasury receipts. If there were no other reason for this investment, retirement of substantial portions of the national debt would be enough to justify it.

Figuring the benefits to agriculture in terms of numbers of farms, the increase would be from about 59,000 farms in the Valley in 1939 to some 110,000 farms when the project reached completion. Farm income would have been increased in the same period from about $220,000,000 annually to $420,000,000—a boost of more than 90 percent. An increase of 90 percent in income for California farms is worth considering.

Agricultural expansion cannot take place on such a scale, of course, without a corresponding growth in industry, service occupations and trade. It is estimated, for instance, that as a result of new irrigation developments alone the number of manufacturing establishments would increase from 1,600 in 1939 to about 2,200 when the project is completed, together with an increase in the number of workers from 44,000 to about 60,000 and a jump in the value of products manufactured from $625,000,000 to $850,000,000—a jump of 36 percent—something for California manufacturers to think about.

The number of proprietors of service establishments, it is estimated, would increase from 7,400 to 11,100, with an increase in the number of workers from 9,700 to 14,500, while the dollar value of sales would go up from $37,200,000 to $55,800,000. This would be a 50-percent increase in sales for service establishments.

The number of retail and wholesale trade establishments would jump from 23,000 to 31,000, with an increase in the number of wage earners engaged in them from 63,000 to 86,000, and the value of sales up from $900,000,000 to $1,215,000,000, or one and one-fifth billion dollars—a gain in trade of 35 percent.

The first two stages of the program would provide about 550,000,000 man-hours of employment at the construction sites and in manufacturing plants throughout the Nation. Translated into men at work, this means the employment of some 18,000 men for 15 years.

Others wil describe to you, or already have described the details of the Department of the Interior plan. I shall, however, ask you to remember this—that the operation of the system of reservoirs and canals required to develop completely irrigation and power and to provide for control and use of flood waters in the Central Valley is so complex that unless its control is centered in a single agency; and carried out under a systematic plan, full utilization of the basin's water resources cannot be attained. Full use of available water supplies calls for facilities designed to conserve water in surplus areas and to conduct it long distances to deficiency areas and to new lands. This the Department of the Interior proposes to accomplish by a system of 38 major reservoirs intricately interconnected by hundreds of miles of main canals. The entire system was designed to permit fluidity and efficient operation in the transfer of water from key reservoirs to a multitude of different places to meet the ever-changing requirements of supply and demand.

The relation of the Folsom Reservoir to the operation of the comprehensive conservation plan provides a typical illustration. Water stored in the reservoir could be delivered directly by any one of three main routes into the interconnected system of canals traversing the valley and be routed for irrigation use to almost any area in the basin floor west or south of the reservoir. In addition, reservoir releases would be controlled for power generation and for regulation of flows to maintain fish life along the American River, both of which are conservation uses of the stored water. The disposition of stored water at any given time would depend upon a number of variable factors intimately related to the operation of the basin project as a whole, including storage in other reservoirs, snow storage, location and amount of water demand, existing flows in alternate-transfer canals, power generation requirements, flood protection, and the releases required to maintain favorable flows for fish life.

In any plan that looks to the comprehensive control and conservation of the basin's water resources it is inconceivable that the Folsom Reservoir, or any one of a number of key units, could be operated separately. To permit anything resembling efficient operation, it would be imperative that such key units be managed in close coordination with all other units. Unified control must be achieved.

Unified repayment policy is almost as important as unified operation. If water rates are negligible in one area, and set at a figure designed to effect repayment in another, you have an unbalancing force at work that will almost certainly play havoc with land values and create dissention, instead of the unity required if Californians are to obtain congressional support.

You will remember that the State of California at one time attempted to finance this development itself, but because the sums of money involved were so large—too large for either the State or private capital to finance—it turned to the Government in Washington. Now the Federal Government to perform its functions justly must consider the interests of all of the people, despite the fact that it is sometimes regarded as a greedy monster feeding upon the people through taxation. Congress represents the humid East as well as the West, and to obtain the necessary funds with which to finance so vast a program as that proposed for the Central Valley of California it will be necessary to persuade the Senators and Representatives who come from the East that the Central Valley project is for their benefit as well as yours. This means that the people of California must assume a reasonable attitude in asking Congress to grant funds for their benefit, and they must show that the development of their western part of the country will reflect prosperity to every other area.

May I also remind you that in considering the problems of any river basin that the Bureau of Reclamation must take into consideration the welfare of all of the people of that basin, rather than the interest of one group or another seeking special benefits. This must be done if we are to keep this Government of, for and by the people. It is often some special interest group, which, forgetting that all of the people must be considered, causes most of the outcry against their Government in Washington. A case that at once comes to mind is the demand which has been raised by a special interest group for complete abolition of the 160-acre limitation in Reclamation Law, which prohibits the Bureau of Reclamation from delivering water to more than 160 acres in one ownership. Your community property law in California makes 320 acres the effective maximum. Not only does the maintenance of this principle of size limitation mean the protection of trade, but it means protection of community life as Americans have known it.

Let me remind you also that following any great war in which there have been enormous expenditures of public funds, that it is essential to economize. Congress today feels strongly such a need, and it is indeed true that there should be no unnecessary expenditures.

But if we are to provide opportunities for the men returning from the battle fronts, and if we are to continue to maintain a high-velocity economy and a high standard of living, we must continue to develop the resources which nature has given us. The impact which the construction of such projets as the Central Valley project will have upon the national economy in the years immediately ahead will help to spell the difference between prosperity and depression.

When we take a long-range viewpoint, we must realize that the entire world has become resource conscious, and that if we are to maintain our place of leadership among the family of nations that we must use our heritage to the best possible advantage, improving it through wise cultivation rather than wasting it.

In addition, there is also this important point to remember—reclamation development is sound business. Multiple-purpose projects are self-liquidating when wisely constructed and operated and revenue from water charges and disposal of electricity will return to the Treasury virtually all that is expended. In this connection it should not be overlooked that the power development within the Central Valley is the key to success in the economic problem.

While almost nine-tenths of the direct benefits of the ultimate development will be derived from irrigation, it appears now that irrigation interests will be required to repay only about 40 percent of the construction costs. Revenue from the disposal of power, and allocations to flood control and other purposes, will account for the remaining 60 percent of construction costs. Without the large returns from low-cost power, and the consequent self-liquidation of the project, it seems to me very probable that the Congress may be quite reluctant to undertake the project—at least at this time.

In the face of these facts it is important that all California interests unite upon a single plan that will produce maximum results for the people of California and for the Nation. If the interests of the Nation as a whole are overlooked by the people of this State, I believe I can say without qualification that you will make little progress with Congress in obtaining the funds which you so urgently need. This will be true, also, if you place the interests of any special group within your State above the interests of the people of California as a whole. You must assume a broad, unselfish point of view which is statesmanlike—you must look into the future and plan wisely for the years ahead, both for yourselves and your children—if you are to succeed in inducing Congress to adopt a plan of sufficient scope to do the job for your State that you consider necessary.

If you will adopt such a program, if business, labor, farmers, consumers are united on one plan that is comprehensive and well conceived, I believe that you will get the necessary financial support from Congress.

You may not be aware of the fact that every other far Western State has given strong support to the Bureau of Reclamation. Your neighbor States are in the habit of going to Congress with a united voice in demanding funds for their irrigation development, and generally get what they seek when their plans are well conceived.

I wish to stress that your future is in your own hands. Only remember that the day is not so very distant when the population of your State will be greater than your resources can sustain if you do not take wise action now. As population increases wise husbanding of resources is necessary if you wish to escape the ultimate fate of almost every civilization the world has ever known. Rome, Byzantium, Egypt, India, and China once attained great civilizations, but their populations grew beyond the ability of their people to provide sufficient food to sustain decent standards of living, and their civilizations fell into decay.

Likewise the population of California will increase beyond your ability to support them and your own prosperity will decay unless you give heed in time to developing your resources to their maximum long-term capacity. Piecemeal development, project by project, will not accomplish this. Only an over-all plan which is sound and just to all of your people will serve this end.

Just one more thing I wish to say. This plan for full development of the Central Valley is identical in many respects with the plan developed by the State of California itself. The initial project development is virtually the same as that proposed by the State. The Bureau of Reclamation must, by law, respect the water rights of individuals, and the State laws under which the rights of individuals are protected. We have no desire to override the wishes of the people of California, and have offered the service of the Federal Government with but one purpose in view—to assist the people of California.

In conclusion, permit me to say that the rate of accomplishment on the comprehensive plan will be governed by the availability of funds and the economic condition of the country as a whole. Accordingly, I make no attempt to predict how many years will elapse before the construction necessary to carry out the plan is completed. However, I believe that each unit undertaken will be a necessary component of the plan in its entirety.

We appreciate this opportunity of discussing our proposals with you.

## Doctors Seek Substitute for United States Health Program

EXTENSION OF REMARKS
OF
## HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Sunday Star of December 9, 1945:

DOCTORS SEEK SUBSTITUTE FOR UNITED STATES HEALTH PROGRAM—AMERICAN MEDICAL ASSOCIATION STUDIES PLAN FOR NONGOVERNMENTAL INSURANCE TO SAFEGUARD DISCRETION OF INDIVIDUAL

(By Thomas R. Henry)

The American Medical Association has just met squarely what many of its members believe to be the greatest challenge yet offered to independent medical practice in the United States—the far-reaching Wagner-Murray-Dingell bill, introduced following President Truman's message to Congress on national health on November 19.

This legislation in effect would set up a system of compulsory health insurance met by deductions from pay envelopes. It seeks to improve the national health by making medical service available to all the people—to spread over the population the inestimable values of medical progress over the past generation.

The organized medical profession of the United States has itself made great advances in this direction and it is aware of the hurdles and pitfalls better than any other group—for it is constantly coming in contact with them.

The association, following instructions from its house of delegates meeting in Chicago last week, is hard at work on a prepayment sickness-insurance plan which, its members feel, will confer every real benefit likely to come from the national legislation now proposed, will be more practical and will keep the profession free of lay—and they fear, political—direction and interference.

FATHERED BY DISTRICT OF COLUMBIA SOCIETY

This decision by the medical association is largely due to the efforts of the Medical Society of the District of Columbia, one of the most progressive groups in organized medicine, which essentially framed the resolution adopted at Chicago. It is difficult to predict the lines the national plan will follow. Proposed set-ups have been submitted by several State societies.

There are certain elements in the broad picture of medical care which are responsible for the greatest hardships to the individual—such as hospital bills, surgical bills, and obstetrical bills. There are already efficient schemes of hospital insurance, largely under private auspices. Memberships are growing as the benefits are better appreciated, and there appears to be little room for change except for improvements in details. Need for major surgery is clearly a catastrophe, like a fire. Presumably, reasonably accurate statistical tables can be framed on which to base insurance costs. With those taken care of, the physicians believe, perhaps the biggest element of the problem will be solved.

There still remains a vast, uncovered field in which, it is presumed, the men at work on the national plan will proceed cautiously, by a system of trial and error, rather than by a broad application of untested ideas such as is indicated by the bill now before Congress.

DOCTOR WANTS TO BE FREE

The American doctor wants to remain free. He believes that his freedom in the past has been one of the greatest factors in building up the finest medical service anywhere in the world. He believes that no discipline imposed from outside will approach in effectiveness the discipline of its own members, by organized medicine and the self-discipline of the members themselves. But also he is thoroughly devoted to the extension of the best medical service to all the people in the most effective way possible.

Both the physicians and the Government face one of the most complicated social questions imaginable. Compared to sickness insurance such a complex problem as unemployment insurance is simple. No other field in the past has been less susceptible to socialization. It has seemed somewhat like socializing music, art, or poetry. As one physician remarked: Insurance against sickness is like a newspaper insuring itself against ever being scooped.

Like every large body, the American Medical Association has its right, left, and center. These are expected to work out their differences in the numerous conferences which will be necessary before a workable plan is adopted to take the place of that proposed by the Government.

TREND TOWARD SOCIALIZING

The fight is not against "socialized medicine." This is a complete misnomer, says Dr. Roger I. Lee, of Boston, newly elected president of the American Medical Association. Medicine has grown more and more "socialized" for the past century—largely through the efforts of the physicians themselves. Every public health department, every public school clinic, every State or municipal hospital, is a manifestation of "socialized medicine."

Instead, the battle is against "political medicine." There is an infinite difference between the two, Dr. Lee says. There are certain medical and public health services which can be rendered almost mechanically by any conscientious, qualified individual. Such, for examples, are general inoculations in the face of an epidemic, X-raying of the chests of school children, fortifying deficient foods with essential vitamins. Medical societies everywhere have fought for these things. They have played, perhaps, the principal part in making the American people the healthiest in the world. There could be no finer case for such work than the experience of the Army and Navy in the war. The sickness rate from communicable diseases was reduced to a point where it was almost inconsequential, although it has been one of the major problems in all past wars.

The doctors have no quarrel with the creation by society of an environment conducive to health, and both national and local societies constantly are advocating new activities. In this field medicine is an exact science. Individuals can be dealt with en masse, for one does not vary one iota from another.

EACH INDIVIDUAL A PROBLEM

But the chief activity of the medical profession lies in quite a different field, where sickness is a matter of reaction between the environment and the individual—where the patient is something unique in the universe. The physical and mental difficulties of such a person cannot be dealt with on any sweeping basis. Each case presents its own peculiar problem and medicine becomes both a science and an art.

There can be no question but that the cost of medical care is high. This is inherent in the practice of a combined exact science and fine art. The burden falls heaviest on persons of moderate incomes. It is an old truism that the best in medicine is shared by the very poor and the very rich. For the former, communities have provided free hospitals and the medical profession, in accordance with its ancient tradition of service, gives its best efforts for nothing. The rich, of course, can afford to pay. It has been to some extent the practice of doctors to "soak the rich to carry on their work for the poor." This has not been very satisfactory, either to the wealthy patients or the physicians. But the family whose income just about meets ordinary living expenses often gets a terrific economic blow from unpredictable illness.

Sometimes the members struggle for years to meet the bills and seriously reduce their standards of living. Sometimes they simply do not pay. It is generally supposed by doctors that their bills are the last to be met. That is one of the reasons for the high cost of medicine. Those who do pay must make up for those who do not, and the physician who was able to collect all his bills could cut down his charges by a big margin.

SICKNESS UNPREDICTABLE

Now, the family with a modern income can insure against other unpredictable expenses, such as fire, death of a breadwinner, and so forth. Why can they not insure against catastrophic sickness? One reason is that the former type of catastrophies can be predicted by exact actuarial statistics. It is a pretty safe bet that a certain number of dwelling houses in Washington will catch fire in the next 6 months. There is little element of guess work in predicting how many Washingtonians in the 60-year-age group will die in 1946.

Medical practice is different. One cannot predict sickness, because there is such a large subjective element about it. Every person differs from every other person. Some demand medical services for complaints which would be regarded as inconsequential by others. Doctors sometimes make the cynical comment that the best way to cut down the sickness rate of a community is to raise prices for medical services.

Insurance against sickness costs in general, doctors say, would be unpredictably and prohibitively expensive.

Various schemes of political medicine have been tried. Perhaps the best known is the British panel system, which is not far removed in principle from that proposed in the Wagner-Murray-Dingell bill, although the latter would give a larger leeway for personal choice. A group of British physicians constitute a panel. Each panel has a certain number of patients, who make their own free choice of the doctors on the panel. Only within this group does the patient select his own physician. Each constituent of a panel pays a stated fee each year.

DODGE RESPONSIBILITY

There are various claims as to how well this has worked. The conclusion of most American observers is that it is quite inefficient. The panel physicians are inclined to treat only the simplest of ailments. They are not held responsible for specialist service and this gives them an opportunity to avoid responsibility.

From his own observations, Dr. Lee says, the higher type of independent British physician is as good as any in the world, but the panel doctors fall far below the average American practitioners. They are much more inclined to sell medical care over the counter, like potatoes or cheese. They reach the point where the peculiarities of the individual mean nothing.

One of the greatest political medicine experiments was that of the Veterans' Administration after the last war, when a corps of physicians was set up to care for veterans with war-connected disabilities. Over a course of years it proved a dismal failure and veterans' hospitals were a byword everywhere for inefficiency.

The present administration, under Maj. Gen. Paul R. Hawley, proposes to do away with this system to a very large extent and rely on the American private physician, freely chosen by the patient himself, to treat the 20,000,000 veterans of the Second World War.

HEALTHIEST IN WORLD

These 20,000,000, by the way, go a long way toward nullifying the value of any compulsory health scheme—constituting, as they do, such a considerable element of the American population. They have already the best sort of sickness insurance, for nothing. True, it is supposed to extend only to war-connected disabilities, but in actual practice the dividing line is hard to draw.

A good deal has been made of the poor health of the American people under the present system—as revealed by the numbers rejected by the draft for physical and mental defects. This is all bunk, say the doctors. The American people are the healthiest in the world. No sort of medical service ever could have remedied a good many of the defects for which men were rejected by the Army. Doctors cannot repair constitutional weaknesses. They cannot raise subnormal intelligence. A good many of these rejected by the draft boards would have had the same defects if physicians had danced attendance on them every instant since they were born. They could thank medical men, as it were, for the fact that they were alive, instead of having perished as subnormal babies.

Furthermore, Army standards were very strict. The British Army—and also the German Army—was filled with men who never could have gotten through the gate of an American military post and many of them made very good soldiers.

## Fate of the Small Business Committee

EXTENSION OF REMARKS

OF

### HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the St. Louis Globe-Democrat of November 27, 1945, entitled "Fate of the Small Business Committee":

FATE OF THE SMALL BUSINESS COMMITTEE

The possible death of the House Select Committee on Small Business around January 1 is foreshadowed in the rejection by the House Committee on Accounts of a request for $135,000 to continue the work through 1946. The Small Business Committee will be out of funds in a week and the accounts group is reported willing to offer it only $20,000 to liquidate the program.

A difficult floor decision, then, faces the House: Does the committee's work justify its being made an exception to the undeniable need for cutting Federal spending and reducing expensive special wartime committees?

Enjoying little public acclaim, the Small Business Committee nevertheless for the last year has functioned as an effective court of appeal for the little fellow who felt he was being neglected or injured in the Government reconversion program. It lent a sympathetic ear to those multitudinous small firms whose voice could neither compete with the lobbies of big business nor get a foot in the door of the Federal agencies abusing them.

In its months of hearings concerning little businessmen in textiles, coal, oil, logging, stoves, bottling, construction, tires, repair shops, slaughtering, manufacturing, retailing, food packing—to mention only a few—and in taxation, price, financing, and surplus goods problems, the committee with big-brother fervor frequently has slugged OPA, SPA, WPB, OWMR, and the armed services into changing their ways or policies.

Meanwhile, it has built and offered to Congress a comprehensive plan on how to avoid injuring the little man when it draws its long-term tax program. Much constructive legislation already has stemmed from its recommendations.

The committee's cost is relatively small; its decisions, investigations, and reports already have involved some $30,000,000,000 of the Nation's economy; handling 60 cases a week, it is a refuge in time of hardship for unorganized enterprises which are without industry representation in Washington; it is an accurate source of congressional information from a segment which provides more than half the Nation's jobs and comprises 96 percent of its enterprises.

In the light of these facts, it would seem desirable to make an exception and continue the committee, if not for a year, at least until most Federal wartime controls are off and little business' reconversion problems are more nearly over.

## H. R. 4717, to Establish a Department of Medicine and Surgery in the Veterans' Administration

EXTENSION OF REMARKS
OF
### HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 7, 1945*

Mr. DURHAM. Mr. Chairman, first, I want to compliment the Veterans' Committee on bringing to the floor of the House this legislation. This legislation has been needed for the past 25 years and will, in my opinion, improve the medical service not only for veterans of this war but for veterans of all wars.

We are very fortunate in securing as head of the Veterans' Administration Gen. Omar Bradley whose service has been outstanding in World War II.

The Veterans' Administration has been fortunate in securing the service of so able a soldier and doctor as Maj. Gen. Paul R. Hawley, Acting Surgeon General of the Veterans' Administration. A subcommittee of the Military Affairs Committee, of which I was chairman, had the privilege of visiting many of the hospitals and field stations in England, France, Belgium, Holland, Germany, and Austria, last summer. We also had the privilege of visiting the redeployment camp Lucky Strike through which a larger percentage of all prisoners of war were redeployed. We were there at the heighth of the redeployment of the prisoners of war and observed the treatment given these boys by the medical service when they entered the station. Medical services in this entire theater were handled, in my opinion and in the opinion of the committee, in a very efficient manner. The men—wherever we talked to them—were highly complimentary as to the medical service rendered under the command of General Hawley. The hospitals throughout the theater were clean, and the medical service was of the highest order. I also had the privilege, at the request of General Hawley, of returning to this country on the hospital ship *Acadia*, which brought back more than 800 patients who were principally ambulatory cases. I lived with these men daily for over 8 days. The medical service and the care of these men were on the highest professional level. I reviewed daily the complaints as each man was given the opportunity to make any complaint in regard to the service. The only complaint during the entire trip was that there was either too much air or not enough air in the wards of the hospital ship, and this was a minor complaint.

H. R. 4717 enables General Hawley to offer commensurate compensation to doctors, nurses, dentists, pharmacists, dietitians, and all personnel required to carry out the best medical service obtainable because of the fact that it offers pay for service rendered in line with civilian pay. It is our duty to see that the disabled veterans shall have the best of medical treatment, and I believe that under this act we will be able to do so.

## Resolution of Davis County (Iowa) Farm Bureau

EXTENSION OF REMARKS
OF
### HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. LECOMPTE. Mr. Speaker, in the State of Iowa we have very active and progressive Farm Bureau organizations and at the recent annual meeting of the Davis County Farm Bureau resolutions were adopted on the subjects of agriculture, world peace, health, military, and economic matters.

Under leave to extend my remarks in the RECORD, I desire to bring these resolutions to the attention of the Members of the House since they express the progressive spirit of farm members of one of Iowa's fine agriculture counties:

We the members of the resolutions committee, offer to the Davis County Farm Bureau the following policy deciding principles that we trust will meet with the approval of this farm bureau group and those that combine with us to make this great organization. Great because it is made up of voluntary group of farmers with broad and open-minded views and in a free and unfettered farm organization working for the interest of each farmer in America.

In offering the following principles we request the members present to offer suggestions for improvement or addition which they so desire to be included.

1. World peace: We favor the general plan for maintaining world order adopted by the delegates at San Francisco Conference: We believe reciprocal trade agreements will further the development of this plan.

2. Military training: We do not favor compulsory military training for youth, but do favor a larger military force than our pre-war forces with emphasis upon more military research and added inducement for voluntary enlistments. We feel that a strong, high trained * * * voluntary army would be more valuable than a large, slightly trained compulsory army.

3. Agriculture program: In order to establish a balance between agriculture and industry we favor continuation of parity prices for agriculture production. We recommend partial Government control of production to meet demands; favor commodity loans with normal granary. We feel crop insurance program should be continued and expanded.

4. Soil conservation: We favor continuance and expanded soil-conservation program supplemented with strong educational program and a reasonable Federal compensation as an added inducement. We pledge our continued support to the Extension Service, AAA, FSA, and Soil Conservation Service in efforts to conserve our soils, for we feel that a sound soil-conservation program is our first line of defense and that the Farm Bureau make every effort to help carry on the work of the soils district that has been established in Davis County. We favor continued emphasis upon a liming and phosphating program for Davis County.

5. In order to pay off our Government debt we favor taxation at near present level. We feel income tax and sales tax are the fairest, as they are based on ability to pay.

6. Schools: We suggest that Farm Bureau endorse and back the school code, and we favor a more equalized school-taxation plan.

7. Sale barn: We favor State legislation to govern sale barns that help eliminate spread of disease and parasites.

8. Hospital: We favor the Davis County hospital plan.

9. Inflation: We commend the OPA for their work done in inflation control and feel that price controls should be continued until scarcities disappear.

10. We feel the extension program has done an effective piece of work and should be continued and expanded.

11. We resolve that the returning servicemen be given an opportunity to purchase farm homes under a long-time-loan program to protect them against foreclosure and loss of homes. Every effort should be made to encourage veterans to return to the farm and to help them get started on a sound basis.

12. We recommend that the Farm Bureau continue to support farm-to-market road program.

13. We feel the strength of our organization lies in the work and support we obtain from our membership. We wish to commend the following for their faithful and untiring efforts in carrying on the program: Our women's chairman, Mrs. Glenn Huffman; Girl's 4-H Club chairman, Mrs. Z. Willard Hubbartt; Boy's 4-H chairman, E. S. Baughman; organization director, Z. Willard Hubbartt; insurance agent, A. R. Barnett; county extension director, Don P. Carter; county extension home economist, Norma Feigenspan; the officers and directors of the Farm Bureau, 4-H leaders, office assistants, and all others who have contributed time and effort to our program. We especially want to thank Sherm Rene and family for donating the use of the new sale barn for our 4-H achievement show.

14. We wish to commend the business and professional men of Bloomfield, for their support of our farm bureau organization and its activities during the year. It is recognized that the great work carried on by the farm bureau in the many fields in which it affects the general welfare of farmers is possible only because of the cooperation of all.

15. We pause here momentarily to recall the passing during the past year of long-time friends of the farm bureau: H. W. Tarrence, Gene Runkle, J. W. Lanman.

16. We also take this opportunity to express our sincere appreciation to those who served in the armed forces and have brought peace again to our Nation. We pledge ourselves to support the Victory war loan to bring them home and to make America worth fighting for.

RESOLUTIONS COMMITTEE:
E. S. BAUGMAN, *Chairman.*
LOWELL CRUIKSHANK.
E. R. KINCART.
H. O. AUGSPURGER.
DWIGHT DOWNING.

## Japanese Cruelty—Don't Forget How They Starved Us

EXTENSION OF REMARKS
OF
## HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Saturday Evening Post of December 8, 1945:

DON'T FORGET HOW THEY STARVED US

As one of the two American medical officers who experienced conditions in both the military and the civilian prison camps on Luzon, I am anxious to have the American people understand, and never forget, that the Japanese applied a premeditated and systematic program of starving American prisoners to death. During 34 ghastly months I saw every manifestation of dietary deficiency merely by looking at people around me—the terrible pain and toe-dragging gait of beriberi, the hemorrhages from scurvy, the mental stupor and hardened skin of pellagra, the barrel-leg bloat and withered muscles of hypoproteinemia.

The first application of mass extermination began with the death march after the fall of Bataan in April 1942, and continued with horrible results until December of that year, when the Nips increased our rations a little and let Red Cross packages through, having decided to fatten us up to use as prison labor in work projects. For 14 months after witnessing this bald admission that our diet was inadequate to keep us alive for long, I served on a Bataan labor detail, in Bilibid Prison hospital and at Cabanatuan. Afterward I spent the last 11 months in the Santo Tomas internment camp, where I saw a new system of starvation applied.

At first, malaria and dysentery plagues slaughtered our people. Quinine would have prevented the malaria deaths; sanitation alone, if we had been permitted to enfore it, would have wiped out the dysentery. With dietary deficiencies and beatings contributing, 1,475 Americans and 23,000 Filipinos died in 51 days in Camp O'Donnel, where we were herded after the death march.

Then the starvation program began its awful execution with the diseases of prolonged food deficiency. There was dry beriberi, bringing its burning, stinging, and crawling sensations of the skin on legs and feet, its terribly painful neuritis, its paralysis of the muscles, which lifts the foot and made it necessary for those walking skeletons in our camp to take high steps to keep their toes from dragging. Also prevalent was the wet type of beriberi, bringing its dropsy, which waterlogs bulging legs, balloons abdomens and faces, and, before death, effects a bloating of the entire body—excruciating penalties for lack of vitamin $B_1$, or thiamine chloride.

SICKNESS AND DEATH, AND NOT EVEN A DECENT BURIAL

In due course, pellagra and ariboflavinosis set in. The symptoms were dermatitis, a coloring and thickening of the skin, swelling of the tongue, diarrhea, mental confusion and, at the end, usually severe dementia. Riboflavin, or vitamin $B_2$, deficiency, commonly accompanied pellagra—cracking lips, sores of the nose, burning eyes, ulcers of the legs as large as half dollars.

Vitamin C deficiency caught up with us. Scurvy, with its breaking blood vessels in the skin, muscles, and bones. The men's gums bled and their teeth loosened and fell out. Vitamin A deficiency, too—ulcering and scarring of the eyes; in some of the cases total blindness. And in the early days at Camp O'Donnell there was always the lack of water, resulting in severe cystitis, or inflammation of the bladder. One day I stood in line at a faucet for 9 hours, only to see it turned off for the night when I was four men away.

In Cabanatuan alone, 2,300 Americans had died by the end of 1942. One day 60 died. The emaciated cadavers were borne to the cemetery by prisoners almost equally cadaverous. The living lined the road, saluting the dead, dully contemplating when their turns would come. Out where the bodies were deposited en masse in graves that filled with water before they could be completely dug, gaunt arms, legs, and torsos habitually protruded from the mud.

Of course we complained to our jailers. A typical result was the time I tried to requisition vitamin B for the Bataan labor detail. I was given four bottles of Lydia E. Pinkham's compound, which, according to the label, includes "1 milligram of crystalline thiamine chloride"—the daily requirement of a child. Also I was given a supply of Dr. Williams' Pink Pills for Pale People. At Santo Tomas Prison truckloads of food donated by neutral agencies were turned away at the gate. Meanwhile, inside, we dragged about on bloated legs, shriveling away to skin, bones, and hair. We ate the cats, dogs, pigeons, and the vegetation—hibiscus, canna lilies, and banana trees.

These stark facts about Japanese mass murder I have set down because I've noticed a tendency here at home to forget, even almost to forgive, the enormity of Japan's war crimes. I do not want the American people to forget.

Maj. LIVINGSTON P. NOELL, Jr.,
*Medical Corps, Army Air Forces.*

## General Hurley Is Right

EXTENSION OF REMARKS
OF
## HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. DONDERO. Mr. Speaker, bearing directly on information which I have presented to the House on three or four occasions I offer for the RECORD, a statement appearing in the Washington Times-Herald of today.

John Service who was arrested by the FBI in connection with the stealing of secret and highly confidential documents from the State Department appears to be the power behind the scene which caused General Stilwell's removal by our late President, and has influenced the resignation of Ambassador Hurley from the Chungking Government.

It could hardly be said that the "Cardinal Mercier of China"—Bishop Paul Yu-pin—would make the statement attributed to him without foundation in fact.

Whitewashing of radicals and Communists is not unknown in Washington.

The Times-Herald article follows:

YU-PIN ACCUSES STATE DEPARTMENT AIDE OF RED INTRIGUE IN CHINA—SERVICE PERSUADED STILWELL TO DEMAND ARMING OF COMMUNISTS, SAYS BISHOP

(By Tina Marranzano)

Inside details of State Department behind-the-scenes intrigue in China which resulted first in the recall of General Stilwell and more recently in the resignation of Ambassador Hurl y, were disclosed to the Times-Herald last June in an exclusive interview with Bishop Paul Yu-pin, vicar apostolic of Nanking and internationally known prelate, sometimes referred to as the Cardinal Mercier, of China.

The Times-Herald refrained from printing it at the time because it felt it might adversely affect diplomatic efforts to coordinate the two rival armed factions in China.

KNOWS MANY OFFICIALS

The Chinese prelate, who numbers among his friends many high-ranking Government officials in this country, told the following story on the day that John S. Service, career diplomat, State Department appointed political adviser to Gen. "Vinegar Joe" Stilwell, was arraigned before Commissioner Needham C. Turnage following his arrest in June on espionage charges involving the alleged mishandling of confidential State Department documents.

Service was later cleared by a grand jury and was reassigned in August to duty by Secretary of State Byrnes for important work in connection with far-eastern affairs.

SERVICE INFLUENCED STILWELL

At the same time, Bishop Yu-pin, a close friend of Generalissimo Chiang Kai-shek, disclosed why the Chinese leader had asked for the recall of General Stilwell even though they were known to be the best of friends.

Bishop Yu-pin had just returned from the San Francisco Conference where he had served as unofficial adviser to the Chinese delegation. Previously arriving in this country on Easter Monday, 1943, he remained here until November 1944, and return to the United States in April to attend the Conference.

The prelate said there was every indication that Service was working in the interests of the Communist Party and that it was upon his advice that General Stilwell approached Chiang Kai-shek in person no less than three times to ask that the Chinese Communists be armed with American lend-lease supplies.

UNITED STATES REDS START CLAMOR

Stilwell did this, the prelate said, even though the Generalissimo had warned him that his insistence in this demand left no recourse but that President Roosevelt be asked to recall him from China.

The prelate disclosed that when Service was appointed political adviser to General Stilwell, the American Communists immediately began howling for this Government to demand that the Chinese National Government arm the Chinese Communist soldiers.

Meanwhile Service was doing a pretty job of finagling with the Chinese Communists, Bishop Yu-pin said, and kept urging Stilwell to send a representative to provinces in which they were active to investigate the part they were playing in the war against the Japanese.

PLAYED INTO HIS HANDS

"Vinegar Joe," playing into Service's hands, the bishop continued, appointed Service himself to the job. The report Service submitted to Stilwell, the prelate said, "lauded the Communist soldiers in glowing terms."

But, the bishop emphasized, Communist guerrilla warfare actually was but a minor part in the battle against the enemy.

Following his report to Stilwell, Service kept urging him to go to the Chinese generalissimo with the demand that the Communists be armed. Cognizant of the situation in China, Vinegar Joe hesitated to do so, the bishop said, but finally consented when his political adviser insisted.

STILWELL SHOCKS CHIANG

Bishop Yu-pin said that Chiang Kai-shek was astounded at the American general's velvet-gloved demands because the latter knew that to arm the rival faction could result in but one thing—an immediate outbreak of civil war and the possible destruction of the National Government of China.

Although Stilwell's first Service-inspired visit failed, Service did not lose heart, the bishop said, but allowed some time to go by before he again urged a second visit by Stilwell to the generalissimo. Again the Chinese leader refused, and it was then, the prelate said, that Stilwell was informed that if the demand was repeated, there was no other alternative but to ask that President Roosevelt recall him from China.

STILWELL TRIES THREE TIMES

Undismayed, Service kept hammering at Stilwell that the Chinese Communists were getting a raw deal, and again insisted that the demand be resubmitted for the generalissimo's reconsideration.

And it was on this third visit to his good friend, with whom he had broken bread on many an occasion, that Stilwell was informed by the generalissimo he was asking Roosevelt to relieve him of his duties in China.

Service, the bishop said, was a definite detrimental influence during his assignment in China.

WARNS OF RED IMPERIALISM

On various other occasions during his 18-month stay here, the prelate warned of Communist imperialism in the Far East. It was 2 monthe before the Teheran Conference that he said in an interview published in the Times-Herald, that "unconditional surrender of Japan must include unconditional return of Manchuria." Familiar by reason of birth there with Manchuria's vast reserves of raw material, mineral resources, forests, and fishing, the prelate asserted that World War II actually started with the invasion of the northern province and can well be the start of World War III.

## Amending the Soldier Ballot Law

EXTENSION OF REMARKS

OF

### HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. MASON. Mr. Speaker, under leave to extend my remarks, I include the following editorial from St. Globe Democrat of Friday, December 7, 1945:

AMENDING THE SOLDIER BALLOT LAW

Representative C. W. VURSELL, of Illinois, has made a commendable move to amend the soldier vote law which was bitterly controverted in the last Congress prior to the general election. It will be recalled that the administration attempted to force the adoption of the short Federal ballot which permitted overseas service men and women to vote only for President, Vice President, and Members of Congress. This was the Green-Lucas bill which was rejected, but a compromise was voted which provided that with certain limitations those State governments which would authorize the Federal ballot as being legal in their States, could give the soldiers the option of voting either the Federal or the State ballot.

Only 20 States offered both ballots to the service men and women, and the governors of 28 States held that the Federal ballot in most cases was illegal. Only 2 percent of the 4,900,000 soldiers of voting age used the Federal ballot, which is potent argument that it was a failure.

In urging Congress to strike out the short form entirely, Representative VURSELL pointed out that former Secretary of War Stimson, chairman of the War Ballot Commission and one of the original sponsors of the Federal ballot, admitted after the election that there was serious question whether this short form "is of sufficient utility to justify its continuance as a voting procedure in time of war."

Although the war is over, the same limitations apply in peace to the men and women in service. Mr. VURSELL is not only correct in asking for elimination of the Federal ballot but his suggestion should be followed by Congress now in order to clear the skies before the congressional elections are held next year.

## Elusive Security

EXTENSION OF REMARKS

OF

### HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio talk delivered by me over radio station WIND, Chicago, on December 8, 1945:

Ladies and gentlemen of the radio audience, we live in a turbulent world. At the conclusion of a war more intense than any in history, we had assumed, and had a right to, that some measure of sanity and good will would result after victory. Perhaps we are all guilty of wishful thinking, for we know that freedom of speech, freedom of the press, and freedom from want and fear do not prevail in the world today. One of my colleagues recently returned from Europe said, "There is less peace today than before the war." This is a sobering statement, but it is true. I said we live in a world of chaos because we are apparently in search of something which is not present in the world. Men and nations are seeking for security, security against the deadly power of the atomic bomb, a weapon more terrible than man has ever conceived.

As a nation we try to prevent other nations from securing the secret and the know-how of this indescribable force. We seek security against unemployment, security against the lowering of our standards of living, security in our right to protect ourselves against aggressors, security and with the hope that our democratic institutions may be preserved. As individuals, we seek security in our business ventures. We seek security for our families and we look ahead to security in old age when we will be willing to pass on our responsibilities to younger people. We seek security in all phases of life, and yet, we know that today, it is an elusive concept, perhaps an elusive ideal. We are now in the midst of a serious economic upheaval. Witness the labor turmoil today, and yet these men, and we have no reason to doubt them, believe their cause is just and righteous, a desire for security for those who labor with their hands and minds. These are indeed challenging days calling for the best in you and me, for it goes to the very basis of our civilization, and the question is: "Have we the courage, the fortitude and foresight to meet this great responsibility?" We are but the trustees for future generations. We inherited the blessings of liberty and freedom from our forefathers. We pass on to our children, and their children, these same ideals for which, in the past few years, we have given with lives and treasure.

I have already alluded to this problem of world peace and to the threat which comes through that new discovery—atomic power. The time has come, ladies and gentlemen, for us to consider the full implications facing this world, for we are part of it. We have been hearing and reading much in the past few weeks about the secret of atomic energy.

It was my privilege a few days ago to have sat in at a meeting or conference of Congressmen, who had as their guest, one of the scientists who worked on the atomic bomb. He very frankly stated that we should not be fooled into believing that there is any secrecy about atomic power. The only secret lies, at the moment, in the mechanical knowledge which went into producing the weapon itself. He stated that the power of atomic energy has been known to scientists for hundreds of years, but only until now has a process been devised by scientists and engineers which permits us some control of this energy. He further stated that the Germans had a plant in operation in eastern Bavaria, and immediately, when the Russian Army took over that area, they seized the plant, and that plant is in operation today. What I am trying to say is this, that we may endeavor to lock up the know-how of atomic power and the mechanical phases of it, but it cannot remain a secret very long. From this, there is but one conclusion: that competition in the field of atomic power by the nations of the world will ultimately result in the total destruction of mankind as we know it today. Thus we are faced with the stark reality that men and nations must learn to live together. We must be about the business of creating understanding. Yes; there is a lack of peace and understanding and it is so important that we, as ordinary individuals, should give time, thought, and expression to our views. The United States is called to world leadership. We have the opportunity if we will continue that leadership on a sound, constructive basis, for we have no desire for territorial aggrandizement. We are not imperialistic; we are concerned solely with the question of maintaining our national integrity and the establishment of as high a standard of living for our people as we can possibly secure.

Those of us who have the privilege and honor to serve in Washington at the seat of our National Government, cannot help but feel a great deal of concern about our economic situation. As I see it, the one great domestic issue is that of free enterprise versus state socialism. During the war we have gladly submitted to regimentation in the war effort. We have tossed liberty and freedom overboard in the interest of a united effort to win the war. During the period of war, we have seen a steady trend toward the establishment of a strong centralized government, a government of men and not of law. We are face to face in this country today with the question as to whether or not our society shall be organized on the

basis of private ownership of the means of production, or on the basis of public control of the means of production. The idea I am expressing deals with the question of a planned economy. Free enterprise is the opposite and means the sovereignty of the consumer in economic affairs for the right to conduct his business on the basis of a fair return to him on his invested capital. I know of no group in this country more vitally interested in that question than those of you who are listening to this broadcast. Many of you have felt the lash of bureaucratic orders, but you have said nothing. I am sure that deep down in your hearts, you have longed for the day when those orders would no longer be in effect and you could run your business and your homes as you knew they should be run, on sound, economic principles with a full realization of the public's interest in your affairs.

We must know that socialism, which breeds bureaucracy, means full government control of every sphere of the individual's life and the unrestricted supremacy of the government in its capacity as a central board of production management. The result is obvious, namely, a full control of our economic life. We are told today that there may be a middle ground of approach between free enterprise and government control or state socialism. I do not believe it. I am convinced that you are going to have one or the other. It is a matter of choice, and the American people must face this issue in the very immediate days ahead.

I have said, and I know you agree, that everybody went along during the war with the Government in its desire to win this war, and we yielded our rights and freedoms. Yet, in Washington, there is a desire expressed openly that many of these controls must be continued upon some pretext or other. A short time ago, certain representatives of government made a plea for a continuance of the War Powers Acts which vested in the Chief Executive unheard of powers. Yet, with the war over and the reconversion period in full swing, we are asked to continue controls. We are asked to reendorse, if you please, a continuance of a planned economy. The issue is up to you. You are getting the kind of government you tolerate. There is no force like that of intelligent public opinion. I have seen it demonstrated on the floor of the House time and again, and it behooves us, and I would suggest that you give vent to your feelings in these matters for if we permit a continuance of these wartime powers in this country, we will have moved too far in that direction to retrace our steps. The die will have been cast, and we will become the victims of our own inertia.

Might I, ladies and gentlemen, for the sake of emphasis, call your attention to the true meaning of socialism or totalitarianism, or communism, or whatever you have a mind to call it? All these "isms" are in the same category. Socialism, as such, means the subordination of every individual's whole life work and leisure to the orders, the whims and fancies of those who are in political power. It is the reduction of man to a cog in an awe-impressing machine of compulsion and coercion which forces the individual to remove any activity which government might not approve. It tolerates no real expression of dissent. It is in fact the transformation of society into a strictly disciplined and regimented civilization.

Someone has said that it cannot happen here, but I call your attention to the fact that there is evidence of it today. It is in action. It is on the move. It is so close that some of us cannot observe it. To the individual businessman, to the farmer, to the artisans in any wealth-producing activity, government will have the final say as to his movements. It is, in effect, totalitarianism to the highest degree. Under circumstances such as this we, the people, are the wards of government. It is our guardian. It controls our lives. If I judge rightly, the American people do not want this sort of thing to predominate in the life of this Nation. This is not what our boys have fought and died for. This is not the purpose which motivated our entry into this war. Eternal vigilance is still the price of liberty.

We have been thinking in terms of world security and considering also the problems of our own economic society, yet there is a problem which constitutes the most serious threat of inflation, which can wipe out everything that has been near and dear to us at home and abroad. These other problems are insignificant when we consider the full import of the situation that confronts not only this Nation, but the world. Every nation is faced with the same problem.

A short time ago my daughter returned after 18 months of service overseas with the American Red Cross. Part of her service was in China. She tells a most interesting story about going out for dinner which consisted of curried chicken, tea, and hot rolls and a little wine. For that she paid $4.353. Of course, in Chinese money, but I cite it merely as an example of what is going on in China. We know that identical situation prevails in most of Europe and Asia today. Not on such an outlandish scale, but a pronounced inflation exists in France, Spain, Portugal, Italy, and the occupied countries.

Some very interesting figures came to my attention just a few days ago, and I was amazed to learn that in 1939, which I believe was considered one of our prosperous years, there were $7,000,000,000 in circulation. In July of 1945 that amount had been increased to $27,000,000,000 at a time when civilian goods in this country were at a premium. We know that this great increase in total dollars comes as a result of the war and unlimited Government spending. We know that it is a condition which threatens our very existence, for should inflation really take hold in this country, all that we treasure would be wiped out, including our form of government.

The Government has a responsibility and a tremendous one in this connection, and the time has come for those in responsible positions to face the facts and chart a course taking us away from this situation. The time has come to think in terms of economy, perhaps an old-fashioned term, but a true economic law, nevertheless. Government must stop its prolific spending. It must strive to balance the budget. Once the floodgates of inflation are broken we will never stem the tide. Government will have to stop advocating spending of money to satisfy this group or that. It will soon have to eliminate subsidies as an economic factor. It will have to curtail its own expenditures, which means a reduction in governmental personnel. It will mean a smaller Army and a smaller Navy. It will mean the application of sound business practices in the operation of our Government. That can and will become a fact when, as, and if you, as citizens, insist upon it and elect men to office who stand for those principles.

In conclusion, I want to read to you a statement by John Stuart Mill, who, about 1870, said this:

"A people may prefer a free government, but if from indolence, or carelessness, or cowardice, or want of public spirit, they are unequal to the exertions necessary for preserving it; if they will not fight for it when it is directly attacked; if they can be deluded by the artifices used to cheat them out of it; if by momentary discouragement, or temporary panic, or a fit of enthusiasm for an individual, they can be induced to lay their liberties at the feet even of a great man, or trust him with powers which enable him to subvert their institutions; in all these cases they are more or less unfit for liberty; and though it may be for their good to have it even for a short time, they are unlikely long to enjoy it."

## Comments on My Trip Through China, India, and Other Countries

EXTENSION OF REMARKS

OF

### HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. ENGEL of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the annual banquet of the Veterans of Foreign Wars of the State of Michigan on December 8, 1945:

The War Department subcommittee of the Appropriations Committee consists of eight members, five Democrats and three Republicans. I am ranking minority member. This subcommittee drafts, holds hearings on, passes upon, and steers through the House and through conference with the Senate all War Department appropriation bills. These bills have aggregated $214,000,000,000 in the past 5 years, which is one and one-half times the assessed valuation of every piece of property in the United States as it was before the war.

This committee is absolutely dependent upon the information given us by the War Department justifying these appropriations, unless it goes out into the field and sees for itself just what becomes of the money. This $214,000,000,000 was spent and scattered all over the world. It was with the appropriation in mind that this committee took a 36,000-mile trip and actually saw what became of the money and how it was expended. It was, in my judgment, one of the most profitable trips from a taxpayers' point of view that any congressional committee ever made. It has already paid, as far as I am concerned, large dividends. It enabled me to advocate and help to bring about increases in the $52,000,000,000 rescission bill that I never could have justified had I not made the trip. This bill, you will recall, cancels and returns to the Treasury war appropriations heretofore made to various bureaus and departments and will save the taxpayers an amount that is more than twice the amount our World War I national debt reached at its peak. The information that the committee gathered will be valuable as long as its members have the responsibility of determining War Department appropriations.

#### CHINA

While it is impossible to give a review of China in a few minutes, to me it was one of the most interesting countries in the world. Everybody works. The Chinese coolie, in my judgment, is one of the most remarkable individuals I ever saw. No individual ever worked harder in the world for less. Every man, woman, and child works. That coolie may be breaking stones with a hammer, work we give our convicts at hard labor; he may be pulling with hundreds of others a large cement-filled roller, rolling down an airstrip; he may have a yoke around his shoulder like an ox and carry dirt in baskets for half a mile, or he may be doing a hundred other kinds of similar work for 10 or 12 hours a day, his only compensation, a cup of rice and a cup of tea—but he works. If this tremendous energy can ever be directed toward modern methods of production, China will be the most wealthy country in the world.

#### KUNMING, CHINA

Kunming, China, is in Yunan Province. Yunan Province is the first Chinese province through which the Burma Road runs, the

road that brought supplies from India. Everything that came to China over the Burma Road had to go through Yunan Province. At the time I was there the Governor was Lung Ying. We had a buffet luncheon at Major General Aurand's home which the Governor attended. Dr. Mao, a University of Minnesota graduate, in charge of the large tin works in China, acted as interpreter as five of us, including the Governor, sat at a table and ate our dinner.

Strangely the thing he was most interested in was taxation. He impressed me as a typical war lord. You will recall he is the Governor whom Chiang Kai-shek captured while his troops were on the Burma side of the province.

The Governor, I was told, had 200,000 of the finest troops in China. Every street in Kunming was filled with Chinese troops marching in columns of four the night we were there. They were fully equipped with tommy guns, rifles, and a show was put on without a doubt to impress us. These 200,000 Chinese troops never shot at a Jap during the entire war. I was further informed that only such equipment got through Yunan Province as the old Governor permitted to go through. There is no other explanation that I could find for the equipment that these troops had. The son of Governor Lung had 50 American jeeps which were stolen from the American Army. The Army admits they had them. I asked General Aurand why he didn't get them, and I was informed that they could not go to the Governor's palace to get them. There was a thieves' market selling American supplies and equipment within a few hundred feet of where we slept that night. I was told by Army officials that there were hundreds of these thieves' markets in China. I asked them why they didn't go into these markets and take the American equipment that was there, as it had the American mark on it. The reply was that American soldiers had sold it. I replied, in turn, that if the Army took this equipment wherever they found it, the thieves' markets would cease to exist because they would not buy the equipment unless they were permitted to retain it. I was confidentially informed that the same Governor got a rake-off on the supplies. At 4 o'clock in the morning, I met a male Red Cross worker and talked to numerous military police from then on until 7 o'clock and got a great deal of interesting information.

A certain type of water buffalo carts in Kunming are all equipped with automobile wheels with rubber tires. I went into that matter and here is a story. When the Burma Road was closed by the Japs, a great many French and British motor vehicles were left on the China side in Yunan Province. This same son of the Governor stripped these vehicles of the wheels including the rubber, expecting to sell the wheels separately to anyone who bought the vehicles. It was the same old racket that they pull off over there. For instance you rented a building for a certain amount per year, then you had to pay another huge amount for the key to get into the building. Nobody bought the vehicles and they were left there to rust. So the son of the Governor had the wheels on his hands. The old Governor came to the rescue and issued an order that a certain type of vehicle in Kunming could not travel on the streets unless it had rubber tires, so his son could sell these wheels and tires. The result is that if you were on the street of Kunming, China, tonight you would see hundreds of vehicles drawn by water buffaloes equipped with American automobile wheels and tires.

The military police told me that the thieves are apparently organized and the city authorities would do nothing to them when we caught them. The result was that the military police who brought in anybody caught stealing, beat them up and kicked them out because they knew that if they turned them over to the authorities they would not be punished.

In going through China I was told that an attempt would be made to retain 25 American divisions in China. I was alarmed at this story and when we had a conference with Army officials at Kunming I brought up the question of getting out of China. I was told at that meeting that they could and would get out of China by December 15. After the meeting I was in the Red Cross building and some of the GI's recognized me and wanted to talk to me. I sat down in the lobby and as usual in a few minutes 75 or 100 GI's were there. The question came up as to when they could go home. I told them I didn't know, all I knew was that I was told by Army officials a little while before that they were going to get the troops out of China by December 15; that they were going to fly troops across the hump to Karachi, India, and from there on home. The China Lantern, a paper published over there, headlined the statement, "The next issue of the China Lantern had a statement by General Wedemeyer to the effect that this was all wrong; that somebody had misinformed me and that the troops had to stay there to repatriate 2,000,000 Jap troops. I received perhaps 50 copies of this China Lantern from boys after I got back.

I wrote a letter to the Secretary of War asking for a complete statement, taking the position that the people of the United States would not tolerate our entering another war in China. I asked the Secretary whether General Wedemeyer was right or whether those people were right who told me that they would get these troops out of China by December 15. I placed the correspondence in the CONGRESSIONAL RECORD. The Secretary of War's letter reads in part as follows:

"The information given you at Kunming apparently was intended to apply only to western China."

No such reservation was made. The fact of the matter is that after the secretary wrote me, an Associated Press story appeared that they were retaining troops in northern China "because of a promise made to the Japanse last August to help in the surrender and repatriate Japanese troops there.

You have Lung Yin generals in the Yunan Province with 200,000 well-equipped Chinese troops. You have so-called Communists in the north with another big army and Chiang Kai-shek somewhere in between. The Chinese war may last for years. There never was a time to my recollection when there wasn't some kind of a civil war in China. A million American troops would not handle the situation there. We cannot win in China and I believe we ought to bring our troops home at once. It is not a question of repatriating Japanese troops. It is a question of whose Chinese troops are going to get the arms, ammunition, and equipment which those Japanese have. Whoever gets those arms, ammunition, and equipment is going to win the China war.

### CHIANG KAI-SHEK

We had dinner with Chiang Kai-shek. I sat across the table from him with his interpreter at my side. I was in his palace before we went into the large dining hall later and was with him until nearly 11:30 o'clock. He is a very clever individual, selects words carefully, a typical Oriental with a wonderful personality. He is perhaps the strongest individual in China today. This does not mean that a majority of the Chinese people are behind him. He was strong for Hurley and Wedemeyer and just as strong against Stilwell, although he didn't mention Stilwell's name. There is no doubt but what he is a typical war lord, with the Soong family of which Madame Chiang Kai-shek is a member as his strongest backer. The question as to whether China is coming back depends upon the stabilization of Chinese currency. The Chinese dollar is greatly inflated. It took anywhere from 750 to 3,400 Chinese dollars to buy an American dollar. I was informed, whether correctly or not, but I think correctly, that nothing could be done about it because Chinese banks and the Soong family were back in the inflation. It is my candid opinion that we are being taken for a merry ride by all of them.

### MAO TZE TUNG

Mao Tze Tung is the so-called Communist leader we hear so much about. Pat Hurley had brought him for a conference with Chiang Kai-shek. I attended a luncheon at the embassy. Only three members of our committee were at this luncheon. I had a long talk with Mao Tze Tung through an interpreter. He impressed me as being very earnest, sincere, and honest in his endeavor to help the poor people of China. I was with him perhaps an hour and a half either talking to him direct or listening to the conversation between himself, Pat Hurley, and others. He and his generals wore plain blue denim overalls and jackets which might have come out of any country store in America. Each had a blue handkerchief around the neck. The most surprising thing I learned about this so-called Communist leader was that he was not a Communist at all. Joe Stilwell said he isn't; Pat Hurley says he isn't, and Joe Stalin called him an "ersatz" Communist.

I was further informed that while they broke up the big war lord estates, they divided these estates on an individual property ownership basis. If a person going into China gives his honest opinions and conclusions, he should not be criticized because those conclusions may not be the same as the conclusions arrived at by reading the press, listening to the radio and from other sources.

In China you are either master or slave. My heart went out to these millions upon millions of poor people in China who work, toil, and sweat day after day for a mere existence—people who work so hard and have so little. People who love the soil or as they call it the good earth, because it is the good earth which gives them their rice and the things, not to live, but to exist upon. I don't believe we can have a strong, unified China unless these millions of coolies who are now in effect slaves are free. The war lords will never free them. They thrive on slavery. That is true whether the war lord is Chiang Kai-shek or Lung Ying.

I know I may be criticized for what I say here but it is my opinion that the only man in China to whom these poor people can look is Mao Tze Tung, so-called Communist leader, who is not a Communist at all. He is the only man I met whom I believe has the honest-to-God welfare of these poor people at heart. Call him what you will, but this policy of his is going to spread. No one is going to stop him. The coolie is going to say, "Over there is that northern province where Mao Tze Tung is, they give us land, they give us a little of the good earth where we can raise rice, and tea, and a few vegetables."

Over there we can dig in the soil that will belong to us. Over there we need not slave any longer. We will get two cups of rice instead of one and two cups of tea instead of one for a day's work. Therein lies the hope for a new China. Not communistic but capitalistic because individual property ownership is capitalistic whether it be under Mao Tze Tung in China or under President Harry Truman in the good old U. S. A. It probably will not be in my time but some day a real China is going to rise from the ruins of the old—a free China; a China in which every Chinese individual down to the lowest coolie will have the right to life, liberty, and the pursuit of happiness. This means the right to eat three times a day, having a decent place to live, just as much in a free China as in a free America. Amer-

ica, a country which won its liberty and freedom by revolution—America, which boasts of being a free country where each citizen is guaranteed the right of "life, liberty, and the pursuit of happiness" cannot consistently support any war lord in China, whether he be Chiang Kai-shek, Lung Ying, or some other who denies to the masses of Chinese people the very right which we enjoy and boast of. No plea of a unified China which continues slavery for these masses can justify such support.

THE SENATE SHOULD CALL GEN. JOSEPH W. STILWELL IN THEIR HEARINGS ON CHINA

We have apparently two views as to what our policy in China should be. Both, in my judgment, are based upon sincere convictions. The first is represented by my good friend, Maj. Gen. Patrick Hurley, Ambassador to China. He undoubtedly represents the administration policy. Another view is held by many people who are just as sincere and just as honest as the first group. These people should be permitted to testify before the Senate committee so the American people may have the benefit of their view.

On August 30 our subcommittee had a conference in Okinawa which was attended by Gen. Joseph W. Stilwell, commanding general of the Tenth Army. General Stilwell addressed us briefly but said nothing about China. He was about to close, when I said, "General Stilwell, this subcommittee is going into China. You could not pick seven men in the United States who know less about China than our subcommittee. On the other hand, you, General Stilwell, know more about China, the real China, than anyone else I know of. You can be of real help to this committee, if you will. You can give us information which will be of real assistance to us in the work we are trying to do. Won't you please give us your honest opinion on or off the record, as to what you think of the situation in China?"

General Stilwell turned to the committee and talked and answered questions on China for perhaps 30 minutes. I shall consider everything that General Stilwell said as being off the record. I do feel, however, that until General Stilwell has testified and given his views on the China question, the Senate committee and the American people will not have had both sides of that question. His remarks will contain some "vinegar" and perhaps a little "acid," but he will give you interesting facts. No one is going to accuse Joe Stilwell of being a Communist or not having the best interest of his country at heart.

General Hurley has given his side and General Stilwell and others should give theirs. Both of these men are friends of mine, and I admire them greatly. General Hurley has given us the benefit of his views. The hearing will not be complete until Joe Stilwell gives us his views.

It is my conviction that a strong China, a China which will take her place in the world politically, commercially, and, if necessary, in a military way, cannot be based upon the suppression of the masses of the Chinese people.

KARACHI, INDIA

We were supposed to stop and have two conferences—one with junior officers and one with enlisted men—at Karachi, India. To my amazement and surprise, we spent 2½ days at New Delhi and then Army officers made every effort to get us out of Karachi without seeing the enlisted men and junior officers. We stopped off there for lunch and were told to get back on the plane at 1:15 to start for Abadan. In going through the officer's club on my way to the officers' mess a number of young Air Corps officers who had been flying transport planes "over the hump" and all over that area stopped me and wanted to know why they could not talk to us. While talking to them, Major General Richards, budget officer for the Army, who was an officer on our plane, called me saying that we would have to eat and start at 1:15. I got a cup of coffee and a sandwich, came back, and talked to the junior officers while the rest were eating. They again complained that they were not given a chance to tell their story, and I stated then and there that I was going to remain and hear their story, regardless of anything else. I just got going with a pencil and pad when the group came out and General Richards tried to hurry me to the plane, the other committee members having gone ahead. I informed Major General Richards that I was going to stay there and get the facts. He came back again and told me the plane was going to leave. I told him to take the plane and go. I was going to get the story if it took me until Christmas and if he wanted to leave he could. He then turned to a second lieutenant who had been talking to me and ordered this second lieutenant to report to his commanding officer everything he had said to me. Here we had the anomalous situation of a congressional committee trying to get information being blocked by the chief budget officer of the War Department. What I said at that time just is not printable. When I got through saying it the Army officers left. While I was talking, some of the other committee members came back, with the result that we remained and heard the story of these men, and the officers, other than those present, including Major General Richards, left at my insistence. I was then able to get a little information unhampered.

I had perhaps seventy-five to one hundred lieutenants and captains there, all flying officers who had been on duty bearing the brunt of the flying across the Hump and elsewhere. I took penciled notes. I took information only from men who saw what they told me. I have their names with this result:

1. We flew 750 tons (1,500,000 pounds) of Indian cotton across the Hump by air for the British who sold it to the Chinese. The cotton was worth about 15 cents a pound or $225,000 which the British got. I was told it cost us from $1 to $2 a pound to haul this cotton across the Hump or from a million and a half to three million dollars which they undoubtedly charged against lend-lease, if it was charged against anything. I saw a part of the cotton in the air warehouse waiting to be shipped at Chabuam, India, and 371 tons had already been shipped according to their records.

2. They transported cargo after cargo of springs, mattresses, commodes, bedsteads, dressers, etc., for officers by air. This material was shipped by air from Khaurtaum, Egypt, to Karachi, India, 2,000 miles, and from Cairo, Egypt, to Karachi, 3,000 miles. One group told me they carried by air 570 Simmons mattresses, 270 spring, 240 bedsteads, chairs, commodes, dressers, a quantity of barbed wire, and other things. This was only a part. I examined the records and found a great deal more of this type of property had been shipped by air. An officer, and I have his name, had shipped to him an Austin car from Karachi to New Delhi, India, and shipped it to Karachi because he did not like the paint on the car. A quantity of tile was shipped by air from Bombay to Karachi to build a patio for the officers' club at that place. The patio was built after VJ-day.

3. A great deal of equipment was hauled from Africa to India thousands of miles only to be burned after it got there. I have the name of the officer who said he saw them burn probably a gross of flying gloves worth $2 apiece, 75 parachutes, and a great many new A-2 flying jackets. He saw them smash aircraft parts and instruments with an ax. A Lieutenant Renshow, I was told, did the smashing acting on orders. A Major Griffith from Calcutta, an Air Corps shipping supply officer, was sent to Karachi from headquarters to get rid of the supplies within a week. I have the name of the lieutenant who heard him say that. I was informed that the same type of flying jackets and equipment they were destroying had been taken from the men going back to the States and which they were taking back with them. A load of empty Coca-Cola bottles was shipped out. A printing press weighing 8,600 pounds was shipped from Karachi to Agra and from there to Gaya where it was left unused. I was informed that the officer at Gaya made the statement it was the only way he knew to get rid of it.

Another officer informed me that they destroyed and dumped tools and instruments in the original packages; that an enlisted man showed him welding tools that he had taken from the packages before destruction. Among the things that were destroyed, I was informed, were 10 beacon lights worth $3,600 apiece; 20 Pratt & Whitney engine cylinders worth $700 apiece; 10 magnetos for airplane engines. Incidentally the Austin car was shipped on June 28, 1945, weighing 2,760 pounds shipping weight. All this information was obtained in spite of every attempt made by the budget officer of the War Department to prevent my obtaining it. The information was furnished by officers and men who actually did the flying.

## The Bar and the Bench

EXTENSION OF REMARKS
OF

### HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. RAMEY. Mr. Speaker, under leave to revise and extend my remarks, I include an address delivered by Dr. Jay P. Taggart, president of the Ohio State Bar Association, before the junior bar section at the fall association meeting in Cleveland on November 30, 1945.

Dr. Taggart was for years dean of the law school at Ohio Northern University, and at the present time is a member of the board of trustees of that most distinguished institution of advanced learning. Dr. Taggart is also an alumnus of Ohio Northern University, and while a law student at that institution received the highest grades in the State of Ohio of any participant in the Ohio State bar examination.

He is also a distinguished lawyer and author, being one of the compilers and master of his work in the compilation of the Ohio annotated code. In spite of his active life, he gives a great deal of his time and fortune to the advancement of his old alma mater, Ohio Northern University.

OHIO BAR ASSOCIATION REPORT

(Vol. 18, No. 35, December 10, 1945)

THE BAR AND THE BENCH

The occasion for this address is at least twofold: First, I have believed for some years that the former practice, of the making of a presidential address by the president of the association, should be revived, because I think he owes it a duty to communicate to it whatever ideas or suggestions he may have about its work, or about the administration of justice; second, as I have talked with lawyers, rather widely distributed over the State, during the year since my election to the presidency, it has seemed more and more apparent to me that both the bar and the bench are in need of a revival of interest in the fundamentals of our judicial system and our method of administering justice.

Perhaps the president's annual address ought to contain some review of the work of the association during the period immediately preceding it, but the limitations of this program do not permit that, and I do not think you would be interested in hearing it—particularly since monthly notes of the proceedings of the exective committee are now published in the Ohio Bar, and the principal committee reports are printed, there is no very great need for such a review. Any member of the association who reads the Ohio Bar and the committee reports knows more about the work of the association, from those sources than I could possibly tell him in any address. This is true also of statutory changes, even though the association, through its committees and officers, has given careful attention to many legislative proposals during the past year and has some substantial accomplishments to its credit, especially the creation by the last legislature of a permanent code-revision commission.

I take up, therefore, without further preface, certain subjects which I think are presently of most vital importance, both to the bar and to the bench; the present condition of our judicial system, our methods of administering justice, and the trend of business away from the courts and our profession.

I am neither at the moment, nor fundamentally, so concerned about the loss of business to our profession as I am about the decreasing volume of the business of the courts. We have complained for a long time, and still complain, about the inroads, upon our practice, of practitioners of other callings. I have said before, and I repeat, that I think we ourselves are very largely, although, of course, not solely, to blame for those inroads, and that, if they are to be corrected, we must correct them ourselves, by impressing upon the public our ability, willingness, and fitness to do the work which other people are doing, and we think we ought to do. If we have lost business to other callings it is, I believe, very largely because we have not taken advantage of our opportunities, have not fitted ourselves to do promptly, efficiently, and ably the work which members of these other callings or professions are doing for the public, and to a certain extent because of lack of confidence of the public in the integrity and trustworthiness of a few members of our profession. The correction of these situations depends, I repeat, upon our equipping ourselves to do this work, and letting the public know in proper ways that we are equipped, able, and willing to do it, and that we maintain, and intend to maintain, in the practice of our profession, the highest standards of integrity and honesty. This latter factor, in particular, requires, and will require in the future, much closer attention to the enforcement upon the negligent fringe of our profession of the high standards set up, and professedly adhered to, by us, in our canons of ethics. If lawyers and courts are willing to continue to wink at infractions of our own ethical rules, because of personal friendship or sympathy for the offending lawyer, or because of the feeling that in some way he has a right to make a living, which is a higher right than that of the public to be dealt with honesty and fairly by every member of our profession, we shall simply have to take the consequences. The great majority of the members of our profession intend to, and do, adhere honestly and carefully to our standards of ethics, but we are entirely too considerate, at the public expense and at our own expense, of the occasional lawyer who is not concerned about ethical matters, and thereby injures the whole profession. At this point, too, the courts have a very grave responsibility, to which I shall recur.

I am not, however, as I have said, so deeply concerned about possible loss of business by us as members of the bar. I think there will always be business for lawyers who are honest, able, and industrious. It may not be business in the courts to so great an extent as formerly, but by whatever name we may be called, the community will always need us, or some profession which does what we hold ourselves out as equipped to do.

It is not so clear that the public is always going to consider that it needs a judicial system of the kind with which we now supply it. You are all familiar with the phenomenon of the decreasing volume of business in the courts. I know quite well that much of that has arisen during the war emergency, as a result of that emergency.

To whatever extent this decrease of litigation results from a more peaceable disposition of our citizens, it is, of course, a salutary thing. Litigation is not a thing to be encouraged, for the selfish benefit of judges or lawyers. The condition of which I speak is the transfer to other agencies of business which exists in any event, but which ought to be handled by courts of law. I know, too, that many of you believe that the volume of litigation will materially increase when conditions return to what we are pleased to speak of as normal. To some extent that will undoubtedly be true. I seriously doubt whether it will be true in so great a degree as you think. The phenomenon to which I refer is not a new thing. For many years there has been an increasing trend toward the taking away from the courts of jurisdiction which, at least in principle, had formerly belonged to them, and the lodging of it in commissions, boards, bureaus, agencies, of many and diverse kinds, which we are accustomed to speak of as administrative agencies. Making due allowance for the conditions of the war emergency, it seems to me probable that that trend will increase, rather than diminish, unless both the bench and the bar exert themselves, much more energetically than they have in the past, to stem the tide. If this meant merely a loss of livelihood to some individuals, because fewer judges may be needed, there would be no justification for my addressing you about it.

The matter is one which is fundamental to our system of government and our way of life. I know that problems of international organization, the control of the atomic bomb, labor disputes, threats of inflation, and many other questions, both international and domestic, seem superficially of much greater importance, and that we talk much too lightly and tritely, of the tremendous importance, in our constitutional system, of an independent judiciary, but it is, nevertheless, of fundamental importance, if what we have become accustomed to call—also too lightly—the American way of life, is to be preserved, that an independent judicial system, uncontrolled by any other branch of Government, open as freely and as cheaply as possible to all citizens, administering justice as expeditiously as is consistent with substantial justice, and staffed by able, well equipped, mentally alert, ethically sensitive, and absolutely independent and fearless judges, who respect the person neither of the poor nor of the rich, as the Mosaic code has it, be maintained, and that to it shall be committed the decision of all justiciable matters. If and when we cease to maintain such a judicial system in this State, or in the United States, we shall have lost one of the principal foundations, if not the most important foundation, of our political and economic systems, and just insofar as we cease to use such a system, in proper cases, we weaken that foundation.

But you will say, I suppose, "We have such a system in this State." I submit that I doubt if the public believes that, and I say so because of the apparent public disposition to remove matters from the jurisdiction of the courts, because of the disposition of businessmen, with which every lawyer is familiar, to settle matters rather than to try them in court, and to provide in contracts for arbitration, instead of relying upon judicial determination, and because of the disposition of the public generally to complain, and in many cases with sound reason, about courts and lawyers, and the law's delays. So that I present to you for serious consideration the question whether the growth of administrative agencies is not in large part due to a real, but unformulated, and largely unexpressed, dissatisfaction with the workings of our judicial system, and to a public feeling that, after all, such agencies operate expeditiously, and with perhaps little more arbitrariness than many courts, and I remind you that the history of the English-speaking peoples is not without its examples of the substitution, partially or wholly, of one system of tribunals for another, when the public came to believe that a need for change existed.

Some of you may say that, since I am not now a trial lawyer, I have no right thus to speak of the courts, but I think that a lawyer who does not practice actively in the courts, but who has some opportunity to know what other lawyers say about them, and to know something of what the business community thinks about them, may be in a better position to make suggestions than those of you who are, day in and day out, before the courts. And so I suggest to you, first, that the business community, at any rate, is not satisfied that our present method of administering justice, particularly in civil causes, is an efficient, economical, or expeditious tway of determining disputes, and, second, that a large element of the public is not convinced, as to some of our courts, that they are entirely free from outside influence of one kind or another, whether that be due to politics, to the personal necessities of the judge, to the need for his campaigning for reelection, to indolence, inattention to business, or whatever other cause.

We need fairly and squarely to face some existing facts and not to solace ourselves, as so many of us—and I am afraid too many judges—apparently do, with the belief that as things have been, they will always be, and that our present method of administering justice will always be permitted to continue, whether or not it is thoroughly satisfactory to the community. There seems to me to be a certain laissez faire attitude, an apparent acceptance, albeit a dissatisfied acceptance, of things as they are, a certain spiritlessness, among the rank and file of lawyers and judges.

Consider first for a moment the actual efficiency of our present method of disposing of litigated matters, particularly civil causes. Is it not possible that the time consumed in making up the issues and getting cases ready for trial could be materially shortened without prejudice to justice? May we not, at some points, have concerned ourselves too much with making justice pay for itself, rather than with making it open, efficient and expeditious? Is the present method of arriving at the facts of a case, particularly our traditional method of examining witnesses, the most efficient that could be devised without sacrifice of the necessary safeguards of truth? It seems to one who looks at the actual trial of cases in a more or less detached way that there are many elements of waste of time, effort, and money involved in the average trial and appeal. There is also a marked disinclination on the part of both bar and bench, but again, particularly, I fear, upon the part of many judges, to try to put into operation newer and more efficient methods. Pretrial procedure is one outstanding example of that. In many courts, its possibilities have not been thoroughly tested, and even when it is honored by lip service, it is too often used perfunctorily, without realization of its possibilities, or as a mere method of compelling settlements. It is true that lawyers are very much to blame for delays in trials, but it is

also true that judges have it in their power to prevent very many of those delays, and to compel much more speedy and more efficient procedure on the part of the bar, and in my judgment no judge who does that will in the long run suffer by it.

Next, let us consider briefly the actual disposition, toward the matters which I am discussing, of some members of the bench. I would not be misunderstood. I intend no indiscriminate condemnation of either bench or bar. I am satisfied, as you are, of the fundamental integrity and good intentions of the vast majority of the members of our profession and of the occupants of the bench, but, just as there is at the bar what I have spoken of as a negligent fringe, who either openly flout, or are passively uninterested in, our standards of ethics, so it, unfortunately, must be said that there are occasional occupants of the bench who do not seem to be concerned about its improvement, about the practical application of the standards of judicial ethics, or perhaps about anything except routine performance of business, continuance in office, possible increases in salary, and other perquisites. Judicial indolence is, it must regretfully be said, a disease not entirely unknown; the disposition of occasional judges to delay unconscionably the decision of matters submitted to them is a matter about which we talk more than we act; neither is an inclination upon the part of sitting judges to opppose the abolition of unnecessary judgeships, or the imposition of some additional work upon their courts, a thing unknown. Almost every questionnaire submitted by a bar association to its membership discloses that there are a few judges who a substantial number of members of the bar believe permit themselves to be influenced, in the disposition of cases, by considerations other than those of justice, and I have already spoken of what seems to me an indisposition on the part of many members of the bench to try new methods and to compel members of the bar who practice before them to conduct their cases with reasonable speed and efficiency. To put it in another way, the machinery which we already have, which would conduce to more efficient operation of the courts, is not thoroughly used, but much more efficient machinery might be devised if we were sufficiently alert.

I have said that I would recur to the responsibility of courts for the maintenance of the ethical standards of our profession. Many lawyers who have served on grievance committees of bar associations know perfectly well that one of the greatest obstacles to the enforcement of our ethical standards is the unwillingness of some judges to treat seriously, when presented to them, infractions of our canons of ethics, so that, in practical operation, grievance committees hesitate to submit to courts, for discipline, cases other than those of the most flagrant kind. I submit that this should not be so. Bar associations and individual lawyers should be encouraged by the courts to bring to their attention disciplinary matters, even if not so flagrant as to require disbarment, not so that it may be known that there are lawyers who are negligent in such matters, but rather so that the public may know that the bar and the bench cooperate in attempting to protect the public against such offenses. Too frequently, as you all know, it happens that when lawyers have been disbarred for flagrant misconduct, they are reinstated, without publicity, without adequate evidence of reformation, and of fitness to enjoy the public confidence, and very frequently over the protest of the same bar association at whose instance they were disbarred. At this point I digress to express, so far as I have a right officially to do so, the appreciation of this association of the attention and cooperation of the supreme court of this State in regard to the matter of reinstatements, evidenced by its recent amendment of its rule XXVII, in response to an application made by the committee on legal ethics and professional conduct of this association.

I make no apology for laying so much stress as I have upon the matter of ethics, either of the bar or of the bench. The upholding of integrity and honor in our profession is one of the declared purposes of this association. We are not tradesmen; we are not merely craftsmen; we are not even solely practitioners of a very high art; we are members of a profession, and, trite as it may be to say so, both bar and bench must, like Pompeia, be beyond suspicion, and we shall enjoy the public confidence only to the degree that we thus keep ourselves beyond suspicion, not merely beyond actual misconduct.

But, you may say, what remedies do I suggest? I think that what Ohio needs is a unified court, containing no more judges than are actually needed for the discharge of the judicial business of the State, divided into trial and appellate divisions, and with small claims divisions for the handling of minor litigation. If the public continues to desire elected judges, the judges of such a court might be elected by appropriate political subdivisions, with proper provision for periodical adjustment of the number of judges to the demands of judicial business, but be subject to assignment from place to place as they are needed, so that they will be kept busy, and so that the public will not bear the expense of unnecessary judges. Such a court should be free to make, and freely change, the rules of pleading, evidence, and procedure, in the interest of as free, untrammeled, and expeditious justice as may be found reasonably possible, and it could and should be alert and astute to protect and promote, by well-considered changes, without long legislative delays, the efficiency of the judicial process.

This may be a counsel of unattainable perfection, but we must always aim at ideals beyond what we can accomplish at a given time. But if that is unattainable or too visionary, then we need, within the framework of our present judicial system, such a rearrangement, and such a reduction of number of judges in places in which there are too many, as that courts will be kept busy, and so that it will be demonstrated to the public that it has a body of judges who are busy, industrious, alert, and careful of the public interest, and then the bench may, with confidence, appeal to the public and to the bar for that reasonably increased compensation which, in many parts of our judicial system, is needed, and for some reasonable system of retirement pay for judges who have spent long years in the public service, and who, because of that long service, and of age, would be unable, upon retirement from the bench, to earn a competency in the practice of law.

I think, too, that the time has come when lawyers must make up their minds that, far from simply choosing between two or more comparatively undesirable candidates for a particular judgeship, they shall see to it that in such a case a suitable candidate is persuaded to run and is elected, and that it is the duty of the bar, further, to see to it that judges who do not measure up to the standards in which the bar itself believes, and who are unwilling in good faith to cooperate with the bar in its efforts to enforce our standards of ethics, shall in no case be supported by the bar for election, and this without regard to questions of personal popularity, personal sympathy in particular situations, or long service in a particular office

I am not a prophet of doom; I am not, I trust, a wild-eyed reformer; particularly I am not a candidate for anything. I am, however, and I think we all ought to be, deeply concerned about the fundamental matters which I have attempted to lay before you; that is, the continued existence of our judicial system upon its present basis as an independent branch of government, and the restoration to its jurisdiction of great bodies of matters with which it ought to deal, and which ought never to have been allowed to escape from the jurisdiction of the courts; but I am firmly convinced that the trend is not likely to be reversed, unless and until both bench and bar are willing to give serious, continuous, attention to these matters. The mills of the public dissatisfaction, like the mills of God, which in truth they are, are slowly set in motion, but when they grind they grind surely, and exceeding small. And so, if, in your opinion, there be in our scheme of the administration of justice, and in its continuance, any virtue, if in them there be any praise, then I ask you seriously to think on these things.

## New York State Ought To Pay Back Premiums for Veterans' Retirement Funds

EXTENSION OF REMARKS
OF
## HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Joseph Leib, national legislative director, American Veterans of World War II:

NEW YORK STATE OUGHT TO PAY BACK PREMIUMS FOR VETERANS' RETIREMENT FUNDS

(By Joseph Leib, national legislative director, AMVETS)

Discharged soldiers now returning to their jobs in police and fire departments throughout the State of New York are finding it necessary to dig down in their empty pockets in an attempt to catch up with their premiums to the State retirement fund.

This is an unfortunate predicament that warrants immediate study. Many of these premiums are averaging as high as $100 per year. This is staggering enough to some veterans but then take into consideration that most of these men served in the armed forces from 2 to 4 years. Therefore, repayment of these premiums would completely eat up, if not exceed, whatever mustering-out pay these veterans collected when they returned to civilian life.

It is obvious that the present requirements are causing a great hardship on many battle-scarred veterans and it is the opinion of AMVETS that the legislature should take under consideration possible legislation in order to correct this injustice.

An article regarding this condition follows:

"[From the Army Times of December 8, 1945]

"AMVETS PROTEST PAYMENT OF OVERDUE PENSION PREMIUMS

"BUFFALO.—Officials of both the police and fire departments have asserted that servicemen returning to their jobs in these two departments should not have to pay back premiums into the New York State retirement fund for their pensions, but that either the State or city should shoulder the responsibility.

"'Under the existing regulations, veterans must pay back premiums averaging around $100 for each year they were absent from their jobs while serving with the armed forces.

"'According to Patrolman James Francis, commander of the newly formed Thomas V.

Brennan Post, affiliated wth the AMVETS, 70 veteran members of the post employed by the police department are now discussing the situation.'

"'"The returning servicemen feel very bitter about paying the back premiums," asserted Francis. "Most of these men have been in the military service for 3 or more years, and it certainly is going to hurt their pocketbooks, especially those with families. The powers that be certainly should not let them down."

"'The AMVETS' State convention, said Francis, will be held in Buffalo December 14 and 15. At that time it is expected that resolutions asking the State to pay the back premiums will be drawn up.'"

## Address by J. Edgar Hoover Before the International Association of Chiefs of Police

EXTENSION OF REMARKS
OF
### HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

*Tuesday, December 11 (legislative day of Monday, October 29), 1945*

Mr. WILEY. Mr. President, yesterday the renowned Director of the Federal Bureau of Investigation, Mr. J. Edgar Hoover, made a Nation-wide radio address before the fifty-second annual conference of the International Association of Chiefs of Police.

The chief G-man gave the facts on the postwar crime wave which we are now experiencing. He told of the expanded roles which the home, the church, and the school must play if we are to be adequate to cope with the lawless tendencies that always follow in the wake of war.

Mr. Hoover pointed up, too, the fact that the returning serviceman, instead of being a problem, is actually a potent patriotic stalwart in the drive against hoodlumism.

Finally, Mr. Hoover warned us to be on our guard against the wiles of the collectivists within our midst. In particular, he told us to be vigilant against the insidious work of the Communists operating behind a thousand guises within the ranks of labor, within the church, the home, the schools themselves, to undermine the Republic.

Mr. President, I ask unanimous consent that this important address be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE RECONVERSION OF LAW ENFORCEMENT

There is a marked similarity between our meeting 6 years ago, as war was spreading in Europe, and our first peacetime meeting today. The firing has stopped on the battle fronts, but it is being resumed on the home front. We had a big job to do then, but a bigger one faces us today.

At our last peacetime meeting, it was my duty to convey to you the President's directive calling upon all law enforcement to protect our internal security, and to call upon you for assistance. The manner in which you answered your country's call to duty is a tribute to your love for America. Never in our national history have brighter pages been written by men working together for a common purpose.

Already, I have expressed my gratitude to many of you and today I want publicly to extend to all of law enforcement my heartfelt appreciation for your assistance in keeping our home front secure. It is also my privilege to extend to you the personal greetings and commendation of the Attorney General of the United States, Hon. Tom C. Clark. As the chief law enforcement officer of the Nation, he has asked me to convey his congratulations for a job well done.

The ability of all branches of law enforcement to cooperate and to pool their facilities proves once and for all that we needed no unified agency to insure the discharge of our responsibilities. I have said before, and I say again, that there is no place in our American way of life for a national police. Our first line of defence in peace or war is the local police agency. It is on the scene and can strike at lawlessness at its source. The role of the Federal Bureau of Investigation shall continue to be that of a service agency to augment and bolster your efforts and to handle those matters which are Nation-wide in scope and beyond the reach of hometown protectors.

As we look to the future, we should also consolidate our gains. At the very inception of hostilities, we were all apprehensive of what might happen. That these fears did not materialize is a tribute to the forces assigned to maintain the peace at home.

In every period of national emergency, it is normal and natural for human beings to become panicky and hysterical. There is not an experienced law enforcement administrator in the land who was not criticized for seeming inaction. We could not publicly proclaim what we were doing and why. But in no civilized land in time of war were civil rights and personal liberties abridged less than here in the United States. The civil rights which we preserved then must be preserved in the future. The dragnets of World War I were unheard of in this war. The slacker raids did not recur. The lynchings and character assassins of World War I were checked. On the other hand, the sabotage which everyone said would occur did not take place.

Early in the war, skeptics proclaimed that we were wide open to espionage. They held that nothing was secure and nothing was being done. The record is exactly to the contrary. We knew from the very outbreak of the war that espionage was under control. I do not mean that the enemy was not active. He was. Foreign powers tried to steal not only the atomic bomb, but other military secrets. For years, Nazi Germany had built an espionage machine and an army of fifth columnists, which proved to be the downfall of once proud nations. They spent money with reckless abandon and were constantly on the alert to train, develop, and unleash spies and saboteurs, not only in the United States, but throughout the entire Western Hemisphere. The counterespionage program which we developed did more than encircle spies and render them harmless. It enabled us to learn of their weaknesses and their aims.

There is a universality to law enforcement in democratic countries. I am happy to report that the integrity and devotion to duty of peace officers in the United States has been matched by our neighbors in the north, in the south, and by our British allies. It was our happy privilege to be closely associated with the security and intelligence authorities in the British Isles, with that sterling organization in Canada which has captured the imagination of all Americans—the Royal Canadian Mounted Police—and with similar agencies in all of the countries in the south from Mexico to Chile.

There were few espionage cases which came to our attention which did not have worldwide ramifications; and FBI liaison agents, stationed from Canada to the tip of South America, received the highest degree of aggressive cooperation.

It can truly be said that so far as subversion is concerned there is no such thing as a domestic field. It is international. Japanism manifested in this country had its origin in Japan. Nazism in Germany, and Fascism in Italy, and without the wholehearted spirit of mutual assistance of all law enforcement agencies, domestic and foreign, the FBI could not point to the proud record we have today. Let me illustrate. Germany, lacking an ever-necessary supply of platinum, turned to the black market of South America. One arch platinum smuggler was arrested in California. His trail led through several South American countries. In each, the facts were communicated by the FBI to the established law enforcement agencies in those countries and the holes were plugged. In one espionage case which centered in New York, shipping information was getting out of the country. Contacts of the enemy were spotted in faraway Brazil and Chile. There, the authorities quickly moved into action. Twenty-four clandestine radio stations were put out of business, 30 short-wave transmitters were seized, and in all, 335 espionage agents were arrested in South America alone through the fine cooperation of the countries of that continent.

More than 23,000 enemy aliens throughout the Western Hemisphere were identified, interned, deported, or moved from strategic areas through the joint efforts of local law enforcement agencies and the FBI. We not only thwarted enemy sabotage at home—none occurred in the entire Western Hemisphere throughout the entire period of World War II. We of law enforcement can be very proud of this record.

The wartime associations of law enforcement officers of the different countries have brought about a spirit of understanding and friendship which will inure to our mutual advantage in the peacetime years which lie ahead. I cannot commend too highly all of the officers with whom we have been privileged to work, and I sincerely hope that the spirit of mutual assistance and understanding will continue.

We have faced many problems, burdened as we are with added duties, untrained personnel, and acute manpower shortages. The salaries paid to law-enforcement officers are scandalously low. Community leaders should hang their heads in shame when they condemn their local police without first facing the fact that the average officer could command a much higher salary in the industries he protects.

In replenishing our ranks, we should enlist the aid of the public in improving conditions, in providing better facilities, and in securing the modern implements of law enforcement. A community can have no better investment than in an alert, well-trained police department. It is false economy and a flagrant disregard of society's rightful protection to reduce essential enforcement services.

Our gretest advances have come through concentrated training programs. But we have scarcely begun to scratch the surface. Like every other popular movement, leeches and parasites have already tried to attach themselves to the field of police training. Here is a job that belongs in the hands of law enforcement. It is no place for professional promoters with quack nostrums to sell nor for stratosphere thinkers disseminating mists of error and confusion. Yet, I know of in-

stances where ex-convicts with glib tongues have actually succeeded in taking part in training police and in surveying police needs. The International Association of Chiefs of Police can embark on no more important program in the postwar years than a widespread campaign to lift police standards through well-established training activities conducted by professional men of law enforcement who have dealt in the realities of the problem.

The need for increased effectiveness and the marshaling of whole communities on the crime-prevention front becomes more important each day. Lawlessness has taken on such proportions as to even startle the imagination. The crime waves proclaimed in the daily press are not imaginary. They are real. They are bloody. If anything, the press is guilty of understatement rather than overstatement. Let me be specific. In October of this year serious crime increased 19 percent over the same month last year. Of the more serious crimes, the increases reflect 32 percent more murders, 38 percent more auto thefts, 38 percent more robberies, 11 percent more larcenies, and 26 percent more burglaries. Crime rates are continuing to rise rapidly throughout the entire Nation.

The fingerprint files of the FBI reveal a criminal army of 6,000,000 individuals who have been arrested and fingerprinted—1 out of every 23 inhabitants in the United States. You know only too well the constant recurrence of arrests.

After every great war or period of acute national emergency there has been a rescission of moral fortitude. This one will be no exception. I hope as you do that the racketeers, the overlords, the desperadoes, and the criminal scum who characterized the roaring twenties will not come back to the American scene. I fear, however, that this is wishful thinking. Once they get a start and find they can succeed, we shall face very serious trouble.

Crime springs not alone from a state of mind. There are many factors that must be considered in discussing crime causation, such as the matter of economics, moral standards, and social conditions. To combat the rising tide of serious criminality which is sweeping the country, we need a revival of old-fashioned discipline and courage.

The abuses and maladministration of our penal systems which release murderers, sex-crazed degenerates, outlaws, and bandits on parole or on "leave of absence" from our correctional institutions to commit serious crimes against our citizens is constituting again a national disgrace. A large percentage of the fugitives being sought by law enforcement officers throughout the country have been the recipients of ill-advised clemency.

The inefficient and careless manner in which convicted criminals are guarded in our jails and penal institutions is shocking and in many cases represents criminal malfeasance upon the part of those charged with the proper safekeeping of these enemies of society. Almost daily we note hardened criminals escaping from confinement to endanger the lives of our citizens. The taxpayer has every right to demand that convicted criminals be guarded by men of high character, integrity, and intelligence. Law enforcement agencies exist for but one purpose, namely, the protection of society. We of law enforcement must be alert to take advantage of every opportunity to focus the spotlight of public opinion upon the evil conditions which presently exist. In this, we must enlist the aid of a sympathetic press and a civic-spirited screen and radio.

The responsibilities of law enforcement are ever broadening. Not only must we marshal our forces on the front of crime detection and apprehension, but there is an ever-broadening front dominated by the subverter and purveyor of alien isms who seek to transform the America we know and love to a land of class struggle. The fight against fascism continues. The hooting war has stopped, but these espousers of dictatorships still exist, and they have been too well entrenched to become converts to democracy overnight. The evidences of Fascist survival are too plain to ignore.

To the Fascist foe must be added another, the American Communist. These panderers of diabolic distrust already are concentrating their efforts to confuse and divide by applying the Fascist smear to progressive police departments, the FBI, and other American institutions to conceal their own sinister purposes.

The godless, truthless way of life that American Communists would force on America can mean only tyranny and oppression if they succeed. They are against the liberty which is America; they are for the license of their own. When they raise their false cry of unity, remember there can be no unity with the enemies of our way of life, who are attempting to undermine our democratic institutions. The Fascist-minded tyrant whom we conquered on the battlefields is no different from the American communistic corruptionist who now uses the tricks of th confidence man until his forces are sufficiently strong to rise with arms in revolt.

America cannot exist half democratic and half Communist or Fascist. If we want to improve upon our American form of government we will do it in our own way, in our own time, and with our own blueprint. Therefore, it behooves us to be on guard for an enemy that brazenly and openly has advocated the corruption of America, that spends sleepless nights working one propaganda line after another, that poses behind a dozen fronts, that squirms and twists his way into those great American forces such as the church, schools, and the ranks of labor.

As I speak to you today, the big guns of the Communist Party in the United States are aimed at returning veterans, openly boasting that here is a new front behind which they can hide. They have selected a worthy foe, for the American Legion and the Veterans of Foreign Wars are too experienced in fighting America's enemies to be hoodwinked by these Communist swindlers.

Lest I be misunderstood, I do not for one minute detract from the heroic fight Russia waged against the invading Nazi hordes, to emerge as one of the great powers of the world. We must not let the antics of the American Communist prejudice us against this great Nation which has the right to any form of government she desires, nor must we judge the great Russian people by the lunatic fringe which represents the great majority of American Communists.

Yes; we have a right and a duty to know what is going on in America. Law enforcement in the peacetime era must determine to do its best to prevent home-grown or imported Fascists and Nazis from reorganizing or regrouping under some other high-sounding, misleading name.

The rising trend in crime once again directs its attention to the home and the youth problem. More and more, I am convinced that the fault lies directly in the home. Parental responsibility is no longer in style. This causes me to suggest that a new approach is necessary. In the past when a youngster committed crime, he alone was held responsible and went to reform school, a foster home, or was put on probation. The time has come when parents should be held responsible not only to their own conscience but to society. Juvenile delinquency does not occur until adults first become delinquent. Law enforcement must find a way to do more to alleviate this problem. A widespread return of officers to the beat, concentrated efforts through crime prevention bureaus, and a closer contact with community facilities will make it a more potent force for social betterment.

There is a need for more realism in meeting the crime problem. It is not pleasant, but the fact remains that it is the delinquent youngster of the war years who is now graduating into the ranks of seasoned criminals. The most recent figures reveal that 21 percent of all arrests are of persons under 21. More persons aged 17 are arrested than in any other age group. Those under 21 years of age represent 15 percent of all murderers, 36 percent of all robbers, 51 percent of all burglars, 34 percent of all thieves, 26 percent of all arsonists, 62 percent of all car thieves, and 30 percent of all rapists.

The whole problem becomes more serious when we observe the shocking spectacle of the rise in youth offenders during the war years. They are the ones who are now becoming the postgraduates of crime and are committing the more despicable offenses. The arrests of girls under 18 years of age have increased 198 percent since the last peacetime year of 1939, while arrests of boys under 18 years of age have increased 48 percent for homicide, 70 percent for rape, 39 percent for robbery, 72 percent for assault, 55 percent for auto thefts, and 101 percent for drunkenness and driving while intoxicated.

These figures do not mean that all youth has failed; on the other hand, the generation ahead of them has failed. The best we can do to correct our mistakes is to aid the youngsters who have never had a chance in recapturing their rightful places and removing those forces which have contributed to their delinquency. The home, the church, and the school must be united in a common purpose. We need new altitudes of respect, both for the parent and for law. We need a rebuilding of the foundations which made this Nation the greatest in all history, bulwarks formed of more staple materials than those of apathy, selfishness, or indulgence. Our boys and our girls are the foundation of America, to grow as their parents and their surroundings direct.

We have a potent ally in the returning veteran. Fathers, older brothers, and even mothers and sisters freed from defense plants can do much to restore the home to its rightful place.

The average veteran will come home a better citizen. He knows what America means. He has fought and sacrificed the best years of his life in order that democracy might survive.

I resent the libel that has been placed on the returning veteran by those who would lay the postwar crime waves at his doorstep. This misapprehension regarding servicemen stems from the fact that many weapons used in crimes of violence are either service pistols or other souvenir weapons the returning soldiers were allowed to bring home because of lax regulations. Many of these inevitably find their way into the hands of unscrupulous black marketeers who resell them to hoodlums and criminals.

Hundreds of thousands of such souvenirs have been brought into the country by returning war veterans. Consequently every community and all civic groups should start a campaign to keep dangerous souvenir war weapons out of the reach of killers and bandits. Nationally the Federal firearms statute should be strengthened so as to serve more adequately to protect society and make more difficult armed depredations upon law-abiding citizens by thugs.

At the very outbreak of war, in addressing you, I pointed out that oppression would crystallize a fifth column. We singled out

the guilty then and protected the innocent. Here was a practical lesson in Americanism which worked. The same principle should be applied to the veteran. Give him the understanding, friendship, and help he deserves while he faces a period of adjustment. Those few who take the law in their own hands must be treated firmly and be made to understand that neither they nor anyone else can be immune when they do as they please and fail to respect the rights of others.

As we face the new era that lies ahead, let us do so with the determination that the people we serve shall have our best efforts and the utmost of our protection. Let us realize our responsibilities to those who have fought and died that democracy might live, by dedicating every fiber of our being to the preservation of the America we love. Let us forever pledge that we shall keep here in America a way of life that is wholesomely democratic, where citizens walk consciously and fearlessly as free men.

I know of no great cause; I know of no cause more entitled to receive the enthusiastic support of every American interested in the preservation of our country's institutions.

## Stateless Persons

REMARKS
OF
## HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mrs. LUCE. Mr. Speaker, I have today introduced a concurrent resolution, the purpose of which is to reestablish the civil rights of the many thousands of refugees now in internment camps and scattered throughout Europe and Asia. A similar resolution is being introduced in the Senate by Senator ARTHUR VANDENBERG, of Michigan. There is nothing particularly new to students of the refugee situation in World War I in the purposes of this resolution. After World War I the terrible and pressing problem of refugees and stateless persons was met by the creation of "Nansen passports" under the League of Nations. Today, there is no similar passport or card of identity for stateless persons. My resolution seeks to request the State Department to create such passports for a need that is even more pressing than after World War I.

Less than a month ago General Eisenhower told the House Foreign Affairs Committee that the problem of displaced, that is, stateless persons is still far from being solved, although at that time some 3,000,000 displaced persons had been returned to their former residence-areas from the American occupied zones.

Since then the forcible evacuation of persons from Czechoslovakia and Hungary has added a new caravan of over a million other men, women, and children who must be located somewhere and given some kind of shelter, food, and opportunity to earn a livelihood. In the Europe of today this cannot be done without ration cards, work cards, and papers of identification, none of which are available to exiles so long as they are classed as "stateless." The situation is greatly complicated by the fact that many of these newly displaced families have been uprooted from areas where their ancestors have lived for hundreds of years, and they are ignorant of any other region or customs.

Aside from purely humanitarian consideration is the social effect this resentful horde may have within another generation. As Fridtjof Nansen told the League of Nations in 1928, asking for aid in settling the much smaller number of refugees then displaced in Europe:

If intelligent human beings are forced to brood over a situation so much against their wishes and efforts that they come to regard it as an injustice, and if they are denied the most elementary forms of protection, there is the danger that their physical and intellectual energies, instead of being turned into constructive channels, may be exploited in other ways which will exact a heavy reckoning out of all proportion to the slight sacrifice they now ask.

Today, General Eisenhower calls attention to a similar situation magnified by the greater number of these unhappy refugees. Testifying recently before the House Foreign Affairs Committee on UNRRA, General Eisenhower said:

I class anyone as stateless who does not want to go back to his former area through certainty of persecution. Unless that man can be shown to be a real criminal, where he is arrested and turned over to the authorities, he is a stateless person. We have thousands of those men, and we have to feed them all. They have no possibility of getting their food from anyone except from our stocks of food, and such indigenous stocks of food as we have been able to sequester for them.

Our great relief job to date has been, on the whole, satisfactorily done, but there is more needed than the Army can give those people. Future education certainly is needed. They must go somewhere sometime. They should have education now and proper nutrition rather than just shotgun types of nutrition of, say, so many calories a day. There are children, there are old people, and there are women. There is a very vast job to be done.

Among all the "stateless" problems the cases of political refugees from areas now held as parts of the Soviet Russian Empire are particularly tragic as they are claimed by the Soviet Government to be its subjects, and this claim was accepted by United States authorities until last September and, even now, is only in temporary abeyance. Deportations under the Soviet claim may be resumed at any time under the authority of the American commander of the zone of occupation, or by a directive from the President at the instance of the State Department.

Mr. Speaker, here is the resolution introduced by me and by Senator ARTHUR VANDENBERG, of Michigan, in the Senate:

Concurrent Resolution on Stateless Persons

Concurrent resolution favoring prompt inquiry by the United States State Department into the question of affording stateless persons immediate relief by legitimatizing their civil status and their right to become self-sustaining citizens

Whereas there are now in the areas occupied by Allied military forces many thousands of refugees, including persons who have been uprooted from their native areas to which they fear to return because of the probability of persecution for their political beliefs; and

Whereas following World War I so-called Nansen passports were provided under the auspices of the League of Nations to meet the needs of such persons, and did meet those needs: Therefore be it

*Resolved, etc.*, That the State Department be requested to explore and promptly report on the subject of such refugees with a view to relieving immediately their present intolerable situation, either by means of appropriate international machinery within the existing framework of the United Nations Organization to legitimatize and register the civil status of, and provide cards of identity for, all stateless persons who are now in any area occupied by any armed forces of a constituent member nation of the United Nations Organization, or by giving sufficient and proper authority for the above purposes to the Intergovernmental Committee on Refugee Problems now existing with headquarters in London.

For the purpose of this resolution, a stateless person shall be understood to mean "any individual, free of criminal charges against him, who does not want to return to his former area because of the probability of persecution."

## Speech of Hon. H. Struve Hensel

EXTENSION OF REMARKS
OF
## HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Assistant Secretary of the Navy H. Struve Hensel before the convention of New Jersey Real Estate Appraisers at Atlantic City, N. J., December 7, 1945:

The aftermath of war is generally characterized by deep emotional upsets which often threaten reason and balance. An atmosphere of unsteadiness is frequently generated. After the First World War, several nations suffered violent internal revolts. In this country, emotion overpowered reason to such an extent that an eminent group of congressional investigators solemnly characterized defense munitions makers as "merchants of death" and announced that the cause of war lay solely in the aspirations of such munitions makers. Our consequent weakness at the start of this war was the price we paid for that emotional spasm.

On this fourth anniversary of Pearl Harbor Day and less than 4 months after complete victory over our enemies, this country is again on an emotional spree. Reconversion is delayed by a myriad of strikes. There is a wild rush to demobilization. Our people seem determined to exclude all things military from their private lives. The atomic era appears to some to promise terror and devastation. Others are relaxed to the point of limpness because of a belief that we will, always and without effort, be preeminent in the atomic field.

There is also what may be called the magic formula group which is convinced that the merger of our armed forces will be the complete panacea for permanent safety. Such group resists all suggestions of care and study. Their watchword is "Haste." Their plans are vague and conflicting. Their claims are extravagant—so extravagant, in fact, that many of you must wonder how

we ever managed to win this war, if our Military Establishment was as sick as they claim.

The emotional heat thus generated is rather terrifying. Witnesses have appeared claiming that the Army Air Forces won the war practically single-handed. It is charged that the weapons of sea power were obsolete or obsolescent at the time of their greatest successes. Many battle-starred naval veterans wonder if they were ever in the war. The guess is often repeated that we could have saved billions of dollars if we had fought this war with a single military department instead of two. It is also guessed that 75 percent of our war expenditures would have made us militarily stronger if we had only had a single department of some kind. There is also the unprovable statement that we would have won the war earlier if the departments had been combined. Proof of such claims is frankly admitted to be impossible. Yet on such unsupported opinions—as to which I am a most doubting Thomas—we are asked not only to risk our national safety but we are urged to take that step without investigation, reflection, or study. It is hard to believe that mature people could be so carried away.

There is admittedly an important and complex problem before us. We must establish an organizational pattern which will best preserve our national security for all time. National security in its broadest aspects—in defense against total war—is our objective. Our plan must be comprehensive, not a series of disjointed and fragmentary approaches. Yet so far we seem absorbed with only the military phase of the problem. I can assure you that, while military operations are most important, they are but a part of total war. Military successes are completely dependent on basic steps in research, invention, production, transport, and other activities quite unrelated to the military departments. In limiting our discussion to the military departments, we are not even approaching consideration of our real national problem.

I have the deepest regard for the sincerity and industry of the Senate Military Affairs Committee. Yet, the hearings before that committee do not faintly resemble a careful study of our national security. The committee has no staff to make a detailed analysis of the over-all problems. Its members are not legislatively familiar with the Navy and naval affairs. There is no group available to the committee painstakingly to investigate our present organizations and their operational advantages or disadvantages. The committee members have many other duties. Some of them are members of four or five other important committees. The hearings are seldom attended by more than 5 of the 18 committee members. Down to this evening only 1 of the 18 members had attended all of the hearings. None of the Senators can devote their entire attention to this problem for even a day much less for a week or a month. Although the Pearl Harbor Investigating Committee has most experienced counsel to organize and present a case, this Military Committee has none. Consequently, the witnesses appearing before the committee are not subjected to searching cross-examination. No matter how extravagant the claim or how unsupported the guess, there has never to date been any demand for substantiation or proof. We have been entertained with the most general opinion testimony, completely unsupported by real evidence and forever defying critical analysis. The pattern is one of debate not study. It is conducted along the lines of claim and counterclaim—not analysis and reflection. That is certainly not the atmosphere or the manner in which to compose a comprehensive plan to preserve national security.

It is time that we attacked our real problem calmly, coldly, and in a manner commensurate with our intellectual maturity and with the importance of the subject. The selected solution must be able to stand the test of peace and war. We cannot afford to make any mistake.

We civilians have had some experience with war. We ought to be able to agree on some important facts. We know, whether or not it is admitted by the military, that there was much more to this war than field operations. We often emphasized the scope of our mobilization of manpower and material resources by calling it total war. We know that the next war, if there should be one, will be even more total than this one. Everyone will then be in the service of his country. The front will be everywhere. I doubt whether any material resource will be left untapped. Organizations which might have been successful in this war may be wholly unsuited for the atomic era. It is for a possible future war—not the past one—that we must prepare. We know what happened to France when she followed a majority of her military opinion and prepared for the last war instead of the coming one.

A comprehensive plan for national security must include provision for marshaling the entire resources of our Nation. Perhaps it would be more accurate to say: for mobilizing every person, every material, every tool, and every skill. Our analysis of the elements of security must be started far back of the field efficiency of the armed services. The fighting forces are but the apex of the pyramid. The shape, form, and strength of the apex must be determined by the base. The testimony and hearings to date are conceived in the opposite theory.

We should start with plans for the mobilization of our material and manpower resources. A thorough catalog must be carefully prepared. Plans must be made for the conservation and improvement of those resources. Organizationally such work involves the functions perfarmed by our War Production Board, the War Manpower Commission, and also by the Departments of Commerce, Agriculture, Labor, and the Interior. There were also auxiliary agencies, such as the Solid Fuels Administrator, the Petroleum Coordination, the War Food Administration, and other similar agencies. The foundation of security is built on such activities. Yet they have not been mentioned in the War Department claims.

Stock piles of critical materials not possessed by this country must be planned, accumulated, and kept current. This must be done to support the people in the factories and on the farms as well as on the field of combat. Such activities are in the realm of the Metals Reserve Corporation, Rubber Reserve Corporation, and the Army-Navy Munitions Board. Furthermore, we cannot neglect a catalog of all foreign sources of critical materials. For that we must turn to the State Department. And I have left out of my discussion the important war functions performed by the Office of Defense Transportation, War Shipping Administration, the Office of Price Administration, and Selective Service.

I have deliberately refrained until this point from discussing the role of the scientist in this war. I can hardly imagine his role in the future. Under the direction of civilian scientists—not military leaders—the independent Office of Scientific Research and Development fought the war through radar, sonar, the proximity fuse, and nuclear physics. In the release of atomic energy, they may have harnessed some of the basic natural forces. Others may guess as they want, but it is not a bad guess that all military men—and the military departments—may in the future be replaced by scientific groups—nuclear physicists and even biologists.

Such are and will be the real basic elements of our national strength. Agencies to supervise and direct such matters were hastily devised in this war. Successful mobilization of those resources and the coordination of those activities made possible the victorious campaigns of the Army and the Navy. You will recall that late in the war the Office of War Mobilization was devised as a supreme authority over the military departments and the War Production Board, which had already been placed over the military departments in the procurement field. If we are really studying national security, there is the field of study. Obviously a unification or other reorganization of the armed services would contribute little to the coordination of those activities or the mobilization of basic resources.

It was also in such fundamental endeavors that we made our most serious mistakes. The coordination of civilian and military research was not the most perfect. Our many material shortages—rubber, tin, copper, steel, food, and many other items—were the result of bad planning. The determination of contests for such materials by the armed services together against the general mass of civilians was much more perplexing than the settlement of the contests between the armed services. The continuous struggle of our fighting forces to tear men away from the farms and the factories affected our national security just as much as the Battle of the Bulge. Our failure to train industrial personnel and our drafting of essential workers was much more threatening to the Army than the Navy's recruiting of volunteers. It is also now apparent that the existence of two Departments was not even a remote cause of our disaster 4 years ago today at Pearl Harbor.

The role of the State Department in preserving national security likewise cannot be underestimated. In that Department wars are avoided and sometimes made. There friendships are developed in peace to mature into alliances in time of war. The Army and the Navy are in reality but instrumentalities of the State Department. That is becoming clearer to all as the Pearl Harbor investigation continues. The functions of our armed services can hardly be satisfactorily determined until the State Department has specified the foreign policies to be supported. The establishment of the State-War-Navy Coordinating Committee was one of the great steps in the direction of real integration of our national security agencies. That is not even mentioned by the War Department witnesses.

Admittedly there were many deficiencies in our prosecution of this war which cannot be risked again. We fought in an atmosphere of superabundance. The next may be fought in an economy of scarcity. Now is the time to prepare fully—not partially. Can it really be that some people would have us study only the military departments?

We can proceed from the catalog of the basic elements of security to a review of some of our major mistakes. Our matériel requirements were not estimated with precision. We entered the war with inadequate knowledge as to the country's productive capabilities. Food shortages surprised us frequently. Our allocation of critical materials was most imperfect for a long time. We never attained a firm grasp on the manpower problem. The recruiting and training of personnel for industrial as well as military purposes was far from scientific. Men with higher skills were often used in less skilled jobs. The education and training of research men for the invention and development of weapons and counter measures were seriously neglected.

As such major deficiencies are enumerated, it should be noted that responsibility of the armed service departments for overwhelming victory dwindles. The possibility of preserving security solely by reorganizing those departments dwindles even faster. It is time to turn from emotionalism to realism. Reorganization of the armed services, no matter how successful, would be but a fragmentary accomplishment. An effort to reorganize

that fragment alone, as insisted upon by the War Department, not only neglects national security—it is really dangerous. Concentration on the unification of the armed services as the one "magic formula" may well lead us to a partial solution which will hamper and obstruct a satisfactory settlement of the entire problem. We may also—and this fear is supported by many of the claims made before the Senate Military Affairs Committee—we may also come to believe that in solving a fragment of the problem, we have automatically solved the whole.

There you have the fundamental issue between the War and Navy Departments today. Both seek national security. The War Department believes that security can be attained solely by merging the military departments. The Navy believes that national security requires a much more comprehensive governmental reorganization and that to attain real security in total war, the armed services play only a part.

It is surprising that Army commanders find security completely encompassed in the military departments. In directing its inquiry solely toward the advisability of unifying the armed services and encouraging field commanders to give unsupported opinion testimony, the Senate Military Affairs Committee has done worse than put the cart before the horse. The basic elements of strength are being passed over. The atomic era is being forgotten and passed by. Our usually sane national thinking is being led astray.

It is time for us to act our national age. There is no reason for us to develop the galloping jitters. We have just won a war. There is no war on the horizon in the next week or month. We have adequate time for careful study and critical analysis. Delay carries no penalty Error may involve the loss of our national life. When a leading Senate proponent of unification opposes a careful study on the ground that it will kill unification—when the Army members of the Joint Chiefs of Staff can urge a civilian commission to study the effect of guided-atomic missiles on our national security but can reject such a study with respect to our governmental-security organization—when military field commanders can urge that we unify first and find out how later on—it is time for the people to call a halt.

There is no one man who, short of a long period of careful study, has acquired sufficient experience in all phases of this war to speak with authority on the complete cycle. We cannot reason carelessly from the field of combat to the domestic front or vice versa. The problems of each phase were radically different. The field commanders know the combat angle. They know little, if anything, about the problems encountered in producing the materials and training the men which made their exploits possible. The men who worked in the service departments here and in the War Production Board and the other agencies of mobilization know little of the problems of the field. I must emphasize again and again that this is an enormous and complex problem. No one phase should be permitted to dictate the solution. It cannot be solved piecemeal. Any solution which does not embrace all elements of national security should be doubly suspect. All conflicting War Department plans fall into that unsatisfactory category.

To date there has been only one study which even purports to consider all facets of national security. Such study was made by Ferdinand Eberstadt at the request of the Secretary of the Navy. You will remember Mr. Eberstadt as the Chairman of the Army-Navy Munitions Board and inventor of the controlled-materials plan, which solved our problems of material allocation. He undertook his study without any bias except that of a citizen. As a matter of fact, he started with some leanings toward a single military department. He catalogued all the elements of national security and checked the errors made in this war. Analyzing such studies, he evolved a comprehensive plan for national security. A single military department was rejected. Three departments—sea, ground, and air—were recommended. Decisions as to policy and coordination of those purely administrative organizations were lifted from the departments to a higher level. The military administrative organizations were to be kept compact and single-minded for efficient operation. Here only do I find it recognized that preservation of our full national security does not lie in the consolidation of any of our existing governmental departments, but rather in the creation of modern coordinating and directing agencies. This is the pattern for the future.

The existing State-War-Navy coordinating committee is to be replaced by a National Security Council with the President or Vice President as Chairman, and with the Secretaries of State, War, Navy, Air, and the Chairman of a National Resources Board as members. Such council will have a permanent secretariat. It will be responsible for foreign and military affairs and will maintain active, close, and continuous coordination between the departments and agencies of government responsible for foreign and military policies and their execution. It is the improvement of an existing instrumentality and, except for the proposed addition of the Secretary of the Treasury, it is almost identical with the recommendation recently made by Walter Lippmann as a more satisfactory instrumentality for determining our foreign policy. Such National Security Council would have under it the Joint Chiefs of Staff, a central intelligence agency, and a central research and development agency. The three service departments would execute and carry out the policies determined in this permanent body. Unity is directed by the Security Council.

On the domestic and economic side, the present War Production Board would be replaced by a National Security Resources Board consisting of a permanent chairman, the Secretaries of War, Navy, and Air, the heads of other concerned departments, and the chairman of a Military Munitions Board. This permanent organization would establish and keep up to date, in times of peace as well as war, integrated programs for the maximum use of all of the Nation's natural and industrial resources in the support of national security. This Board would be assisted by a Military Munitions Board which would determine the policy and plann ng of procurement, production, and distribution of military materials. Again, unity is directed by the Resources Board and the three separate service departments are utilized as the administrative organizations through which the domestic and economic policies determined by these boards are carried out.

Such proposal really deals with national security in its broadest aspects. Instead of trying to rely for our security upon a single Secretary restricted to military matters, it establishes instrumentalities able to deal comprehensively with foreign and military matters as well as domestic and economic matters. The service organizations will be prominently represented in such councils. They will not be convulsed with attempted merger. Autonomy and vitality in each administrative branch wil be supplied by a split of the War Department into two parts. Efficiency will be preserved by seeking the maximum in compactness. Everyone knows that enormous size breeds inefficiency. Such a comprehensive organization is directed toward real national security.

In conclusion, and as aid to further investigation, I should like to state briefly the conclusions I have thus far reached on this perplexing subject. Some of you may find them equally acceptable.

First, the problem before us involves all elements of our national security. It is broader than the existing War and Navy Departments. The true solution must be equally broad.

Second, I am not in favor of, nor opposed to, merger in the abstract. Merger is not susceptible of discussion in abstract terms. A merger is a detailed plan. It can only be discussed in such terms. Could any of you discuss a merger of General Electric and Westinghouse in the generality of a single president?

Third, I am opposed to the many vague and conflicting plans proposed to date by War Department spokesmen. I am particularly opposed to the plan of merger last presented by Lieutenant General Collins. It has as its central purpose the isolation and restriction of civilian control of the armed services and it is bad organizationally. It will bring about no economies. It will not foster national security. That position I would submit at any time to any impartial jury. The proposal is superficial and dangerous.

Fourth, as a citizen, I am deeply concerned with the present emotional approach to this important problem. If the delay inherent in critical analysis and study will kill the program of merger as was insisted by some of the proponents of the War Department plans, it is clear to me that the project should be killed. There is too much at stake to justify a headlong plunge until we know just where we are going. The present discussions and hearings must be returned to the fields of analysis, sobriety, and calm reflection. You as citizens can and must lead the way.

---

## House Resolution 407

EXTENSION OF REMARKS
OF

### HON. JOHN H. FOLGER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 11, 1945*

Mr. FOLGER. Mr. Speaker, this resolution purports to make in order, immediately upon the adoption of the resolution, consideration of H. R. 3937.

The bill was considered by the Committee on Military Affairs of the House, and the resolution recites that the purpose of the bill is to repeal the War Labor Disputes Act and to abolish the National War Labor Board. It was stated, however, by the chairman of the Committee on Military Affairs, that, even if this rule were adopted, consideration of the bill would not be had and that he, as chairman of the committee having the bill in charge, would not bring it before the House until after the Committee on Labor, under the direction of Mr. ROBERT RAMSPECK, acting chairman, had had an opportunity to consider legislation proposed by President Truman in a communication to Congress about a week ago.

It does not only seem but it is a fact that this is a procedure not heretofore adopted or indulged in by the House: the consideration of a rule to make in order action upon a bill which it is not contemplated will be brought up except at some indefinite period of time. It may not have been designed, but it certainly has the effect that this rule would circumvent and stymie consideration of the President's recommendations as to

labor legislation which he positively requested of the Congress. It is quite unfortunate that this resolution should be brought up without the expectation of action on the bill, pending consideration of the President's recommendations.

This resolution, moreover, states that all points of order shall be waived against any provisions of the bill or to amendments offered by direction of the Committee on Military Affairs. This would have the effect of giving to the Committee on Military Affairs jurisdiction of labor legislation and with it the substitution of any legislation that the committee might decide to bring to the floor of the House just as the bill was being considered by the membership. No one but a member of the Committee on Military Affairs would likely know what substitution or amendment this committee has in mind to offer to the House for consideration.

This sort of procedure does not commend itself to the thoughtfulness of one who desires to know what he is legislating about or is called upon to vote on. What a substitute bill or the provisions of a substitute bill or denominated amendments would be, no one outside of the Committee on Military Affairs could know. Moreover, it is not contemplated that the bill at all shall be considered except that the chairman of the Committee on Military Affairs, addressing himself to the resolution, had said that he would not bring up the bill immediately, and expressing the thought that he did not know when he would allow the bill to come to the House. Later a member of the Committee on Rules stated that he had the promise of the chairman of the Committee on Military Affairs that if this resolution were adopted the bill itself would be considered not later than next Tuesday, just 1 week from today. It was not indicated, however, what that bill would contain, as the committee has authority, or would have under the resolution, to offer the House anything it desired, without such amendment or substitution even being printed. Furthermore, it seems to me that inasmuch as the bill in question lay in the Committee on Military Affairs for a long time and was not brought to the House until after the President had made his recommendations, it would be almost an affront to the President to go back and dig up a bill and offer it under such a resolution as this one is, and which would have the substantial effect of disregarding any of the recommendations made by the President.

So that it makes no difference what this bill contains as to whether the rule should be adopted, as we are put on notice that the Committee on Military Affairs has reserved the right to substitute anything it please.

The President has made recommendations and really a request for legislation along lines pointed out in his message to the Congress. I think consideration of his recommendations should be given a fair opportunity for action by the House of Representatives, and not be circumvented or stymied by the use of some long-pending measure, not pending before the House but before a committee, and not brought out until after the President had made his recommendations and request.

Inasmuch as it is not contemplated to follow the resolution, which calls for immediate action on the bill, and in view of the recitals heretofore made as to the conditions and circumstances, I see no point in adopting this rule. To my mind, it is next to playing with a subject, and in the face of what I deem required action on the part of the House to consider recommendations of the President on important subjects.

## The Atomic Bomb—Address by Walter Myers, Jr.

EXTENSION OF REMARKS
OF
### HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. LUDLOW. Mr. Speaker, on Sunday, December 2, Mr. Walter Myers, Jr., of Indianapolis, a brilliant and capable attorney and student of public affairs, delivered a broadcast under auspices of the Indiana Committee for Victory in which he discussed the potentialities and future of the atomic bomb. I have requested and have obtained the unanimous consent of the House of Representatives to have Mr. Myers' address printed in the CONGRESSIONAL RECORD as a notable and worth-while contribution to the discussion of this important matter. His address follows:

The atomic bomb has done more than to fuse the sands of New Mexico or to obliterate the cities of Hiroshima and Nagasaki. The effects of its stupendous explosions have rocked the world to a far greater extent than the physical damage which it created. It has become a universal topic of discussion throughout all the nations, from coffee-table conversation to the stilted language of diplomats in lordly conference assembled. Editorials, articles, lectures, sermons, publications, and vast quantities of learned diatribes on the subject have flooded radios, newspapers, and magazines. Most of these reflect little knowledge but great imagination.

Throughout all this mass of literary and oratorical effort we can trace certain persistent themes, however. One of them is an overwhelming fear of the bomb. As we know, it has turned out to be the most destructive force ever devised by man. Experts have stated that one small atomic bomb aid raid, if undertaken by surprise over this country, could devastate practically all the important cities and kill over 40,000,000 persons. Thus a little neighboring country harboring unfriendly desires, with 120 atomic bombs and an equal number of long-range bombing planes, could conceivably cause such a catastrophe if it executed a sneak attack such as the Japs brought about in Pearl Harbor. Other scientific experts have theorized that solar energy can be harnessed. They have pointed out that in theory if the rare uranium atom can be split, thus releasing the terrific energy resulting in the atomic-bomb explosion, there is no reason to believe that the very common atom of nitrogen cannot be similarly split. If so, the resulting explosion might set off a chain reaction which might destroy all matter on the world. It is no wonder that such thoughts have curdled the blood of not only political leaders and diplomats, but of businessmen, Army commanders, and labor leaders of the world.

A second persistent theme which can be traced throughout the voluminous material about the bomb concerns the problem of how to control its use. While people are in agreement about its deadly potentialities, and are united in their fear of it, the question of its control has caused far-reaching differences of opinion. Many believe that it should be kept within the realm of the United States in a tightly locked safety deposit box. Others believe that an international committee should protect it. Still others feel that its so-called secrets should be revealed to all nations of the world for the future advancement of science. The great amount of energy spent trying to solve a far greater problem has been wasted and of no avail unless the peoples of the world solve a far greater problem. To make an issue of whether Russia or any other nation should be taught its secrets, or whether the United States should preserve them in silence forever, is to put the cart before the horse.

The greatest problem facing the world today is how to govern the passions and warlike tendencies of man so as to prevent any future wars wherein the atomic bomb could be employed. To date the ingredients of the bomb have been used for purely destructive purposes. With further development it could conceivably destroy civilization as we know it. However, it is under the domination and control of human beings, who can use it or not use it, in accordance with their desires. In order to abandon it completely for destructive purposes, man must once more try to form a world community in which all peoples may live in peace. The effects of the atomic bomb should permanently dissipate nationalism and isolationism and banish them forever from the thoughts of man.

This Nation, as well as the countries of the world, can best protect itself from the bomb by sincerely and quickly promoting such a world community as has been suggested. Whether it can be created by a reorganized League of Nations, or a world-wide super government, or the existing United Nations Organization is not as important as recognition of the fact that some form of international union is absolutely necessary. If we devote our energies in creating such a union which will be dedicated to serving the peaceful interest of the world, we shall never have to fear the consequences of the atomic bomb.

## Address by Hon. Henrik Shipstead, of Minnesota, Before Lutheran Men's Council

EXTENSION OF REMARKS
OF
### HON. HENRIK SHIPSTEAD
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
*Tuesday, December 11 (legislative day of Monday, October 29), 1945*

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered on October 28, 1945, at the Civic Opera House, Chicago, Ill., at a meeting held under the auspices of the Lutheran Men's Council.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The greetings I bring are sincere and friendly, even though the shadows around us will lend a note of grimness to what I venture to say this afternoon. Christian character is still the hope of mankind, and its only substantial, practical hope. When I look back

over my years of observation, at first-hand, of what the Lutheran Church has stood for I am sincerely happy to come here from Washington and give testimony to the profound esteem and respect in which I hold this great exemplar of dauntless courage and integrity of character.

Viewing the future, I see the Lutheran Church faced with a tremendous challenge—a challenge that will spell the difference between national and individual weal or woe. Aside from the spiritual mission of the church, her obligation of awakening a greater active interest in good government among her membership is more pressing than ever before. The crying need of the times to offset the forces that are undermining the cause of truth, righteousness, and justice in government and international relationships is a wider application of the tenets of the church.

Once again the leaders of men, out of ignorance or out of a malicious indifference to the causes and consequences of war, have visited a calamitous repetition of history upon a terrified world. Once again men caught in the mad chaos of their own folly are crying "Peace, peace," when there is no peace. Power politics is still in the saddle riding mankind to destruction.

A reminder of past history will help us better to understand this present conspiracy of silence and better to appraise the future.

In the year 1785 Dr. Samuel Johnson observed:

"Among the calamities of war may be justly numbered the diminution of the love of truth by the falsehoods which interest dictates and credulity encourages. I know not whether more is to be dreaded from streets filled with soldiers accustomed to plunder, or from garrets filled with scribes accustomed to lie."

In 1848 Abraham Lincoln said of President Polk, whose complicity in the Mexican War he suspected:

"He is a confounded, confused and miserably perplexed man. God grant there is not something about his conscience more painful than all his mental perplexities."

During the latter part of the nineteenth century, Disraeli, for many years Prime Minister of England, wrote:

"All great events have been distorted, most of the important causes concealed, some of the principal characters never appear, and all who figure are so misunderstood and misrepresented that the result is a complete mystification. If the history of England be ever written by one who has the knowledge and the courage, the world would be astonished."

I venture to say that this quotation will apply to all the great world powers engaged in this war.

Secretary of State Robert Lansing wrote of President Wilson's part in drafting the Treaty of Versailles:

"He has put himself on a level with politicians experienced in intrigue, whom he will find a difficult lot. He will sink in the estimation of the delegates who are not of the inner circle, and what will be more disastrous will be the loss of confidence among the peoples of the nations represented here."

Even more recently the brilliant English man of letters, Aldous Huxley, wrote:

"At no period of the world's history has lying been practiced so shamelessly or, thanks to modern technological progress, so efficiently or on so vast a scale as by the political and economic dictators of the twentieth century."

Already events are proving that this war has been a tragic repetition of the causes and results of these ancient afflictions. Yet we are still being told that the only thing we must fear is fear itself.

History teaches us it is knowledge that is power and not courage. It is ignorance that makes cowards of men. It is the prostitution of truth that breeds human corruption and human slavery. Why is it then that in the midst of the present disaster we are not being warned against these things?

During the past 30 years men highly skilled in the arts of mastery have strutted onto the international stage. One by one these masters have abused the confidence of the people, usurped their liberties, and corrupted their minds and morals. Always for allegedly fair and noble ends, and always under the guise of a benevolent tyranny, these masters have succeeded in committing two international crimes in one generation.

Certainly these things have not just happened. There are too many of the same strange threads running through the pattern of recent years for us to continue to believe our highest policy-making circles are either ignorant or innocent of what they are doing.

Again we are admonished not to be perfectionists or starry-eyed idealists, and not to expect too much from all the grandiose promises and schemes with which our statesmen inspired our sacrifice and suffering. Again, as was the case following the last war, we are told there has been a slight misunderstanding among the victor powers.

If I read history aright, this Nation was born in the bloody travail of just such a historic epoch of world revolt against the then-existing social and political tyranny as the one in which we now find ourselves. The founders of our Government knew the historic background of this revolt. They were carefully conscious of its cause. Faithful to the lessons they had learned from history, they built the foundations for a new nation under God. Our Constitution was framed in the light of that knowledge.

What was even more important is that our respect for the dignity and rights of human personality was directly derived from a Christian heritage and incorporated into the very heart of our constitutional representative Government.

There was not the slightest misunderstanding of these principles and and ideals in the minds of our freedom-loving fathers. There cannot possibly be any misunderstanding of the challenge of these historic truths now. The American people still know instinctively wherein lies their greatest treasure and their greatest strength. We have not yet lost our faith that the essential genius of a free society lies in its power of self-criticism and self-correction. We have not become such moral ingrates as to expect Almighty God to save us from the consequences of acts which he has given us the wits to avoid, yet, if these further catastrophies are not to befall us, we must now demand a day of reckoning.

Remember the Atlantic Charter, which was promised to every nation—the great and small, the weak and the strong, the victor and the vanquished—and, individually, to the black, to the brown, to the red, to the yellow, and to the white alike? It has become the "Atlantic barter."

When the wraps of propaganda are taken from off the "four freedoms," we shall find the "four horsemen" again charging down the corridors of time.

When our liberation of the tragic peoples of Europe and Asia is exposed, we shall find them transferred from the hands of one dictator into the bloody and tyrannical hands of another.

Our "justice" has become a masterpiece of mockery in which we have taken over the purge techniques of our enemies and, at the same time, revived and extended to the white race the savagery of slave labor.

The "peace" about which our self-styled international authorities are shouting from the housetops, is merely the extension of brutal war techniques to millions of helpless and innocent men, women, and children.

The "interim agreements," under which the victors are attempting to hold the mad chaos of Europe and Asia together, have become brutal, immoral, and uneconomic political absurdities.

If our financial books were balanced, we would find that America, as the world spendthrift and chief advocates of international pump-priming, is the first great nation in history to have fought two wars in order to finance a bankrupt imperialism. Even the London Economist, one of the greatest interpreters of international affairs in the British Empire, has the grace to admit that England now needs $6,000,000,000, not for food, clothing, and shelter but to finance her armies of occupation all around the world. Russia is asking more billions, so she can continue her imperialistic program and her enslavement and purge of eastern Europe, the Near, the Middle, and the Far East.

International law has degenerated into international anarchy, in which there is not a single international law, principle, agreement, covenant, or purpose held in common among or binding upon even the Big Three.

Even while I speak, our one world is being carved up by three powers behind closed doors without the advice or cooperation or consent of the suffering millions involved.

Then what do these men mean when they cry "Peace"? We need only to read between the lines of the foregoing statements of the present ugly international facts of life for the answer.

"Give us more power," our statesmen cry. Again the state supreme, whose greed for the products of man's toil and suffering can never be gratified, rears its ugly head.

"We shall enforce the peace," our statesmen shout. Yes, they are enforcing peace upon the millions of their economic slaves in Africa and Asia, and they are doing it with American lend-lease tanks, guns, and ammunition. The people of the British, French, and Dutch East Indies have been working in slavery over a century for the sisal and rubber monopolies on these plantations. Their wages have been from 40 cents to $1.25 a week. They want to be free. They were promised independence at the outbreak of the war. They are now fighting to achieve that freedom. The British, the Dutch, and the French Governments are fighting these people with American lend-lease tanks and guns, and our State Department has requested these governments to remove the words "Made in the United States" from these instruments of warfare that American workingmen and American taxpayers produced to be used for freedom.

It was in 1918 that Ernst Troelsch, the great German historian, sadly lamented to a friend:

"What have we witnessed since Hegel's time but the gradual draining away of our native belief in the power of the spirit to rule history?"

Was it not St. Paul who said of the evils of his time:

"We wrestle not against flesh and blood but against principalities and powers; against the rulers of the darkness of this world; against spiritual wickedness in high places."

It was the eminent theologian, Emil Brunner, who so forcefully stated the dilemma and the challenge men of every age confront, when he said:

"If it were truly possible for the State to make men out of wild animals, would it be necessary for the State to make wild beasts out of men?"

America can never discharge her aspiration to world leadership by proposing haphazard, face-saving doctrines and policies of government, either at home or abroad, which the pages of history reveal have repeatedly wrecked governments and civilizations since the beginning of time.

The challenge that is ours can neither be declined nor ignored; the forfeit is freedom, collective and personal alike.

Should we fail, inevitably our "brave new world" becomes a miserable hovel.

It was to save us from these calamities that the mothers of America gave millions of their sons to the war. We had over a million casualties and over a quarter of a million dead. If the history of diplomacy and power politics repeats itself, these boys will have died in vain.

"Mourn not for the dead,
Who in the soft earth lie,
Dust to dust as will you and I.
But mourn, rather, for the silent meek
Who know the world's wrongs
But dare not speak."

## Official Inhumanity

EXTENSION OF REMARKS
OF

## HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 11 (legislative day of Monday, October 29), 1945*

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Official Inhumanity," by the editor of the Lutheran Outlook, published in the November issue of that magazine. The editor is Rev. E. E. Ryden. I ask that the article be printed in the Appendix following the address which I have asked to have printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OFFICIAL INHUMANITY

Peace has come to the world, but as yet there is no peace. The spirit of hatred aroused by the passions of war continue to persist despite the fact that war drums have ceased to beat, and there are numerous evidences that the flames of animosity are being fanned by sinister forces. Inhumanity and even brutality are being practiced in a manner that is shocking to the Christian conscience. Millions of human beings are on the verge of starvation, and yet, in America at least, there appears to be no official cognizance of the fact. And the American people are being kept strangely in ignorance of the awful catastrophe that has befallen a large part of the world's population.

We are referring primarily to the appalling tragedy that has come to the German people. We have no plea for the despicable despotism which for six long years brought untold misery to mankind. It has been brought down to the perdition which it richly deserved. But we do raise a voice in solemn protest against the inhumanity which today is being practiced by the victor nations against the German people, many of whom have suffered from their tyrannical leaders longer than the peoples of other countries. And we do plead for pity and mercy for the millions of innocent children who in no way could be held responsible for the crimes of their war lords, but who now are become the chief victims of the judgment which has fallen.

Tens of thousands of these children are already dead from exposure and starvation. Other tens of thousands will perish for want of food, clothing, medicine, and shelter during the bitter months of winter that lie ahead. They roam the highways, these children, some with parents and others alone. But their parents are often as helpless and destitute as they.

Where did they come from? They came from the territories taken over by the Russians, Poles, and Czechs in eastern Europe. The minority problem in many parts of eastern Europe has always been a troublesome one. The minorities have been a source of irritation to the ruling majority peoples. The Russians, Poles, and Czechs, however, have evidently found a simple solution for the minority problem. They have determined that there shall be no minority. And that is why some 16,000,000 to 18,000,000 people of East Prussia, Poland, Czechoslovakia, Pomerania, the Baltic States, and Silesia are now wandering the highways of eastern and central Europe, driven from their homes, dispossessed of all they owned in the world, and compelled to beg, to steal, or to die.

British Foreign Secretary Bevin recently told Parliament that the refugee scenes he had witnessed in Berlin beggared description. "As I watched," he said, "I felt, 'my God, that is the price of man's stupidity and war.' It was the most awful sight you could possibly see." And most of the refugees, he added, were women and children. Although he did not say it, the implication was clear that the Russians had taken the husbands and fathers as slave laborers.

And in this revolting slave business, the United States also stands with guilty hands. During the month of July the communications zone of the United States forces in Europe turned over 320,000 German prisoners to the French and 278,000 to the British, for reconstruction work. These figures did not take into account other thousands of German prisoners already turned over by the Sixth and Twelfth American Armies. However, after the International Red Cross reported that the slave laborers turned over to the French were receiving inhuman treatment, further transfers were halted by General Eisenhower.

The other week, some 2,474 of these slave laborers were returned to the Americans by the French. Correspondents described them as "a beggar army of pale, thin men clad in vermin infested tatters." All were pronounced unfit to work—three-fourths of them because of malnutrition. Nineteen percent were severe cases requiring infirmary treatment. Said Associate Press photographer Henry Griffin, who took pictures of the piled corpses in every German concentration camp from Buchenwald to Dachau:

"The only difference I can see between these men and those corpses is that here they're still breathing."

It is not without reason that some of the leading churchmen of Germany, men who suffered persecution at the hands of their Nazi oppressors because they would not subscribe to their pagan philosophy, are beginning to wonder if they helped to betray their country into the hands of enemies who are even more pagan and inhuman than their former political tyrants. Bishop Theophilus Wurm, provisional head of the newly organized Evangelical Church of Germany, in a recent letter to Dr. G. K. A. Bell, Anglican Bishop of Chichester, asks bitterly if it was necessary that once again in history the victorious powers should "come to be infested by the spirit of those they have vanquished."

"Was it not possible," he asks, "to take preventive measures in order to save innocent women and children from ghastly misery? Was it really necessary to proceed in such a manner that the war propaganda of Goebbels seemed to be vindicated?"

Bishop Wurm recalls the pledge of the Allied statesmen at Tehran in which it was stated that "we will not rest until we have won the victory over tyranny for freedom and tolerance," and then he adds:

"How we long to see this pledge redeemed. The future destiny of the human race will be determined by the outcome of the struggle between the heathen spirit of revenge and the Christian spirit of mercy and forgiveness. Which will prevail?

"The spirit of forgiveness won the day in 1815, after Europe had been freed from enslavement endured for 20 years under Napoleon. A peace was made which respected the integrity of France proper. The spirit of forgiveness did not prevail in 1918-19. Today whole German populations are subjected to the harshest retribution."

Strangely enough, it is England—the country that suffered perhaps more than any other from the destructive fury of the Nazi war machine—that has shown the first evidences of an awakened conscience regarding the vindictive measures pursued by the Allies in Germany. The recent discussion in the British Parliament regarding the miseries of the German people was led by Foreign Secretary Bevin himself and brought on one of the most remarkable emotional outbursts witnessed in many years. One lawmaker who ventured to remark that he was indifferent to the fate of the German people was silenced with cries of "shame" from his colleagues. Another denounced in bitter terms what he called the lunatic policy of the United States.

What is this "lunatic policy" of our Nation? Is it a form of appeasement by which we have given free rein to Russia, Poland, France, and other of our allies to carry on in any fashion they desire, just in order to avoid friction with them and to keep them cooperating with us?

From the lips of one of our returned chaplains who was an eyewitness of the scene, we have heard how hungry German children digging in the garbage cans of a certain American outfit in the hope of finding food during the early days of the occupation of Germany, were driven away by American soldiers. This does not sound like the deed of American men. Our fighters do not ordinarily act that way. They would rather share their candy, gum, and food with hungry youngsters. But even American soldiers were helpless in the face of grim official orders that not only prohibited them from fraternizing with the conquered enemy peoples but also denied them the right to reveal any human kindness. Was this also a part of the lunatic policy of our country?

And what about UNRRA? Is it a fact that this agency, which has billions of dollars at its disposal for relief work, is prevented from giving any aid to former enemy peoples? If so, who is responsible for this situation? Is it a part of a coldly calculated official inhumanity by which the Allied nations hope to reduce the German people to a state of helplessness?

In contrast with the strange cloak of silence which Washington has thrown over the desperate plight of Germany's dispossessed millions, warning voices are beginning to be raised in various parts of the United States. "The peace is being lost at the present moment as fast as it is possible for five nations to lose it," declared John Nevin Sayre, cosecretary of the national Fellowship of Reconciliation, in a midwestern address, as he told of the brutal deportations in eastern Europe. "The age that is coming in must be marked by nonviolent spiritual force. Unless that force is characteristic of the age to come, there won't be any age or culture worth talking about or making an effort to save for our children."

Dr. John A. Mackay, president of Princeton Theological Seminary, echoed the same sentiment when he said, "If the world displays interest exclusively in punishment of war guilt, it will create a diabolical situation with dangerous reactions."

And former President Hoover is even more deeply concerned. In an address at Wilson College, Pennsylvania, emphasizing the need of a reconversion of the intellectual, moral, and spiritual life of mankind from the shock of war to the life of peace, he spoke soberly about our dulled sense of truth, our damaged sense of justice, our loss of sensitiveness to brutality, and at least the partial

loss of our ideals of freedom. If the Allies persist in their present policy of visiting on the children of millions of Germans and Japanese the sins of their fathers and seek to reduce the economic life of coming generations to the low levels of an agricultural state, warned Mr. Hoover, they will "create gigantic cesspools of hate, poverty, and conspiracy against the world."

These are solemn words, and America and the rest of the world will do well to ponder them earnestly. The time has evidently come when the church must raise its voice in protest, and in no uncertain words, against the vindictive and brutal spirit of revenge which appears at the present time to animate the victorious nations. The world is in utter chaos, morally, spiritually, economically, and politically, and it is drifting rapidly closer to the abyss of complete disaster. Millions are in the grip of despair. Revolutions everywhere are in the making. It is already late, very late, if mankind is to be saved from another appalling catastrophe.

Instead of discussing the probability of a third world war and the horrors which the atomic bomb will bring to such a struggle, let the nations be summoned for a peace conference. And let it truly be a peace conference and not the breeding ground for another war. The devils of hate have already ruled long enough, and a sorry mess they have made of God's fair world. It is time to let the Prince of Peace begin His reign in the councils of the nations and in the hearts of men.

## Slave Labor in Europe

EXTENSION OF REMARKS

OF

### HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 11 (legislative day of Monday, October 29), 1945*

Mr. SHIPSTEAD. Mr. President, earlier in the day I placed in the RECORD some remarks made by me in Chicago on the 28th of October. I now ask unanimous consent to have printed in the RECORD following my remarks earlier in the day an editorial entitled "Slave Labor in Europe," from the October 4, 1945, issue of the Wanderer, a very excellently edited Catholic newspaper published in the city of St. Paul, Minn.

SLAVE LABOR IN EUROPE

Commenting on the inhumanity of the use of German slave labor by the Russians to rebuild the devastated areas of the Soviet, Fr. Edward J Whelan, S. J., says in a letter to America:

While it is true that Great Britain and the United States have not descended to the depth of using slave labor, one wonders why there has been no outcry against this return to barbarism from our Government or from the American press. One almost would infer that the use of slave labor by the Russians meets with our approval.

A few weeks ago I received a personal letter from one of our ablest and most experienced war correspondents now in Europe. He writes: "A diplomat from Moscow told me that it was generally accepted there that around 8,000,000 are in the slave-worker camps of Russia and Siberia. A high Polish diplomat told me the other day that of 1,700,000 Poles forcibly deported by the Reds to the interior of Russia, incomplete returns indicated than 400,000 men, women, and children had perished. Attention at home in the States, it seems has been focused only on the concentration camps in Germany. God knows they were bad enough. But do they justify slavery or the conditions in Poland, Hungary, Rumania, eastern Germany, Austria, etc.?"

The reestablishment of human slavery in the form of compulsory slave workers to rebuild devastated areas of Russia is a crime that cries to Heaven. The dignity of man is ignored and insulted, families are broken up, and such treatment of men made after God's own image will result in savagery unbelievable, spiritual collapse, and moral disintegration. What a terrible precedent to establish.

Also terrifying is the thought that our country and Great Britain seem to have given their consent, at least tacitly, and to our shame. Granted that slavery of German prisoners was already in operation in Russia and Siberia before the Potsdam Conference, that does not justify our complacence. There should have been a strong protest by us.

It may not be too late even now to stir up our people and the world against the barbarous institution of slavery in our so-called twentieth-century civilization.

## Sheepshead Bay Maritime Training Station

EXTENSION OF REMARKS

OF

### HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 11, 1945*

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Brooklyn Eagle Supplement of Sunday, December 9, 1945:

SHEEPSHEAD BAY MARITIME TRAINING STATION

The Sheepshead Bay Maritime Training Station was rushed to completion during the summer and fall of 1942. This was the period of crisis for the United Nations. The Russians were desperately defending Stalingrad and the British were digging in at El Alamein. Our allies fought as only those with their backs to the wall can fight but they needed supplies. And men were needed to man the supply ships.

This Nation answered their call. When the first section of trainees entered the gates of the station on September 1, 1942, the property was still a mire of muddy paths and partly constructed buildings. The first graduate was shipped out December 5 before the station was even dedicated. Six days later the full complement of 10,000 was reached and the next day the dedication took place. Its first superintendent was Commander George M. Wauchope, United States Naval Reserve, and he was succeeded in May 1943 by Capt. John L. Beebe, United States Naval Reserve.

LARGEST IN THE WORLD

The Sheepshead Bay station is the largest merchant marine training school in the world. Sprawling over 76 acres, the gigantic station contains barracks, a mammoth auditorium and gymnasium, administration center, canteen, hospital and dental clinics, carpenter shops, the largest enclosed swimming pool in the world, mess halls, machine shops, 5 piers and more than 200 whaleboats, sail and motorboats, 27 outdoor steering trainers, classrooms, parade ground, and the reproduction of a complete deck of a typical freighter.

Between December 1942 and VJ-day the station turned out 115,000 trained seamen, all volunteers. Many of them saw the sea for the first time when they stepped within the station's boundaries. But they were turned into mariners with dispatch and precision. Two men out of every three trained by the War Shipping Administration came from its Sheepshead Bay training camp. This means that more than half of the entire personnel of the American merchant marine are Sheepshead graduates.

COURSES OF STUDY

These men who manned the United Nations supply lines and spread the name of Sheepshead Bay into every war port on the globe averaged a 13-week course at the station. From here they were sent to a graduate school for further training. Sheepshead's shortest course was a 6-week schedule for messmen. The longest was a 6-month curriculum for a new-type warrant rating which combined the functions of junior assistant purser and pharmacist's mate. This was to assure merchant crews a trained medic on their many dangerous convoy runs.

The courses were elastic, however, depending on the need of the moment. When available ships had full crews the call for men was hushed and the 13-week course for deck and engine ratings was extended to 18. Such was the case during February 1944. On the other hand, many men anxious to get in the fight volunteered and were shipped out after 10 weeks.

During the 1943 emergency periods when crew shortages were acute, hundreds were speeded to ships after 6 weeks. Since the station accepted 16-year-olds with their parents' consent (a total of 10,000), many fuzzy-cheeked youngsters were thrown into the dangers of submarine-menaced sea lanes, where wolf packs bared their fangs without warning. Although these short-course personnel held only messmen's ratings, once they set foot on deck they were subject to the skipper's orders and the discipline of the high seas. Since Nazis torpedoes did not distinguish between the experienced and nonexperienced, men barely getting their sea legs were called upon to perform the tasks of the sea-wise and hard-bitten.

LOUDEST GRIPE

One of the loudest and most perennial gripes of the American merchant mariner during World War II was that, unlike his British equivalent, he was not considered a part of his nation's armed forces. The percentage of dead and missing of those who sailed into the teeth of the enemy as civilians was greater than that of the Army and Navy. Approximately 6,000, or 3 percent, of the 200,000 American merchant seamen are dead or missing, compared with the 2-percent figure of the armed forces. No statistics were kept on wounded or prisoners of war. The Sheepshead Bay honor roll lists 250 men who went down with their ships.

The Sheepshead Bay Maritime Training Station has the neat look of a naval post, the firm discipline of a military unit, the solid traditions of a university—and the fresh tang of the sea. The green apprentice seaman, whose deep-seated romantic notions pictured a sailor as a casual swaggering character making constant rounds of water front bars or plotting mutinies in the forecastle with a knife in his teeth, is shocked at his first view of the station. He sees trim lines of men marching with the geometrical precision of West Point graduates. He sees streets as clean as a hospital floor. He sees freshly painted white barracks lined up as trim as the men they house. It is enough to make him take a deep breath of salt air and look again.

The new seaman is sucked into the life of the station as soon as he enters it. First, a barrage of questionnaires is thrown at him.

He is fingerprinted and photographed for identification purposes and given a thorough medical examination, including inoculations. Then, he is supplied with $80 worth of clothing which consists of work dungarees, dress blues, raincoat, underwear, peacoat, and shoes. Seabags full, he is assigned to one of seven two-story barracks, each housing 1,400 men and containing four recreation rooms.

SPIRIT OF THE SEA

The new man quickly becomes familiar with the names of famous American ships, for the barracks are named after them—*Glory of the Seas, Westward Ho, Savannah, Clermont, Lightning, Ocean Monarch,* and *Flying Cloud.* The three big classrooms are named *Saratoga, St. Mary's,* and *Enterprise.* The gunnery building is *Constitution.* The buildings do not have names merely to give the new seaman a lesson in United States sea history but to imbue him with the spirit of the sea from the beginning. The buildings are "ships," the floors are "decks," windows are "portholes."

Besides the big jobs of housing, feeding, and training thousands, the station makes sure that everything is done for the safety, happiness, and comfort of every man. Doctors and pharmacist's mates are always ready in case of accidents or sickness. The tailor shop helps keep clothes spruced up. In the ship's service store he can buy anything from jewelry for his girl friend to tobacco for himself. There are Protestant, Catholic, and Jewish chaplains to give advice on personal and religious problems. The Red Cross has a field office at the station. There are two giant mess hall buildings, in which each barracks has its own immaculate compartment, where 700 men are served cafeteria-style in one sitting. Organized athletic competition is aimed at supplying a healthful sport for every taste.

The 6 weeks of preliminary training lay heavy emphasis on lifeboat skill. The new man may grin as he learns to manipulate an oar in a boat embedded in solid ground, but this elementary instruction is important. It is not long, however, before 11-man crews are handling the boats in Sheepshead Bay and Rockaway Inlet.

SINK OR SWIM

Since their very lives depend upon it the men are taught five swimming strokes, not including the crawl because the head is submerged part of the time. It was discovered that about 20 percent of the men entering training did not know how to swim.

The men are toughened by boxing, wrestling, a 565-yard obstacle course, and gymnasium training. It is essential they have strong, well-coordinated bodies to enable them to face emergencies. They are familiarized with guns, gas masks, oxygen-breathing apparatus, and fire-fighting equipment. They must learn the 32 points of the compass backward and forward.

At the end of 3 weeks of quarantine the trainee rates his first week-end liberty in the most exciting city in the world. He returns to another week of classes and then goes into workweek. This means swabbing the deck, painting, washing windows, and clerical work. Preliminary training is finished off by mess week, which enables every man to be certified as a steward's mate, third class.

In advanced training the man learns the heart of his job. In 99 cases out of 100 it is a field of work he himself has chosen. There are 17 courses in deck training plus 3 weeks of practical work aboard one of the USMS training ships operating on Long Island Sound and Chesapeake Bay.

The student seaman learns about every piece of deck equipment, the principles of deck cargo rigging, how to load cargo, marlinspike seamanship (the use of rope), and signaling. On cleverly designed steering trainers, which consist of a steel platform of pontoon design pivoting in water, he gets the feel of the wheel.

Some men, who can't resist the thrill of working with engines, join the "black gang." Engine training revolves about the Liberty ship and its equipment. A wealth of instruction devices and actual operating equipment gives the student thorough knowledge of the machinery he must care for and repair. Like deck seamen they get 3 weeks aboard a training ship.

MESS

Good food is the key to a happy ship. And to make sure there are as many happy ships as possible in the American merchant marine a 10-week intensive course is devoted to turning out skilled second cooks and bakers. There is nothing haphazard in the menus turned out by these trainees. They provide balanced meals based on their study of nutritional values. Their preparation of meat, fish, and poultry is sure and swift and they are as wary of dirt as a physician. In addition to this there is an 8-week chief steward's course open to men with at least 9 months of sea duty as chief cooks.

The 6-month course for junior assistant purser-pharmacist's mate is usually given to the older men, for theirs is a responsible job. They must treat wounded seamen calmly and expertly at the height of an emergency. They must keep pay roll and cargo records accurately and know a mind-staggering list of intricate regulations.

A man with ability gets a chance to show his worth at the school. He may compete for entry into radio school or the Merchant Marine Academy at Kings Point, "the Annapolis of the Maritime Service." He may apply for transfer to the Army Transport Corps. Engine trainees may go to turbo-electric or pumpman schools.

After the student takes his oath in accordance with shipping regulation he is ready to ship out. For his first trip the Maritime Service assigns him to a ship. After that he is a free agent.

PLANS FOR THE FUTURE

Unlike many other wartime installations which sprouted up all over the country only to be wiped off the map with equal celerity, the Sheepshead Bay station is destined for an important role in the postwar years. Under the terms of a national policy designed to provide 100,000 trained men for a peacetime merchant fleet, the school will give 1-month refresher and upgrading courses to unlicensed personnel. Present plans look to a school able to hold 6,000 men at one time, 60 percent of the present capacity. Courses will be given for deck, engineer, and steward nonofficer ratings, and classrooms will be enlarged for the purpose. In charge of these activities will be Capt. J. von Sneidern, U. S. M. S., who succeeded Captain Beebe October 15, 1945.

## Centralization and Coordination of Federal Statistics

EXTENSION OF REMARKS

OF

## HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 11, 1945*

Mr. CANNON of Missouri. Mr. Speaker, there are functions of government, State and National, and of essential businesses of many kinds, which cannot be efficiently conducted without accurate statistical information, reasonably current and approximately dependable.

The Congress has recognized this need from the beginning of our Government by authorizing the collection, compilation, and dissemination of statistical data. The number of governmental agencies exercising such authority has steadily increased—especially in recent years—until there are now said to be as many as 65. Whatever the number, the feeling is widespread and frequently voiced that there are too many agencies engaged in statistical activities and that economy and efficiency would be effected by centering such work in a single agency.

The idea of centralization of governmental functions is not new. It has been the subject of careful study and investigation in the formulation of the supply bills in every Congress. The Congress, in the Federal Reports Act of 1942—Public Law 831, Seventy-seventh Congress—undertook to eliminate duplication and establish an economical and efficient procedure by vesting over-all administrative control in the Bureau of the Budget. Much has been accomplished in pursuance of that law, and the Bureau of the Budget, it will be generally agreed, is in position to bring about orderly, sensible, and economical administrative processes.

I have received from the Director of the Bureau of the Budget a report of a recent study the Bureau has made, at the instance of the Committee on Appropriations, with regard to the establishment of a single statistical agency. It is an illuminating paper and I am presenting it for the information of any who may have an interest in the subject. It is my impression that the committee is inclined to believe that the Bureau should be given every opportunity and encouragement to effect compliance within a reasonable time with the spirit of the Federal Reports Act, to which reference is made.

The report follows:

DECEMBER 4, 1945.

MY DEAR MR. CANNON: I am transmitting herewith a report to the House Committee on Appropriations on "Centralization and coordination of Federal statistics." This report has been prepared by the Bureau of the Budget in response to the committee's suggestion, in its report on the first supplemental appropriation rescission bill, 1946, that the Bureau of the Budget study the problem of duplication in our present centralized system of Federal statistics, and take appropriate measures toward the establishment of a single statistical agency.

We have set forth in the report a brief account of the study of Federal statistical programs made in 1938 and ensuing measures taken by the Congress and by the Bureau to provide for increased coordination, a summary of some of the reasons which indicate that complete centralization is not desirable, an indication of some of the legislative obstacles to statistical centralization, and a résumé of the Bureau's present methods for coordination of Federal statistics.

The reasons why complete centralization is impractical do not imply that existing arrangements for Federal statistical activities in several areas are satisfactory. There is need of improvement. Any attempt to improve these arrangements, however, must take into account many administrative, legislative, and technical considerations such as those dealt with in this report.

We shall be glad to supply you with any additional materials you may wish, whether in written reports or in consultation.

Sincerely yours,

HAROLD D. SMITH,
*Director.*

CENTRALIZATION AND COORDINATION OF FEDERAL STATISTICS—REPORT TO THE COMMITTEE ON APPROPRIATIONS OF THE HOUSE OF REPRESENTATIVES

The great variety and complexity of information needed to administer the Government of the United States and to meet the legitimate needs of its citizens for facts call for strong control over the statistical programs of Federal agencies. The best means of obtaining this control have been discussed from time to time for more than three generations. The particular device of creating a single statistical agency has been examined thoroughly at intervals during the last 25 years.

The conclusion each time has been that it is impracticable to delegate to one agency the responsibility for the gathering, compilation, and publication of the many diverse kinds of numerical facts that must be obtained by the Federal Government. The alternative conclusion has been drawn from each of these examinations that there must be centralized responsibility for the coordination of fact-gathering programs; but that the programs themselves should be executed by various administrative and other specialized agencies.

We believe that these conclusions still hold. The objectives sought by proposals to centralize statistical activities within a single agency are the elimination of unnecessary duplication and overhead expenses. In our judgment these objectives can be met much more satisfactorily by leaving statistical programs within separate agencies and providing for coordination in the many different fields.

It should be understood that the considerations weighing against complete centralization of statistical work do not indicate that great improvements in Federal statistical work are not needed. Although many improvements have been made in recent years, much still remains to be done to increase the efficiency of present statistical activities. Such improvements, however, cannot be made without full consideration of the many administrative, legislative, and technical problems involved.

The present report explains what considerations have led to the continuation of a decentralized statistical system and why coordination seems to be a better means than centralization for eliminating duplication in Federal reports. It also explains why, in view of the many legislative provisions under which Federal agencies operate, it is not feasible, in a literal sense, to centralize all statistical work of the Government in a single statistical agency. The report further describes the measures the Bureau of the Budget is taking to eliminate statistical duplication and to centralize the collection of information within limited fields.

RECENT STUDIES AND DEVELOPMENT OF STATISTICAL COORDINATION

Adequate provision for statistical coordination within the Federal Government is of fairly recent development. With the exception of a few short-lived organizations, established in time of emergency, there was no central authority charged with responsibility for statistical coordination until 1933, when President Roosevelt established the Central Statistical Board. Even then, the functions and authority of the Board were limited.

In 1938, at the request of the President, the Central Statistical Board made a thorough study of alternative methods of bringing about increased efficiency in the collection of Government statistics. The results of this study, with the Board's recommendations, were printed in January 1939 as Report of the Central Statistical Board on the Returns Made by the Public to the Federal Government (H. Doc. No. 27, 76th Cong., 1st sess.).

While the report was being prepared, the secretary to the President asked the agencies most concerned to submit memoranda on the best means of eliminating duplication in Government statistical and reporting services. They were asked specifically to comment on the feasibility of establishing a single statistical agency. Analysis of these replies and study of the problems presented led the Central Statistical Board to recommend against the centralization of Federal statistics into one agency. The Board reached this conclusion because of the impossibility of separating many statistical processes from administrative operations and because it was convinced that the possible advantages of a single statistical agency would be more than offset by disadvantages. The Board recommended that there be a statistical coordinating agency with adequate powers to eliminate duplication in agency programs and to relate the needs of different agencies for similar information.

The Central Statistical Board was incorporated into the Executive Office of the President, as the Division of Statistical Standards of the Bureau of the Budget, under the Reorganization Act of 1939. As part of the Budget Bureau, its authority for statistical coordination was greatly increased. Enactment of the Federal Reports Act of 1942 further strengthened the Bureau's authority in this field. The objectives, methods, and achievements of the Budget Bureau in coordination of statistical programs are described in the final section of the present report.

Copies of the Central Statistical Board's report to the President, of the agency replies to the letter from the secretary to the President (which have not heretofore been submitted in full to the Congress), and of the Federal Reports Act of 1942 are attached as exhibits 1, 2, and 3.

IMPRACTICABILITY OF COMPLETE STATISTICAL CENTRALIZATION

As a result of its continuous work and years of experience in working with Federal statistics, the Bureau of the Budget is convinced that it is impracticable to centralize the collection, compilation, and publication of statistics in one agency. Reasons against such centralization are presented here in summary form.

1. Statistical activities are an integral part of the programs to which they relate: Statistics collected by the Government are of two general kinds: those which are collected as a result of administrative operations, and those which are collected primarily for the information they yield. The distinction between these two types is not always sharp. Frequently the two purposes may be combined in one collection, and where this is possible better statistics may be obtained at lower cost.

Most Government statistical collections are of the first type. They are by-products of the regular activities prescribed by law for the various administrative agencies, and cannot be separated from the programs to which they relate. Examples of statistical collections of this type are tax returns; reports required by regulatory agencies, such as the Federal Communications Commission, the Federal Power Commission, the Federal Trade Commission, the Interstate Commerce Commission, the Securities and Exchange Commission; and applications on forms such as those used by the Social Security Board, the Federal Housing Administration, or the Veterans' Administration. It would be impossible, for instance, to divorce the collection of statistics from the regular operations of the Bureau of Internal Revenue in collecting taxes. Numerous statistical activities of the Government would therefore have to be exempted from the operations of a single statistical agency, and problems involved in coordinating these statistics would still remain.

Statistics of the second type are those which are collected primarily to determine facts and relationships useful to the Government and to the public as guides for making decisions or taking action. Much information of this type is also derived from operating reports of the first type. Both sources provide information needed by the legislative and executive branches of the Government as well as by business, agricultural, and labor groups. Examples of statistics of the second, or informational, type are crop and livestock reports, population and vital statistics, current data on employment and unemployment, statistics on production and distribution.

Informational statistics are collected by most agencies of the Government in direct connection with their programs and operations. During the war, for instance, the War and Navy Departments collected great quantities of statistical data in connection with administering contracts, expediting deliveries, and maintaining records of progress on contract completion. This information was collected primarily not by questionnaires sent out from Washington, but by administrative officers stationed in the field. Reports of these officers were usually sent to regional or district offices for information and action, and then to Washington for summarization. Thus the flow of information followed administrative channels.

So long as there is a central coordinating procedure by means of which duplication can be avoided, it is more efficient and economical for the responsible operating or administrative staff to collect information pertaining to its general area of responsibility. The collection of such information may be incidental to operating reports received automatically. The same staff may be utilized. In many cases the ready availability and understanding of data in a particular area makes it possible for an operating agency to demand less information than it would need if the data were collected by a separate agency.

There are a few bureaus in the Government which are primarily statistical, with limited operating duties, such as the Bureau of Agricultural Economics in the Department of Agriculture, the Bureau of the Census in the Department of Commerce, the statistical units of the Bureau of Mines or the Fish and Wildlife Service in the Department of the Interior, or the Bureau of Labor Statistics in the Department of Labor. Most of these bureaus, however, are more than statistical agencies. They are also research staffs of the operations of their respective departments and serve the needs of Cabinet officers having a great range of responsibility over economic activity. Even in the limited area represented by this type of bureau, consolidation in a single agency would not be desirable because it would separate statistical work from the departments and the officials having policy and operating responsibilities for particular functions. Informational statistics needed by the public or by a number of Government agencies are generally assigned to one of these bureaus for collection and tabulation.

The problem of rationalizing the Federal statistical system involves centralizing collection where economy will result without impairing the purposes served by the data. In these circumstances centralization is practicable and is now being applied in many instances. Centralization by subject matter or by groups of respondents is discussed below, under "Present Methods of Coordination" in the section on single-collecting agencies. Determination of which bureau should be responsible for any given collection is based upon the nature of the inquiry and upon a consideration of which bureau is best equipped to obtain the data needed at lowest cost. Naturally in this situation there are occasional cases where no clear-cut advantage exists for the selection of one bureau over another; but these cases are exceptions in the general statistical picture

Present costs for statistical activities would not be reduced by centralizing them in one agency. Transfer of statistical responsibility to such an agency would involve transfer of the entire staff working in each area, including professional and supervisory staff to direct the clerical staff. The largest expense in statistical work is clerical help, which is now fully occupied and which would have to be either transferred or replaced. Statistical equipment is now so fully utilized that there is no slack. Overhead costs for statistical activities are now part of the general administrative requirements of the different departments and agencies. If the statistical activities were removed the agencies would still need to maintain close association with the statistical staff, wherever it was located; and additional supervisory staff would be required for liaison with remote operations of a large central statistical agency.

2. The collection and interpretation of statistical data are not separate mechanical processes but require special knowledge of a given field: Statistical data, to be useful and realistic, should be obtained, analyzed, and interpreted by those who have knowledge and experience in the particular field. It is not possible in a centralized agency to have the requisite specialized knowledge of many unrelated subjects without duplicating the personnel already required by specialized agencies in the performance of their regular duties. At present statistical activities within many agencies are carried on not as separate activities but in connection with other staff responsibilities. If the statistical programs were removed to a central agency, maintenance of liaison between the operating and the statistical agency would not only necessitate duplication but would require expansion of professional staff. Both time and money would be wasted if it were necessary for the technical personnel of an administrative agency to participate continuously in an advisory or supervisory role over the personnel of a central statistical agency.

3. Centralization of statistics would tend to decrease the accuracy and timeliness of the data: Statistics are not ends in themselves. To be useful, either to Government agencies or to private organizations, they must be accurate, timely, and applicable to the problem at hand. Those fundamental criteria for good statistics would be much more difficult to meet in a mammoth centralized agency than in small units attached to operating agencies, each familiar with problems in its particular area and concerned with solving those problems. Furthermore, under present arrangement, many agencies have the great advantage of continuing contacts with business advisory committees or other groups affected by their programs. These contacts have been established primarily to aid in operational problems, but they also serve very substantially to improve the Government's statistics in a given field by making the respondents more fully aware of the need for the information and the Government more alert to the reporting difficulties involved. The advantages now gained from contacts of this kind would be lost if the collection of information were transferred from the operating to a statistical agency.

The economic system is so complex that general-purpose statistics need to be very elaborate. In some fields such statistics are necessary and justifiable. For many purposes, however, they would be almost prohibitively expensive as compared with most of the specialized statistical work now being done.

Even within departments, where the Secretary usually had the authority to shift responsibilities of the different bureaus in any manner needed to increase the efficiency of the department as a whole, statistical responsibility has not been centralized. Maintaining a close relationship between statistical and administrative activities has proved to be a more efficient and economical means of producing the specific kinds of statistical information needed. Experience has shown that beyond a certain point centralization of statistical activities results in an unwieldy organization which lacks the flexibility necessary to adapt statistical programs to changing needs. Without such flexibility the costs of statistical services inevitably increase.

In brief, the 1938 study and continuous experimentation since then indicate that centralization of statistical activities would be an inefficient method of eliminating duplication in Government statistical and reporting services. Collection of relevant statistics is an integral part of an agency's operations, like answering correspondence, or supplying information or legal advice, or preparing a budget. Such functions cannot be separated from the regular operations of an agency without substantially impairing their usefulness and validity.

Centralization of most statistical responsibility in one agency has appeared practicable in some other countries, such as Soviet Russia, Italy, and most of the South American Republics, where the amount of statistics supplied to the public by the Government is relatively limited. We believe that the volume and usefulness of statistical materials supplied by our Government to its citizens are a matter for pride. They are envied by other peoples. In no other country are business, agricultural, and labor groups given so much of the basic information on which a system of free enterprise must depend.

In general, the efficiency of a centralized statistical system decreases as the organization of a government becomes more complex and as the variety and quantity of information supplied to the public increase. In Canada, for instance, where a single statistical agency was established some years ago by law, the system was found ill-adapted to wartime requirements and the new statistical activities were carried on by administrative agencies and not by the central bureau. In Great Britain, the only other country with an amount of statistical activity comparable to ours, each ministry collects and compiles its own statistics. During the war the need for correlation of the separate informational programs resulted in the establishment of the Central Statistical Office to coordinate the statistical activities of the various ministries. The Office has proved so useful that its peacetime continuation, with increased responsibilities, was recently announced by the Prime Minister.

### EXISTING LEGISLATION PERTAINING TO STATISTICS

It has been stated that 65 separate agencies engage in the gathering, compilation, and publication of statistics of one kind or another. Actually, the number may be greater or smaller, depending on how "agency" is defined; whether, for instance, the Department of Commerce is considered as one, or whether each of its major operating divisions—such as the Census Bureau, Bureau of Foreign and Domestic Commerce, Civil Aeronautics Board, Weather Bureau, Patent Office, National Bureau of Standards—is counted separately. Almost every establishment in the Government collects some statistical material as an essential part of its operations. Most of these statistics, however, are used in operating specific programs and are not published.

Questions of statistical needs and responsibilities have been carefully considered by the Congress in the enactment of the basic statutes of administrative agencies. In these statutes the provision of information with which to administer a program has been regarded as an essential part of an agency's operations, and in many cases the agency is specifically directed to collect, compile, and publish statistics relating to various phases of its activities.

Sometimes the collection of statistics is an incidental byproduct of the program which the agency was established to operate. The Social Security Board, for instance, automatically obtains information on employment and pay rolls in covered industries through administration of its unemployment compensation and old-age insurance programs. Similarly the Securities and Exchange Commission necessarily obtains financial reports from corporations listed on the stock exchanges in connection with its supervisory and regulatory functions.

A few examples of existing statutory requirements for the collection and publication of statistics are presented below. The list could be extended to include most agencies of the Government. Many agencies are given not only general authority to collect statistics relevant to their programs, but in addition are required to collect detailed data on specific subjects. The following list presents some examples of both types:

*Department of Agriculture*

"There shall be at the seat of Government a Department of Agriculture, the general design and duties of which shall be to acquire and to diffuse among the people of the United States useful information on subjects connected with agriculture, in the most general and comprehensive sense of that word" (5 U. S. C. 511).

"The Secretary of Agriculture shall procure and preserve all information concerning agriculture which he can obtain by means of books and correspondence * * * by the collection of statistics, and by any other appropriate means within his power" (5 U. S. C. 514).

"The Secretary of Agriculture is authorized and directed to collect and publish annually, on dates to be announced by him, statistics or estimates concerning the grades and staple length of stocks of cotton, known as the carry-over, on hand on the 1st of August of each year in warehouses and other establishments of every character in the continental United States; and following such publication each year, to publish, at intervals in his discretion, his estimate of the grades and staple length of cotton of the then current crop" (7 U. S. C. 471).

"The Secretary of Agriculture is authorized and directed to collect and publish statistics of the quantity of leaf tobacco in all forms in the United States and Puerto Rico, owned by or in the possession of dealers, manufacturers, quasi-manufacturers, growers' cooperative associations, warehousemen, brokers, holders, or owners, other than the original growers of tobacco. The statistics shall show the quantity of tobacco in such detail as to types, groups of grades, and such other subdivisions as to quality, color, and/or grade for particular types, as the Secretary of Agriculture shall deem to be practical and necessary for the purposes of this section and sections 502 to 508 of this title, shall be summarized as of January 1, April 1, July 1, and October 1 of each year and an annual report on tobacco statistics shall be issued" (7 U. S. C. 501).

*Bureau of the Census*

"A census of population, agriculture, irrigation, drainage, distribution, unemployment, and mines shall be taken by the Director of the Census in the year 1930 and every 10 years thereafter" (13 U. S. C. 201).

"The Director of the Census is authorized and directed to collect and publish, for every second year after 1927, statistics of manufacturing industries; and the Director is hereby authorized to prepare such schedules as in his judgment may be necessary" (13 U. S. C. 217).

"The Director of the Census is authorized and directed to collect and publish statistics

concerning the number of squares of red-cedar shingles produced in shingle-manufacturing establishments in the United States; the shipments of red-cedar shingles by producers; the withdrawals from warehouses of red-cedar shingles which have been imported into the United States from Canada; and the imports of red-cedar shingles from Canada. * * * The statistics as to the number of squares of shingles * * * shall relate to each calendar month and shall be published as soon as possible after the close of the month" (13 U. S. C. 94, 95).

"The Director of the Census is authorized and directed to collect and publish statistics concerning the amount of cotton ginned; the quantity of raw cotton consumed in manufacturing establishments of every character; the quantity of baled cotton on hand; the number of active consuming cotton spindles; the numbers of active spindle-hours; and the quantity of cotton imported and exported, with the country of origin and destination" (13 U. S. C. 71).

*Civil Aeronautics Administration*

"The Administrator of Civil Aeronautics is empowered and directed to collect and disseminate information relative to civil aeronautics (other than information collected and disseminated by the Board under subchapters IV and VI of this chapter); to study the possibilities of the development of air commerce and the aeronautical industry; and to exchange with foreign governments, through appropriate governmental channels, information pertaining to civil aeronautics" (49 U. S. C. 456).

*Civil Aeronautics Board*

"The Board is empowered to require annual, monthly, periodical, and special reports from any air carrier; to prescribe the manner and form in which such reports shall be made; and to require from any air carrier specific answers to all questions upon which the Board may deem information to be necessary" (49 U. S. C. 487 (a)).

*Bureau of Labor Statistics*

"The general design and duties of the Bureau of Labor Statistics shall be to acquire and diffuse among the people of the United States useful information on subjects connected with labor, in the most general and comprehensive sense of that word, and especially upon its relation to capital, the hours of labor, the earnings of laboring men and women, and the means of promoting their material, social, intellectual, and moral prosperity" (29 U. S. C. 1).

"The Bureau of Labor Statistics * * * shall collect, collate, and report at least once each year, or oftener if necessary, full and complete statistics of the conditions of labor and the products and distribution of the products of the same. * * * The Bureau of Labor Statistics shall also collect, collate, report, and publish at least once each month full and complete statistics of the volume of and the changes in employment, as indicated by the number of persons employed, the total wages paid, and the total hours of employment, in the service of the Federal Government, the States, and the political subdivisions thereof, and in the following industries and their principal branches: (1) Manufacturing; (2) mining, quarrying, and crude petroleum production; (3) building construction; (4) agriculture and lumbering; (5) transportation, communication, and other public utilities; (6) the retail and wholesale trades; and such other industries as the Secretary of Labor may deem it in the public interest to include. Such statistics shall be reported for all such industries and their principal branches throughout the United States, and also by States and/or Federal Reserve districts and by such smaller geographical subdivisions as the said Secretary may from time to time prescribe" (29 U. S. C. 2).

"The Bureau of Labor Statistics of the United States Department of Labor is authorized and directed to make continuing studies of productivity and labor costs in the manufacturing, mining, transportation, distribution, and other industries.

"The Secretary of Labor is directed to submit annually to the Congress a report of the findings of the Bureau of Labor Statistics in complying with this section" (29 U. S. C. 2b).

*Office of Education*

"There shall be under the Federal Security Agency a bureau called the Office of Education, the purpose and duties of which shall be to collect statistics and facts showing the condition and program of education in the several States and Territories and to diffuse such information respecting the organization and management of schools and school systems and methods of teaching as shall aid the people of the United States in the establishment and maintenance of efficient school systems and otherwise promote the cause of education throughout the country" (20 U. S. C. 1).

*Department of the Treasury*

Section 54 (f) of the Internal Revenue Code requires certain organizations exempt from taxation under section 101 of the I. R. C. to file annual returns which shall state the items of gross income, receipts, and disbursements, and such other information as the Commissioner, with the approval of the Secretary, may by regulations prescribe.

Section 63 of the Internal Revenue Code provides that the Commissioner, with the approval of the Secretary, shall prepare and publish annually statistics reasonably available with respect to the operation of the income, war-profits, and excess-profits tax laws, including classifications of taxpayers and of income, the amounts allowed as deductions, exemptions, and credits, and any other facts deemed pertinent and valuable.

Section 2555 of the Internal Revenue Code requires dealers in narcotic drugs to render to the collector of the district a statement setting forth the quantity of narcotic drugs received by them during certain prescribed periods of time, the names of the persons from whom the said drugs were received, the quantity in each instance received from each of such persons, and the date received.

The Alcohol Tax Unit administers a number of statutes which require dealers in industrial alcohol, liquor, wines, etc., to make reports relating to the business in which they are engaged. Among these statutes are the following: Internal Revenue Code, sections 2811, 2844, 2845, 2855, 2857, 2859, 2871, 2904, 2915, 3032, 3033, 3155, 3171.

The Bureau of the Comptroller of the Currency administers a number of statutes which require national banks to report various types of information to the Comptroller of the Currency. Among these statutes are Twelfth United States Code, page 161, which requires national banks and affiliates of national banks to make reports at least three times annually, setting forth the resources and liabilities of the said banks; Twelfth United States Code, page 163, which requires national banks to report to the Comptroller of the Currency the amount of dividends declared and the amount of net earnings in excess of such dividends; and Twelfth United States Code, page 602, which requires national banks operating foreign branches to furnish information concerning the condition of such branches to the Comptroller of the Currency upon demand.

*Interstate Commerce Commission*

Railroads and pipe lines: "The Commission shall have authority, in order to perform the duties and carry out the objects for which it was created, to inquire into and report on the management of the business of all common carriers subject to the provisions of this chapter, and to inquire into and report on the management of the business of persons controlling, controlled by, or under a common control with such carriers, to the extent that the business of such persons is related to the management of the business of one or more such carriers, and the Commission shall keep itself informed as to the manner and method in which the same are conducted. The Commission may obtain from such carriers and persons such information as the Commission deems necessary to carry out the provisions of this chapter; and may transmit to Congress from time to time such recommendations (including recommendations as to additional legislation) as the Commission may deem necessary" (49 U. S. C. 12 (1)).

"The Commission is hereby authorized to require annual, periodical, or special reports from carriers * * * and from lessors * * * to prescribe the manner and form in which such reports shall be made, and to require from such carriers and lessors specific and full, true, and correct answers to all questions upon which the Commission may deem information to be necessary. * * * Such annual reports shall give an account of the affairs of the carrier or lessor in such form and detail as may be prescribed by the Commission" (49 U. S. C. 20 (1)).

The Commission has similar authority to collect reports from motor carriers (49 U. S. C. 304 (7) and 320), water carriers (49 U. S. C. 904 (b) and 913 (a)), and freight forwarders (49 U. S. C. 1003 (e) and 1012 (a)).

The Commission is also empowered to require reports concerning the issue of securities and concerning safety appliances, methods and systems, and the authority to prescribe the form in which reports shall be made.

*Federal Trade Commission*

"The Commission shall also have power—

"(a) To gather and compile information concerning, and to investigate from time to time the organization, business, conduct, practices, and management of any corporation engaged in commerce, excepting banks and common carriers subject to the act to regulate commerce. * * *

"(b) To require, by general or special orders, corporations engaged in commerce, excepting banks and common carriers subject to the act to regulate commerce, or any class of them, or any of them, respectively, to file with the Commission in such form as the Commission may prescribe, annual or special, or both annual and special, reports or answers in writing to specific questions, furnishing to the Commission such information as it may require as to the organization, business, conduct, practices, management, and relation to other corporations, partnerships, and individuals of the respective corporations filing such reports or answers in writing. * * *

"(h) To investigate, from time to time, trade conditions in and with foreign countries where associations, combinations, or practices of manufacturers, merchants, or traders, or other conditions, may affect the foreign trade of the United States" (15 U. S. C. 46).

PRESENT METHODS OF COORDINATION

The independent operation of scores of separate statistical programs would lead to bewildering confusion unless there were a central coordinating agency to group related needs of different agencies and to develop procedures for an integrated system of Federal statistics. Administrative responsibilities of many agencies necessarily overlap, in general terms at least, and in such areas it is especially necessary to take steps to prevent duplication and unnecessary work.

The Federal Reports Act established a mechanism for statistical coordination by directing the Bureau of the Budget "to coordinate Federal reporting services, to eliminate duplication and reduce the cost of such services, and to minimize the burden of furnishing information to Federal agencies." This act was not passed until the end of 1942.

During the war years it was necessary for the Bureau to concentrate the activities of its statistical coordinating staff almost entirely on the review of forms in order to keep to a minimum the vast numbers of reports required by wartime controls. Even during this period the Bureau was able to make some notable advances in arrangements for more efficient integration of Federal statistics. With the end of the war it is devoting an increasing proportion of its time to the development of further measures to avoid duplication and increase comparability among Federal data and statistical programs.

The Budget Bureau achieves coordination through its review of forms, its establishment of single collecting agencies, and its development of uniform standards for use by all agencies. Its thorough budgetary review of agency proposals also strengthens its statistical control. The following paragraphs contain brief descriptions of the way in which each of these devices operates.

*1. Review of forms*

Statistics are obtained from administrative, operating, or informational report forms or applications received from groups of respondents. The Federal Reports Act provides that every agency (with a few specified exceptions) must obtain Budget Bureau approval for any report form or questionnaire to be sent to 10 or more respondents. This means, in fact, that no statistics may be collected without thorough examination and approval by the Bureau of the Budget. The purposes of this examination are to prevent unnecessary duplication and unwarranted cost and to improve the quality and general usefulness of the statistics obtained.

The Budget Bureau maintains a file of all forms in use by the agencies. Every new questionnaire proposed is examined to see that the data it would obtain are necessary and relevant to the program of the agency, and are not already available from reports collected by the same or any other agency. The Budget Bureau also makes sure in its review that a form is as simple as possible and conforms to business practices, that it is sent to the smallest possible number of respondents, and that it is collected no more frequently than necessary. Expiration dates are assigned to all forms, and before that date each form must be resubmitted for Budget Bureau examination as to its continued necessity and for any further simplification possible.

A full description of the methods used in reviewing forms is presented in Two Years of Progress Under the Federal Reports Act, published in March 1945 by the Senate Special Committee to Study Problems of American Small Business (Rept. No. 47, p. 2). A copy of this report is attached as exhibit 4.

*2. Establishment of single-collecting agencies*

Although the Bureau of the Budget does not believe it would be practicable or desirable to centralize all Federal statistical activities within one agency, it has long advocated a more limited and selective centralization of statistics within particular areas of subject matter, or, where subject matter considerations are not determining, a limited type of centralization based on considerations of efficiency and economy. As early as 1934, in its First Annual Report, the Central Statistical Board proposed the development of what is called focal agencies to be responsible for all statistical activity in particular fields. The focal agency would not necessarily collect all or even part of the information for which it had responsibility, but would be concerned with putting together currently into a rounded picture all available information pertaining to its field. This proposal was modified in the 1938 report of the Board to the President, which called for the gradual development where practicable of single-collecting agencies. These agencies would be responsible for centralized collection of information in given fields of interest or from given groups of respondents. The Federal Reports Act of 1942 called for the development of single collecting agencies to serve the needs of two or more Federal agencies.

This kind of limited centralization by subject-matter fields or respondent groups has the advantage of being flexible enough to permit adaptation of collecting arrangements to changing administrative responsibilities and needs. The kinds of arrangements which the Budget Bureau makes for joint collection and use of data necessarily depend on the kinds of problems involved. In some cases these arrangements are broad enough to cover a very large segment of Federal statistics. In other cases they may be confined to two agencies and one report form. The following instances are illustrative of many arrangements worked out by the Budget Bureau since the passage of the Federal Reports Act:

"Late in 1943 the Bureau established an interagency committee to appraise the needs of Federal agencies for financial information and to determine what agencies should carry out specified parts of the program. The committee, representing seven agencies, investigated and made recommendations on the allocation of responsibility for various parts of the program. As a result, the Bureau completed arrangements for an integrated collection program which would supply the needs of all the agencies without duplication and at minimum cost.

"The Bureau has designated one agency as responsible for the collection and processing of data on exports and imports needed by five administrative agencies, thus avoiding the necessity of independent and overlapping activities in the field. The program has proved effective and useful—it has provided the data needed promptly and has proved flexible enough for special needs. For example, one agency needed information on each shipment of each of 120 commodities to each of 70 countries from each of 3,000 exporters during a 3-year period. The Budget Bureau arranged that the agency obtain the information from special tabulations of data in the possession of the single collecting agency, rather than from an independent and very burdensome survey.

"The Bureau arranged that one agency be the collecting and compiling agent for all information from gas utility companies needed by itself and three other agencies.

"The Bureau eliminated 3,500 forms a month by arranging for one agency to provide another with information it had been collecting independently on its construction contracts.

"The Bureau arranged for one agency to use annual tabulations of industrial injury reports supplied by another agency required to collect such information in one industry, thereby eliminating duplicate reporting."

Opportunities for additional arrangements of this type arise continuously in the operations of the Budget Bureau. Its task of coordinating and rationalizing the statistical program of the Federal Government as a whole involves constant examination of the areas of responsibility of each agency and bringing together all agencies, whether statistical or operating, which have a common or related interest in a particular problem. In designating single collecting agencies or arranging for joint collection or use of statistical data the Bureau of the Budget is guided particularly by considerations of overhead cost and ultimate use of the information sought. We believe that through continuous and increasing efforts in this direction it is possible to bring about an integration of Federal statistics which is realistic, practicable, and economical.

*3. Development of uniform standards*

Lack of uniformity in definitions, techniques, and procedures frequently makes it difficult for one agency to make use of statistics collected by another. The lack of uniformity wastes time and costs money. The Budget Bureau has therefore taken the leadership in developing uniform standards for use by all agencies. Only through general application of standard techniques, definitions, and classifications can data collected by different agencies be made comparable and consistent and be fitted together to yield reliable and meaningful totals.

Among the uniform standards already developed by the Bureau and adopted by the agencies concerned are the standard pay-roll reporting period and standard definitions for categories of employees in manufacturing industries. Adoption of these standards involved considerable changes in some reporting systems, but makes valid comparison and integration possible.

The Budget Bureau has participated actively in the development of standard techniques whereby in any instance the minimum essential information may be obtained without asking more detail or collecting more reports than necessary.

It has developed a standard industrial classification which not only improves the usefulness and comparability of data obtained by different agencies but also makes it unnecessary for various agencies to spend money on specialized staffs to develop and maintain independent classifications for their own purposes. The Bureau has also completed some parts of a commodity classification now in use by all agencies of the Government in describing, recording, and reporting property.

The use of a single classification system in complicated recording and reporting systems tremendously simplifies operations and reduces total costs by making it unnecessary to convert from one classification to another every time commodity information crosses agency lines.

The Budget Bureau has developed standard forms for use when two or more agencies carry on similar activities, such as procurement, contract renegotiation, or contract termination and settlement. Standardization of these forms not only relieves the respondent of the necessity of keeping duplicate records but facilitates summarization of reports from different agencies.

*4. Budgetary review of agency programs*

The Bureau of the Budget is responsible for reviewing the annual appropriation requests of all agencies, and for recommending to the Congress what funds should be granted. This basic function of the Bureau gives it unique opportunities for knowing in detail the functions and present and proposed activities of each agency. In its review of appropriation requests the Bureau makes a thorough study of the program of the agency, both in its entirety and in detail. Appropriation requests for statistical programs are studied in relation to the functions and authorities of the agency making the request, and in relation to similar programs in other agencies. The Bureau's responsibilities in the budgetary process supplement and greatly strengthen its authority for statistical coordination.

## Bad Bargain With Britain

REMARKS

OF

## HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. CELLER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. CELLER. Mr. Speaker, the Associated Press reports this morning that the United States has proposed commercial use of airfields leased to us by England in Newfoundland, Bermuda, and the Caribbean for military purposes. That request is rather belated. The request should have been made, indeed, and made most forcibly before the loan had been negotiated with England. There is an old story but a true one that when the feast is over the guest departs. The London negotiators have departed. We have shot our bolt. We have no longer the power of bargaining with Great Britain. You can jolly well know that that request for the commercial use of those air bases will be denied.

## Address by Governor Green, of Illinois, Before Meeting of Republican National Committee

EXTENSION OF REMARKS

OF

### HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 11 (legislative day of Monday, October 29), 1945*

Mr. BROOKS. Mr. President, at a recent meeting of the Republican National Committee in the city of Chicago, Governor Green, of Illinois, made a very able address. I ask that the article which appeared concerning it, written by Mr. Robert Howard, of the Chicago Tribune, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Governor Green called upon the Republican Party yesterday to return to the "straight thinking and plain speaking" necessary to save America from the chaotic failures of the Truman New Deal.

Republican Presidents again can be elected and America can be returned to prosperity and sound progress, the Governor said in his welcoming speech as the party's national committee opened a 2-day session in the Stevens Hotel.

The Governor was introduced by National Chairman Herbert Brownell, Jr., as "one of the greatest Republicans in the country." Green was interrupted frequently by applause and was given a standing ovation when he finished.

SOUND PROGRAM DEMANDED

He said Republican failures have been caused by weak compromises designed to ape New Dealism. He called for the National Committee to adopt and to stick to "a sound declaration of principles" at the start of the 1946 campaign.

"Let us Republicans be true to ourselves and our honest beliefs," Governor Green said. "I predict that if we do that we shall gain 10 votes for every 1 we lose."

Stressing his constructive program, the Illinois leader also warned that America's world position is being wrecked in the aftermath of victory by ineptness of President Truman's administration.

FOUR FREEDOMS VIOLATED

Governor Green said:

"We propose a complete about-face from the weak and vacillating Truman New Deal diplomacy, which has suffered the most humiliating defeat in American history.

"With the greatest military force in the world, it has lost every skirmish on the diplomatic front. The 'four freedoms' and the Atlantic Charter have not only been disregarded, but specifically violated.

"American diplomacy under Truman, instead of standing as a fortress for the freedom of peoples and the integrity of national existence of small nations, has become the abject servant of British, French, and Communist imperialism."

HYBRID ADMINISTRATION FLAYED

"Truman-Democratic-New Deal diplomacy is losing the peace 6 months after American armies and navies won the war. Power politics again rules the world, and the Truman administration has stood helplessly by. We warn that appeasement now can be as dangerous as at Munich, especially when it means compromise with the conscience of America."

Courage must be substituted for compromises at home and abroad, he continued, adding:

"We know that our country is today by long odds the strongest of all nations, more than a match for any combination that might be brought against us, but we have too often given lip service to a foreign policy founded upon fear."

PEOPLE TIRED OF DOUBLE TALK

"We have been told that we must not raise our voice against the rape of Java by the British and Dutch for fear of offending some voters, and we have been told we must not even protest against the shameful betrayal of Poland for fear of offending Russia's following over here.

"We say we don't want Communist votes—and whether we do or not, we can never expect to get them—but we act as if they were about to fall into our lap if only we behave with circumspection."

The people are tired of double talk, at which Republicans should not attempt to duplicate New Dealers, he continued.

NEW DEAL FALSEHOODS CITED

"By this time, the country knows that the New Dealers cannot be trusted. They promised Palestine to the Arabs and to the Jews at the same time. They gave Poland to the Poles and to the Russians. They told us that lend-lease would keep the Nation out of war when they knew it would not. They told the fathers and mothers of America that their sons would not be called upon to fight on foreign soil. They promised peace when they knew war was upon us."

The party leaders were told that they had been deluded by local victories during 14 years of failure in national leadership.

"The Republican Party was founded to elect, not sheriffs, but Presidents," Green admonished. "It was born as a national party, has always been a national party, and, if it cannot win national elections, has lost its main reason for existence.

"Our party has failed nationally, chiefly because it has not been true to the faith that is in us," he went on. "We believe in private enterprise, but we have offered only feeble protests as private enterprise has been hemmed in and restricted by Federal taxation, regulation, and regimentation, until it cries for help."

UNITED STATES DEFENSE A CORNERSTONE

"The cornerstone of our program must be the vigorous protection of the people of America from future attack," Governor Green said. "This is the first duty of our Government.

"We do not agree that the American people were to blame for Pearl Harbor. We are determined that there shall never be another Pearl Harbor. We demand that the superiority of our Army and Navy and their air arms in numbers and in scientific weapons of modern warfare shall be rigidly maintained.

"Republicans must insist that the Government promptly and unequivocably act to insure the permanent retention of air and sea bases vital for the defense of America," he continued.

"WE STAND FOR WORLD LIBERTY

"We favor the fullest cooperation with other nations to insure peace, but we insist that the makers of our foreign policy cling to our American ideals of justice and liberty," said the Illinois Governor. "We must never condone the suppression of liberty in Poland, in the Baltic states, in the Balkans, or in any nation in Europe, Asia, or elsewhere. It must be our vigorous policy to use the leverage afforded by the discussion of forgiveness of lend-lease, or of requests for new loans, and every other peaceful means to speed liberation of the people of these nations.

"Just as vigorously we must support in our dealings with all nations concerned the right of free Jewish immigration into Palestine. May we not hope that American influence, properly used, can achieve that long cherished goal of world Jewry, with due protection of the rights of all?"

HUMAN SLAVERY CONDEMNED

"The Republicans of the Middle West will never approve the administration's indifference to the extension of human slavery, whether the victims be the peoples of the nations we have defeated in war or the unfortunate natives of Malaya and southeastern Asia."

To the national committeemen, Green sketched a Republican program to put the national economy on a sound basis.

"We believe that the time has come to bring national expenditures down to the tax receipts of our National Government," he said. "We must live within our income, and basic thinking should govern our consideration of loans and gifts to other nations."

WOULD GUARD AGAINST FRAUD

"We insist upon rigid honesty throughout the national administration, and that there be a prompt end to the use of public power for personal gain. Particularly, we urge Congress immediately to enact legislation requiring full publicity to all deals for disposal of surplus war goods or alien property.

"We face the fact that the present and future prosperity of America depends on the prompt reconversion of American business to a sound peacetime economy. Increased production of sorely needed materials, tools, and consumer goods is our paramount need today. Without increased production, we cannot check the current trend of inflation or achieve the full employment which is our hope to avoid the equally serious perils of deflation.

"We believe that such increased production can be accomplished only by the fullest cooperation of American industry, American agriculture, and American labor under the profit motives of our system of free enterprise. We believe that system has demonstrated its superiority to any system in the world, both in the miracle of our production for war and in the long-range record of American industrial expansion which has produced for the American people the highest standard of living the world has ever known.

"We charge that our production has now bogged down mainly because the Truman New Deal administration has failed to clear away obstacles to reconversion created by oppressive Federal tax policies and a maze of Federal bureaucratic regulation. * * *

REGIMENTATION MUST BE ENDED

"We believe that the regimentation of American business, American agriculture, and

American labor must be speedily terminated; that special war controls shall be ended as quickly as possible, and that powers of Congress and the State governments, delegated to the President in the war emergency, should be speedily restored to Congress and the States. Freedom from regimentation is the objective of a liberty-loving people; governmental controls should be limited to the prevention of abuses and dishonesty and the correction of gross inequalities."

Prosperity for both capital and labor has been made almost impossible by New Deal tinkering that has complicated labor disputes, Governor Green said.

"The basis of virtually every labor dispute today is the natural desire of the workers to receive under peacetime conditions a take-home pay at least equal to the amount they received while working overtime hours during the war emergency," he continued. "They are supported by those who argue that the levels of workers' incomes must be maintained to provide the buying power required to support the full-employment program for our country."

CHALLENGES NEED OF MORE BUREAUS

"However desirable this may be, from the employers' point of view, it means an increase in his unit cost of production, and, if he proposes to meet this cost by increased prices, he runs into the ukase of another group of New Dealers which says: 'You must not increase prices.' In this situation, the American businessman is chanting the familiar words of a late leader of the Democratic Party who could not stomach the New Deal: 'You can't have it both ways.' The President of the United States has been unable to show us how we can have it both ways, and I do not believe it can be accomplished by law or by the creation of any additional bureaus or so-called fact-finding bodies.

"We endorse collective bargaining. The right to bargain implies the right to refuse terms offered—the right of labor to strike and the right of management to shut down if satisfactory agreements on wages and conditions cannot be reached. Strikes and shutdowns are expensive to the public, but they are more expensive to the employers and employees involved."

CLEAR LABOR PROGRAM

"We believe that most of our labor conflicts could be settled promptly if management and labor were free to negotiate in their own interests. I see no effective solution to this problem until free and unfettered collective bargaining is restored. I trust that the position you take here on labor will be clear and forthright, and that we shall not promise what we cannot perform."

Governor Green reaffirmed Republican belief in the Bill of Rights, said that social security must be placed on a sound basis actuarially, and pledged full aid to returning war veterans.

VETERANS' NEEDS PARAMOUNT

"The Republican Party must pledge to the American people the fulfillment of our Nation's obligation to provide a sound and happy future for the veterans of this war. That obligation transcends any supposed obligation to our allies or to the world."

He called for speedy discharge of soldiers "not absolutely essential to our national interests," and blamed New Deal bungling for the housing shortage.

"Finally, we believe the time has come to speak out for America; that the efforts of our Government should be turned to benefit Americans; that the greatest service we can do for mankind is to keep America strong," he said.

"I believe that the people of America today will listen to straight thinking and plain speaking. I am convinced that here and now is the opportunity for the Republican Party to put our country on the road to prosperity and sound progress."

## Labor Developments Support Mr. Truman

EXTENSION OF REMARKS
OF
### HON. ALLEN J. ELLENDER
OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 11 (legislative day of Monday, October 29), 1945*

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Labor Developments Support Mr. Truman," published in the Houston (Tex.) Chronicle of December 7, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LABOR DEVELOPMENTS SUPPORT MR. TRUMAN

Developments following President Truman's message to Congress urging the enactment of legislation for fact-finding in industrial disputes have served to substantiate the correctness of Mr. Truman's position.

The United Automobile Workers have rejected a 10-percent increase offered by General Motors. The union leaders insist that they must have 30 percent. Here is a case where fact-finding would be of value. The employer acknowledges his ability to pay increased wages. The employees take the position that the amount offered is not sufficient. There must, therefore, be some common ground upon which the two parties to the controversy could meet, and how could the point of compromise be better established than through an outside examination of the facts presented by the disputes.

The intemperate language of many labor leaders who have commented on the President's proposal also demonstrates the necessity of applying more impartial minds to the controversies between labor and management which are retarding reconversion.

An outstanding example of labor's intemperance was the charges made by Philip Murray, president of the CIO, that the Truman administration had yielded in "abject cowardice" to industry's refusal "to engage in collective bargaining" and that the President's action was responsible for laying the ground work of a legislative design "to weaken and ultimately to destroy labor union organizations."

Mr. Murray further charged that the administration had ignored human rights and "appeased" industry "with ever greater opportunities for increased profits at the expense of the American public."

These statements lack all reason. There is collective bargaining. Possibly not in the sense that Mr. Murray interprets the term, for he seems to feel that it should result always in the granting of labor's demands. President Truman has not appeased industry any more than his predecessor did over a period of 12 years. Any appeasement there may have been, has been in favor of labor. The President's action was not designed "to weaken and ultimately to destroy labor-union organization," since it did not take from them a single one of the many rights they have acquired in the last decade.

No one either in labor or management has as yet advanced a sound or valid reason why there should not be a fact-finding examination of labor disputes affecting the public interests, which the principals are unable to settle. The President's proposal presents no new and untried methods. What he suggests has been employed in railway mediation over a long period of time. The procedure has prevented any crippling work stoppages in railroad transportation. It has not held railroad wages down. There are, as a matter of fact, those who criticize the President's fact-finding proposal on the ground that railway labor has benefited unduly by the use of such machinery.

It cannot be denied, however, that fact-finding as it has been employed in the United States for the examination of industrial disputes has served the public interest and prevented strikes. At the present time there are numerous conflicts in the industrial field where the public interest has been given no consideration, and there are strikes and threatened strikes highly disruptive to peacetime production. The President has taken action designed to protect the public interest and to bring an end to work stoppages. So far the course of events has served to substantiate the soundness of what he has proposed.

JESSE H. JONES.

## Financing Dead-Beat Nations

EXTENSION OF REMARKS
OF
### HON. WILLIAM LEMKE
OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 11, 1945*

Mr. LEMKE. Mr. Speaker, on Thursday, December 6, there appeared in the Times-Herald, of Washington, D. C., an editorial by John O'Donnell that I feel should be read at this time by every citizen in the United States.

Now that our State Department has kindly consented to give Great Britain another gift of $4,500,000,000, I do not care about Great Britain's promises to repay this. Her promises are not worth the paper they are written on. She owes us over $5,000,000,000 from World War I that she promised to pay, and then refused to pay. She owes us $29,000,000,000 from lend-lease which she has not and will not promise to repay.

Our first duty now is to our returning veterans. That $34,000,000,000 that Great Britain already owes us would go a long way to put the veteran back into civilian life, from which he was taken. It would go a long way in setting him up in business for himself in place of looking for jobs that will not and do not exist.

The editorial quotes the gentleman from Nebraska, Representative STEFAN. I am in full accord with the gentleman from Nebraska, Representative STEFAN, when he quotes a famous quotation: "Millions for defense, but not one cent for tribute." I would add, "Billions for the veterans, but not one cent for dead-beat nations that accept our money and goods and then call us 'Uncle Shylock.'"

The editorial follows:

CAPITOL STUFF

(By John O'Donnell)

At this moment, up on Capitol Hill, the battle lines are being sharply drawn for the most important issue that ever faced the citizens of the Republic.

At stake is control of Congress in next year's election; at stake are the political fortunes of President Harry Truman. Pivot of the battle is whether President Truman wants to go down the line and fight for White House victory on the firm line that he once stood for, and still stands—for the ideas and practices of his predecessor, the late Franklin D. Roosevelt.

For the first 3 months after the death of Roosevelt, last April, the politically shrewd Truman went down the political line for

Roosevelt's policies. Now, something new has been added. The Roosevelt background of the entrance of this Nation into the war—the revelations of Pearl Harbor—have changed the magic name of Franklin Roosevelt from a political asset to a definite liability.

Never before in our Nation's history has a President who died in office lost his political prestige and authority with such appalling swiftness.

After all, the words of Washington, Jefferson, Jackson, Lincoln, Cleveland, and the great T. R. Roosevelt spoke from the grave and had their influence after death. So, for a bewildered era, did the mouthings of the sainted Woodrow Wilson.

The Hyde Park grave has silenced the political injunctions of F. D. R.—hence, the immediate worry of the Truman administration. After all, the boys want to win in the next Presidential campaign. They figured on playing the Roosevelt line, and now they have to reverse their field—a dangerous and audacious shift in any game, particularly in that of politics. And it looks as if the boys may be tossed for a loss.

Boiling hot at the moment is the proposal that American taxpayers loan a few billions to Great Britain and the Communists of Moscow and then top this off with some odd millions to our so-called beloved and united allies.

Now this proposition is strictly down the old lend-lease alley deviously charted by F. D. R. at the very time when he was piously proclaiming to the Nation from the White House that this Nation was 100-percent neutral, that "I hate war." Interesting point is that the proposed loan to Britain, which might have gone through with a bang and a whoop under the high-pressure days of Roosevelt, probably will be booted out the window when it reaches the House of Representatives.

After all, every Member of the House has to fight for his political life before the voters next November. The idea has been percolating through their brains that the returning veterans would like to see taxpayers' dough spent for such things as housing, jobs, etc., for Americans. And Brother Truman and his advisers are getting the same idea.

For about a month now, the British have been putting the diplomatic arm on our Santa Claus branch of the Government. The Communists, Poles, etc., have been stretching out the clutching hand for the Uncle Sam handout. Truman, Secretary of State Byrnes, and all our so-called Treasury and United States loan experts (by the way, does anybody remember when any of the foreign boys gave us a small hand-out from their public funds?) have been figuring out how we can part with our cash.

What we would like to know is whether the Income Tax Division of the Internal Revenue Bureau would certify the loan as a bad debt if we don't collect? And we don't think we ever will. Can we deduct it from our taxes, as individual taxpayers?

How much will Brothers Truman, Byrnes, and Vinson personally be clipped—and the Members of the House of Representatives? After all, they got us into this sucker trap.

There were sounded some very intelligent observations on this subject by the veteran and respected Representative KARL STEFAN, dean of Nebraska's delegation in Congress.

At a moment when all the boys were cupping a meditative ear to the reports that President Truman, the State Department, and some of the New Deal hang-overs were discussing with British mendicants the amount of dough we should hand out to them Representative STEFAN stood up and told the House an ancient truth. It was this:

"We are vested with the responsibility under section 7, article I, of the Constitution of the United States of America, namely: 'All bills for raising revenue shall originate in the House of Representatives.'

"The present situation which this House must meet is: Foreign nations have demanded that the United States Government loan them or give them billions of American dollars, which the House must take from our people through tax legislation."

The Nebraska Congressman awakened the memory of his colleagues to the historical fact that once upon a time an American naval officer retorted to the cash demands of trans-Atlantic pirates with the words, "Millions for defense, but not one cent for tribute."

We give Representative STEFAN credit for sinking the knife in gently, but deeply and thoughtfully, when he observed:

"Let us forget for the moment that their (ex-allies) attitude in this matter is unparalleled in all financial history.

"They do not come, hat in hand, begging. They do not come as equals, asking openly for loans to bear honest rates of interest and to be honestly repaid. Rather, they come in arrogance, asking outright gifts. Above all, let us not forget that the members of these foreign missions are perfectly aware of the source of these gifts which they so avidly seek from the American people."

## Navy Department and United States Foreign Policy

REMARKS

OF

## HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 11, 1945*

Mr. PATTERSON. Mr. Speaker, I would like to call to the attention of the Naval Affairs Committee, for prompt investigation, some facts which have been brought to my notice.

Since the policy of the United States Government, expressed by President Truman is: Not to interfere in other nations' internal affairs, and the upholding of all peoples' right of self-determination, I am amazed that our Navy Department helped arm, train, and equip Dutch troops who are now fighting the Indonesian peoples in the Netherlands East Indies.

The Government of the Kingdom of the Netherlands, in September of this year, approached the Foreign Economic Administration, through the Netherlands Purchasing Commission, with an inquiry regarding the possibility of their getting equipment for a detachment of Royal Netherlands Marine Corps men. Their request was denied by the Foreign Economic Administration, who informed the Dutch that since the war was over, they were no longer eligible for supplies for military operations. The Dutch then went to the Navy Department, and asked for the same types of equipment that had been denied them by the Foreign Economic Administration. The United States Navy granted the request for these war materials, to be sent to the Netherlands East Indies. The Navy accepted the bid on a cash reimbursement lend-lease basis. The Navy requisitions for these supplies amounted to around $16,000,000. Aside from the defiance of United States foreign policy by the Navy Department in this instance, I do not have any evidence showing that we were ever paid the $16,000,000 by the Dutch.

On every requisition, the delivery instructions read "Royal Netherlands Marine Corps, for overseas duty shortly. Fastest delivery is requested."

From the Naval Bureau of Medical and Surgical Supply, standard kits for medical companies, infantry battalions, surgery, dental, and miscellaneous surgical supplies were given to the Dutch for the repression of the will of their colonial subjects.

From the Naval Bureau of Supplies and Accounts, 450,000 gallons of 80-octane nonaviation gasoline and 25,000 gallons of lubricating oil, for overseas field activity in the Netherlands Indies, were sent to serve on a 6-months' self-maintenance basis. Other items mentioned on this requisition were: B-type rations for 30 replenishments for 5,000 men; and A-type rations for 90 replenishments for 5,000 men; Army-type special menus for hospitals, and so forth, were also included.

Yards and dock material for advance base functional components for naval construction companies, such as pontoon bridge construction materials, were given and sent.

Post-exchange supplies for overseas activities, enough for 5,000 men for 3 months, were also given by our Navy to a foreign government for use in subjugating native peoples.

As if this were not enough, it appears on some of the requisitions that supplies were to be delivered to the Quartermaster of the Royal Netherlands Marine Corps at our United States Marine base, Camp Davis, N. C. The 5,000 men used our materials and were trained in American camps.

It is obvious that the departments of our Government knew quite well where these men and supplies were to be used. In the light of this fact, in complete violation of the policies laid down by the President and his foreign office, the State Department, I want to know who was responsible, and demand that the individuals be called before the proper authorities to relieve them of the responsible positions they now hold.

We are having enough difficulties ironing out our foreign policy today, without complicating it by the irresponsible actions of some unknown American policy-maker, who has the blood of another Allied Nation's subjects on his hands.

If anyone doubts that such transactions took place, let him call on the Navy Department to show him their requisition Nos. NEN-10,000 through 10,005.

All dealings in lend-lease by the Navy Department are under the Chief of Naval Operations. I believe that this division should certainly look into the matter with congressional aid, to see whom within it has taken this unheard-of responsibility and placed the United States Government in the position of actually, literally participating in the repression of Dutch colonial peoples in their own lands.

I hope that the Naval Affairs Committee will take prompt action in investigating this situation, and see that the person or persons responsible for this act be immediately replaced by those

who will not drag this Nation into affairs outside its jurisdiction.

Our expressed policy is to foster democracy and to encourage nations to have the right of their own self-determination. Such irresponsible acts as I have outlined here will not help us obtain the friendship and cooperation of our world neighbors.

We must avoid any subsequent acts of intervention, whether it be in Indonesia, China, or anywhere else. If these supplies have not gone forward to the Pacific as yet, they should be stopped.

This democracy must continue its policy of working in harmony with all peace-loving nations. Our own interests come first, and our best bet for world peace is in United Nations cooperation. A firm expression of this policy must be known to the world through our own democratic actions.

I regret that I have felt it necessary to reveal the foregoing information about the Navy Department's misguided action. I feel it in the best interests of the Nation to prevent a recurrence of such action, by bringing this to light now.

## Pfc Jack MacNider, USMCR

REMARKS
OF
### HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. BIEMILLER. Mr. Speaker, on November 30 I spoke on the floor protesting the release of Pfc Jack MacNider, USMCR. I read into the RECORD a letter to General Vandegrift, Commandant of the Marine Corps, in which I raised certain questions concerning the incident. I have today received a reply from the general which I wish to place in the RECORD. You will note General Vandegrift states frankly that the discharge took place "in deference to a request by General MacArthur and in consideration of the outstanding record of General MacNider in two world wars." I repeat my previous charge that this discharge smacks of rank favoritism and should never have taken place. Neither General MacArthur nor General MacNider should make such requests. There are tens of thousands of lads in the armed services who want to resume their education as much as does young MacNider. There are Members of this House who have sons in a comparable position but they would not dream of making such a request.

General Vandegrift assures me there will be no more such discharges. I sincerely hope this policy will prevail. The one case has been too many.

COPY OF LETTER FROM GEN. A. A. VANDEGRIFT TO REPRESENTATIVE ANDREW J. BIEMILLER

MY DEAR MR. BIEMILLER: This is to acknowledge receipt of your letter of November 30, relative to the discharge of Pfc Jack MacNider, USMCR.

My approval of the return home and discharge of Private First Class MacNider was in deference to a request by General MacArthur and in consideration of the outstanding record of General MacNider in two world wars. It was not an act of friendship, for I barely know General MacNider, and I can assure you that the case bore no political significance whatsoever.

Insofar as I know, the MacNider case is the first and only deviation made from the Marine Corps' established policy governing discharge. Had I realized the possible result of my acquiescence in this particular request, you can rest assured such decision by me would never have been made.

In view of the reaction resulting from the MacNider case, I can assure you that henceforth not the slightest deviation from the Marine Corps system of discharge credits may be expected by anyone.

With best wishes, I am,

Sincerely yours,

A. A. VANDEGRIFT,
*General, USMC, Commandant of the Marine Corps.*

## The Hobbs Bill, H. R. 32, Antiracketeering or Antilabor?

EXTENSION OF REMARKS
OF
### HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. HOOK. Mr. Speaker, some proponents of this bill have referred to it as an antiracketeering bill. It is important in any objective analysis of the bill to understand that it simply is not an antiracketeering bill at all. We already have an antiracketeering law. The Hobbs bill simply removes certain sections from the present antiracketeering law.

Responsible labor organizations condemn the practices which constitute racketeering. Labor has taken vigorous steps, frequently with the aid of government prosecutors, to cleanse its ranks of racketeering elements. Labor opposes the bill, not because labor opposes antiracketeering legislation, but the Hobbs bill is not in any respect an antiracketeering measure.

Supporters of the Hobbs bill in all public discussions seek to convey the impression that it outlaws the use of force or violence or prohibits something which the bill calls robbery and extortion. The proponents of the bill thus seek to convey the impression that those who oppose the Hobbs bill are in some way protecting force or violence or robbery or extortion.

The fact is that the prohibition of force or violence or the prohibition of what the Hobbs bill chooses to call robbery or extortion are not at all the changes which the Hobbs bill makes in the law. The Hobbs bill would not for the first time introduce into Federal legislation a prohibition on force or violence or robbery or corruption as those are defined in the bill. All of these are already today prohibited by Federal law. The language in the Hobbs bill in most respects is merely a repetition of the language which already appears in the present Antiracketeering Act. The significance of the Hobbs bill lies in the changes which it would make in the present act.

Before proceeding to an analysis of these changes it is interesting to note the extent to which the new bill, while purporting to replace completely the existing Antiracketeering Act, simply repeals the language of the original act and recasts it in terms of labels such as robbery or extortion. Thus the term "extortion" is defined in H. R. 32—section 1c—as "the obtaining of property from another, with his consent, induced by wrongful use of actual or threatened force, violence, or fear, or under color of official right."

The present law already declares a felony the activities of a person who "obtains the property of another, with his consent, induced by wrongful use of force or fear, or under color of official right."

H. R. 32 declares felonious the activities of any person who "commits or threatens physical violence to any person or property in furtherance of a plan or purpose to do anything in violation of section 2."

The present law already on the books declares felonious the activities of any person who "commits or threatens to commit an act of physical violence or physical injury to a person or property in furtherance of a plan or purpose to violate section (a) or (b)."

H. R. 32 declares to be felonious the activities of any person who "conspires with another or with others, or acts in concert with another or with others, to do anything in violation of section 2."

The present law declares to be felonious the activities of any person who "conspires or acts concertedly with any other person or persons to commit any of the foregoing acts."

H. R. 32 applies the term "robbery" to the "unlawful taking or obtaining of personal property" against the will of another person "by means of actual or threatened force or violence or fear of injury"—section 1 (b).

The present law makes felonious the activities of any person who obtains or attempts to obtain money or other valuable considerations "by the use of or attempt to use or threat to use force, violence, or coercion."

In general, therefore, when we discuss the Hobbs bill we are not discussing the question of whether or not we are to have an antiracketeering law. We already have one which contains all of the substantial protections against racketeering which are needed, or, indeed, which the Hobbs bill offers. When we discuss the Hobbs bill, what we are discussing is what changes should be made in the present antiracketeering law.

What are the changes which the Hobbs bill really offers in the present antiracketeering law? Basically they come down to just one single change—but very significant from the point of view of the direction in which the antiracketeering law of 1934 might be turned. The present law specifically prohibits any attempt to direct its application against situations involving simply "the payment of wages by a bona fide employer to a bona fide employee"—section 2a. The present law specifically declares that:

No court of the United States shall construe or apply any of the provisions of this act in such a manner as to impair, diminish, or in any manner affect the rights of bona fide labor organizations in lawfully carrying out the legitimate objects thereof as such rights

are expressed in existing statutes of the United States (sec. 6).

These are the two provisions which the Hobbs bill would delete from the present antiracketeering act. The deletion of these two provisions would constitute the full extent of the change which the Hobbs law would make in the existing antiracketeering law. Indeed, there is no pretense either on the part of the author of the bill nor in the report of the Committee of the Judiciary that anything else is contemplated or desired by the proponents of the Hobbs bill.

Thus all that the Hobbs bill does is to remove from the present law the two provisions inserted to prevent any warped application of the law in derogation of the rights of labor. All that the Hobbs law does is to remove first the provision which prevents application of the antiracketeering act to the payment of wages by a bonafide employer to a bona fide employee and second the provision which prevents application of the law to impair the "right of bona fide labor organizations in lawfully carrying out the legitimate objects thereof."

The mere statement of this fact should be enough to demonstrate why organized labor is opposed to the Hobbs bill. The mere statement of this fact should be enough to demonstrate why the Hobbs bill should be defeated.

On the other side of the picture we may point out what would be the results flowing from the removal of the protective clauses which are now contained in the present law. This question may be answered by answering at the same time another question. Why were the provisions placed into the present law when it was enacted in 1934?

The provisions now appearing in the law were inserted by the representatives of the very agency of the Government entrusted with the duty of enforcing the legislation—the Department of Justice. At that time the Attorney General wrote to the House Judiciary Committee on May 19, 1934, pointing out that the protective provisions had been inserted into the bill and explaining that:

> The original bill was susceptible to the objection that it might include within the prohibition the legitimate and bona fide activities of employers and employees. As the purpose of the legislation is not to interfere with such legitimate activities but rather to set up severe penalties for racketeering by violence, extortion, or coercion, which affects interstate commerce, it seems advisable to definitely exclude such legitimate activities. (See H. Rept. No. 1833, 73d Cong., 2d sess.)

What are some of the means by which the language of the Hobbs bill, in the absence of the protective provisions which are elements of the present antiracketeering law, may be directed against the legitimate and bona fide activities of employers and employees as the Attorney General noted? The law makes it a felony for anyone to obtain the property of another by "actual or threatened force, violence, or fear of injury" to persons or property. Lawyers who have had occasion to familiarize themselves with the decisions of the courts on labor problems, particularly the courts operating in the heyday of the labor injunction, are aware of the kind of interpretation that has been given to words of this type in connection with labor disputes.

There are courts which have held that whenever workers seek to bring about a wage increase or other adjustment of their working conditions by a strike, however peacefully conducted, they are attempting to "force" their employer to grant the wage increase or the requested adjustment of their working conditions.

There are courts which would hold that since a union's sole method of inducing an unwilling employer to grant wage increases is the economic weapon of the strike, then the very posing of the demand by a union to the employer is a threat of force.

Attorneys familiar with the decisions of the courts on questions of picketing will recall that there are courts which have held that picketing, however peacefully conducted, is by its very nature an attempt to "force" the employer into action which he is not willing to take. It is on this basis that many courts have in years past granted sweeping injunctions against concededly peaceful labor activity.

Attorneys familiar with the decisions of the courts on charges of violence in labor relations can tell of the implications to labor in a statute worded as is the Hobbs bill. There are courts which, in injunction cases and in disorderly conduct cases, have held name-calling or use of such terms as "scab" to constitute force or violence. Whatever may be your feelings as to whether such name-calling should properly be considered disorderly conduct under local ordinances or statutes, it should be kept in mind that the Hobbs bill is defining conduct which would become a felony, punishable by imprisonment up to 20 years, or by a fine of up to $10,000 or both.

This problem has another aspect. It is generally recognized that some, if not all, labor disputes are unfortunately marked by heated tempers on both sides. It is unfortunately true that in some instances in the heat of labor disputes there will be minor altercations on the picket line. There will be occasional scuffles between partisans. Any truly criminal conduct which may occur in the course of these altercations and scuffles is, of course, punishable by local disorderly conduct statutes or ordinances or other local laws. Under the Hobbs bill every such altercation is automatically raised to the level of a Federal offense—a Federal felony the punishment for which may be as high as 20 years in jail or $10,000 in fine.

Nor is that all. These dangers are not even limited to the persons who may take part in the strike or in the picket line and certainly not to the persons who may be actually involved in the altercations or in the name-calling or other incidents which under this bill would become felonious.

Section 3 of the Hobbs bill makes equally felonious the conduct of those who conspire with or act in concert with others to commit the acts which are prohibited by the bill. Now, if a strike is force, within the meaning of the other sections of the bill, then obviously not only the strikers are guilty of felony but all those who voted for the strike at the union meeting. Indeed all those who are members of the union may be involved, since by their membership in the organization they may be found either to have conspired or to have acted in concert with strikers. By the same token, all of the workers on the picket line, and indeed all of the members of the union, may be found to have conspired or to have acted in concert with the individual or individuals who may have become engaged in an altercation found to constitute a felony under the bill.

All of these are not merely hypothetical dangers. They are not speculation. These are dangers which are found in the kind of construction which courts have in the past given to certain words in connection with their application to labor-relations problems.

True, we have come a very long way from the kind of approach which is reflected in such interpretations. We may assume that there are very few today who would side with the courts of the first two decades of the nineteenth century which found the mere existence of a labor organization to constitute an unlawful conspiracy. The fact is, however, that applied to specific strike situations and other specific labor-relations problems brought to the courts, there are many decisions now on the books and there are many judges now on the bench whose outlook may quite definitely be expected to result in holdings of the kind that have been outlined above.

It is reasonable to assume our national legislators do not believe that legislation directed against racketeering should be directed against a strike for higher wages or a picket line in support of such a strike. Certainly that was not the intent of the Congress which enacted the 1934 Antiracketeering Act. We doubt that the supporters of the Hobbs bill would be willing to assert that this is their intention today.

How then are the dangers of such constructions of the antiracketeering laws to be avoided? The 1934 statute provided the answer in the form of the two very simple provisions previously cited:

First. That the act was not to apply to the payment of wages by a bona fide employer to a bona fide employee.

Second. That no court was to construe the act "in such manner as to impair, endanger, or in any manner affect the rights of bona fide labor organizations in lawfully carrying out the legitimate objects thereof."

The supporters of the Hobbs bill offer no substitute assurance against these dangers. They offer only the elimination of the protections contained in the present act. Under the circumstances labor must be excused for arriving at the conclusion that the supporters of the Hobbs bill seek the very antilabor ends which these protections in the present law sought to prevent.

In connection with this bill, as with any other piece of proposed legislation, it is significant to consider the purposes of

the sponsors and the circumstances in which the proposal is made. Is the bill now being offered in the light of a sudden and special need exposing a defect in the laws now on the books? Is the bill brought before the House because of a sudden outbreak of robberies and extortion within the meaning of these terms under the antiracketeering law now in effect?

On the contrary, the Rules Committee sent this, along with another measure of similar objective, to the House openly and avowedly because of the occurrence of a number of strikes. There is no doubt that those American workers now on strike are exercising legal and constitutional rights rightfully theirs under our American form of government. In bringing this bill before the House at this time the sponsors of the measure are in effect making clear their hope and intention that if enacted the bill may be used as a means of repressing American workers and labor organizations in the exercise of their lawful rights.

Moreover, the record of the author of the bill is relevant and significant. He has a long and consistent background of opposition to every measure for the benefit of American working men and women and of support for every measure designated to weaken the position of American workers. He opposed the National Labor Relations Act in its original enactment, he has supported every proposed amendment since then to weaken the act; he opposed the Wage and Hour law in its original enactment and he has supported every amendment to that law since that time which would in any way weaken it. He opposed the Social Security Act in its original enactment.

The antilabor record of the bill's author is reflected equally in the persistence with which a bill of the present type has been introduced and reintroduced over the past years. There can be no pretense that it is offered as a new measure dictated by any special justification at the present time. On the contrary, before the war it was introduced in almost identical terms for a number of years. During the war it was recast in the appearance of a war measure—Seventy-eighth Congress, first session, H. R. 653, introduced January 6, 1943. Today, with hostilities at an end, it still bears in title II, section 201, a reference to the war in which the United States is now engaged. Today, the bill takes on new significance in the eyes of its sponsors because it comes at a time when the most powerfully entrenched monopoly portions of American industry are greedily seeking to prevent the maintenance of American consumers purchasing power and to expand to unheard of levels their already swollen profits. We know that the truthful presentation of the facts to the Nation as well as to the majority Members of Congress will do much toward stifling maneuvers so thoroughly opposed to the welfare of the American people. We urge that the Members of Congress make every effort to assure the kind of objective analysis and understanding of measures like the Hobbs bill, which must mean the quickest defeat of such measures.

## When Oil "Joined" the Navy

EXTENSION OF REMARKS
OF
**HON. GEORGE H. BENDER**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Orange Disc, volume 7, for September-October 1945, entitled "When Oil 'Joined' the Navy." The author is Dr. Paul H. Giddens, of Allegheny College, Meadville, Pa.:

MODERN SEA POWER WAS BORN WHEN OIL "JOINED" THE NAVY

(By Dr. Paul H. Giddens)

That the world's most powerful navy, the United States Fleet, uses oil for fuel is taken as a matter of course. It was not so long ago, however, that coal was the sole source of power for propelling our fighting ships and the transition from coal to oil was, as history is reckoned, a comparatively recent development. This is an account of the events and investigations that led to the decision to change to oil and create an oil-burning fleet. It was a momentous decision and, in view of the part our Navy was called upon to play in World War II, it was also a fortunate one.

In 1864, 5 years after Col. Edwin L. Drake drilled his famous oil well near Titusville in northwestern Pennsylvania, the United States Navy began an experiment with petroleum as a substitute for coal on naval steamers. This was the first in a long series of experiments which culminated in 1913 in the Navy's decision to burn oil exclusively in all fighting ships. While the results in 1864 were reported upon favorably, further development of petroleum as fuel was thwarted by the fact that when exposed to the air of a confined space at summer temperatures, petroleum gave off a gas which, when mixed with atmospheric air, became explosive and detonated with the force of gunpowder. Until a practical remedy for this could be found, naval engineers believed that it was useless to experiment upon the best form of apparatus for burning oil.

Three years later the Navy resumed its investigation. Numerous trials made on three experimental boilers at the Brooklyn Navy Yard demonstrated that the method invented by First Assistant Clark Fisher was a complete success. The engineering problem involved in burning oil appeared to be satisfactorily solved, but there were important disadvantages to the use of petroleum on a ship. B. F. Isherwood, Chief of the Bureau of Steam Engineering, solemnly concluded his report upon the experiment by writing that "it appears that the use of petroleum as a fuel for steamers is hopeless; convenience is against it, comfort is against it, health is against it, economy is against it, and safety is against it." Twenty years were to elapse before the Navy made any further experiments and reported its findings.

The appointment of George W. Melville, engineer in chief of the Navy, as Chief of the Bureau of Steam Engineering in 1887 was a turning point in the development of petroleum as a source of power for the Navy. In fact, it marked the beginning of an epoch-making period in the construction of a new United States Navy. For the next 16½ years Melville served as Chief of the Bureau and, often in opposition to conservative opinion, he was responsible for the introduction of the water-tube boiler, the triple screw system, vertical engines, the repair ship, and the "distilling ship." "The naval power," Melville long contended, "that can successfully install a liquid-fuel plant in a warship will possess a great military advantage." Although he retired in January 1903, some years before the introduction of oil as fuel for battleships, the constant experimentation carried on under his supervision laid the foundations for this revolutionary change.

Within a year after his appointment as chief of the Bureau, Melville appointed a Board of Navy Engineers to test the value of crude oil for fuel in a patented device of the Petroleum Fuel & Motor Co., of Washington, D. C. The apparatus, applied to a locomotive belonging to the company, was placed at the disposal of the Board. The trial lasted for 6 hours; several factors impressed the engineers: burning oil was smokeless and noiseless; the facility of manipulating the fire was "very decidedly in its favor"; a smaller force in the fire room was required than for coal; and the evaporative results were "the best on record." While the Board was not certain about the safety of storing and handling oil, it believed that this problem could be solved. If so, oil might be used advantageously on torpedo boats and coast-defense vessels.

The experimental use of oil as fuel for torpedo boats abroad, especially in Italy, had attracted considerable attention in the United States. Discussion in naval circles led the torpedo board in 1892 under the supervision of Commander George A. Converse to make inquiries regarding the use of petroleum as fuel for steam boilers. It found that oil was being successfully employed in a large number of manufacturing establishments. Consequently, the board expressed the belief that oil could be used in torpedo boats. In 1897 the Navy Department contracted for two new torpedo boats—exactly alike except that one was to be fitted for burning oil and the other for burning coal, so that a comparison of the two fuels might be made. The outbreak of the war with Spain, however, thwarted this project. During the winter the Chief of Ordnance lent the small torpedo boat *Stiletto* to the Bureau of Steam Engineering for several months. The fuel-oil apparatus of the Consolidated Gas Fuel Co. was installed, not to determine the economic value of oil as that had been pretty thoroughly investigated, but to give the system a thorough trial under conditions of regular daily service. All of the tests were satisfactory and the crew enthusiastic. Experimentation with different types of burners continued through 1899 and 1900 at the Navy Yard in New York and on the torpedo boat *Talbot*.

The number of experiments made during the 40 years prior to 1900 by various foreign navies, as well as our own, to utilize oil for naval purposes, shows how important military experts regarded the question. The United States Navy, however, had not introduced oil as a fuel for a number of influential reasons. Ignorance concerning the economic value of petroleum had not been eliminated. Some people were still afraid that the supply of oil might become exhausted. The cost, at 7 cents per gallon in 1897, was considered excessive. Oil could not be purchased away from our own coasts, and this was a distinct hindrance to naval operations. The oil from Pennsylvania and Ohio, the largest producing States in the eighties and nineties, did not seem particularly suitable for use as fuel. There had never been any thorough, systematic, and independent study of oil fuel by the Navy Department. Finally, in all of the experimentation of the past, too much effort had been made to burn oil in the same way as coal without success; oil had simply been thrown into a furnace by an injector, and no recognition had been given to the importance of atomizing oil.

In 1902 Melville reported: "The use of crude oil as a combustible for marine purposes has

probably increased to a greater extent during the past 2 years than during the previous century." A number of factors had contributed to this sensational development and change in the general picture. The production of huge quantities of crude oil in Texas and California had dispelled the idea that the oil supply would soon be exhausted. Moreover, the oil found in these States proved to be particularly suitable as oil fuel. The military value of petroleum had been greatly enhanced by the fact that the new fields were located near the water and the product could be delivered to naval vessels at comparatively slight cost. The increased use of oil in locomotives, power plants, and especially in ships plying from New York to San Francisco and San Francisco to Honolulu had served to heighten interest in oil. Finally, previous experimentation had now demonstrated that oil should be atomized before ignition and that the length of furnace, volume of combustion chamber, and the calorimetric area were all factors which must be considered in burning oil.

In view of these circumstances and the fact that a trifling amount of data was extant, Melville believed that the time had arrived for the Navy to commence an extended series of experiments to determine how petroleum could be adapted for naval uses, and he urgently requested an appropriation of $20,000 to conduct an investigation. The Navy had found it exceedingly difficult to secure reliable data about using oil as fuel; shipowners, manufacturers, and inventors were not inclined to tell of disappointments, reverses, or failures, those who were successful did not feel called upon to give the world information obtained at considerable cost and trouble. The results of the proposed Navy investigation, therefore, would be of value not only to the Navy but to all interested in liquid fuel. The Secretary of the Navy, John D. Long, supported Melville's recommendation, and the Fifty-seventh Congress authorized the appropriation on July 3, 1902.

For several months prior to the passage of this law, a naval board composed of Lt. Comdrs. John R. Edwards, Wythe M. Parks, and Frank H. Bailey, had been working under Melville's direction making a series of tests on coal. Through the generosity of the Oil City Boiler Works, which had been desirous of entering the field of marine boiler construction, a thoroughly equipped experimental plant with a Hohenstein water-tube marine boiler had been completed and placed at the disposal of the Navy without cost. In completeness and character the experimental plant had never been surpassed. With the passage of the law July 3, 1902, and the completion of the tests on coal, the boiler was carefully cleaned, put into condition, and the board prepared to test oil as fuel.

Many companies offered oil to the Navy free of charge at the wells, yet there was no certainty as to when the oil could be delivered. In order to run the tests the Navy needed a steady supply, so the oil was purchased from the Standard Oil Co., and most of it came from the Beaumont, Tex., field. Experts from the oil-fuel department of Standard were consulted from time to time and gave valuable advice.

The official tests began in August 1902 and ran through June 1903. At the outset the Board thought it desirable to make an endurance test of the plant and conducted a test of this nature for a concentrated period of 116 hours. After the completion of the endurance test the Board proceeded to test different types of burners. The Board then turned its attention to the study of the mechanics of combustion in using oil, mechanical burners, furnace construction, smoke nuisances, crude-oil prices, world production of crude oil, and a host of other pertinent subjects.

In October 1902 the Board made a preliminary report. It declared that the results already secured warranted without delay the installation of oil-burning equipment in at least one-third of the torpedo boats and destroyers. In regard to the larger vessels, especially battleships, the installation of oil-burning equipment presented serious difficulties; the safe and convenient storage of oil beneath the protective decks and the question of replenishing the supply in the case of vessels being sent without warning to unfrequented harbors were grave matters. The preliminary report of the Board served a useful purpose—it stimulated individuals to make special experiments and, in many cases, the general results were submitted to the Bureau of Steam Engineering for consideration .

In attempting to determine the value of liquid fuel for naval purposes, the Board drew heavily upon the experiences of the industrial and maritime world. It sent Lt. Com. Ward P. Winchell on a round-trip voyage from San Francisco to Tahiti on the steamship *Mariposa* to observe and report upon the burning of oil in that ship. Particular attention was given by the Board to the use of oil in the *Navadan* and the *Nebraskan* of the American-Hawaiian Steamship Co., and in the locomotives of the Santa Fe and the Boston and Maine Railroads. It made a special visit to the Hoosac Tunnel, where oil was used in four locomotives of the Boston and Maine to keep the tunnel free from smoke. The Board also made a critical inspection of the oil-fuel installation of the Standard Oil Co.'s whaleback steamer *City of Everett* on a trip down the Delaware River. Moreover, hundreds of letters were received from technical experts throughout the country who were directly or indirectly interested in oil as a combustible. As a result of these efforts, the Board could "unhesitatingly state that both upon the part of the engineering profession and of skilled labor there is a general desire to have oil supplant coal as fuel for practically every purpose. * * * The desire to use liquid fuel thus practically exists everywhere."

The Board submitted its voluminous report to Rear Admiral Melville, and it was approved by his successor, on August 1, 1903. One year later it was published under the title, "Report of the United States Naval 'Liquid Fuel' Board." No effort had been spared by the Board in its desire to test petroleum. The cost of the investigation, including the installation and operation of the experimental boiler plant and the direct and indirect expenditures by individuals and the Navy, totaled more than $200,000. The Board's work represented the largest outlay ever heretofore incurred by either private, corporate, or official interests in the thorough investigation of the important problem of determining the possible future field for the use of crude petroleum as a fuel.

Many significant conclusions were presented by the Board on the technical and military aspects of the subject. Special attention is called here to the following because they had a bearing upon the question of whether or not the United States Navy should abandon coal for oil fuel:

1. By reason of our acquisition of the Philippines and the Hawaiian Islands and our responsibility for defending the projected isthmian canal, the scene of our probable future naval operations would be more distant from the supply of coal than in past wars. "It may be in the Pacific rather than on the Atlantic," the report prophetically declared, "where our greatest naval battles of the future will be fought." The defense of these places, therefore, would be greatly dependent upon our ability to use California oil as fuel in our ships of war. In view of these considerations, the Board recommended that at least one vessel cruising on the Pacific coast should burn liquid fuel exclusively, and this vessel should be assigned to special experimental work for an extended period.

2. It was highly probable, unless greater importance was attached to the value of the factors of evaporative efficiency, boiler capacity, steaming radius, and character of supply, that the successful and exclusive use of oil on board an armored cruiser or battleship could not be brought about for some years.

3. The information and data warranted the immediate use of oil on several torpedo boats and torpedo-boat destroyers.

4. Naval demands of the future made it compulsory to begin immediately the training of engineering specialists on oil and oil appliances.

5. The engineering or mechanical feature of the liquid-fuel problem was considered as having been practically and satisfactorily solved. Hindrances to the use of crude petroleum as a standard fuel for the Navy were cost, expense of transportation, and the lack of a safe and satisfactory structural arrangement for carrying an adequate bunker supply.

In spite of Melville's efforts and the Board's report, 5 years elapsed before the Navy made any progress in converting its ships to burn oil. Once it started, however, the pace was relatively fast. During 1909 the installation for burning oil fuel instead of coal under the main boilers of the *Cheyenne* was completed. A year later the Secretary of the Navy made this important announcement: "All new destroyers and submarines are now designed to use oil exclusively for fuel, while battleships and other large vessels were being fitted to carry oil as an auxiliary fuel." In the same year the Navy placed oil installations in the battleships *Delaware* and *North Dakota;* in these ships, oil was used only in maintaining power on long pulls, or when the fire became dirty, or when the trimming of the coal in the fire-room bunkers became difficult. Owing to the increased use of the oil fuel by the Navy, it became necessary to build storage depots at Key West, Charleston, Norfolk, and Narragansett Bay. The Secretary of the Navy pointed out that it would be necessary to build additional depots at outlying strategic points. Plans were also being made at the Philadelphia Navy Yard to instruct firemen and water tenders in the methods of burning oil. "The lack of such a place of instruction," wrote the Chief of the Bureau of Steam Engineering, "had greatly hindered the development of the art of oil burning in the Navy." When the *Wyoming* and *Arkansas*, the fastest and largest battleships in the world, were completed in 1912, their boilers were fitted to burn both oil and coal. With only a portion of our fleet equipped to burn oil, the Navy was now using over 30,000,000 gallons a year.

Congress authorized in 1911 the construction of two dreadnaughts, the *Nevada* and the *Oklahoma*. The question now arose: Should these battleships burn oil exclusively? The Navy recognized the superiority of oil-burning battleships and desired to build them, but it was afraid of the failure of the supply of oil. In Congress and in naval circles the question was vigorously debated. Before making any decision, Secretary of the Navy Josephus Daniels sent a letter in 1913 to the Department of Interior asking for expert advice regarding the fuel-oil situation. Receiving assurances from Secretary Franklin K. Lane that the Navy might rely upon the reserves already existing for a supply of oil greater than the life of any battleship, the order was given to make the *Nevada* "the first oil burner in any Navy." "Henceforth," declared Secretary Daniels, "all fighting ships which are added to the fleet will use oil." Thus, after almost a half century of experimentation, the Navy had made a decision which was to revolutionize naval warfare—to build an oil-burning fleet and to depend solely upon petroleum for power. At last, Melville's hopes and ambitions had become a reality.

In commenting upon this momentous decision Secretary Daniels in his annual report for 1914 wrote that "the transition from coal to oil will mark an era in our naval develop-

ment almost comparable with the change from black power to smokeless powder for our guns. The ease with which oil can be handled, its superior steam-producing properties, the reduced number of men required for handling it, and the decreased exertion required from the firemen, to say nothing of the ease with which cleanliness of the ship can be maintained, all combine to make oil the ideal fuel for naval use."

## Control of Inflation

EXTENSION OF REMARKS

OF

### HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am asking to reprint herewith the speech made by Mr. Chester Bowles, head of the Office of Price Administration, before the National Association of Manufacturers in New York, December 6.

Mr. Bowles' speech follows:

I am very glad of an opportunity to appear before the annual meeting of the National Association of Manufacturers. I have always found here a friendly atmosphere and a willingness to discuss any public policy in a constructive atmosphere of give and take.

The whole country is deeply concerned in the program of inflation control, about which you have asked me to speak today. Businessmen are concerned. Farmers are concerned. The workers in our factories are concerned. And so are the great mass of our people which cannot readily be fitted into any group.

There are many audiences before which I appear where the support of our program is heartfelt and vigorous. Last night I spoke before several hundred businessmen at a dinner given by the business council. Next week I will appear at the annual dinner of the Ohio Grange, an organization representing thousands of farmers which has also pledged its all-out support to the OPA's price-control program.

Here in this meeting of the NAM I am face to face with a group whose leaders have gone on record during the last 18 months in vigorous opposition to what we have done and to what we are now doing.

Only the leaders of the National Retail Dry Goods Association and the leaders of the Association of Real Estate Boards have equalled the vigor with which the National Manufacturers Association heads are opposing the stabilization-control program through which inflation thus far has been kept in check.

I must point out that this opposition to effective price control is a departure from the original NAM stand when wartime price controls were first proposed.

In 1941 when price- and rent-control legislation was under discussion the stand of the NAM was clear-cut. Mr. Noel Sargent, who was then your secretary, testified before a congressional committee that firm controls on prices was an absolute essential to meet the inflationary circumstances created by war. In many respects his recommendations went beyond the actual program which your Government has put into effect.

I am told that Mr. Sargent's testimony was a major factor in securing the passage of the original Price Control Act.

But more recently your position has changed. To some degree in 1943, and increasingly in 1944 and 1945, you have swung into sharp opposition to effective price control.

Obviously, today we are in disagreement. Obviously, we cannot both be right. One of us must be wrong.

Let me emphasize my own feeling of deep humility with which I approach the problems which confront us. I have been wrong on occasion in the past and, like most human beings, I shall probably be wrong on occasion in the future. I do not want to appear dogmatic or, above all, I do not want to create the impression that I think I have all the answers.

In that spirit I should like to analyze the stand of your association on this question of price and rent control. At the cutset I believe it is a proper question to ask what would have happened if the Nation had followed the advice of the NAM leaders in 1944 and 1945.

Before Congress 18 months ago and again last spring NAM officials advocated amendments to the act which in my opinion would have made effective price control absolutely impossible.

But for the sake of clarifying the point, let's accept the view of those who claimed these changes would have increased prices only 10 percent each year. Even though we accept this viewpoint, the result would have been a $30,000,000,000 increase in the cost of fighting the war—a sum only two billion less than the cost of the entire World War I. At the same time Mr. and Mrs. Long-Suffering American Consumer would have found $36,000,000,000 added to their cost of living. In other words, even relying on the most optimistic estimates put forward by the proponents of the NAM-sponsored amendments, the Nation has already saved $66,000,000,000 by not taking your leaders' advice.

But those figures are, in my opinion, only a portion of what your official proposal would have actually cost our Nation.

Those of us who have been entrusted with the task of wartime price control have long recognized the fact that controlled inflation is an idle dream. One man's price may be the cost of a thousand other firms.

There is no organization big enough or smart enough or efficient enough to handle the vast deluge of price adjustments which would result from any such concept. There could be only one result and that is higher and still higher prices, each feeding on itself with the beginning of an inflationary spiral which would soon be out of control.

As I analyze the NAM's position on price control, it seems clear that the opposition of your leaders stems from a conviction that these controls tend to hold down production. Certainly there was no indication of this during the war years. This is perfectly clear from the record.

Both industrial and farm production during the years of effective price control have risen to record levels. They have gone far beyond even our most ardent hopes. American management and American labor in their all-out war effort have hurried the day of victory and have amazed our enemies as well as our allies.

Today it is generally recognized that inflationary pressures are at record levels. Liquid assets are at an all-time high. Savings have increased from prewar levels by $145,000,000,000. Currency in circulation is almost five times as great as before the war.

The stock market has been booming merrily upward. As in 1929 taxi drivers, barbers, and elevator boys are providing inside information on just what selections are apt to rise the fastest. The dope sheets coming from Wall Street anticipate higher and still higher prices. The real estate market is starting to skyrocket.

What, under such circumstances, would happen to prices if the Nation now accepted the advice which Mr. Robert R. Wason, chairman of the NAM reconversion council, and Mr. John Airey, chairman of the NAM War Controls Temination Committee, offered to Congress on November 7. This NAM recommendation called for the elimination of all price control by the 15th day of February. What, for instance, would happen to food prices?

Those of you who are in the candy business know that coconut, which OPA decontrolled some 30 days ago, has quadrupled in price. Many grades of furs, from which price controls were removed during the fall months, have more than doubled. Your wife will tell you that some grades of oranges, lemons, and grapefruit moved up 50 to 100 percent in the first few days following the action of OPA in removing the price restrictions.

If this occurred on food products which seemed to be in adequate supply, what would happen to meat, vegetables, milk, cereals, and all the other dozens of food products which are in more scarce supply?

If the Nation accepted the advice of your leaders to drop price control 60 days from now, what would happen to clothing prices? Right now the apparel situation is tighter than it has been since the beginning of the war.

Our veterans in search of their first outfit of "civvies" are forced to walk from store to store and even then often fail to secure the clothing to fit their needs. All authorities agree that this shortage is likely to continue for a great many months to come.

If we accepted your official recommendation of the early removal of all price control, what would the public be asked to pay for automobiles, refrigerators, washing machines and vacuum cleaners? Some say that competition would take care of all that. I can only say that this expectance is not in line with the facts.

The original requests of OPA by reconverting manufacturers were for price increases ranging from 25 percent to 55 percent. On October 26 and 27 orders were taken for 300,000 Ford cars, one-third of the entire 1941 production, with no questions asked on prices or trade-ins.

If the Nation accepted the official NAM recommendation, what would happen to the price of building materials? During the period of the First World War the cost of lumber, soil pipe, brick, and other essential building materials tripled. Today the housing shortage is infinitely greater. Under the best of circumstances I am told that only 500,000 homes can be built in 1946.

This will be meager relief to the 3,401,000 families, a major portion of them young married veterans, who will be forced to live with relatives, or otherwise double up during the coming year. If we removed price controls, is there any limit to the heights to which building materials would move in 1946? Certainly not, judging from what occurred 25 years ago.

If we accepted the official advice of the NAM what would happen to rents? We could not remove price controls without removing rent controls. We know that in the period of the last war 90 percent of the entire increase in rents occurred not during the war itself but after the armistice. In view of the critical housing shortage, could we expect any greater restraint on the part of our landlords today?

Finally, if we accepted the advice of your leaders, what would happen to wages? Today most of you gentlemen feel that the demands of the labor groups are excessive. If controls were ripped off as you propose, if rents were allowed to shoot upward, if food and apparel prices were allowed to boom, labor would very properly intensify its demands for higher and still higher pay checks.

History has proven that in a race between prices and wages, prices invariably go up faster. Under such circumstances, however, our workers would have but one defense and that would be to get what they could as fast as they could get it in the hope of keeping their incomes within speaking distance of the rising cost of living.

Organized labor could at least make an effort to keep its earnings in line with increasing living costs. But how about the

millions of workers, farmers, and people living on fixed incomes who have no strong unions to protect them? What would happen to them as prices and rents shot upward?

Finally, how about the businessmen if the Nation accepted the official advice of the NAM? Prices that skyrocket invariably collapse. How would our businessmen, particularly our small businessmen, fare as inventories were thrown on the market for any price they would buy and as the inevitable drop in purchasing power dried up their sales?

We had 106,000 bankruptcies following the collapse after the inflationary rise in 1919 and 1920. If we ripped off our inflation controls today, could we expect anything less in 1947?

Your leaders say they fear inflation as much as I do. They agree with me that production, production, and still more production is the only final cure for the inflationary danger.

But it is their claim that price control interferes with production, and that if price controls were removed the whole situation would take care of itself. The record has proven them emphatically wrong in the past. The record indicates that their claim is equally wrong today.

Last week the President's report stated reconversion has been achieved at record speed. Manufacturers of automobiles, washing machines, electric refrigerators, and other reconversion products, reporting to the Civilian Production Administration estimated their volume of sales by June 1946 at from 75 percent to 300 percent above 1939 levels—all under OPA price controls.

Retail sales today, again under the very price controls which your leaders claim make all-out production impossible, are breaking every record.

Admittedly, price control has never been painless. Admittedly, it can never be painless. Obvicusly, there have been some delays, some fumbling, some outright mistakes. Everyday we are moving to correct these mistakes and to eliminate hardship to the fullest extent of our ability.

Business is restless. Business has had its fill of wartime regimentation and red tape. Very properly, business is anxious to get back to a free economy with Government interference reduced to a minimum.

Believe me, there is no one in America as anxious to get rid of price controls as I. I cordially dislike the job I have. I would like nothing better than to drop it tomorrow.

Price control should and must be removed as rapidly as supply conditions permit. Barring continued labor-management difficulties, the production estimates for 1946 indicate that in industry after industry during the next 12 months, we will find supply and demand coming into balance. As that occurs, I assure you that your Government will move promptly to eliminate the last vestige of price restrictions in those industries. But to remove them before competitive conditions are again established is to invite inflationary chaos.

Gentlemen, the recommendation of your leaders for the removal of price control in 60 days is reckless in the extreme. Just how high prices would go I do not know. But at the best, it is a risky, reckless, gambling policy which in all likelihood would produce a national disaster.

The everyday people of America are looking forward eagerly to good jobs, steady jobs at higher wages—to a high sustained level of farm income—to good profits for our businessmen—to the development of a land of peace and abundance where every man may raise his family in an atmosphere of economic security and with steadily increasing standard of living.

Today the entire country, with very few exceptions, believes that our capitalistic free enterprise system continues to be our best hope of achieving this future. But we must face the fact that this deep-seated confidence and belief in our free enterprise system is largely confined to America. In practically every European country, capitalism has ceased to be even a source of controversy. In country after country we find the left wingers advocating communism while the right wingers advocate various forms of a socialistic state.

I have great faith in our ability to make our free enterprise system work here in America. But would this system, in spite of its great achievements, and its deep-seated roots in the traditions and thinking of our country, survive the bitter disillusionment which would surely develop if the inflationary forces are allowed to take hold? Frankly, gentlemen, I am very skeptical.

Let us make no mistake about it. The everyday people in this country are wholeheartedly behind this program of inflation control. Our farmers are behind it. Our workers are behind it. The consuming public is behind it. And tens of thousands of businessmen, large and small, many of them members of the NAM, are also behind it.

The urge to strip off price controls now (or, let us say on February 15), and to let the devil take the hindmost, comes with relatively few exceptions from business and business association leaders. As I have pointed out the leaders of the NAM have been among the most outspoken.

The dizzy inflation which could so readily develop in the absence of OPA controls on prices and rents would, I repeat, not be accepted lying down by the great masses of our people. It is for this reason that I firmly believe that the stand which your leaders have taken represents a most dangerous threat to the future health and success of our entire free-enterprise system.

Gentlemen, I might have come to you today and made a pleasant and easy speech about the inflationary dangers and our efforts to combat them. But such a speech would have failed dismally to meet the basic issue.

These are critical times and I believe we are all entitled to frank statements and blunt opinions. Your leaders are on record in favor of a course of action which I believe to be utterly foolhardy and dangerous. I would have failed to meet my public responsibilities if I did not state to you my own sharp disagreement with them.

Let me emphasize that I accept the great sincerity and patriotism with which Mr. Mosher, and other leaders of your organization, have stated their views. I hope you will accept with equal readiness the sincerity with which I have tried to state the facts as I see them.

Let me take this occasion to ask your organization to reexamine its position. You supported price control in 1941. If you will but look at the facts of the present inflationary situation, it seems to me you must support price control now.

In spite of whatever disagreement there may be between some of us, let us never forget that we are all working wholeheartedly and humbly for the same goal—a country of peace, abundance, and prosperity—for all of our people of all races, of all groups—whoever they may be, wherever they may live.

## Some Problems Before Congress

EXTENSION OF REMARKS

OF

## HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 11, 1945*

Mr. SHORT. Mr. Speaker, under leave heretofore granted me to extend my remarks, I include an address, Some Problems Now Before Congress, which was delivered by me on Friday, October 12, 1945, before the Executives' Club of Chicago, an organization of approximately 1,200 of the most prominent businessmen in our second largest American city:

[From the Executives' Club News]

SOME PROBLEMS NOW BEFORE CONGRESS

(By Hon. DEWEY SHORT, Republican Member of Congress from Missouri, Friday, October 12, 1945)

Mr. President, members of the Executives' Club of Chicago, since last I addressed you gentlemen much water has gone under the bridge and over the dam. At that time we were deeply involved and busily engaged in fighting the most terrible and devastating war in all history. While there was no doubt in any of our minds as to the ultimate outcome and of eventual victory, we knew that we were engaged in a gigantic task that called for the supreme combined efforts of all Americans, regardless of race, color, or creed. Fortunately in every time of great crisis the American people, regardless of minor political or religious differences, have been big enough and patriotic enough to lay aside these minor differences and to join heads and hearts and hands in fighting to preserve the liberties bequeathed to them as free men.

It was a long, hard, and devastating war, and no one here today or anywhere else in the world can, at this moment, accurately estimate the total cost in blood and treasure, the millions upon millions of the flower of young manhood in all the belligerent countries involved in that savage struggle, or the billions upon billions of dollars in national wealth of each participating power that was spent in that global conflict.

It doesn't require a very intelligent person or very much knowledge of the world's history to know that following in the wake of every war, and particularly in one such as the one that just ended that engulfed the whole world, you naturally and inescapably must face political upheaval, social chaos, and serious economic dislocation.

DEMOBILIZATION

War pulls nations and peoples up by the roots and disorganizes all of our lives. We find ourselves in a much more serious predicament at this tragic hour than we found ourselves following the First World War and in the wake of a decade of depression. The backwash of war presents as many and as baffling complex problems as war itself. I do not exaggerate, gentlemen, when I give it to you as my honest and humble opinion that the next few months are going to be most critical period in the history of this beloved Republic, more critical than at the darkest hour at any moment of the whole war—or, I should say, wars—which has just ended. We fought two, one in Europe and one in Asia; one in the Atlantic, and one in the Pacific.

It took us 5 long years to build up the mightiest war machine that the world has ever known, 12,000,000 men and women from every nook and corner of this great Nation, fighting on every continent and on every sea, in every field of battle, and in the skies all over this universe.

I told Ward Castle when he cordially invited me to come back here to inflict myself for the fourth time upon you—which proves that you are very patient people and capable of enormous endurance—that I would discuss just some of the problems now confronting the Congress of the United States and naturally confronting you people.

The first thing after victory, of course, is the uppermost and foremost problem confronting us all, in which an overwhelming majority of the people are tremendously interested, the problem of demobilizaton. I get telephone calls and telegrams and bushels of letters every day from dear friends of ours,

intelligent people, good patriotic Americans, saying "Now my boy is no better than John Brown's. I don't want any special consideration, but I need him so badly."

Sometimes it is on the farm; sometimes it is in some branch of industry. Maybe he is a professionally or technically trained man. Perhaps he is married and has some kids at home and can claim some dependency. All these special classes can find some good reason why their loved ones should be immediately discharged and come home. We have witnessed since VE- and particularly since VJ-day an emotional upheaval in this country that has knocked the people off their trollies, a hysterical haste to discharge everybody from all branches of the service. If we did that, where in the name of God would we be?

This problem of demobilization that I am discussing very briefly and altogether too inadequately in the limited time I have at my disposal is not as simple, gentlemen, as it might first appear to be. I repeat, it took us 5 years to build up this machine and to get ten or twelve million men and women scattered all over the world, and you cannot get them home overnight, and it wouldn't be desirable if it were possible in the state of thoughts and confusion and uncertainty that you find throughout the world today. The problem is a very difficult and complex one. No Army or Navy, not even Congress or any other governmental agency, could possibly lay down a hard and fast rule, an inflexible formula, without doing somebody an injustice because of the very complex, difficult nature of the problem. It is inescapable that we will have cases of individual injustices. I regret there are so many. We should do everything in our power to correct as many as possible. I can understand how anxious fathers and mothers and wives and sweethearts are to get their loved ones back.

I have a brother who has been in the Air Corps over 3 years, and 18 months of the time in England. He is down in Dallas now. I have a nephew 36 years old with two little girls, 10 and 12, in Tokyo, who has gone through the stinking, steaming jungles of the Southwest Pacific. I would like to see him come home to his wife and two little girls. I have another nephew down in that equatorial region of South America which is about the jumping-off place comparable to New Guinea. He would like to come home. I have another one in Germany, barely 19. His mother would like to see him.

There is not a family that hasn't been affected, and let me say this: I don't like to see any soldier cutting grass with bayonets or wasting his time picking up cigarette butts. I am just as anxious, I think, as any American to see that they are brought home as quickly as possible. I even built a fire under some of the generals, and told them that we were going to put a burr under their tail, and if they didn't get these boys home quickly and speed up this demobilization, Congress would take it over themselves, and we have speeded up that program.

We discharged 600,000 men last month from the Army alone. We will discharge 800,000 during the month of October. [Applause.] Yesterday our committee had lunch with General Arnold, General Spaatz, General Eaker, General Doolittle, and the high-ranking officers of the Air Corps who are having to try to plan their program upon certain suppositions. I am not free to tell you what was told us, but you will read about it Monday when it is released.

They are going to furnish us with a copy of it tomorrow. I hope they don't dare go below the estimate that is in their minds at this moment—not for awhile. We should move cautiously and carefully, exercise the greatest discretion during this troublesome period of postwar reconversion, especially during the time we are trying to write a peace which we hope will have some justice in it and that will last a little longer than the last one, to prevent a recurrence of a world tragedy a quarter of a century hence. We are discharging 10,000 men a day from our Air Corps, 300,000 men will be let out next month, and I imagine, if exigencies demanded it, and we were called upon to call our air force today into operation, that our commanders would find themselves very much embarrassed, and we might find ourselves in danger.

LET'S BE A LITTLE PATIENT

We want to be just a little tolerant and a little patient. Everybody today seems to want to let George take care of the country. "As a dog returneth to his vomit, so the fool returneth to his folly." Is it possible—after spending the huge sums of money that we have, and after suffering over 1,000,000 casualties, a quarter of a million men killed, and others maimed and wounded for life—that we are now going to let the sands of victory run through our fingers because we are so darned impatient to get everybody out of the service?

George Washington said, you know, "If you want to avoid an insult, you had better be prepared to repel it." I still believe in God, but I think we should keep our powder dry. Speak softly, but we had better carry a big stick because there are some brigands still on the loose throughout the world who understand only one language, and that is force.

America is the apple of their eye, and with modern weapons and particularly with the atomic bomb, they are not going to sail around the world; that is too great a distance. They won't follow the line of the Equator. They will fly over the top of the Hump. Did you ever imagine what it would be like to get a few rocket bombs with a little atomic energy in them? If you drew a line around the world at the Equator, you would find that there is no one south of the Equator who is a potential enemy of this country, except the country of Brazil, with which we are on good terms, but north of the Equator reside all of our potential enemies.

The next war will be fought with rockets and with atomic bombs, which spell the end of civilization itself, and the thing that we have to keep in mind is that this demobilization should be carried on in a gradual, orderly manner, and I am happy to say that thousands of our troops are being landed every day in every port in this country that is available; in Boston, in New York, at Newport News, at Norfolk, down at New Orleans and Seattle, and San Francisco. They are returning by the thousands, and we are bringing them home just as quickly as shipping facilities and these service separation centers permit, so I hope that the Members of Congress, who have been deluged and covered up with an avalanche of mail, everybody wanting "out" of the service—not tomorrow, but today—will be just a little patient, a little tolerant, and try to understand the enormous difficulty and complexity of the task.

If we ever needed the advice of Shakespeare, we need now the admonition that Hamlet's mother gave her son when she said, "Oh, gentle son, upon the heat and flame of thy distemper sprinkle cool patience." Let's be a little patient.

I am not wanting to see these ex-servicemen, or men now in the service becoming ex-servicemen too rapidly. Many of my buddies in the last war were so anxious to get home that they didn't take time to get physical examinations or have disabilities written on their discharge, and for a quarter of a century they have been trying to establish service connection and cannot do it. They are suffering hardships today.

I am glad to see we are doing a much better job in this war by seeing to it that when a soldier or a sailor goes to a separation center, he talks to the finance officer and gets all of his papers in order. He gets a thorough physical examination. All notations are written on his discharge. He is consulted about reemployment. We are doing an infinitely better job in this war than we did in the last one. I wish every single one of you gentlemen here would take time to buy, beg, borrow, or even steal, if necessary, the report of Gen. George C. Marshall, the biannual report that he released the other day. I want you to read it and study it because I know you are great Americans out here, and it is too bad Members of Congress can't come out and speak to this club, which is an inexhaustible fountain of inspiration and patriotism, to get away from mad Washington. But so much for demobilization.

URGES BOMB SECRET BE KEPT

I can report to you gentlemen that for this week we have been holding hearings on the atomic bomb. On Monday morning Secretary Patterson and General Groves testified. Tuesday we had Dr. Vannevar Bush, head of scientific development and research and also Dr. Conant, of Harvard. We have listened to the chemists and the physicists. I know so little about atomic energy, I feel more ignorant now than I did when they began their testimony because they spoke a language that I could not comprehend. I confess that I possess abysmal ignorance, but when a man realizes he is ignorant, he is pretty smart. It keeps him from becoming indispensable. [Laughter.] And there are no indispensable men in this world. There never have been—not now, and I hope and pray there never will be.

Of course we have had men who thought they were, but then they pass on and the world goes on.

This atomic bomb is the most terrifying, devastating force that has ever been let loose. I don't know how secret it is. I asked that question; I thought it was pertinent. I have always thought that science was international and universal; that no country and no people have a monopoly upon the discovery of truth. We all know that certain experimentations have been carried on for the past half century in atomistics. It was only because of the high pressure of a savage war, of course, that it was quickly developed.

I am convinced in my own mind that there are no secrets so far as the ingredients or materials or component parts of the atom bomb are concerned, because it is the product of too many minds from too many countries. However, I do think the method of its manufacture, the managerial genius, the American "know how," the skill and industry of our own workers—I mean the mechanics of the production of this deadly thing that threatens, not only national suicide for nations, but the destruction of civilization everywhere—I know that that is more or less an American secret.

We are 14 jumps ahead of the rest of the world, and let's hope and pray to God that we stay ahead and keep the secrets of its manufacture. [Applause.]

We know what it is and what it will do, but it took many people in many places to assemble all of the data and all of the knowledge and all of the mechanics in order to produce it. That is America's secret, and if America has a thimbleful of brains, she will hold onto it. [Applause.]

UNITED STATES FEEDS COW—EUROPE MILKS IT

We are going to share all good things with other people. We have shared so much we don't have much left. [Laughter.] The British and the Russians are our allies and are still our allies, and we love them, but this lend-lease is supposed to be a two-way road. Pipe lines should come back as well as go over, but the old cow has had her head here in America. We have been feeding her and taking care of her. Her other end has been in Europe, and she has been milked dry. [Laughter and applause.]

They have all but carried the dome of the Capitol away. And let me say this, gentlemen, I think we have arrived by this time to when we should talk plainly. We won't

lose anything by that, not after the London Conference, the great fiasco that ended not only in a stalemate—a deadlock, but where we have been inclined to give and give, and thank God Jimmy Byrnes has finally spoken out and said, "We are not going to compromise or surrender any more principles." I hope he sticks to it. [Applause.]

UNCLE SAM AGAIN IN ROLE OF "UNCLE SAP"

I remember back in the World War you boys went to Chateau Thierry and Belleau Woods and the Meuse-Argonne. The French were so discouraged they were throwing their rifles away and going back home. We came in at the eleventh hour, and we saved the day. I remember how we were branded "Shylock" afterward. I know the billions of dollars that we loaned which we have never collected. History has a queer and naughty way of repeating itself. We painfully are going through now what we went through in the last one. Uncle Sam becomes a bigger Uncle Sap as the years go on.

PEARL HARBOR CARDS STACKED

We came into this global conflict at a very dark hour. We are going to try to find out just how we got in it, and I did introduce the four resolutions to continue investigations of Pearl Harbor. The committee has been set up. I hope we can get to the bottom of it, though I am afraid the cards are a little stacked in advance. It is hard to go up against a marked deck or loaded dice, and you don't want to fix the jury before you go to trial. That is a method that has been employed in this country in the past twelve years in every branch of government, until at this hour America has reached a new low moral tone. The Presidency has been prostituted and commercialized and exploited until the stench in Washington will remain in the nostrils of decent patriotic citizens for decades to come. [Applause.] I am not angry today, but I am filled with righteous indignation and holy wrath. [Applause.]

WHO WON THE WAR

Now how in the world was Germany licked and crushed? Everybody here knows that three-fourths of the troops we had in the Mediterranean and the western front were American troops. Where in the name of God would we have been without Eisenhower and Bradley and Devers, Simpson and Hodges, Patton and Patch, and the three and a half-million men that we got to Europe in this war. We got only two millions in the last one. All the time that Patton was racing through France, and when he broke through Germany and down into Czechoslovakia, every newspaper I could get hold of in London would tell how Monte had begun a new offensive.

Do you think there would have been no capitulation at Stalingrad? Do you think the Red Army could ever have gotten to Berlin without the enormous assistance we gave them in lend-lease—planes and tanks and ammunition and food? America's industrial capacity, American workers in our factories and on our farms and in our mines, America's managerial genius, as well as the men who fought in the air and on the sea and on the land, won this war.

I have no quarrel with any form of government that exists abroad. If the Russians want communism, God! let them have it. I should, by all rules of the game, be a Communist myself because I have nothing, and I want to share it with everybody. [Laughter and applause.]

My mother's people all came from England, and I spent a happy year at Oxford, and you are going to hear a representative of the British Government next week, and you should all be here and listen very attentively to hear him tell about the great victory of the labor party over there. If England wants state socialism, she is welcome to it, but we don't want in the United States either Russian communism or English state socialism. [Applause.]

If their form of government is so superior, so superb, so far better than capitalism, why is it that during the war and now after the war the Russians and the Britishers come with hat in hand to Washington, one asking for six billion, and the other hoping that they will get that much, or even more, if we are gullible enough to give it to them? They are not satisfied with lend-lease during the war, though it was specifically written into the act of Congress that it was a war measure and was to be continued only so long as we were actually in war and that it would automatically end when the war ended, but now the Russians and the British tell us that lend-lease must go on. They have to have hundreds of millions of dollars more voted to them now. Not by my vote.

There are a lot of crown jewels that I have seen over there that would bring a pretty neat sum, even here on the market in Chicago. I know that they could get enough for the crown jewels, either the Czar's or the King's, to run a country for a little while, and so help me God, I am not going to take butter and bacon, corn pone and sowbelly out of the mouths of my constituents down in the Ozarks in Missouri as long as they wear emeralds and ermine in Moscow and London. [Applause.]

NEED OF PROTECTION

Perhaps some think I am a nationalist and isolationist. I am not. I am more broad-minded than they are. I have been farther back under the barn hunting for eggs than a lot of those Britishers and Russians have ever been away from home. I have been over to see them many times. Most of them have never been out of their own bailiwick.

Why of course the war has left us supreme. We have to assume and shoulder our responsibilities and meet this great opportunity, but we don't have to be maudlin. We don't have to be mollycoddles. We don't have to be weaklings to prove our friendship for the world. Sometimes the only way you can make some folks like you is to talk very straight to them or let them feel the impact of your power. Then you get along much better with your neighbor. That is the reason I don't want to get demobilized too fast too much. If they took the fire department and the police force out of Chicago, half the people in this city wouldn't be here a month from now because the hoodlums would take it over tomorrow—and if it were New York, they would take it over this afternoon! [Laughter.] If it were in Kansas City, they would take it over now! [Laughter.]

You have to have protection. It is going to cost you money, an army and a navy and an air force, but we had better have a superior air force and the largest and best navy; not necessarily a large standing army, but a highly trained, well equipped, well-disciplined army capable of expanding itself so that we can back up the moral law and our ethical ideals with physical force if necessary, because that is the only language that some people can understand. I am sorry to say that, but it is just true. I wish it were otherwise, but it ain't. [Laughter.]

I don't know whether Britain and Russia want lend-lease, whether they want a loan. If they do, it is over a long period of time at a very small or no rate of interest. By the time it would come due, everyone would have forgotten about it because Americans have short memories. Our consciences soon grow callous. We are not going to quarrel with them about the form of government they have. We want to give them to understand that we have a government of our own—what a marvelous government it is. We intend to keep it.

Four hundred and fifty-three years ago Columbus—and this is Columbus Day—discovered a new world and in that brief time, because there was planted on this continent, in this new world, Christian religion and eventually a representative form of constitutional government, and because we established an economic system of individual initiative and private enterprise where man could stand on his own feet and walk the earth his own king—though we are not as large as other countries, either in area or in population—we have grown to be the greatest Nation on the face of God's earth. We don't want to change it. [Applause.]

UNITED STATES SYSTEM PERILED WITHIN

We don't want to change it, but it is being undermined, attacked, and assaulted. There are things going on right now in this country I don't like it. I believe in the right of labor to organize. I believe in the right of collective bargaining. I believe every laborer is worthy of his hire. I hold no brief for the sins of industry in the past, but the pendulum has swung altogether to the other extreme until now a few, just a little handful, a coterie of high-powered labor racketeers, many of them from the Old World who lived in poverty and who are living better now than they could ever have lived had they stayed where they were born, are over here shaking down Americans to pay exorbitant fees and stir up trouble, having jurisdictional fights. A few hundred men going out of a plant here will throw several thousand innocent men out of employment other places. Congress has to do something about it. [Applause.] The President of the United States has to do something about it. [Applause.] If we don't, when another million or two of these soldiers get back home they will do something about it. [Applause.]

We will discharge more than 6,000,000 men from our Army alone by the 1st of next July. That is just about as fast as you can bring them back home by plane and by ship and through our ports and separation centers, gentlemen. In the meantime, we have to keep a cool head, calm nerves, warm feet, resolute will, and an inflexible determination to see that this Nation is not wrecked from within. Years ago Edwin Markham wrote:

"I fear the vermin that shall undermine Senate and school and citadel and shrine.

"I fear the worm of fraud, the fatted worm of ease and all the crawling progency of these.

"I fear the vermin that shall honeycomb the walls and towers of state in unsuspecting hours."

I am not fearing this country being invaded or attacked from the outside by any country on earth for a little while. If we have sense enough to keep ourselves strong, we never will be, but I do fear the vermin, the rats who are boring from within, who are undermining the Senate and school and citadel and shrine. I fear men with alien ideas and foreign philosophies contrary to the spirit and genius of the founders of this republic who would undermine and destroy the very foundations upon which this great Government rests. I am not easily scared, either.

I have seen too darned much of it. We have had too many coming into Washington on special trains from the east side and from the back alleys. They don't look any too good to me. They don't talk my language, and God knows, I don't like their smell. [Laughter and applause.]

FIRST TAX CUT SINCE 1933

Well, we granted you a little relief yesterday. Ten voted against the tax bill. It will give you a cut of from 10 to 40 percent, and I am sure that your able Senator BROOKS here will go forward in the Senate, maybe making it a little more. The significance of that bill is that it is the first time since the advent of the New Deal—I think someone called it steal—I don't know—New Deal or steal—it is the first time since 1933 that you have gotten any reduction at all, so it is significant in that it shows we have about faced, and we are now headed in the right direction. [Applause.]

Even with the reduction that we have incorporated in the pending bill we are going

to worm and corkscrew $25,000,000,000 out of the taxpayers of this country next year, and that isn't peanuts to an Ozark hillbilly. [Laughter.]

Our annual budget before the war was seven billion a year, but we are going to collect more than three times that in order to carry on this top-heavy, bungling, cumbersome, and costly bureaucracy. Let's hope and pray we won't have to carry it on too long, that there can be some more reductions, but I don't think there is much possibility of it until we have a little housecleaning in Washington. [Applause.]

We are going to have to get a good stiff new broom, maybe a pitchfork and a scoop shovel—[Laughter]—on election day to elect men to the United States Senate and the United States House of Representatives who still believe in the Constitution and who will vote to uphold it and who have a little respect for the high office of the Presidency and who still think a little of God, home, and mother. That is all.

BUILDING TWO WORLDS

There are so many other issues I would like to discuss, but there is not time. We have been building two worlds here in America for the past 453 years, and particularly since the Pilgrims landed on the Plymouth Rock, and the Cavaliers down at Jamestown. We have been building two worlds during your generation and mine. One of them is a material world with its physical comforts. It is a world of skyscrapers and transcontinental railways and airplanes and radios and frigidaires. It is a world of physics and of chemistry and of mathematics. It is a world of engineering. It is a marvelous world that has given the people of this great Nation, 139,000,000 of us now, more of the good things of life, so far as physical comforts are concerned, than any country has ever known. It has been built up, yes, under this constitutional form of government, under this free economic system. Call it capitalist or whatever you will. It has been built up here in a land where men have known God and where we trust many of us will return to the faith of our fathers. It is a wonderful world. We have built it at a terrific rate of speed; the world of atomic energy, the world of electricity, the world of steam. It is a marvelous world of accomplishment.

There is another world we are building in America. It is the world, not of suspicion and distrust and of hate, but of faith and hope and love and of human brotherhood. It is the world of tolerance and forbearance. It is the world of patriotism. It is a world where men and women love this country and who are just as willing as their forefathers to go out today, as the boys did yesterday, to give the last full measure of devotion to protect and preserve it. It is a world of moral law, a world of ethical ideals and of religious principles, and, unless we build this spiritual world with the same rapidity and substantiality with which we have built a material world, then in spite of huge armies and large navies and superior air forces, in spite of all our accomplishments of years gone by, we will crash and go to pieces on the rocks of a sordid and a crass materialism.

It has been good to again see you. [Applause.]

## British Loan Proposal Is Unbusinesslike

EXTENSION OF REMARKS
OF
### HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. STEFAN. Mr. Speaker, under leave granted me, I include in my remarks an editorial published in the Houston Chronicle on December 7, 1945:

United States negotiators have proposed that we make a loan to the United Kingdom of $3,750,000,000, to be repaid in 50 annual installments from 5 to 55 years, largely at the convenience of the British. No interest is to be charged on the loan for 5 years, and thereafter the rate will be 2 percent per annum. Allowing 5 years interest free, the average interest rate on the loan will be 1.62 percent, assuming that the interest will be paid continuously after 5 years. There is, however, a provision in the loan agreement that no interest will be charged in any year where the United Kingdom has an unfavorable international exchange position. If this should happen every year, we would get no interest whatsoever. If it happened in one-half of the years our average interest rate would amount to less than 1 percent.

During the past few years the United States Treasury has been borrowing money from its citizens at an average interest rate of 1.92 percent, so that on the interest alone, assuming that we make the loan and that the British pay it, and pay the interest in full, we will have a very substantial loss in the difference between the interest we collect from the British and the interest we pay our own citizens for the borrowed money.

In addition to the loan of $3,750,000,000, the terms and conditions of which bear little if any relationship to business principles, our negotiators have agreed to accept Britain's notes for $650,000,000 in full settlement of our unpaid $25,000,000,000 lend-lease account and all our investments, materials and surpluses in England. Obviously, this is tantamount to a gift.

In consideration of our making this very large loan at a great sacrifice to our own taxpayers, the British agree that—manana—within 1 year after the loan has been ratified by our Congress and approved by the British Parliament they will eliminate the dollar pool which they now control, thereby enabling countries of the British Empire to use their current dollar receipts without restriction. In other words, if Australia or India, or some other member of the Empire should sell us something and get dollars for it, such country could then use the dollars any way it wished. With the dollar pool in effect such countries can only use those dollars at the pleasure of Britain. They must give Britain the dollars and accept sterling.

There is nothing in the agreement to indicate that the United States will receive anything in the nature of foreign bases, raw materials, communications, or other concessions.

In connection with the loan agreement Secretary of State Byrnes has issued a beautifully written white paper containing many laudable and desirable aspirations with respect to world trade. While recognition of this white paper is made by the British, they are not signatories to it. They agree to undertake to help us work out world-wide multilateral agreements governing such things as tariffs, cartels, quotas, and production, to be administrated by an international trade organization. But these are only promises to try to help work out agreements with the other 48 countries of the United Nations. Bluntly stated, the British will only cooperate in working out world trade agreements if we lend them $3,750,000,000 and settle our lend-lease account, and give them title to our hundreds of millions of investments and materials in Britain on a 55-year note. If it costs this much to get the cooperation of Britain in world trade, what will it cost to get the cooperation of the other 48 countries of the United Nations?

If we must continue to help the British temporarily, let's do it by selling them our agricultural prdoucts—cotton, grain, meat, tobacco, etc.—on easy credit until the world gets more settled, and we can see our own way a little better, and let's see what we are to get in return. Fifty-five years is much too long.

## Resolution on Housing

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following resolution which was adopted on December 5 by the national executive council of the Textile Workers Union of America—CIO—at its quarterly meeting held in Boston, Mass.

The Textile Workers Union of America represents some 400,000 workers engaged in the several branches of the textile industry and has substantial membership in virtually all of the textile-producing States in the Union and especially in the New England region.

Resolution on housing

Whereas this country faces a Nation-wide housing crisis of record-breaking proportions; and

Whereas the shortage of all types of housing falls with the greatest severity at this moment on the returning war veterans and low-income workers; and

Whereas failure of Congress and the Federal Government to control real estate sales has brought about widespread speculation and flagrant profiteering which has caused a marked inflationary movement of menacing proportions; and

Whereas quite apart from the cruel and needless human suffering and unfair exploitation which the housing crisis causes, the shortage of housing accommodations is delaying full reconversion of many industries which are unable to get into full production due to the impossibility of recruiting sufficient labor; and

Whereas this housing shortage applies with real severity in several textile communities; and

Whereas drastic rent increase have been imposed on textile workers in several places which have not up until now been included in OPA rent control areas: Therefore be it

*Resolved*, That the President send a message to Congress and resolutely press for its adoption, urging a comprehensive legislative program calculated to meet both a long and short range need of the situation; that this program include the following steps:

1. That the President by Executive order at once place all building materials under control so that the use and allocation of essential materials may be devoted and concentrated on house building rather than on industrial construction wherever human needs so require;

2. That the President by Executive order make available wherever needed and justified, all surplus military or naval establishments for conversion as temporary shelter for returning veterans or other citizens in critical need of emergency accommodations;

3. That legislation along the lines of the Patman bill now before the Congress be enacted into law at once which would give the President power to regulate sale prices of all real estate until the housing shortage shall have been mitigated;

4. That the scope of the Patman bill be enlarged to give the President power to take needed steps to increase the supply of building materials either by raising wages or prices or by other means;

5. That the administration give the most vigorous support to the Wagner-Ellender-Taft omnibus housing bill, hearings on which have now commenced in the United States Senate;

6. That this executive council calls upon the membership of the Textile Workers Union of America, CIO, to do all in their power to develop mass support and pressure for the speedy enactment of the Patman and Wagner-Ellender-Taft housing bills.

## Why Export American Jobs and Pauperize American Labor by Importing Competitive Goods?

EXTENSION OF REMARKS
OF
### HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. REED of New York. Mr. Speaker, most of our watch industries have been ruined by foreign imports. Even the free-trade internationalists in the State Department now recognize the fallacy of free trade in watches. It is a hard pill for some of these internationalists to swallow because of their investment in foreign watch establishments.

Under leave to extend my remarks, I am inserting an editorial from the Herald Tribune of New York City, under date of November 17, 1945:

FOREIGN TRADE FALLACIES

America's best assurance of a prosperous foreign commerce, points out Stuart Chase in a study, "Tomorrow's Trade," just published by the Twentieth Century Fund, "is to build prosperity at home."

This newspaper is glad to welcome the support of the articulate Mr. Chase in debunking some of the more widely held fallacies concerning foreign trade, and in particular (1) the theory that the big obstacle to our foreign trade is the high level of our tariff and (2) the belief that we can achieve continuous prosperity and full employment at home by floating a huge volume of exports on a correspondingly huge volume of foreign loans. As Mr. Chase notes, it is not necessary to defend the general level of the tariff structure, much less some of the more conspicuously excessive schedules to explain the pattern of American foreign trade. Indeed, as he points out, it is absurd to generalize about tariff, for the word is "a meaningless noise until one gets down to cases." There is no mystery about the existence of a limit on our imports. It derives from the fact that most of the things we need we can obtain within our own borders, the biggest free trade area in the world. As Mr. Case says, 70 percent of imports from other countries consist of materials needed for our own manufacturing industries, and the way to keep such imports at a high level is to keep domestic production at a high level.

From the standpoint of practical importance, Mr. Chase's attack on proposals to "blow up" exports by a huge program of foreign loans is much more timely because a heavy barrage of propaganda along these lines is emerging from Washington at this very moment. The danger of such subsidized exports has been repeatedly stressed here and in other quarters where it has been given anything more than the most cursory study. It is a program which, as the London economist has shown with merciless logic, comes down, in the end, to a policy of "exporting American unemployment."

An unfortunate aspect of this argument at the present time is that it is being employed as justification for the proposed credit to the British Government. No one has urged the extension of such a credit more vigorously than this newspaper, but to base that policy on representations that "we must maintain a huge and continuing foreign loan policy" is not only utterly unsound, it is to assume that the proposal can be sold to the American public only by advancing the sordid argument that the transaction is one that will yield us a handsome financial return.

## Atomic Warfare—Can It Be Averted?

EXTENSION OF REMARKS
OF
### HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. HAVENNER. Mr. Speaker, I am in receipt of a letter from Mr. Paul F. Fratessa, prominent attorney of San Francisco, with which he has enclosed a copy of an open letter addressed to the Congress of the United States, outlining a plan which he believes might avert necessity for use of atomic bombs in the future.

Mr. Fratessa for many years has taken an active interest in the problems of government, and during the administration of the late Gov. Friend W. Richardson he was attorney for the California State Highway Commission.

In order that his thoughtful thesis may be brought to the attention of the Members of Congress, I have asked permission to have it printed in the CONGRESSIONAL RECORD.

The thesis follows:

Necessity for the use of atomic bombs can only be eliminated by removing the causes of war and of communism.

Greed of the few for profits and power cause poverty and want in the "midst of plenty." Great concentration of wealth and power warps the minds of too many in high places, thereby forcing the people to follow leaders who promise relief and hope for a better world. We have seen the results under our present system owing to its defects.

DEFECT I

Theoretically, our profit system is supposed to redistribute all profits added by industry to the cost of production and distribution. In practice this rarely happens. Low income groups seldom receive dividends. Investments requiring labor are always far below the total profits added to the costs of production and distribution, which creates a great vacuum, resulting in unemployment and thereby depriving the consumers of purchasing power who are all entitled to a livable income.

DEFECT II

Our profit system fights for foreign trade in an effort to maintain full employment, endeavoring to sell goods which cannot be paid for unless we accept goods in exchange. This course leads all nations into economic warfare followed by military conflict. Every nation is entitled to needed raw materials. No nation should be forced to accept finished goods while it has the manpower to produce them itself. Every nation can and must have purchasing power to consume its own production without foreign trade.

DEFECT III

Excessive profits, salaries, wages, and incomes of every nature received by anyone who cannot use them within a reasonable time, prevent others from earning or receiving a livable income, when these same excessive incomes were derived from the toil of the worker, because of their greed for excessive income.

All defects can be cured by congressional action.

1. Amend the Federal Reserve Act, by requiring the Federal Reserve Board to maintain a stable dollar or be removed from office by a majority vote of the House of Representatives and

2. Subsidize all low-income groups or subsidize industry—which means all employers of labor—with payments from the United States Treasury which will insure a reasonable profit to industry and farmer, with credit created without interest as provided in Congressman VOORHIS' H. R. 1 of the Seventy-ninth Congress, thereby wiping out profiteering—commonly called inflation—for all time, as consumers would pay actual cost for all items; or

3. Abolish private profit as Russia has done; or

4. Create a new system whereby we, the people, through Congress—

(a) Guarantee unconditionally all public deposits—which are just simple figures entered on the books of our bankers and other depositories;

(b) Call in all our present currency and Federal Reserve notes and destroy same, after giving full credit to the owners;

(c) Substitute "prosperity" currency, which shall be self-liquidating, as legal tender for all purposes, in various denominations and same size as now in use, with 50 spaces on the reverse side dated for machine cancellation by the banks, or by stamps to be affixed by the holder, weekly on a day certain, at the rate of 2 cents per dollar, represented by each item of currency, or amount on deposit in every prosperity account opened at any bank or depository with prosperity money, or prosperity checks, which shall be charged at the same rate and shall be paid to the United States Treasury, together with the funds received for the sale of stamps issued for this purpose. Prosperity checks and currency shall be legal tender for all purposes, except for deposit in security accounts hereafter described;

(d) Ten dollars is the limit anyone can possess of coins without a special permit from a bank and permittee shall be charged weekly at the rate of 2 cents for every dollar so possessed in excess of the $10 exemption as though the excess dollars were in a prosperity account;

(e) Prosperity accounts shall be supervised by the Treasury Department, who will furnish every bank with sufficient cancellation machines which will automatically record the daily cancellations of prosperity money, showing the amount due the United States Treasury at the expiration of 50 weeks from the date of issue the prosperity money shall be fully canceled and returned to the United States Treasury for destruction;

(f) On the effective date of the act, all banks, firms, or persons receiving public deposits shall earmark every deposit shown on their books as a security account and shall for 1 year thereafter accept currency, old coins, and Federal Reserve notes for deposit in security accounts. Prosperity coins shall be issued every year thereafter, which must be exchanged for new yearly coins during the month of January, or suffer a penalty equal to 2 cents per dollar for each week of delay;

(g) Security accounts may be converted into prosperity accounts or currency and may be transferred to other security accounts, but may not be used for the payment of interest, dividends, wages, and salaries. Any security account checks which may be cashed with prosperity money shall be credited to the United States Treasury. All banks shall be fully compensated for their services with prosperity currency, or checks drawn on the United States Treasury;

(h) All taxation of every kind and nature shall be suspended, including social security, unemployment, etc., thereby reducing the cost of living to half its present cost—because of the elimination of hidden taxes;

(i) The Federal Government shall pay all of its obligations by check drawn on the United States Treasury, which shall be deposited in prosperity accounts only, or cashed with prosperity currency within 5 days, or suffer the weekly reduction of 2 cents for every dollar represented by the check during the delay in cashing or depositing same. This rule will apply to all prosperity checks when issued;

(j) All States, cities, and political subdivisions existing by taxation must submit proper budgets to a bank of their own choosing, where the United States Treasury must make available weekly the amount required to meet the obligations payable in prosperity checks;

(k) Bankruptcy laws must be repealed. Instead, prosperity money shall be made available by the banks to all industry and farmers when they have exhausted their security accounts for the payment of wages, salaries, repairs, or renewals only, or for deficits arising therefrom;

(l) The Federal Reserve banks shall operate as agents for the Government in handling the new issues of prosperity money and foreign exchange.

Books shall be kept showing the true and accurate amount of credit due from every nation in the world. The Treasury Department shall enter into mutual agreements with all nations, fixing a permanent basis for the transfer of credits, for any purpose whatever. No transfer of gold or any other security will ever be necessary or permitted. Every nation indebted to the United States shall agree to honor any demand when presented for use within the nation on whom the demand is made. This arrangement will enable Americans to purchase foreign credits through their banks from the United States Treasury without any risk of fluctuation.

It will enable us to send travelers to foreign countries and consume these credits.

As an additional incentive, we could reward deserving and faithful American workers with expense-free trips for producing quantity and quality for a given period;

(m) Every nation must agree to make available to every other nation raw materials or other products essential to its well being, either on credit or exchange for goods without demand for gold or silver;

(n) Security accounts, when loaned for any purpose, shall be repayable only in prosperity money;

All dividends, bond interest, pensions of every kind, and anuities shall be paid only in prosperity money;

(o) Our Social Security Act must be extended to all alike. Payments must be the same to all, which must be a livable income for everyone, if they cannot work through no fault of their own;

(p) After several years of operation Congress shall provide the necessary machinery to hold an election, by mail, whereby the owners of security accounts and of all public bond issues shall decide by majority vote, the method to be adopted in disposing of all public debts, by either converting the bonds into security bank accounts, or by requiring Congress to levy a tax on security accounts to pay the bonds;

(q) Every State must create an economic security board with authority to fix and determine, at all times, the exact amount which constitutes a livable income, settle labor disputes, fix prices and profits, if necessary to maintain a stable dollar, make rules for the banks to advance prosperity money to all persons who are unable to pay for necessities, medical and hospital expenses until the Social Security Act is amended to this extent; also recommend to the legislature regulations for further safeguarding society from those who refuse to work, drunkards, and dope addicts.

This presentation of the greatest problem now facing the world serves to illustrate one improvement over our present system, which has lead us into two world wars within 25 years.

If a better method can be evolved, we should all be glad to cooperate. We are all entitled to live decently, provided we are willing to work in producing the items we all need.

Therefore, Congress must study this suggestion and find a better way to provide for the general welfare of all Americans. Over 1,000,000 Californians have voted at three consecutive elections for better pensions because they know it can be paid by simple bookkeeping.

I find it hard to part with our established methods and customs, but prefer it only in order to avoid this continual strife between capital and labor which finally leads nations into war.

If we fail to improve our methods we are headed for war with the Communists.

They have a plan. You cannot fight their plan by merely opposing it. Our people cannot eat the Constitution or Lincoln's Gettysburg Address. We must have a real good plan for beating the coming depression or the Communists will win.

Respectfully,

PAUL F. FRATESSA.

SAN FRANCISCO, CALIF.

## Party Responsibility in a Democracy

EXTENSION OF REMARKS

OF

### HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 11, 1945*

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. James A. Farley at the annual dinner and victor banquet of the Bronx County Bar Association at the Hotel Commodore on December 8, 1945:

You have extended to me a very great compliment in asking me to address this distinguished gathering of lawyers. I am not a lawyer and I have a layman's respect and apprehension in the face of a lawyer's learning and skill. I have never yet won an argument with a lawyer, and I don't propose, for one moment, to start an argument here tonight. And, may I say, I never, in my early days, could have conceived of a day when lawyers would actually want to sit and listen to me.

But of one thing I am certain. I am not here to talk about the law. I am not going to carry coals to Newcastle or law to the Bronx Bar Association. I want to speak on a subject which has been a major concern in my life—that is, party responsibility in a democracy.

Since I am speaking to lawyers, permit me to say, however, that I know enough about the administration of the law in Bronx County to feel an added sense of respect for this particular group. There is no county in the State of New York or, in fact, the Nation, where so little criticism can be leveled at the administration of the law—particularly in the office of the district attorney. It is a great tradition you have here, that of selecting the ablest available man for district attorney, of backing him up and permitting him to administer his office without fear, favor, or politics. The quality of that service over the years has been shown by the great jurists who have been elevated from the office of district attorney here to the higher courts of the State. They have a worthy successor in the present incumbent, Samuel J. Foley, and I think we can all assume that the end of his distinguished service in the district attorney's office will be but the beginning of a still more distinguished service on the supreme court bench of the State of New York.

It is a profoundly important thing to keep the administration of the law, especially the administration of criminal law, on a nonpolitical plane. We have all been distressed in the past when, in some other countries that I need not mention, it has been found that policital influences have prevented the enforcement of the law.

There are two ways in which politics can obstruct and impair the administration of criminal justice. The first is when the scales of justice are weighted with personal favor, and guilty men go free. The second is when men entrusted with the enforcement of the law use their great official power to seek votes by bringing charges, no matter how false or unfounded, against their political opponents. The grand jury, for example, is an honored institution, and justly so. District attorneys have a sacred responsibility to use the grand jury only as tradition dictates that it shall be used. To use it in the midst of a political campaign to bring forth, not indictments, but vague charges is a shameful and reprehensible misuse of official power. Such base actions befoul the purity of justice and bring the law and the courts into disrepute. We must not let the guilty escape. But we must not callously accuse or smear the innocent. In this, I am not talking theory. I have in mind, as I am sure you must have, some events in another county in the not too distant past.

The high tradition in Bronx County, which justly holds the district attorney's office in high respect, derives more definitely from a sense of party responsibility. For party responsibility means the capacity of an organization to establish and build traditions and to sustain them through the years. A party is something more than a mere dispenser of patronage; it is the means through which a free people control their government in a republic.

As an illustration of what I mean, my own party in New York City has, this year, been challenged by a vote of overwhelming confidence in its candidates for city office—General O'Dwyer, Senator Joseph, and Mr. Impellitteri. The party in these five boroughs owes a great obligation to the voters of the city of New York, which it can pay only in terms of good government at the least possible cost and with the greatest efficiency. If it fails in that responsibility, it will be cast out into exterior darkness, as it has been in the past, and fittingly so, and there will be weeping and wailing and gnashing of teeth among the selfish and shortsighted ones. But if a party in the metropolis builds its principles on a sound foundation—if it serves the people well—it will be rewarded with a continued opportunity to serve the public.

The United States is a Federal Union. Not only in its Government but in its political organizations, it consists of 48 units and a single national unit. The duty alike of a State party and a city party, in a national campaign, is to support loyally the choices of the national convention. But between the quadrennial elections, the governments, as well as the political organizations of the States and the cities, carry on their own individual existences. I served long enough as chairman of one of the great national parties to realize how much national political organizations depend on State and city organizations. And that is as it should be, for it would be an inversion of the proper order of things, if ever the State and city

organizations should become dependent upon the national organizations. State and city organizations must select candidates for State and city offices on their own responsibility. They have to live with them and they have to stand or fall on the record their candidates make. They not only have to select candidates and conduct elections, but State and city organizations must have a definite philosophy of government. They must have principles which they create and maintain and which are appropriate to their own special needs and, naturally, in harmony, whenever possible, with the national organization. And I have seen enough of politics to know that no party can long endure and be successful unless it has such principles.

My Republican friends here tonight will not be surprised if I say, very seriously, that for many years the Democratic Party of the State of New York has not only had such principles, but in a very definite sense has helped to bring our State among the States of the Nation in promoting wise policies of government dedicated to efficiency and humanity. New York has, in a brilliantly constructive way, given to the Nation an example of a State that is leading its people to the light of freedom, order and truth. May the State and city of New York bear this responsibility seriously in the months and years to come. A party cannot merely wait for its opposition to make mistakes and fall from public favor. It must consistently, not only in the light of the past but in the light of obvious present needs, lead public opinion. I have said in the past, and I say again, that Government must seek to contribute to those broad social needs which an advanced civilization places upon Government. It must not only be efficient, but it must be humane. It must be administered by one with a head and a heart.

It is only fitting and proper to point out that the leader in this State who first most nearly achieved these two ideals of government was Alfred E. Smith. We shall never forget, not only those who worked with him, but those who saw him at a distance, that in his appointments he required inflexible honesty and sound qualifications. He fought for a simplified government in order that government might perform its services to the public at a minimum cost and with maximum effectiveness. With government thus established on a sound, business-like basis, he extended the activities of that government to meet new and developing human needs in the commonwealth. That great record stands. It is an inspiration and a challenge to those who succeed him.

I cannot say too earnestly that no party can long succeed in the State of New York whose leader or leaders take only one page from the book of Al Smith. They may speak in ringing and inspiring terms of what they have achieved. They may exhibit an administration that is honest and efficient, but if that administration is a mere machine seeking to perform in a routine manner functions of government, without realizing that the true end of government is to serve humanity, then that administration cannot long hold the interest and the imagination of the people. It will only have done half of its job, if it turns government into an impersonal machine.

In the State of New York a great beginning was made in the administrations of Alfred E. Smith, Franklin D. Roosevelt, and Herbert H. Lehman. Over many years a confident people supported these great Governors. There was built up, in the Governor's office and in the legislature, the broadest program of social and economic justice that any State has seen. Year after year New York lighted the way to progressive ends. As a member of the party which these great men represented, I hope this service may continue, that new goals may be reached and that the governmental instruments created in the past may be perfected. For only by fostering such progress can any party play its great role in a democracy.

I said a little earlier that only by fixing party responsibility can a democracy retain the benefits of freedom and, at the same time, provide the people with what they legitimately expect from government. When, as in some countries of the world, there is substituted for responsible parties a multitude of bitter factions, liberty is endangered. It was Washington himself who warned his people, in his Farewell Address, of the dangers of factions in a republic. Washington did not mean that he opposed the formation of responsible political parties. His fear was that the experience of other countries, in which parties had degenerated into factions, might be repeated here. And only in the past decade have we seen, in the fate of France, the danger in breaking down the responsibility of parties. For a country which depends on many parties will, in the long run, have no parties at all, but rather endless civil strife between selfish fragments of the population. We have witnessed in this war that only the United States and Great Britain, true democracies built on the two-party system, have most extensively retained freedom for the individual.

In a two-party system it is always possible for a victorious party to be the legitimate and really representative majority of all the people. There is strength and permanence and responsibility in such a party control.

Moreover, with a two-party system, the party out of power can be sufficiently large to extend its influences on a broad basis. It can be, in truth, an effective critic and corrective of the actions of the party in power. Without strong and intelligent opposition, a party in power grows careless, inefficient, indifferent to public sentiment and, all too soon, dishonest. Conceive, if you can, a Nation or a State in which one party is large enough to be a majority, and the opposition is broken into five or six small groups. The majority party can safely ignore the splinter parties of an unorganized, discordant opposition, no one of which is strong enough to challenge the ruling party at the polls. Ultimately, such a one-sided party system loses all of the characteristics of a free government, and from a one-party system there is developed a one-man system. Today, every schoolboy knows that dictatorships rise on such unstable foundations.

Moreover, the best government is usually found in those nations and states in which the parties are fairly equal in size. That, it seems to me, has been the great virtue of our party system in New York. State elections have never been cut-and-dried affairs. There has always been a real contest, and the control of government has passed, from time to time, from one party to another. Much of the progress that this State has made in the affairs of government has been due to this close race for public favor by two strong parties.

The relations between a sound and healthy party organization in the State and the national organizations is also a matter which deserves careful consideration. The Democratic Party in New York State has repeatedly provided the national ticket with substantial majorities. It has invariably recognized the great authority of the national Government in matters of foreign affairs and, ordinarily, loyally supported the foreign policy of the President, regardless of his party affiliation. It has recognized as a great principle that politics stops at the water's edge.

In the last analysis, a party depends upon the vision, the honesty and the character of its officers. Men who hold high places in a party organization for a long time develop, in the main, these qualities in an even greater degree than in most callings and professions. For the public is a hard and exacting task master.

I grow a little impatient with those who seek to discredit the political leaders because some leadership has failed in its responsibility. I have the same feeling for those who seek to discredit the profession of politics that I have when I hear the profession of the law condemned because there are some dishonest lawyers, or the medical profession because some doctors do not do their duty. By and large, the politician is as honest as any man. In the work of political organizations, as in other human activities, good character justifies itself; energy and loyalty pay dividends and intelligence and education open the road to high honor. The parties owe it to the Nation to seek by every legitimate means to induce able and honest young men and women to join the party, to work with it, to exert what influence they can, and to seek, through the party, to improve the state of the Nation and the condition of everyone in the Nation.

To attain their proper role in a democracy, the political parties must do much more than merely get out the vote and win elections. They must, through research and consultation, develop beneficial and wise policies to be embodied in their appeal to the voters. Furthermore, they must carry on a twofold educational program. They must provide instruction for voters and prospective voters. And they must intelligently train party workers. A political party must, if it is to be useful and successful, operate on a schedule of 6 days a week, 12 months in the year. It is not a diversion, a sport, or a hobby. It is a serious undertaking for earnest and intelligent people.

Its ideal is justice and its end is human freedom.

If a man is a political animal, as a great philosopher has said, then it is his sense of justice which distinguishes him from the brute. Without this ideal of justice, men would be baser in character, poorer in soul. He would find no companionship in such virtues as truth, mercy, honor, courage, and wisdom. But when he seeks to bring the reality of these virtues into political life, he is too often confused by his energy, blinded by expediency and betrayed by ambition.

For justice is not the stepping-stone to power. It is a vibrant, living ideal. It is not a dusty collection of laws and precedents fanned by quibbling arguments in tired courts. Rather, it is a warm and human restraint on power. For power without justice is tyranny, and tyranny is foreign to this republic.

The highest ideal of party government is like the great objective of our Constitution—to establish justice. The political party is the collective expression of the aspiration of many men and women.

The changing conditions of society create, year by year, new stresses and strains among the people, new injustices that need correction, new needs for government service, and new solutions for old problems. The political part is the link between these conditions and the government.

Governments without the living force of political parties would be cold and unresponsive mechanisms. When parties fail in their duties and ideals governments fail. When parties seek only power tyranny grows in public offices. When parties fail to educate the public governments betray the people's interests.

"Justice," said Edmund Burke, "is the great standing policy of civil society, and any eminent departure from it, under any circumstances, lies under the suspicion of being no policy at all."

Our political parties must meet this high test.

## Individual Liberty

EXTENSION OF REMARKS
OF
## HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include a short note from a soldier's mother and a letter from her soldier son to me.

The hope of this soldier is, I am sure, typical of what is in the minds of every American service man and woman today.

Mr. Speaker, it is the duty and responsibility of us all to see to it that we live up to the expectations of our Nation's brave defenders in every way, shape, and form. To do less will not be enough.

COUNCIL BLUFFS, IOWA, *November 28, 1945.*
Representative BEN F. JENSEN,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. JENSEN: The attached letter was enclosed with a letter which I received today from my son, requesting me to forward it to you correctly addressed. I believe it merits your serious consideration.

Mrs. FRANCES J. MCNEIL.

---

FUKUOKA, JAPAN, *November 18, 1945.*
Mr. BEN JENSEN,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. JENSEN: Now that hostilities have ceased, we out here are looking forward to coming home soon. The members of the armed forces do not, as you know, have a very large degree of personal freedom. Now that our discharges are actually in sight, we are looking forward to a new personal freedom, not only the freedoms of speech, religion, fear of aggression, and want, but a complete freedom of pursuit of happiness. This includes, I believe, pursuit of vocation. If our vocational pursuits are to be controlled by governmental agencies and labor unions we will see little change from our service in the armed forces.

We out here are grateful to have been of service in the protection of our country and its liberties. Nothing could be more discouraging than to come back to the States and find some of our liberties in a state of decay. I am sure you are aware of the fact that almost all soldiers, sailors, and marines are opposed to the dictatorship of labor unions. We can't help but feel that the power they have had has been allied with our enemies in fighting against us. Is their purpose really to protect the workers? It appears that now their aim is to destroy the personal freedom of the common man.

Why cannot our Government, elected and supported by the citizens of our democracy, control the ever-rising and revolutionary powers of labor management? Is it afraid to oppose the political powers already gained by labor management? Even though these powers are apparently subversive to the constitutional rights? Is it going to betray the men and women who have fought for its preservation these past 4 years?

I hope not. All servicemen hope not. And I feel that you also hope not; hope not enough to use your respected influence among your colleagues to bring about a Nation of individual liberties that all members of the armed forces will be glad to return to and call their own.

Sincerely yours,

L. W. MCNEIL.

## The Bible in a World Age

EXTENSION OF REMARKS
OF
## HON. CHARLES A. EATON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over the National Broadcasting Co., at Washington, D. C., on December 9, 1945:

Since its founding 129 years ago, the American Bible Society has distributed nearly 350,000,000 copies of the Bible, or portions of the Bible. During the Second World War the society was responsible for the distribution among our armed forces, at home and abroad, of more than eight and one-half million copies of the Bible in whole or in portions.

Either as a complete volume or in selected portions the Bible is now being printed and read in 1,068 languages. And the publishing of the Bible has become far and away the greatest publishing business in the world.

Viewed against the menacing background of postwar world conditions, these statistics are of profound significance. If reading the Bible becomes a daily habit among the peoples of the world, common moral ideals and spiritual energies will be liberated, which may, and probably will, determine the common destiny of mankind.

We are accustomed to think of the Bible as primarily a ministry or message addressed to the individual alone. It does give consolation to the sorrowing; comfort to those who suffer; courage to the fearful; strength to the weak. It enthrones faith. It inspires love. It kindles and illumines the mind. It stills the storms of passion and hate. It reveals the meaning and purpose of human existence. It fortifies the spirit to meet the mystery and might of death.

So long as the individual is compelled, by the laws of nature, to defend his personal existence and identity against the stark mass of the physical universe, in which he functions as an infinitesimal atom—so long will the truths of the Bible strengthen and sustain him in his unequal struggle.

All this is gloriously true. But the world today finds itself in the clutch, and under the curse of circumstances never before experienced. Emphasis has been shifted from the individual to the mass. The rights, the duties, the very; identity of the individual are in danger of being absorbed by, and lost in the mass. For more than a generation the civilized world has been living in a climate of continuous conflict—class against class, nation against nation, race against race. Two world wars, the most costly and destructive in all history, have shaken every political, economic, social, and spiritual institution to its foundations.

These appalling conflicts are like the cosmic convulsions between geologic ages. We are left to grope our uncertain way through a no man's land of universal confusion, lying between two ages. One carried on the sombre wings of frustration and failure toward final extinction. The other, as yet shadowed by uncertainty and fear, challening mankind to set foot upon unknown and untried pathways which lead we know not wither.

In this troubled time of transition and change, one fact stands out like a fixed star in a midnight sky. We have come at last to a world age, the duties and difficulties and dangers of which can only be met by the creation of a world civilization. It is self-evident that no world civilization can successfully function unless it is foundationed upon, and governed by universal moral law, universally accepted. Such a moral law capable of universal acceptance and observance is set forth in the Ten Commandments of the old Testament and the Golden Rule of the New Testament. It is equally self-evident that if universal acceptance of this universal moral law is to be achieved, illiteracy must be abolished everywhere; the Bible must be translated into all languages, and Bible reading must become a common practice among all peoples.

Groups of individuals, great societies, and even races of men are held together by a variety of common motives, interests, and ideals. These change with the passing of time and the vicissitudes of progress or decay. But the ultimate social binder which makes a cohesive human society possible is spiritual, operating in the realm of human affairs, just as the law of gravitation rules in the physical universe. When this spiritual unifying force is weakened or ceases to function societies fall apart and confusion reigns until a new constructive spiritual force is liberated.

We have a disquieting example of this in our own country at the present time. Hitherto we have achieved a unique national unity by the practically universal acceptance of a common moral standard which had its origin in the teachings of the Bible. But this common sense of moral obligation—and moral standard of personal conduct has become obscured and, in countless cases, repudiated and abandoned. In its place there is in process of adoption the antisocial and anti-Biblical delusion of every man for himself—every group, every interest, every class for itself.

This condition of spiritual chaos will find its cure in a return to and a renewed acceptance of the teachings of the Bible.

On June 26 in San Francisco the delegates of 51 nations signed what is known as the Charter of the United Nations Organization. After 8 weeks of continuous conference and frank discussion these representatives of 51 nations, representing every conceivable variety of social, economic, and spiritual ideas and ideals, reached a completely unanimous agreement. The ultimate basis of this agreement was the acceptance by all of a common moral judgment as to the folly and wickedness of war—and of a common moral obligation to foundation our new world civilization upon law, justice, freedom, and cooperation rather than upon brute force.

What we did in San Francisco was of course only the beginning of a world policy which may take a hundred years of trial and error to fully implement. But our great fundamental achievement was the formulation and acceptance of a common moral standard for the governance of world-wide international relations. By our united determination to prevent the outbreak of war anywhere in the world we accepted the principles that injury by war inflicted upon any one nation means injury to all nations.

This enthronement of a common moral standard by and for the world will lead, as time passes, to acceptance and more complete understanding of those deathless spiritual impulses which are common to all men everywhere regardless of breed, creed, or condition.

First of these impulses is the universal urge in all ages and under all conditions, for men to seek a conscious relationship with their Creator. This is the impulse, to satisfy which the great religions of the world have been developed; not to mention a multitude of superstitions and cults.

The history of man is a record of alternating periods of progress and reaction, growth and decay. In this it follows the pattern of nature with its periods of light and darkness; its changing tides and seasons. Four hundred years ago the old world was lifted out of the Dark Ages by an intellectual return

to the great Mediterranean culture and by a renewed spiritual response to the message of the Bible as the word of God. This revival of learning and widespread interest in and loyalty to the teachings of the Bible, coupled with the discovery of new worlds, liberated great progressive and constructive spiritual forces which gave us four centuries of unparalleled progress.

In this hour of world-wide stress and trial we find ourselves once more under the shadow of a new dark age. We have created a material civilization which by its very magnitude and complexity threatens to destroy its creators. We have built what we proudly acclaim the most wonderful machine ever devised; but no individual and no government seems to have brains and character enough to run it without wrecking the very institution it was intended to serve. The work of our hands has outgrown our power of mental and moral control.

We may take comfort and courage in one historic reality. Just as Nature abhors a vacuum so in the history of man whenever there has occurred a spiritual vacuum, such as now seems to have overtaken us, there has always flowed in from the infinite spiritual resources of the Divine Creator a new energy to fill the vacuum and start men once more toward the light.

We have come at last to a world age. A universal age. This universal age must have as its foundation a universal moral law, universally accepted if the world is to escape being returned to primal chaos. The Bible contains the one supreme universal philosophy known to man. It begins with God the Creator of the heavens and the earth and the Father of the race of man. It ends with the same universal fatherhood. It proclaims a common moral and spiritual code for all men. I believe it contains the key to a future of cooperation and brotherhood for all men in a world age activated by a word civilization, based upon a common moral code.

These are great days—days that try men's souls. But in the Bible we find a source of hope and faith—which, if we can accept it and make it our own, will bring us once more to that great moment when with the entire brotherhood of man we can proclaim—

"We have seen the powers of darkness take
their flight,
We have seen the morning break."

## Cum Laude

EXTENSION OF REMARKS
OF
### HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. CANNON of Missouri. Mr. Speaker, when, after a long and distinguished service, a member of the official staff of the House retires from public service to enjoy a well-earned vacation, we release him with mingled pleasure and regret—pleasure that his service is crowned with so richly a merited recognition of duty well performed—and regret that we are to lose a man whose long training and experience makes him well nigh indispensable.

But perhaps the uppermost consideration at the time is our sense of personal loss in the departure of a man whose intimate personal association has endeared him to all who have come in contact with him in social and official capacities.

That is particularly true of the retirement of one of the most valued men on the staff of the Committee on Appropriations, our friend, the friend of every Member of the House, James F. Scanlon.

Service on the staff of the Committee on Appropriations is particularly strenuous and exacting. It is especially true of the arduous duties so successfully handled by Jim Scanlon, in which not only a high degree of technical skill but rare tact and diplomacy are essential. His oversight and supervision relieved the members of the committee of a great deal of administrative work which otherwise would have devolved on the chairmen and members of the subcommittees. Knowing that all details would have to pass his critical scrutiny, they could leave to him many matters of routine which otherwise would have added materially to the burden of their already heavy committee work.

But if we must lose him, it is a matter of gratification that he is retiring while he yet has before him many years in which to devote his time and attention to matters and interests in which he is particularly gifted.

Mr. Scanlon has served with the committee for more than a quarter of a century. In that time he has helped to write important chapters in the history of the fiscal affairs of the Nation. He has made a record to which both he and the committee can always look back with pride and gratification. As he takes leave of his life's work, our warmest regard and affection go with him. We wish for him and Mrs. Scanlon good luck, good health, the continued happiness of achievement, and Godspeed.

## Free and Unfettered Elections in Poland

EXTENSION OF REMARKS
OF
### HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. CLASON. Mr. Speaker, recently the Marshal Joseph Pilsudski Society, of Chicopee, Mass., has communicated with me relative to the plight of the people of Poland and their present government. The members of the society feel that if President Truman's Navy Day pledges are fulfilled, America will regain its world leadership and Poland and other valiant allies in the present war will have received just treatment which may otherwise be denied them. They ask that our State Department demand withdrawal of allied controlling forces from Poland in order that this unhappy country might have a chance for true freedom and democracy.

I am sure that all persons who are interested in the welfare of the people in stricken Poland will be interested in the reply of Secretary of State James F. Byrnes to my letter requesting a statement from him of information now available to the State Department. His reply brings information which is not generally known and which I hope indicates that before many months have elapsed the people of Poland will be given a free and unfettered opportunity to express without coercion the type of government which they wish to set up and to establish a constitution under which they would like to live.

The letter of the Secretary of State is as follows:

DEPARTMENT OF STATE,
*Washington, December 10, 1945.*

The Honorable CHARLES R. CLASON,
*House of Representatives*

MY DEAR MR. CLASON: I have received your letter of November 27, 1945, forwarding a communication from one of your constituents regarding conditions in Poland.

It is understood that the number of Soviet troops in Poland has been substantially reduced and that a considerable proportion of these forces, stationed in Poland on the basis of an arrangement with the Polish Government, remain in connection with the two lines of communication between the Soviet Union and the Soviet zone in Germany.

The policy of the United States Government in regard to Poland has been, and now is, steadfastly guided by understanding sympathy for the interests of the Polish people. This attitude, which envisages the existence of a strong, free and independent Polish state, motivated the recognition by this Government on July 5, 1945, of the Polish Provisional Government of National Unity, which was formed as a result of consultations between democratic leaders from within Poland and from abroad and which, at the time of recognition, accepted in their entirety the decisions of the Crimea Conference on the Polish question. The Polish Provisional Government thereby affirmed its intention of holding free elections, pursuant to the formation of a Polish Government.

In order to ensure conditions whereby Poland may establish a government of its own choice, this Government will continue to press for free and unfettered elections.

Sincerely yours,

JAMES F. BYRNES.

## Address of Hon. Meier Steinbrink

EXTENSION OF REMARKS
OF
### HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Meier Steinbrink, justice of the Supreme Court of the State of New York, at the memorial services of Brooklyn Lodge, No. 22, Benevolent and Protective Order of Elks, on December 7, 1945, at Brooklyn, N. Y.:

It is exactly 4 years ago this very day that the sneak attack on Pearl Harbor occurred, and, as a result, our Nation found itself thrust into World War II. That war has now ended, but in the course of it hundreds of thousands of lives have been sacrificed and many of our own brethren and the sons and brothers of members have made the supreme sacrifice.

Tonight we gather in this meeting place made sacred by the very purpose for which we have assembled to pay tribute in an atmosphere of solemnity and patriotic devotion to those of our fellow members who have gone to that land from which no traveler has yet returned and where—our faith leads us to believe—the best of life is yet to come.

We have come together to memorialize those who have gone to their eternal rest. Nothing that anyone can say to their beloved could possibly beguile them from their loss, and yet, in the words of the immortal Lincoln, "Theirs must be a solemn pride for having laid so costly a sacrifice on God's altar."

A life well spent is a life worth remembering, and it has been a beautiful custom in our fraternity to gather annually as a mark of respect to those whom we count as faithful brethren and as faithful friends. So far as it relates to them, this meeting affords the opportunity for acknowledgment of the debt of gratitude that is due from us to those who have preceded us.

Sorrow for the dead is the only sorrow from which we refuse to be divorced. In our efforts to assuage grief for the loss of some loved one opportunities are constantly sought to extol the character, to enumerate the virtues, and to recount the achievements of those whose memory is held in affectionate remembrance.

Those whom we memorialize tonight were part of this fraternal order, and as such their affiliation testified to their good character and their faith. But faith without works is dead. Honest belief leads to worthy action. Faith in an all-wise and all-loving God should move toward excellencies of conduct that make God real in everyday affairs.

Religion through ritual alone is utterly worthless unless a desire for service and self-sacrifice follows. If we are to live up to the full measure of our opportunities, then no worthy cause should escape our attention and no religion should invite our scorn. The full man is not the perfect man, is not compressed into a mold. He sees beyond the horizon of denominationalism. He can see beauty in the blessed sacraments of the Roman Catholic Church; he can see the glories in all branches of the Protestant faith; and he can feel the throb of prophecy in the atmosphere of the synagogue.

A true Elk deplores divisions while sensing their values. Religious labels alone we should detest. What we want is what is best beneath the labels, and whatever involves human well-being should command our strength, our support, and our compassion.

Death is always a most unwelcome visitor, and yet we recognize it as inevitable. It was not my privilege to have known all these brothers whom we memorialize on this day, but this I am certain of: Each in his sphere was loved and was revered.

Had they lived 100 years earlier, I should have thought that Owen Meredith, frequently referred to as Lord Lytton, had them in mind when he penned these beautiful lines:

"I wish I could get you at least to agree
To take life as it is, and consider with me
If it be not all smiles that it is not all sneers,
It admits honest laughter and needs honest tears.

God means every man to be happy, be sure;
He sends us no sorrows that have not some cure.
Our duty down here is to do, not to know,
Live as though life were earnest, and life will be so.

Let each moment like time's last ambassador come,
It will wait to deliver its message, and some
Sort of answer it merits. It is not the deed
A man does but the way that he does it should plead
For the man's compensation in doing it."

It was, I am sure, in this spirit that they lived; it was in this spirit that they died. A smile that lingers in memory is a manifestation of immortality. When man writes "ended," God writes "begin."

Today we are living and moving in a world of chaos. Our Nation has just emerged from the throes of conflict. Compared with the war we have just ended the First World War was but a prelude to action. In World War II the battlefront was thousands of miles away. Now the battlefront is here and everywhere.

Today it is not a war to make the world safe for democracy; it is a war to save democracy, to keep the light of freedom burning as a light in the dark, to keep the law of justice as a pillar of flame leading men together on to an abiding place of peace.

Forgive me if for a moment I seem to digress. And yet what more appropriate occasion can there be for expression of patriotism than when we are sober and serious minded during a memorial hour.

The Allied Nations have fought the powers of darkness. Those of the Axis would have turned the clock back to the Dark Ages. The Nazi way of death was the spread of an ideology which preached the domination of any one group, be it a group of class, race, religion, or nationality over all other groups.

We have learned through past and bitter experience that the only way to combat the gangster individual or a gangster nation is by drastic action, by routing out the gangs, lock, stock, and barrel, and an extirpation of the gang rule idea by a strict allegiance to law and order and to a belief of all men in the fatherhood of God and the brotherhood of man.

It is for this American ideal that many, many thousands have been sacrificed while hundreds of thousands of others stood ready to pay the price, if the need were there, that our Government and our institutions might continue to live.

Being an American is not a matter of common race, common nationality, or common religion but of a common belief in an ideal of equal treatment and equal opportunity for all. The Bill of Rights applies to all within our borders. We are a law-abiding nation, not a law-fearing nation, and our laws are for all of us—Americans by birth, Americans by choice, or even the stranger within our gates. That is the democracy of the living just as death is the democracy of the dead.

Many years ago at the time of the outbreak of the Civil War, America's foremost orator wrote these words. They might have been spoken after Pearl Harbor. Said he:

"The past rises before me like a dream. Again we are in the great struggle for national life. We hear the sounds of preparation, the music of boisterous drums, the silver voices of heroic bugles. We see thousands of assemblages and hear the appeals of orators. We see the pale cheeks of women and the flushed faces of men, and in those assemblages we see all the dead whose dust we have covered with flowers. We lose sight of them no more. We are with them when they enlist in the great army of freedom. We see them part with those they love. Some are walking for the last time in quiet, woody places with the maidens they adore. We hear the whisperings and the sweet vows of eternal love as they lingeringly part forever. Others are bending over cradles, kissing babes that are asleep. Some are receiving the blessings of old men. Some are parting with mothers who hold them and press them to their hearts again and again and say nothing. Kisses and tears; tears and kisses, divine mingling of agony and joy. And some are talking with wives and endeavoring with brave words, spoken in the old tone, to drive from their hearts the awful fear. We see them part. We see the wife standing in the door with the babe in her arms, standing in the sunlight sobbing. At the turn in the road a hand waves. She answers by holding high in her loving arms the child. He is gone and gone forever. We see them all as they march proudly away under the floating flag, keeping time to the grand, wild music of war, marching down the streets of the great cities through the towns and across the prairies, down to the fields of glory to do and to die for eternal right."

But now the war is over, and now you and I must see a vision. It is a vision of the future. We see our country eventually filled with happy homes, with firesides of content foremost of all the earth. We see a world where thrones have crumbled and kings and dictators are dust. The aristocracy of idleness has perished from the earth. We see a world without a slave. Men are at last free.

We see a world at peace, adorned with every form of art, with music's myriad voices thrilled, a world in which no ill exists, a world on which the gibbet's shadow does not fall nor is the guillotine called into play, a world where labor reaps its full reward, a world without the beggar's outstretched arm, a race without disease of flesh or brain.

And as we look, life lengthens, joy deepens, love canopies the earth, and over all there shines the star of human hope. How much of that vision or dream shall yet come true remains for those of this generation to say.

In the world today there is an insurrection without parallel. It stands unique among all the reported revolts against civilization. It is a point of difference which has never in my lifetime received the emphasis which it now has. It is perhaps best exemplified in the words of him who was the dictator of the German Nation which are to be found in his book Mein Kampf, in which he said, "We are not against the hundred and one different kinds of Christianity; we are against Christianity itself."

No nation has ever lived which has been Godless, and the conflict just ended has brought men of all faiths back to a recognition of the fundamentals of their faiths. The biblical doctrine, "Have we not all one father?" is basic with Catholic, Protestant, and Jew. It is the teaching of all the great faiths of the world, and it is in the light of this faith that tonight especially we stand with bowed heads and say:

"Is there beyond the silent night an endless day?
Is death a door that leads to light? We cannot say.
The tongueless secret locked in fate?
We do not know, we watch and wait."

It may be that there are still dark days ahead, but as always the sun shines in all its splendor after a night of storm. The storm has broken, it has subsided, but let us vow by the memory of those who have fallen that we shall face with courage and determination everything that may come in order that our children, our children's children and the generations yet unborn may live here in peace and harmony under the blessings of the finest form of government that was ever conceived by the brain of man.

May these thoughts, out of the ageless wisdom of man reaching across the centuries, have their message for us in this hour of our questioning and of memorial, and help us in the shadows to find light and, above all, the realization that it is only dust that surrenders unto dust; that love is stronger than the grave, and that through the majesty and genius of our love we shall have life abide with life.

Prayerfully we ask of the Heavenly Father of us all that we be given the will, the determination, the persistence to finish the task while we are here, and when our time comes to pass on, to hand the lighted lamp to those who are younger than we and who are to follow us in the race of lighted lamps.

May the souls of our departed brethren and of our own be quickened and may our children's and our own courage be renewed by the blessed example of those who have passed beyond. May we continue to perform faithfully God's work until the task is done. Then we shall find it in our hearts and upon our lips to repeat in graciousness, in submission and in faith the words of the ancient prophets, "The Lord has given; the Lord has taken. Blessed be the name of the Lord."

## President Truman's Health Plan

EXTENSION OF REMARKS
OF
## HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. BIEMILLER. Mr. Speaker, the professional medical politicians, headed by Dr. Morris Fishbein, have been hollering "socialism," "communism," "totalitarianism," and similar epithets at President Truman's health plan. Anyone who reads this message carefully realizes how ridiculous those who mouth these phrases make themselves.

But the crowning blow to these wild and irresponsible charges came recently when a group of distinguished Americans ran as a paid ad in the Washington Star and Washington Post a statement endorsing the President's plan. This statement was signed by such well-known "Socialists," "Communists," and "totalitarians" as Gerard Swope, of the General Electric Co.; David Sarnoff, president of the Radio Corp. of America; Lessing Rosenwald, of Sears, Roebuck & Co.; Bernard Gimbel, president of Gimbel Bros.; Gardner Cowles, publisher, of Des Moines; Barry Bingham, publisher, of Louisville; and Bartley Crum, attorney, of San Francisco. The complete statement and list of signers are as follows:

PRESIDENT TRUMAN'S HEALTH PLAN WOULD INCREASE PRODUCTIVITY, REDUCE DISEASE, SAVE LIVES

We have read his message to Congress. We endorse it.

A NATIONAL HEALTH PLAN

We have read and strongly approve President Truman's message proposing a national health program. Many messages have been sent by Presidents on the state of the Nation, but this is a message on the state of the people of this Nation, the first full-length Presidential message on health ever submitted to Congress.

TO BE ADMINISTERED LOCALLY

We commend this plan for national health insurance to be administered locally, with free choice of doctor and hospitals for the people and professional freedom for physicians. This is a thoroughly American plan, consistent with our tradition of using government to aid the people in doing things for themselves. We agree with the President that voluntary health insurance will not "meet more than a fraction of our people's needs."

NOT "SOCIALIZED" MEDICINE

We agree also with his statement that "the American people are the most insurance-minded people in the world. They will not be frightened off from health insurance because opponents have misnamed it 'socialized' medicine."

FEDERAL AID THROUGH STATES

We support his recommendations for Federal aid through the States, for the construction of hospitals, for medical research and education, for the care of the needy, and for the extension of needed preventive, maternal and child-health services to every part of the country.

LEGISLATION BY CONGRESS

We would like to see the recommendations of the message promptly carried out by Congress through legislation. This program will increase productivity, reduce disease, and save lives. The income and the professional facilities of the average physician will be improved. The benefits to the health of the American people will far outweigh the costs; in fact, most of the costs are merely the regularization of existing expenditures.

We are glad that many groups, including organized labor, have already approved the principles supported by the President. We sign this endorsement as individuals.

We urge Congress to prompt action.

Signers of the endorsement:

Gerard Swope, General Electric Co., New York.
David Sarnoff, president, Radio Corp. of America, New York.
Lessing J. Rosenwald, Sears, Roebuck & Co., Philadelphia.
Bernard Gimbel, president, Gimbel Bros., New York.
James Roosevelt, Los Angeles.
Gardner Cowles, publisher, Des Moines.
Barry Bingham, publisher, Louisville.
Raymond Swing, radio commentator, New York.
Norman Cousins, editor, New York.

## The Tire Shortage

EXTENSION OF REMARKS
OF
### HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. ROBERTSON of North Dakota. Mr. Speaker, I am in receipt of a constant barrage, telegrams and letters, from the State which I represent, protesting the shipment of all tires to Europe until such time as the people of this country have been reasonably well taken care of with replacements. There is particular distress expressed in farm regions where farming has been put on a mechanized basis and the need is very great for truck tires for tractors and other heavy machinery.

Months ago we were advised that when the gigantic plants produced by the Government for the production of synthetic tires were in operation, there would be an abundance of tires. Strangely, this situation has never come to full realization. Always, each month there is a continual explanation for not having tires. Certainly with the general character of brains we have in this country to make tires, together with the plant facilities, at this date there can no longer prevail a condition which prevents the use of tires by the domestic population.

I am sometimes concerned as to whether or not the Government has given the go-ahead sign to make synthetic tires in this country in full production. At the same time that the country cries out for tires, we find certain amounts being shipped to Europe, although the departments advise us that the number going to Europe is only about 1 percent.

While I recognize that in all probability the Government must send tires to Europe for use in the occupied zones, I fully recognize as well that the commercial cars of Europe perhaps feel the need of tires also.

The problem that confronts America is not factory ingenuity or capacity. Something has held up tire production from the very inception of synthetic tires. We should build in the United States a great tire industry, making it possible to make synthetic tires. The industry should be supported by adequate tariff protection, and this should be done at once. It is inconceivable that with the capacity we possess, that anyone in the United States, and especially farmers now so badly in need of them, should struggle along, driving to market with their livestock and other products on tires now many years old. The United States is a country of transportation, whether it be in the rural sections or the urban sections. A survey of the tire situation in the United States is already overdue.

## Yanks Sleep on Deck in Rain While India Students Get Cabins

EXTENSION OF REMARKS
OF
### HON. CHARLES E. McKENZIE
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a news item by the International News Service and appearing in a local newspaper last week.

I quote the item:

YANKS SLEEP ON DECK IN RAIN WHILE INDIA STUDENTS GET CABINS

NEW YORK, December 8.—Newly arrived American troops from India complained today that 58 soldiers had to sleep on rain-washed decks of the motorship *Torrens*, so cabins could be provided for 50 Indian students from Karachi.

The troops assailed Army brass hats and the State Department for permitting the sale of tickets for the foreign civilians' passage aboard the *Torrens*, which arrived yesterday.

Another arrival was the Greek vessel *Koundouriotic* out of Antwerp, with 28 United States troops aboard, which had to be towed to New York after drifting propellerless for 60 hours.

Now, Mr. Speaker, to me this is inexcusable and unthinkable. Here we have American soldiers who have fought through hard Asiatic and European campaigns to victory—victory that was achieved not only by the bloodshed and death of battle, but victory that was fraught with every hardship known to man—jungles, mountains, and monsoons; tropical sun, disease, and pestilence; fatigue and hunger—and now the American Government, acting through the United States Army, puts these American heroes out on the decks of a ship in more weather and cold and rain while 50 Indian students sleep in the luxury of staterooms. Mr. Speaker, it is a damnable disgrace.

In the first place, I would like to know why these students, or any civilians for that matter, are allowed space on troop ships when the Army and the Navy both tell us that the real bottleneck in

returning our boys home is the lack of shipping space? The good-neighbor policy is fine enough, but I believe that real charity and benevolence begins at home with our own people. Do not we know that instead of being thankful to the people of the United States for the consideration and gifts of food and clothing we have given to them most foreign countries are sorely cussing and condemning us because we do not give them more. And yet we put our own boys, one of them might be your son or mine, for all we know, out in the rain while these so-called students, spreaders of alien doctrines and theories, are given steamship cabins. Why should they have this preference over our own boys? I say keep all aliens at home until every last one of our own American GI's is back in his native land, the good old U. S. A.

## Secretary of Navy Replies to Inquiry As To Suppression of Prostitution; Orders Compliance With Navy Policy—Japan Situation Cleaned Up — Letter Is Prompt Reply

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. DOYLE. Mr. Speaker, I incorporate in my remarks a letter to me from the Secretary of the United States Navy under date of December 7, 1945. I do so because I heretofore referred in this CONGRESSIONAL RECORD to the letter from Chaplain Lacour, and I also set forth my letter of November 19, 1945, to the Secretary of the United States Navy.

The number of communications I have received since my remarks and letter on this subject clearly show that the people of America are hearing what is said here in Congress or placed in the RECORD and also, that they are concerned with the morality of their sons in the armed forces.

Since my letter to the Secretary of the Navy became public, I feel it due the Secretary and also our great Navy that his prompt answer to my letter also be given to the public for its guidance.

You will note, Mr. Speaker, that paragraph 2 of this letter clearly and positively states what was done and that the long-established policy of the Navy is for the suppression of prostitution. I am very happy to have received this prompt and clear-cut reply by our Secretary. In closing my remarks I include the same:

THE SECRETARY OF THE NAVY,
*Washington, December 7, 1945.*

Hon. CLYDE DOYLE,
*House of Representatives.*

DEAR CONGRESSMAN DOYLE: Kindly refer to your letter of November 19 relative to the open letter from Lawrence L. Lacour, chaplain, USNR, describing conditions of prostitution and sex laxity amongst naval personnel in the Yokosuka area, Japan.

I am pleased to advise you that, immediately on learning the situation at Yokosuka, an investigation was made and directives were issued ordering strict compliance with the long-established and documented Navy policy for the suppression of prostitution. This compliance has been secured, and all houses of prostitution have now been placed out of bounds. Parenthetically, it should be noted that the venereal disease rate for the fleet for the month of October was considerably lower than in the continental United States.

The investigation disclosed that an honest effort was made by the commanding officers to control an admittedly difficult situation by means of what at the time appeared most effective. In order to properly meet morale needs, it was imperative that liberty be granted to personnel. Because of the health and recreational problems presented, it was deemed advisable to place many sections of the city "out of bounds." Unfortunately, however, some houses of prostitution existed in the "in bounds" area; and, in order to protect the health of the men, prophylaxis stations were established where they would be most effective; and, in one instance, this was at the entrance to a house of prostitution. While such a procedure may have given the appearance of encouraging the patronage of a house of prostitution, in reality it should have served to remind the men of the hazards to be encountered in such patronage.

The Navy, has, for a number of years, made intensive educational efforts to indoctrinate all personnel regarding the dangers of prostitution, not only from a venereal disease standpoint, but also from the standpoint of the moral implications of promiscuous sex behavior. Continence has been urged as the only pattern that will absolutely protect against venereal disease. The Yokosuka and fleet commands involved, at an early date, reindoctrinated their personnel on the hazards they would encounter on liberty. What Chaplain Lacour observed was the result, in large part, of group pressures, sudden release of inhibitions long pent up by many months of hazardous sea duty, cessation of hostilities and the general let-down in morale stamina of all personnel, all occurring during the confusion incidental to the occupation of Japan by American forces.

While there has been a unanimity of opinion and in directives issued by the policy-making bodies of the Army, Navy, and Public Health Service that prostitution should be vigorously suppressed, there is a wide divergence of opinion on the matter among the rank and file of the services. This reflects the confused thinking of the American public in general on the subject. This confusion exists in spite of the considerable educational efforts that have been carried on in the last several years to enlighten the public as to the moral, social, and medical evils of prostitution.

You may be assured that the Navy Department will continue to do its utmost to protect the American ideals of home and family life. In this effort we earnestly urge that the whole citizenry accept their share of the responsibility for the behavior of its individual members.

Sincerely yours,

JAMES FORRESTAL.

## The Stilled Unknown

EXTENSION OF REMARKS
OF
### HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and poem:

UNION, N. J., *December 9, 1945.*

The Honorable EDITH NOURSE ROGERS,
*House of Representatives,*
*Washington, D. C.*

MY DEAR REPRESENTATIVE ROGERS: In a recent issue of my copy of the National Legionnaire, I read where both you and the Honorable Senator EDWIN C. JOHNSON, of Colorado (whom I also addressed a copy of the enclosed), introduced a resolution in Congress, fostering an American Legion plan to have the bodies of two unknown of our Nation's heroes sent home from overseas and entombed in Arlington Cemetery.

The short poem enclosed expresses my sentiment of those brave men. It has never been published, so if in your opinion it is worthy of same, you are entitled to its use in whatever capacity you deem fit.

Trusting this poem will be of some value to you. Your comments on its worthiness will be most welcomed by me.

May I wish you success in your fight to perpetuate the memory of our Nation's heroes.

Respectfully yours,

CHARLES A. SMITH.

THE STILLED UNKNOWN

Knew not the color of his skin,
His relatives or next of kin;
Never traced his family tree,
A product of the slums, or perhaps an F. F. V.
Matters little if of Puritan stock,
Or African slaves from the auction block;
His only claim to fame—that He'd been slain
So foes of freedom could never reign.

Question not while he does slumber
The name, address, or serial number.
Was he destined to be a future President?
From the State wherein a resident?
Matters little his religious creed—
The death was caused by men of greed.
His identity known to God alone,
Installed on throne—the stilled unknown.

Once more marching Mars caused human pain,
When thinkers plot, for their ravaged gain,
Lay they foreign fields with waste and strife
As brave youths are slain—by madmen's knife.
So once again they'll move that stone
And stilled unknown, you'll not be alone;
But joined by buddies of another war,
So rest with them in peace—O warrior of yore.

—*Charles A. Smith.*

## Headquarters of United Nations Should Be Centrally Located at St. Louis

EXTENSION OF REMARKS
OF
### HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. CANNON of Missouri. Mr. Speaker, under leave to print, I am inserting a letter from George C. Smith, president of the St. Louis Chamber of Commerce, relative to the location of the headquarters of the United Nations at Weldon Springs, adjacent to the city of St. Louis, as follows:

DECEMBER 10, 1945.

MY DEAR CONGRESSMAN: On November 5 I wrote you that we had written to Hon. E. R. Stettinius, United States representative, Preparatory Commission, United Nations, inviting his serious consideration of the Weldon Spring Ordnance Plant property near St.

Louis, and setting forth several reasons why we believed this site was particularly suitable as a location for the headquarters of the United Nations. I also stated that we were preparing a booklet for transmission to the members of the Preparatory Commission. It has just come from the printer and I am forwarding a copy to you under separate cover.

We believe that this property is particularly desirable as a United Nations Organization headquarters site because of the existence of the public utilities on the property. The water system, capable of taking care of a community of approximately a quarter of a million population, the steam-boiler plants with combined capacity of 720,000 pounds of steam per hour at 325 pounds per square-inch pressure, and the high-tension electric system, complete with fan-cooled transformers of 20,000–26,000 kilovolt-ampere capacity, are all installed and ready to operate. These utilities alone cost the United States Government approximately $15,000,000 and to reproduce them in the present material and labor situation might occasion a delay in the construction of headquarters at another location of 18 months or longer.

I would be very happy to have the benefit of any suggestions or comments you might care to make concerning our presentation to the United Nations.

Very truly yours,

GEO. C. SMITH,
*President.*

I trust the convincing statement of the president of the St. Louis Chamber of Commerce will have every consideration.

## Soldier Lt. Joseph L. Lockard, of Pearl Harbor Fame, Says Congressional Investigation Asinine

EXTENSION OF REMARKS
OF
### HON. J. BUELL SNYDER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. SNYDER. Mr. Speaker, under privilege to extend my remarks in the RECORD, I include some sentences taken from the Evening Star of December 6 on investigation of Pearl Harbor. The article follows:

PEARL HARBOR PROBE "ASININE" SAYS YANK WHO GAVE WARNING

NEW YORK, December 6.—The Herald Tribune said today that Joseph L. Lockard, has termed the congressional investigation of the Pearl Harbor attack "asinine."

Lockard, recently given an honorable discharge as a first lieutenant, was reached by telephone at his home in Williamsport, Pa., and the Herald Tribune quoted him as saying:

"I've been wanting to say this for years. Responsibility can't be pinned on any American. We have lost sight of one important fact—the Japanese were responsible for Pearl Harbor.

"I don't think the investigation is doing our country any good. I don't think it's doing our foreign relations any good either. We're in a very critical period now. The country is far from straightened out. Yet they'll take up the time of dozens of Senators investigating something of which the true perspective won't be apparent for at least 50 years.

"I don't see how or why you could blame America."

## Be It Ever So Humble, There's No Place Like Home!

EXTENSION OF REMARKS
OF
### HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 11, 1945*

Mr. TALLE. Mr. Speaker, a great poet has said:

A man's chimney is the golden milestone from which he measures every distance in the great world about him.

The soldier is returning from the battlefield; the sailor is returning from the sea. Each has been in far-away places. Each has measured distances from the golden milestone—his own chimney, his own home, or the home he dreamed of buying or building on his return from the battlefield or from the sea.

But, Mr. Speaker, this soldier and this sailor are not having much luck. If that be true now, what of the soldier and sailor who will return months from now? Certainly it is time that something constructive be done about this urgent matter. The hour is already tragically late, and everybody knows it.

And yet, Mr. Speaker, this is what the lumber trade stated a few days ago:

Last week the sawmills on the west coast sold 66,000,000 feet of American lumber to foreign countries. This is just 1 week's sales. This lumber would build 6,600 average-size homes here in the United States. There is no ceiling price enforced by the OPA on sales of American lumber to foreign buyers. The sawmills need higher prices to pay higher costs, so they are selling the lumber we need so desperately here at home to foreigners.

In the meantime the "little gray home in the West," or the East, or the North, or the South, which the soldier or sailor dreamed about, remains but an empty dream.

That is not all, Mr. Speaker. The lumber trade says further:

The Federal bureaucrats have had, since the end of the war, tied up in red tape at one base (Port Hueneme) on the west coast, 80,000,000 feet of lumber which they will not release. This lumber would build 8,000 homes for you people that need a roof over your head.

So, the Federal Government itself is doing its part in keeping the soldier's and the sailor's chimney just—a dream.

Mr. Speaker, let us now turn to what the National Retail Lumber Dealers Association with offices in Washington, D. C., has to say about this matter:

NATIONAL RETAIL LUMBER DEALERS ASSOCIATION,
*Washington, D. C., December 7, 1945.*

*To Members of Congress:*

Every Member of Congress wants to do something for housing, for construction, and for the returning veteran.

Every Member of Congress should know that the main problems of the building industry are, first, lack of materials and, second, manpower to do the construction jobs.

Every Member of Congress knows of the frantic legislation being proposed to allocate materials and to put further controls back on the building industry.

Let's be practical. If Congress wants to do something to help the building industry and the returning veteran to get a home and to help the construction industry, let it see to it that the export of lumber, one of our shortest building items, is stopped.

The attached letter to John W. Snyder points out that in 1945 approximately 750,000,000 board feet of lumber were exported to many foreign countries, much of it for the purpose of "maintaining export relations." This is in addition to lumber that was exported to our military establishments for the purpose of winning the war.

Seven hundred and fifty million board feet of lumber would have built between 75,000 and 100,000 badly needed dwelling units.

Congress should see to it that no more lumber is exported to any country for any purpose during the period of the construction emergency in our own country.

Very truly yours,

H. R. NORTHUP,
*Secretary-Manager.*

NATIONAL RETAIL LUMBER DEALERS ASSOCIATION,
*Washington, D. C., December 6, 1945.*

Mr. JOHN W. SNYDER,
*Director, Office of War Mobilization and Reconversion, East Wing, White House, Washington, D. C.*

Subject: Exports of lumber.

DEAR MR. SNYDER: Your office is engaged in investigations and in actions aimed toward a solution of the present problems of the construction industry, and as you have yourself indicated, you realize that probably the primary problem confronting the construction industry today is a shortage of materials necessary to enable the construction jobs to start.

You and your staff also are aware of the fact that one of the construction bottlenecks is the inability of the industry to secure the necessary construction items of lumber to even start the houses that are badly needed by people in every section of the country. In the absence of any assurance that the lumber production situation will be improved in any major degree before another 60 or 90 days, it becomes highly important to the retail lumber industry and the entire construction industry that whatever lumber is produced by the manufacturers be conserved to fill the critical domestic lumber needs of this country.

We, therefore, recommend that the exportation of lumber to foreign countries be immediately stopped.

Previous retail lumber industry objections to the continued export of lumber products have met with the statement by the War Production Board, and later by the Civilian Production Administration, that the amount of lumber being exported is a negligible amount considering the over-all lumber-production picture. This may be true. We are told that, in 1945, approximately 3 percent of the 1945 lumber production was for export; but expressed in board footage, this 3 percent will probably run in the neighborhood of 750,000,000 board-feet of lumber. This board-footage of lumber—were it available today or had it been available to the construction industry in 1945—would have provided enough lumber to have erected between 75,000 and 100,000 badly-needed dwelling units. We, therefore, say that regardless of the percentage of lumber being exported in relation to our over-all production, any lumber going for export is lumber that could be used by the construction industry to provide for emergencies that exist in the field of housing in the United States.

We are informed that throughout the war licenses to export lumber to certain Latin-American countries have been issued at the rate of about 15,000,000 feet of lumber per month to "maintain export relations." Again, regardless of the amount, we can see no need to maintain such relations at a time when we cannot take care of critical housing needs in the United States.

If and when we have in the United States a normal lumber production and a normal situation in relation to supply and demand, then we believe consideration should again be given to the matter of lumber for export.

The construction industry is "taking it on the chin" from agencies of Government, and from the public to some extent, because of its inability to provide under present conditions a large volume of badly needed construction. If your office, plus the Civilian Production Administration and all other agencies of Government concerned with export and foreign relations, will see to it that in 1946 we do not ship another 750,000,000 board feet of a badly needed building material to nations outside this country, the construction industry will guarantee to you and to the American public the production of needed construction with every board foot of this lumber that you channel to domestic uses.

It is our understanding that authority for lumber export stems from the Second War Powers Act, and through your office to the Civilian Production Administration and the Department of Commerce, with the old Foreign Economic Administration functions of licensing shipments now being handled by the latter agency.

We are also informed that some time next week a joint meeting will be held by these agencies at which time the subject of allocations of lumber for export for the first quarter of 1946 will undoubtedly be discussed. We respectfully request that no allocations and no licenses for the export of lumber be issued for either the first or second quarter of 1946, and that after that time you again give consideration to export permits if conditions in the United States warrant.

Your office will be told that the items of lumber being exported cannot be used by the construction industry. The lumber manufacturers can readily manufacture a great proportion of the lumber now being exported into lumber items that the construction industry badly needs.

The primary job of the retail lumber industry is to build and to supply building materials to the home builders and the construction contractors of the United States. When our dealers attempt to procure for construction as much of the present production of lumber as they possibly can and are told by sellers of lumber that their needs cannot be met because those sellers have a more profitable export market, we believe that there is something definitely wrong with the picture.

One of the reasons retail lumber yard buyers are told this—one of the usual reasons why we have difficulty in procuring lumber—is namely, regulations of the Office of Price Administration. The Office of Price Administration makes it possible for export buyers of lumber to pay premiums to the manufacturers of lumber over and above the price which retail lumber yards can pay for the lumber and offer it to badly needed construction jobs. In our opinion, your Office should investigate the terms of OPA's export price regulations and that you should not accept the statement that OPA is simply allowing exporters their traditional markups, but you should dig into the fact that, regardless of their statements, premium prices are being paid to lumber manufacturers by representatives of foreign governments for items that we need here to do the building job.

We would very much appreciate an early indication that your Office will take steps to prohibit the further exportation of lumber until such time as our critical domestic housing situation shows signs of being alleviated.

Very truly yours,

H. R. NORTHUP,
*Secretary-Manager.*

Mr. Speaker, I beg and implore the Congress to deal with this most urgent and serious problem in a constructive manner. H. R. 4761, on which the Committee on Banking and Currency has held hearings for several days, is not the answer. Homes cannot be built without building materials and people who know how to build. These two factors—materials and labor—are basic. To rely on controls and allocations without paying first attention to increasing the supply of materials and trained labor is to fan the flames of runaway inflation. Those flames are already so hot that they threaten to destroy our economy. No economic disaster could be worse than runaway inflation. If there is anyone in the Congress or in the world who doubts that, he should turn the pages of at least one of the numerous tragic accounts that have been written by persons who have learned the truth from firsthand experience. May the Almighty save the American people from this monster.

Mr. Speaker, I repeat what I have said so often for so long a time—the solution to shortages is increased production, such greatly increased production as will make controls unnecessary. The soldier and the sailor are waiting for that sunrise. And so is many another American who did his best to sustain the soldier and the sailor while they fought to protect your home and mine, be it a palace or a cottage.

## H. R. 4931, a Bill To Facilitate Purchases of Surplus Properties by Veterans

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 10, 1945*

Mr. DOYLE. Mr. Speaker, I call your attention to the bill I filed December 10. It is referred to the Committee on Expenditures in the Executive Departments. An outline of the provisions is as follows:

First, Purchase at any Veterans' Surplus Property Center by any one veteran up to 5,000 in aggregate.

Second. This priority shall take priority over all other dispositions of surplus property, except dispositions under sections 12 and 13, and shall also take priority over dispositions to or by the Smaller War Plants Corporation under section 18.

Third. The prices shall not exceed the average cost of the property to the Government. Proper adjustment being made for wear and tear, condition, age, obsolescence.

Fourth. Immediate delivery of items purchased shall be made, if the items are in stock.

Fifth. At least once every 30 days notice of stock on hand, quantity, price, location, shall be given by the head of each veterans' surplus center—first, by newspapers of general circulation; second, posting in each post office in each judicial district; third, notifying each town or city clerk.

Sixth. At least one veterans' surplus property center shall be established in each judicial district in each State.

Seventh. At each of these veterans' surplus property centers shall be assembled and displayed items of serviceable surplus property, the items to be representative of all available surplus property available for sale and immediate delivery.

Eighth. This act to be administered by the Administrator.

The clear advantages of this bill are briefly stated as follows:

(a) It will give legitimate and sound opportunity for investment of cash had by the veterans with reasonable reward in terms of profit on resale; if he desires so to do, I have no objection to a veteran making a good money profit on his investment. For this profit will help him get into business or education or other opportunity "on his own" that much sooner.

(b) It will give the veterans themselves a definite, systematic available ways and means to learn what and where surplus property is to be offered and the prices thereof.

(c) It will give him a definite, specific priority—without any "ifs or ands." It is next immediately after priorities to governmental units; it is ahead of smaller war plants so the boys will have a chance to buy without competing with combinations having loads of money or pull or anything else which can get in ahead of the veterans themselves.

(d) It does not set up a new or different bureau or department. It accomplishes the desired results within the framework of already set-up administrative agencies.

(e) The sample display and sale in each judicial district in each State puts the stock pile and information and inspection and purchase within geographical reach of the veterans themselves. After all, the priorities are only as good for the veterans as is their opportunity to go and make a sound purchase. They are presently foreclosed in most cases, for they are located too far from the stock pile of surplus to go to the sale. So the dealers and buyers buy up in large quantities and then turn around and resell to the veterans themselves. Direct purchases by the veterans means more help to them and I am for it. These boys fought for us. I have every hope American businessmen will help the veterans reestablish themselves by helping the veterans to have every sound and sensible American opportunity to help themselves get reestablished. The veterans do not want charity nor sympathy.

For your fuller information I set forth the text of the bill itself:

H. R. 4931

A bill to facilitate purchases of surplus property by veterans

*Be it enacted, etc.*, That section 16 of the Surplus Property Act of 1944 (relating to sales to veterans) is amended by inserting "(a)" after "SEC. 16" and by inserting at the end thereof the following:

"(b) The Administrator is directed to provide by regulations for sales of surplus property to veterans under a program as follows:

"(1) In each Federal judicial district there shall be established at least one veterans' surplus property center (A) at which there shall be assembled, in sufficient quantities for sales for immediate delivery, and at which there shall be displayed, items of serviceable surplus property, the number of different

kinds of items to be reasonably representative of all the surplus property which is available for sale and is of a kind which can be sold for immediate delivery, and (B) from which sales by catalog or by sample of other kinds of surplus property will be made to veterans.

"(2) At least once every 30 days, the head of each veterans' surplus property center shall, by advertisement in newspapers of general circulation in the judicial district, by notice sent to each post office therein (such notice to be posted on the bulletin board of such post office), and by notice to the city clerk and the town clerk of each city and town in the district (such notice to be suitably posted by such clerk), inform veterans of representative items of surplus property available for sale at the center, and the prices thereof.

"(3) At each veterans' surplus property center, immediate delivery of items purchased by the veteran shall, at the option of the veteran (if such items are in stock at the center), be made.

"(4) The price to be charged for any item of surplus property sold to veterans shall not exceed the average cost of such property to the Government, proper adjustment being made for wear and tear, condition, age, and obsolescence.

"(5) The purchases which may be made at any veterans' surplus property center by any one veteran may not exceed $5,000 in the aggregate.

"(c) The requirements for surplus property of the veterans' surplus property centers shall take priority over all other dispositions of surplus property, except dispositions under sections 12 and 13, and shall also take priority over dispositions to or by the Smaller War Plants Corporation under section 18."

SEC. 2. The last sentence of section 18 (e) of the Surplus Property Act of 1944 is amended by striking out "The" at the beginning of such sentence and inserting in lieu thereof "Except as provided in section (c), the."

## Postwar Programs of Democratic and Republican Parties

EXTENSION OF REMARKS
OF
### HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

*Wednesday, December 12 (legislative day of Monday, October 29), 1945*

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject of the postwar programs of the Democratic and Republican Parties, delivered by Hon. Robert E. Hannegan, chairman of the Democratic National Committee, at a dinner held in Denver, Colo., on December 11, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I had intended to talk to you this evening about a program for America—about two programs, in fact; that of the Democratic Party and that of the Republican Party.

I had hoped to set these two programs, one against the other; to compare them so that voters in the important congressional elections which are now less than a year off might now begin thinking seriously about the issues between the two parties, basing their judgments directly on the stated positions of the parties themselves.

I am sorry that I cannot do so.

The Democratic Party's postwar program, as set forth in President Truman's recent messages to Congress and in his public statements, takes up the main problems confronting the country and deals with them specifically, point for point, in terms of action. And that is language that Americans like and understand.

Now, as you know, the leaders of the Republican Party met last Friday and Saturday in Chicago, and at that gathering a long-awaited statement of their party's policy was brought forth.

I have studied that announcement carefully. In the expectation that Republican voters were at last to know what they were voting for, straight from their own party leaders, I have read every line of it and tried to read between the lines.

I regret that the information remains, in Republican councils, a top secret.

I am unable to discover, anywhere in the announcement, a program for America.

In this difficulty, it appears that I am not alone. The editorial writers of the newspapers—Republican papers included—share it with me. They have reacted by calling this statement of policy—and I quote the words of one of them—"a masterpiece of evasion."

The rank and file of Republicans themselves—those outside the councils of the old guard—were quick to show their disappointment with it. Frank O. Horton, for example, Republican national committeeman from Wyoming, accused the congressional leaders of producing the same kind of statement that had contributed to Republican defeats through the past 15 years.

"At least," he said, "we should have a statement that people will read and understand."

The Chicago gathering also had the benefit of expert opinion when Clarence Buddington Kelland pronounced the platform—again I quote—"a meaningless conglomeration of ambiguous words." Mr. Kelland ought to know. He is a professional writer.

But whether the Republicans are satisfied with this political brain child or not, they have legally adopted it. And the electorate of America must judge it at face value.

What is that value? If the statement says nothing, as the Republicans themselves point out, then the only inference we can draw is that the party does not choose to make its stand clear to the people.

Well, we Democrats take our party obligation seriously. We are engaged in an important election contest, not a guessing game. If the Republicans refuse to come out with the truth of their position, it becomes our job and our responsibility to the electorate to do it for them. And I propose here and now to sweep aside the empty verbiage of Chicago and get down to realities, using the evidence that we have.

Individually, the Republican leaders in Congress have spoken their minds. We know where many of them stand. And now that the party has evaded its responsibility, we are correct in reading its intent not in what it says, because it says nothing, but in the statements and actions of its acknowledged leaders.

Individually, Senator ROBERT A. TAFT, one of the most influential members of the Republican leadership, exactly 7 days ago cast his vote in the United States Senate against American participation in the United Nations Organization.

Individually, Senator KENNETH S. WHERRY, Republican whip, another recognized party leader, also voted against American participation in the United Nations.

Individually, Congressman CHARLES A. HALLECK, of Indiana, chairman of the Republican Congressional Campaign Committee, declared last September that in this congressional campaign of 1946 his party must go back—I quote—"to old-fashioned conservatism."

Now, those are actions, straightforward speaking, which the American people can understand.

The people know what Congressman HALLECK's "old-fashioned conservatism" means. They remember the last time they had it, under Republican government, and what happened to them as a result of it.

They remember the old-fashioned conservatism that killed the hope of world peace after the First World War; that invited and sanctioned a reckless inflationary boom; that proved incapable of coping with the crash that followed; that brought ruin to our farmers and unemployment to our factory workers; and that turned the jobless veterans of World War I out of the Nation's Capital with guns.

We have a wholesome habit in America of judging a political party less on its promises for the future than on its performance of the past. But if a party's leaders were to admit error in the past and tell us they wished to abandon the old policies responsible for such error and do better in times ahead, we Americans would likely lend a charitable ear—especially if they were to tell us just how, specifically, they hoped to do better. We would not be convinced, but we are usually willing to give honest intentions the benefit of a doubt.

But when we have a record of the past before us, and the pages of that record are black with tragedy and disaster to the people, and a party leadership tells us it wants to go back to the ways of that past, then there is no question, there remains no benefit of doubt to be given. We know exactly where such a party stands.

That is the position of the Republican Party today, and the fake platform brought out at Chicago does not change it. Perhaps the rank and file of Republican membership was overoptimistic when it looked to Chicago for a sign, at least for some forthright word. Perhaps, considering the record, that was expecting too much.

But they had been given the solemn word of Congressman JOE MARTIN, House minority leader, that he and his Republican colleagues in Congress would draw up a "positive"—that was his word—a positive program for America.

And a fine, ringing promise it was that JOE MARTIN made to his party last September. I remember it well—all these months.

"We plan," he said, "to set before the country a definite and concise statement of the aims and objectives of the Republican Party as represented by Republican Members of Congress. We plan to do this in such manner as will leave no room for questioning as to where the Republican Members stand on the issues before the country."

The issues before our country are real. They are vital. Some of them are crucial. And they concern each one of us in our daily lives. They touch our homes and the future of our country.

This being so, they cannot be treated lightly. To make the claim of solving the problems that confront America in 1945, and at the same time to evade those problems deliberately, is to play with other people's lives.

There are times, there are levels of human experience, in which irresponsibility may be set down to ignorance and overlooked or forgiven.

But we are not on that ground now. Where it jeopardizes the integrity of our Nation and the safety of our children, such irresponsibility is immoral.

When the question arises of our national defense, for example, a political party is irresponsible when it makes a pretense of answering, as the Republican leaders have done, by stating that it "stands for a well-trained Army, Navy, and Air Force, adequate to meet any emergency."

Anybody stands for that. But where are we going to get the army? How are we to raise and maintain it? Let these Republicans in Congress answer that, as President Truman has already answered it, and they will have

met squarely and forthrightly the problem that confronts our country.

But they have deliberately chosen not to answer it; and in doing so, they are dealing as irresponsibly with the safety of our country in 1946 as they did when they voted against its defense in 1940.

Of course, the Republican platform does not tell us that armies grow on trees. But if there is any suggestion in this document as to how and where our Army is to be maintained in adequate strength, I would like to have it pointed out to me. I cannot find it.

So, again, with the problem of improving and maintaining the health of our people, President Truman, in a special message on November 19, told Congress of the vital need for a national-health program. He outlined the specific requirements of the people and asked for action on a five-point program of preventive and curative medical aid to meet those requirements.

Now, according to their congressional platform, the Republicans are in favor of health.

They go so far as to specify good health.

Yet you may read through that statement many times, as I have, and you will discover not one action that they propose to take for preventing and curing bad health.

And that irresponsibility, that willingness to play with the lives of our people and the safety of our Nation, runs through the entire document.

Here, then, is the "positive program for America" which Republican Leader JOE MARTIN promised 3 months ago. Here is the statement that would leave no room for questioning as to where the Republicans in Congress stand.

But I am concerned tonight with one aspect of this imitation platform which is of deeper significance to me than its text.

I am concerned with what has gone on behind the scenes while that text was written, particularly while the plank on foreign policy was written; and I shall be concerned with what goes on behind the scenes while that plank, in the months ahead, is held before the people.

That plank begins with the words:

"We support the United Nations Organization for international peace."

I am concerned tonight because I have just returned from overseas, and I have looked upon the shambles that was Europe, and I have asked myself the question that must spring into the thoughts of every American who surveys that panorama of death and then comes back to contemplate the unbroken walls of our homes here in America, the streets of our proud cities, the peace and plenty of our tree-lined fields.

"Is America," we ask, "is this fair land that we love, to remain unscarred and beautiful in our eyes, forever exempt from the scourge that has run its terrible course all about us, to east and west and around the world? Or have we but come to the second intermission in some vast three-act tragedy which must, a few years hence, play out its deadly plot here?

"Is America living on borrowed time?"

A little while ago that question would have been fantastic. Today it is not. Today it is the scientist who turns to the statesman, and dropping the cold, dispassionate language of his calling, shaken by what he himself has created, asks:

"Can you protect our people from the thing that we have made? You, your work, that principle of statesmanship which must bring the powers of the world into accord for the common security—there in that principle of international cooperation lies the only known defense. How good is the promise of peace? How much can we hope for?"

That defense against the atom bomb and the carrier rocket and the dread assortment of other weapons that are certain to emerge from scientific laboratories was given to us by a man whom the historians of all countries will some day call the Father of the United Nations—Franklin D. Roosevelt.

That defense has been brought closer to realization and completion by a great leader who believes in it and who has remained true to his pledge to carry on—President Harry S. Truman.

One week ago today, the legislation to give the United States full, active participation in the United Nations Organization was passed in the Senate by the overwhelming vote of 65 to 7.

That was good news. It was news to make the hearts of all of us rejoice.

It was not news that gave us the right to be complacent. It was not news guaranteeing us that the long struggle for international cooperation has been fully won, that we need do nothing more. And it is my purpose here tonight to sound a warning to the Nation.

We are now in the eleventh hour of the long struggle to overcome old hatreds and to exterminate, once and for all, the war-breeding virus of isolationist thinking.

Yet there remain among us men who, for the sake of those old hatreds and that thread-bare philosophy of isolationism, would prevent America even now from joining the United Nations Organization, men who voted, only a week ago, to keep America out of it.

There were others who attempted last week in the Senate to apply crippling amendments to the legislation for world peace. Seventeen Republican Senators voted "aye" on one such amendment. It was only after they were shown the overwhelming strength against them that some of these 17 turned about and voted for the bill itself.

Now, those are men who hold positions of power in the Republican Party. Were they insurgents or lone hands outside the councils of the Republican Old Guard we could account for them as such and disassociate them in our minds from Republican Party policy.

But I have pointed out that these men, men like Senators TAFT and WHERRY, are leaders of their party, accepted as such, recognized as such.

Every Republican voter in the United States, as he considers the safety of his country and the future of his children, may well ponder this fact, may well ask himself:

"How much faith can I place in a party leadership which avows support of the United Nations in its pledge to the people and votes against the United Nations in Congress?"

Before we let ourselves become complacent in the Senate vote of last week let us remember that it was 11 o'clock when the enemies of world peace struck 25 years ago—struck and succeeded in wrecking the peace of Woodrow Wilson.

Before we let ourselves become complacent let us heed the warning given in a recent editorial in the New York Times. Discussing the isolationists in Congress, the paper says:

"Their strategy last July was to vote for the (United Nations) Charter and try to weaken it when the participation bill came up. Their strategy now may be to register their objections and hope for a change of popular sentiment which will let them do some undermining later on."

Today while the guns are silent, while all over the world the lights are lit again and men once more are in danger of being lulled into the complacency of truce on earth, let us remember that the making of peace on earth is a long process; that the task of completing this peace will be carried over to the Congress that we are to elect in 1946; and that whether the enemies of world peace can undermine it, whether it is to be killed once more by the old Republican formula of amendment and revision or whether it lives to guard America from the hell of atomic warfare, will depend upon the kind of men we elect next November. The Republican leadership has shown us, by its own acts, that America's only safe guaranty of living at peace with the world lies in the retention of a Democratic Congress.

When I decided to make it my purpose in Denver to sound this warning, some well-meaning friends—a few—cautioned me against it.

It would be a mistake, they said, to choose international cooperation as my subject here. They reminded me of the traditional isolationism, as they called it, of the West. No; when you go out to Denver, they said, talk about mining or sugar beets or the tourist trade. Don't talk about foreign policy and remote matters of that kind.

Well, I have talked to you about the way to keep atom bombs out of the skies over your homes here in this beautiful city which lies inland by many hundreds of miles from either shore, and I am as earnest and I believe I have as good reason to speak of it here as I would have in Massachusetts or California.

I believe the people of Denver and the people throughout our great West are as far from isolationism in their thinking, as alive to the direct menace that modern warfare would mean to them, as the people of Seattle or Cape Cod or any other part of the land.

And so I am glad of the opportunity that has been given to me to sound my warning to America from this high ground. I see it as an opportunity to demonstrate to your fellow Americans all the way out to both coasts that the menace of isolationism is not at home in the West.

We Democrats stand firm on the statement we made in our platform of 1944:

"World peace," we said then, "is of transcendant importance. Our gallant sons are dying on land, on sea, and in the air. * * * We pledge that their blood shall not have been shed in vain. America has the opportunity to lead the world in this great service to mankind. The United States must meet the challenge. Under Divine Providence, she must move forward to her high destiny."

This we have not forgotten.

This we shall not forget.

## Tires for Veterans

REMARKS

OF

### HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. BROOKS. Mr. Speaker, above all other considerations in the allotment of tires, OPA should take care reasonably the needs of the returning veterans. This has not been done. I have just recently received a wire from the chairman of the civilian OPA ration board at Shreveport, La., informing me that the December quota of tires allotted for the needs of Barksdale Field Separation Center at Shreveport, La., amounted to 39 passenger tires, while the Army post asked for 1,000 tires for soldiers being discharged at this post. I set forth the wire in detail:

Separation center, Barksdale Field, tire quota for December reduced to 39 passenger tires, which is grossly inadequate in view of increased rate of discharges. Minimum need 1,000 tires. Regional and district office OPA refuse any relief. Understand Jefferson Bar-

ricks, Mo., December quota 608. Caddo Parish unable to render assistance in view December quota lower than any month prior to opening of separation center. We appeal for your immediate assistance.

J. H. PABODY,
*Chairman, Caddo Parish Transportation Committee.*

Upon receipt of this telegram from the local OPA board chairman, I appealed to the office of Chester Bowles, OPA Administrator, urging the dire necessity of giving to the returning veterans being discharged a liberal supply of tires that they may immediately reestablish themselves in civic and community life. This appeal by me direct to the office of Mr. Bowles resulted in an additional allotment of 200 passenger tires, leaving the veterans being discharged at this separation point in north Louisiana short-changed some 661 passenger tires.

This morning, Mr. Speaker, I received an additional appeal from the chairman of Caddo Parish Transportation Committee, who is also chairman of the local OPA tire-rationing committee, urging the immediate increase in the December allotment to meet the needs of the returning veterans. I set forth this telegram in full:

Thanks your wire Barksdale tire quota. My original telegram said minimum need 1,000 tires which was true if all applicants were supplied with their request. However, with cutting down all requests and limiting any one applicant to 2 tires they can get by with total of 600, which means 335 additional quota. Administrator Bowles' letter received this morning. His statement in error relative Caddo Parish quota total November quota 2,860, December 2,340. Caddo Parish needs 2,500 additional quota to cover increased request from transient soldiers and conditionally approved applications for October and November and increased requests from public. Sincerely hope it is true that tire rationing to end January 1.

J. H. PABODY,
*Chairman, Caddo Parish Transportation Committee.*

Mr. Speaker, the veteran returning to our midst is entitled to first consideration by the OPA in meeting his needs for passenger tires. When he is released, he often finds the tires to his old car, if he has retained it, rotted and useless. If he has previously sold his car, he purchased a used one and is immediately faced with the necessity of obtaining tires. These he must have, in many cases, if he is to get into active business and if he is to move freely to and from his own home. These he must have if OPA is to keep faith with those who fought for this Nation and its people. It is indeed a shabby situation which requires that these returning heroes beg for one or two tires for the old car that they may be able to enjoy those comforts and necessities which you and I have obtained during their absence.

This is not the only case where OPA has failed to meet the needs of the returning veterans for tires. Other appeals have been received and other claims filed with OPA with varying success. It is apparent, however, that our fighting men must bow to the almighty OPA and humbly beg for tires before the ink on their discharge certificates becomes dry.

## Antiracketeering Bill

EXTENSION OF REMARKS
OF
## HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. WOLVERTON of New Jersey. Mr. Speaker, the so-called antiracketeering bill before the House is designed to protect trade and commerce moving between States against interference by violence, threats, coercion, or intimidation.

The hearings conducted by the Committee on Judiciary of the House during April and May of 1942 left no doubt in the mind of any fair-minded person that in different places in the Nation illegal and unconscionable practices were being pursued that prevented farmers from bringing their produce into large cities unless and until they met demands of certain members of local teamsters unions for the payment of tribute.

These practices were in clear violation of State laws. Likewise these unlawful practices were denounced by every representative of organized labor who appeared before the committee. They left no doubt that they considered these practices unlawful, against good morals, and harmful to the cause of organized labor.

These representatives of organized labor, while leaving no doubt that they condemned all such extortion practices, nevertheless expressed the fear that the bill contained language that would destroy certain acknowledged and recognized rights of labor in its attempt to deal with the conditions complained of. There was no objection upon their part to deal with acts of extortion, or acts of violence, in connection therewith. They also felt that present existing State laws were sufficient to deal with the situation.

My vote against the bill at that time was based upon the fear above expressed, and, secondly, because there was sufficient law in each of our States to prosecute acts of extortion and, therefore, no need of additional Federal law to accomplish the purpose.

The situation that now exists with reference to the bill (H. R. 32), now before the House, is considerably different than when such legislation was previously before the House. In the first place the present bill does not contain any language that in my opinion would in any way adversely affect present existing rights of labor, and, furthermore, the Supreme Court in its opinion in the case that arose under the previous bill leaves no basis for the contention that the enactment of this bill would destroy any legitimate right of labor. In this connection I also draw attention to the fact that the bill as drawn cannot be considered as antilabor. It refers to any person guilty of extortion. It makes no difference whether such individual is a member of a labor union or not. It refers only to individuals who practice acts of extortion and violence. Of course, this general language would include a member of a labor union as well as anyone else who violated the law.

Certainly no law-abiding citizen would countenance for even a moment the acts of extortion that have been shown to be practiced against farmers in their honest endeavor to take their produce into legitimate markets for the benefit of the consuming public.

I have known intimately officers and members of labor organizations in the First Congressional District for many years. There has never been one of them who, by word, act, or conduct approved of the acts of certain individuals in the labor movement that has given rise to the necessity for this law. I owe it to the good name of these law-abiding men, whom I have learned over a period of years to honor and respect in their endeavor to advance the welfare of workers, to vote for a measure that makes unlawful extortion committed in the name of organized labor, or otherwise, by those who do not recognize their duty as citizens or respect their obligations as members of labor unions. And certainly I owe a duty to the farmers who seek to do nothing more than carry on legitimate trade in supplying consumers with the necessities of life.

I had hoped that local and State law enforcement officers in our large cities, where the violations usually occur, would measure up to a complete fulfillment of their duties as such officers and enforce the laws against extortion and violence in cases affecting our farmers. But unfortunately in many instances they have not done so. This failure makes it reasonable and necessary for the Federal Government to step in and do this all-important job of protecting law-abiding citizens from acts of extortion and violence.

For the above reasons I shall vote for the pending bill.

## Demobilization

EXTENSION OF REMARKS
OF
## HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES
*Wednesday, December 12 (legislative day of Monday, October 29), 1945*

Mr. JOHNSON of Colorado. Mr. President, a group of American soldiers on Mindanao have sent me a letter relating to demobilization. The letter is addressed to the Congress, and it is most thought-provoking and indicates what American soldiers in far-away places are thinking. Therefore, I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MINDANAO, *November 1945.*

*The Congress of the United States, Washington, D. C.:*

WHAT IS THE SCORE?

We who are stationed here on Mindanao, without a single exception, have been taught

that our Government is democratic in spirit and, therefore looks out for the welfare and protection of its citizens—in short the recognition of the dignity of man to the effect that he is not imposed upon by any department, pressure group or clique. We have been further taught that we were sent to this remote and desolate island in the Pacific to insure freedoms—freedom of speech, freedom of worship, freedom of the press, and freedom from want—to all of its inhabitants. We have been propagandized to the effect that we must give these "four freedoms" to the entire world of which a failure to do so would means chaos and slavery to ourselves and to our posterity. This is the score that brought us to this island and sent millions of our kudies to all parts of the world and thousands to unknown islands from which they shall never depart.

We appeal to you gentlemen of Congress because we have that constitutional right; because you are delegated the power by the people to be used in guaranteeing our freedom and welfare; because it is you gentlemen of Congress that the dictatorial and military-caste conscious Departments of War and Navy, can be forced to treat the men in their services as competent individuals with a mind of their own, and a definite life to live, a home to establish, and maintain, all of which cannot be realized in the services, and because you are the only hope for the solution of our problems, your failure to solve them or to give satisfactory answers to them leaves their ultimate solution in the hands of us who are now here on Mindanao and throughout the world, upon our return to civilian life.

We want to know upon what basis the European theater was considered practically 95 percent of the world's victory and lay in the defeat of Germany. Why was all entertainment of any value sent to the European theater, while a few reprobates were sent to the Pacific theater; why was the best food, equipment, and greater number of personnel sent to European theater while the Pacific theater received left-overs? We want to know further why the war in Europe was considered as the battlefield so large and important that the Pacific war against Japan was considered merely as a skirmish of little importance?

Could the great importance given to the defeat of Germany be related to the growth of great industrial establishments, scientific developments, and military efficiency? Could this importance have related to the fact that these progressive and aggressive strides threatened to end economic domination of the world by a few ruling families of the Allied nations? Could this importance be attached to the abolishment of the last vestige of the definite and common-sense policy of prohibiting, for all time, marriage outside of the white race, thereby justifying, encouraging, paving the way and sanctioning intermarriage of Negroes and whites in the United States and all European countries?

This entire Pacific theater of war has never been considered as a major objective. The newspapers gave and are giving little publicity to all that the men have done and are doing here. The radio is filled with the grand job that was done and is being done in Germany; the picture-production companies have filled and are continuing to fill every theater at home and throughout the world including all GI movies, with anti-German propaganda of which we are fed up while on the other hand there has been practically no distribution by theater or publications, or by lecture, any propaganda to build a will to utterly annihilate the "Sons of Heaven" whose greatest glory was killing Americans and sabotaging America from coast to coast, on the farm land, in the cities, in the schools, especially University of California, University of Oregon, and the University of Washington. Yes, gentlemen of Congress, our Government and our fine War and Navy Departments have been and are so busy shoving German propaganda down our throats by way of orientation of Information and Education Division by lectures given by those men elevated to position of gentlemen, in name only, by your congressional acts; by way of the press; by way of radio; by way of the pulpit; that the Pacific, Asiatic war with its far-flung battlefields became in the eyes of that part of the world not involved directly in its prosecution only a minor skirmish.

We have been propagandized to believe our gentlemen by act of Congress who are in charge of demobilization have evolved a democratic policy which is fair to all. Yes, they worked out the infamous and notorious point system. They justify this greatest display of incompetence in the history of all War Departments, upon the basis that the men in the service requested it, which is a downright lie because only a very small number of enlisted men were given an opportunity to voice their wishes. Following true to form it seems rather definite that the wishes of European theater troops were followed; also those of State-side members of our armed defense.

How can the War Department with any degree of sanity attempt to propagandize us to believe that any person in the armed forces of the United States with 2½ to 3 years active service should have a priority discharge over the person with from 3 to 5 years active service? Why does the War Department and the military display their stupidity by attempting to make us believe that the young man, the unmarried man, the childless couples are all the cream of a military machine and are so deserving as to be the first called to military dictatorial rule and the last to be relieved from it? And what is more we want to know why enough of you gentlemen of Congress stood by, thereby sanctioning their stupidity?

We are not so childish in our thinking, gentlemen of Congres, that we cannot detect the appreciation of our services rendered in this theater of war, by you and the military. You have definitely shown it by your undivided attention to evacuation of troops from Europe and a snail's pace evacuation for troops of Asiatic Pacific theater.

Gentlemen of Congress our intelligence has been taken so lightly that the War Department and the military with your O. K. have with flowery phrases and pitiful and stupid moaning attempted to make us believe that men from 40 years down to 35 have more responsibility, more to live for than young unmarried men, young married men with no children and, therefore, shall get priority in returning to civilian life. Such policy is being carried out and none of those aged gentlemen whom you call the backbone of the Nation are at home now while the young men who slushed through the mud, blood, and grime to destroy the enemy are still isolated here on Mindanao because they happened to be young with nothing to live for except the hardships and tragedy of the battlefield.

As we stated before, gentlemen of Congress, we are not so childish as to miss the correct interpretation of the War Department and the military's action which has to date been sanctioned by enough of you to be put into operation. Yes; action that returned physically fit men for military duty to their homes after the long and strenuous term of 2 months in disease-infected Philippines while there are those here now who had over 36 months of this grand and glorious jungle paradise of the Pacific with no assurance as to when they will follow those who are so much more important to their country—the 40-year-olds, the "38'ers," and "35'ers" who are alleged by the War Department, the military, and sanctioned by you, to be the greatest contributors to the progress, growth, and welfare of our United States of America.

We do not at this time, gentlemen of Congress, wish to cover the War Department's and military's action which you have so freely sanctioned, however, we do want you to know some objectives which we have seen in their action, which are as follows:

1. Security of positions,
2. Political entrenchment, and
3. Military caste crazy.

Gentlemen of Congress, we are aware of the problems of far-reaching consequences created by the War and Navy Departments and which you were so united with them that you failed to halt their growth. Where are the great Pacific and Atlantic United States Navies? Where is our mighty merchant fleet? You know as well as we that when Japan and Germany were threatening domination of our possessions every kind of oceangoing craft was used in rushing troops for their defense. Comfort of troops was secondary. Troops and supplies were moving in a continuous stream to all parts of the world. The War and Navy Departments handled the great and burdening problem of logistics swiftly and efficiently. Which clearly proves that logistics involved in demobilization can be handled much faster because of use of ships which in time of war transported supplies and equipment to all parts of the world, can now be used in transporting troops and if the same initiative were used by the War Department and military against the Japanese as against the people of Germany there would be several Japanese craft transporting American troops to the homeland today, but the Japanese are favored by being "Sons of Heaven" and are getting priority on American ships engaged in returning them to their home, while we Americans continue to wait. All in the name of economy, a good one, overshadowing Dr. Goebbels' propaganda.

It is said by some that there must be conveniences added to converted troop ships for men waiting transportation home. We unanimously say the hell with that line and bring on any craft that will carry a soldier to the United States.

We, who are here on this island, heard of your great Navy Day. Did it ever occur to you that there are troops waiting for those very ships and have been for over 4 months while the brass and braid put on the eyewash and guzzle liquor? Could this great day have been the cause of postponing our sailing date and even today has delayed announcing a definite date?

Gentlemen of Congress, we know the answers to these questions which are shown by the gratitude of our War and Navy Departments in their inaction to get us home and leaving us all the great advantages of gazing day after day toward an empty harbor, our tent city, dusty highway, and desolate hills.

Not realizing their folly, the brass in the War Department, sent to this island the famous Ninety-third Division. They strengthened their folly to the degree of the intelligence of jackasses when they brought them into contact with all troops (white) on this island and especially with those of the Thirty-first Division and attached units.

We know of the Ninety-thirds inefficiency. We know their record for unreliability in battle. We do not hold their incompetence against them but when they come here crowding us off highways into canyons, abusing their authority as MP's and acting in general that they won the "dam" war and the Thirty-first Division, attached units and other white personnel should "heil" them, then we, as one, object to their "dam" overbearing attitude and as a result lives have been lost. No amount of propagandizing will erase the differences that exist between the two classes of troops. This situation grows worse with each passing day while our transports lie idle.

Not only do these famous troops of the Ninety-third show their true color in their every activity, here they have openly made their boast that they were in this war and upon return the white girls will be available and subject to their will. Such statements

forewarn that when they attempt to exercise such attitude they will melt as snowballs in hell.

Yes, gentlemen of Congress, we leave it to you to decide if there are problems to be solved and we inquire as one man why you stand by and uncheck the dictatorial policy rammed down our throats by the brass and braid.

After being subjected to dictatorial brass and braid policy from 3 to 5 years we, gentlemen of Congress, as one man are searching for the reason we fought this war and with each passing day on inaction in returning us to the United States of America we find it more difficult to locate.

We believe, gentlemen of Congress, that an executed wrong cannot be righted, but with vision, determination, and the courage to act, the original wrong can be eliminated, thus ending all chances for a repeat. We mean that by promptly executing the discharge plan you will accomplish the end of a subwrong--incompetence and inefficiency in returning troops to their homes even though the imprint shall always remain.

Gentlemen of Congress, we are agreed to the man that you are faced with a challenge which has many problems that must be solved. We are also agreed to the man that the objectives for which we were involved in this war are so remote that they are invisible.

We are further agreed as one man, gentlemen of Congress, that part of the so-called objectives of this World War II may be retrieved if you act with wisdom, speed, and efficiency in getting down to realities which must result in getting us home without delay.

## Hemispheric Cooperation for World Peace

EXTENSION OF REMARKS

OF

### HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

*Wednesday, December 12 (legislative day of Monday, October 29), 1945*

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by His Excellency Pedro G. Beltran, Ambassador of Peru, at a meeting of the Pan American Society of Massachusetts and Northern New England, Inc., on Wednesday, November 14, 1945, at Boston, Mass. In his address appears a statement which I wish to read at this time. Let me observe that it characterizes the quality and very great interest which we should have in the address. In speaking of the American Republics, Ambassador Beltran said:

We have to draw together for our very safety. Our governments have realized it. The resolutions passed at the Inter-American Conference in Mexico City bear witness to it. The proposed Inter-American Treaty that will soon be negotiated and which is to implement the Mexican resolutions is another proof of it. This is all in the right direction. Yet can we claim that it is enough? I say that it is not because we need something more. It is not only the governments that should get together. It is the peoples of our different countries that should become alive to the need for getting closer to each other. Then we shall be on firmer ground. When public opinion becomes insistent there is nothing else left for governments to do than to fall in line. On the other hand, official action when not duly backed by a general consensus of opinion is ephemeral. What is done one day may be reversed the next. This great country became what it is today when the inhabitants of the Thirteen Colonies realized that it was a question of life or death to stand together. We need to rouse the same feeling all over the hemisphere. There is no reason why our determination to remain sovereign and independent nations should be in the way. Rather it should make us realize that to defend that very sovereignty and independence we are in need of each other's support.

Mr. President, I have caused an estimate to be made by the Public Printer of the cost of printing the address in the Appendix of the RECORD. The estimate, which is submitted with the copy of the address, indicates the cost will be $130.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Now that the war has come to an end at last it seems appropriate to take stock before its lessons are forgotten. President Truman, in his Navy Day speech, said: "We have learned the bitter lesson that the weakness of this great Republic invites men of ill will to shake the very foundations of civilization all over the world." I do not think anybody will be inclined to question this for if Hitler had only known what this country was capable of, he never would have been so crazy as to start the struggle. This is something to bear in mind forever in the future. It is true that the enemy is now prostrate. But so it was in 1918 and yet it has been our lot to witness how conditions can be made to change in a tragic way in the matter of only a few years.

Let us remember also that the war was not won easily. Referring to the days between Pearl Harbor and Stalingrad and El Alamein, General Marshall has this to say in his recent report: "In those hours Germany and Japan came so close to complete domination of the world that we do not yet realize how thin the thread of Allied survival had been stretched." For this great democracy was caught unprepared. Fortunately it had time to get ready before it was too late. But this was solely due to the fact that the stage of scientific development reached at the time did not make it possible for the enemy to attack America as long as the British were holding them in Europe, at first alone and later on together with the Russians.

But, will it be so in the future? Can you afford ever to run the same risk again? The present strength of this great Nation, unequaled in history, must not delude anyone into complacency. In the future there will be no time to get ready; one will have to be ready from the start. A few weeks, perhaps a few days, might make all the difference, even though the enemy may have to strike from far away. Let me refer again to General Marshall's report. He quotes the concluding paragraph from the estimate he asked General Arnold to prepare on the capability of modern weapons in his own field of action. It reads as follows: "All of these weapons and their possible combinations make the air approaches of a country the points of extreme danger." "Many Americans do not yet understand the full implication of the formless rubble of Berlin and of the cities of Japan. With the continued development of weapons and techniques now known to us, the cities of New York, Pittsburgh, Detroit, Chicago, or San Francisco may be subject to annihilation from other continents in a matter of hours."

This is not a warning to the United States alone; it is a warning to all the countries of this hemisphere. We are all in the same danger. These weapons know no frontiers and distances mean very little. The enemy does not have to reach Panama to destroy the Canal. A base almost anywhere along the Pacific seaboard, from Mexico to Peru, might be sufficient for that. The same can be said of the Caribbean coast of Central America, Colombia, and Venezuela. The Brazilian bulge, so far away from this country, is of vital importance for its defense. During the war it was the convenient jumping-off place for planes flying across to Africa. One can well imagine the far greater importance it would have in any future struggle. An enemy beachhead in any of our countries would be a threat to all the others. You cannot think any longer of the piecemeal defense of the hemisphere. No country can be safe unless it can rely on effective support from the others. In future, it is no exaggeration to say that we will stand or fall together. Paradoxical as it may seem today, when you have reached the zenith of your power, your security is much more tied up with that of the hemisphere than in the past.

We have thus become more interdependent than ever before; in fact, we have reached a degree of interdependence that nobody could foresee before the latest scientific progress that made possible new weapons of tremendous power that can be directed to their targets by remote control from unbelievable distances to carry out their mission of destruction. Nor is there anything to complain of in this greater interdependence between our countries if we take due account of it and act accordingly drawing our ranks closer together. We shall then be all the stronger as the resources of the whole hemisphere are so much greater than those of any of its component parts. We have to draw together for our very safety. Our governments have realized it. The resolutions passed at the Inter-American Conference in Mexico City bear witness of it. The proposed Inter-American Treaty that will soon be negotiated and which is to implement the Mexico resolutions, is another proof of it. This is all in the right direction. Yet can we claim that it is enough? I say that it is not because we need something more. It is not only the governments that should get together. It is the peoples of our different countries that should become alive to the need for getting closer to each other. Then we shall be on firmer ground.

When public opinion becomes insistent there is nothing else left for governments to do than to fall in line. On the other hand, official action when not duly backed by a general consensus of opinion is ephemeral. What is done one day may be reversed the next. This great country became what it is today when the inhabitants of the Thirteen Colonies realized that it was a question of life or death to stand together. We need to rouse the same feeling all over the hemisphere. There is no reason why our determination to remain sovereign and independent nations should be in the way. Rather it should make us realize that to defend that very sovereignt and independence we are in need of each other's support.

Can we say, however, that everything has been done in the past or is being done at present to rouse public opinion in our countries to this need for greater cooperation and more intimate understanding among Americans, in whichever country they may happen to live? In any case, we must admit that we are yet very far from that goal. The people in one nation are not familiar with the problems of the others. They feel strangers when they venture in this hemisphere outside their own country. This we cannot allow to continue. The greatest contribution that we can make to the future security of each of our countries is to dedicate ourselves to this great task of bringing our peoples closer together, of making them trust each other, of bringing about real understanding; in short, of developing that genuine friendship which makes one feel at home in somebody else's land.

I think that this is the proper time to set to work. There is no longer any reason for that mistrust of the colossus of the north so prevalent south of the Rio Grande in the past. Facts speak louder than words and nobody can question today that the foreign policy of the United States is based on these two basic principles: first, respect for the sovereignty and territorial integrity of the other countries, however small or weak they may be; and, second, noninterference in their internal affairs. Because it was not always so in the past, untold harm was done. The Monroe Doctrine has been a cornerstone of the independence of the Americas. Yet it could never bring us together as long as there was reason to fear that under its guise the most powerful member of the community could impose on the weak. For it is only human to sense more the immediate danger than the potential one from afar. In fact, pro-Nazi elements in the other American countries still thought they could play on this fear to stir anti-American feeling during the war.

And so the time has come when we should ask ourselves what is the best approach to the problem. To get people to trust and understand each other, to feel friendly toward each other, you must try and get them together. They must have dealings among themselves and see as much as possible of each other. This is the proper human approach to what is nothing but a human problem. It is most unfortunate, for this reason, that neither you in this country nor we in the South have been in the habit of visiting this hemisphere whenever we traveled abroad. Both here and in Latin America a very large proportion of people is found familiar with European countries, yet who know hardly anything of other American countries. Perhaps this was bound to be so in the past. However, it is not only in our traveling habits that we were drawn more to other lands. With our trade it was just the same, and here is a point to which I think should be given a great deal of consideration because so far, rather than shaping our fiscal policies so as to develop the maximum commercial intercourse between our countries, we have gone in the opposite direction. Governments may be thinking of new treaties to bind our nations together yet their policies have tended to make it progressively harder for us to trade among ourselves. They have thus been driving our peoples apart. A typical example is to be found in the tariff policy of this country. Let me give you some figures. According to the United States Tariff Commission, in 1932, 33½ percent of American imports from all countries had to pay duties, whereas less than 29 percent of imports from Latin America were subject to the tariff. But in 1937, only less than 41½ percent of imports from all sources were dutiable, whereas over 48 percent of imports from Latin America came under the tariff. Furthermore, the duties charged represented less than 37 percent of the value of the goods brought into this country from nonhemispheric sources, whereas it was equal to 47½ percent in the case of imports from Latin America.

Now, I ask you, how can we expect a real feeling of solidarity to develop among the peoples of this hemisphere as long as such a policy prevails? Do you not think this may make it a little hard at times for the people south to understand your sincerity when you talk of the good-neighbor policy? It is true that things are not quite is bad today, due to the trade agreements negotiated since 1937. But what I am driving at is the fact that instead of tending to bring our peoples together governments have been acting as if they wanted to prevent them from having any dealings. They proclaim loudly that our nations should get closer yet they make it as hard as possible for our nationals to trade. They want solidarity in the political field, but they oppose it in the economic one. I ask you: Do you think these two policies are consistent? Do you think you can ever be successful in the first if you persist in the second? And yet, the figures mentioned do not tell the whole story as, on top of the tariff, you have quota restrictions which rigidly limit imports into this country. In some cases, quotas are so small that they amount practically to prohibition.

The British, in trying to bring the different countries of the Empire closer and more firmly together, went in the opposite direction, setting up a system of imperial preferences which made it easier to trade within the Empire than with the outside world. They knew that they were doing this at the risk of antagonizing other countries and provoking retaliatory measures, yet they thought it was worth while taking these risks in the belief that nothing brings countries together more than commercial intercourse, because it makes people know and understand each other and each other's problems. There used to be an old British saying that "trade follows the flag." Realistically, they have been using trade to cement the foundations of the flagstaff.

By what I have just said I do not mean to advocate any inter-American preferential tariff arrangements because the world should move away from any sort of discrimination. The same merchandise should pay the same duty regardless of the country of origin. Yet the tariff can be drawn up so that only the lightest duties be levied on such goods as can be imported from other American countries. In other words, the policy should be reversed. In this way you will be helping the development of inter-American trade without any discrimination against the outside world because if other countries can ship the same goods they will not have to pay a higher rate. Instead of driving our peoples apart we would be creating conditions under which they would tend to get together.

Trade relations, particularly so nowadays, do not stop at the letter-writing stage. Soon after commercial relations are established the export and import managers visit the countries with which they are doing business. They are followed by the principals and by other members of the organization until this becomes a regular routine affair. We know that from our own experience because that is precisely what happened to Latin Americans with Europe, with which they have always carried the bulk of their trade. In fact, relations went even further because the children were often sent to be educated in those European countries with which the parents traded. Should we be surprised that so much of Latin America has looked in the past to the outside world when we know that they had to go to other continents to find an outlet for their products? Events in the Old World have been of concern to us because our economy was dependent on conditions in the countries with whom we traded. Anything happening there affected us. On the other hand, economic developments in this country were only of interest to us insofar as they affected our European customers.

The war has made it necessary to import large amounts of strategic materials into the United States. The application of the tariff has been suspended in most cases and a large inter-American trade has developed. The effect of this in drawing us closer together has been remarkable. Are we going to go back now to prewar conditions? Are we going to lose any of the ground gained? The trade policy of this country has been inconsistent with all the pronouncements and lofty declarations that we hear every day about inter-American solidarity. People are much more impressed by deeds than by words. If we go back once more to a system where we can only buy from you but not sell to you as in the past, I think that untold harm will be done to the cause of hemisphere solidarity. It is hard to realize the full extent of the change brought about by these closer commercial relations in both directions in the few years of the war. It would be a tragedy if by reason of the fiscal policy of this country the other members of the American family were to be obliged, once again, to look outside the hemisphere for markets for their goods. We can undo in a very short time what the necessities of war achieved.

In the past our trade relations with this country have been, as I have just mentioned, mostly one way. At least I can say that of Peru. We used to ship our products largely to Europe and also, to a certain extent, to the Orient. Hardly anything came here. But we used to buy a great deal from you. We will continue to need your wares after the war because American skill and technical knowledge are so far ahead that we shall always require them. In the past we used to pay for what we bought here by transferring funds from other countries to which we sold. Will this be possible after the war when so many of those countries may not be able to afford to buy from us unless we buy also from them? Unless the fiscal policy of this country is changed we are running the risk of not even being able to go on buying from you as much as in the past. Our trade intercourse may become even less than before. Trade, in the long run, is nothing but barter carried on a money basis, for we pay for what we buy abroad with the goods that we sell to other countries. If we are unable to sell to you, and our customers are not in a position to allow us to buy dollars with the proceeds of our sales to them, then we will be unable also to buy in this market.

In many cases your import barriers may have been justified in the past when you had ample natural resources and before you had reached your present stage of economic development. But, at present, there is no sound economic reason for preventing so many of our materials from coming in. Your resources or some of them are being quickly exhausted. Mr. Bernard Baruch, only 10 days ago, in a letter to Representative Gore, had this to say on the subject: "We cannot go on depleting our soil and mineral resources as we have in the past 7 years without tragic results to our whole economy and national life." Secretary Ickes has publicly called attention to the same problem listing 21 minerals of which the United States has now less than a 35-year supply. It looks as if nobody could question the fact that in many cases you have consumed at least what was easier to produce and therefore your present domestic sources of supply necessarily imply a very high cost of production. Would it not be much more profitable and wiser, from the point of view of conserving your resources, for the United States to allow those imports to come in, making available to us, in this way, at the same time, the necessary exchange to buy your manufactured articles? Mr. Ickes says that the United States should have access to the minerals in foreign lands, but it is this Government, through its fiscal policy, that has prevented such materials from becoming available to American users in the past.

It is commonly acknowledged today that prosperity cannot be achieved in any one country by itself. It is also generally agreed that you cannot rely entirely on your domestic trade to maintain a reasonable amount of activity and employment. Exports are a necessary requisite and the export business cannot develop unless other countries have the means to buy from you. A more liberal fiscal policy would not there-

fore be harmful to your economy. You would then be selling more abroad for the very reason that you would be buying more. Your own economists say so. This is today the generally accepted doctrine. Now, if at the same time that this is economically sound it also helps bring our peoples together, then the sooner it is done the better. There is no gainsaying that one of the greatest contributions to the cause of pan-American solidarity would be the development of larger commercial intercourse between the American countries which would result in their becoming as interdependent economically as they are interdependent already from the point of view of their defense and security.

I can only think of one other way in which we can contribute as much, if not even more, to bring about genuine friendship and good will between our peoples. Before I finish tonight I would like to say something on that. When a boy gets his higher education in another country he becomes familiar with its problems. He gets to understand why things are done in a different way than he was accustomed to at home. He comes to see other peoples' points of view. There is no room for misunderstandings then for beneath superficial differences we are all as human and very much the same. It is the casual observer who goes back home with mistaken ideas of the people because he is more impressed by peculiarities in habits and customs, in dress and even in expressions, than by the real human factor behind our outward actions and appearance. This does not happen when you are young and live long enough in a foreign country. I do not favor a short postgraduate course because a boy does not have time enough then to acquaint himself properly with conditions in the other country. He leaves when the ice is barely broken, when he has not yet had an opportunity to know individuals because he has not had time to develop close friendships. Boys should rather be sent for the whole of their higher education. Then they are likely to be younger when it is easier to become adapted to different conditions. They would be staying longer and, when they went back home, they would be the best apostles, the stanchest advocates of more intimate relations between the two countries.

They would continue to owe allegiance to their country of birth, yet they would have at heart the development of closer ties with their alma mater with what in a way could be described as their second spiritual home.

Now, how can we get a large number of boys to go to other American countries? As I have said before, in the past they have usually gone to Europe because their parents' connections were in Europe. But, in any case, if we let things alone it will be only the children of the well-to-do who will get a foreign education. This is wrong. This opportunity should be open to promising boys regardless of their parents' means. To this end governments should step in and provide scholarships. Although your Government can help more than any other one because it has greater resources and because you have so many first-class colleges in the United States, it should be easy to work out reciprocal governmental arrangements so that the flow would not be one way only. That would not do either. Just as the boys from Latin America should come here, so also yours should go south. It is not enough for us to know you, for you cannot establish one-sided friendship. You should also get to know us. And just as our boys should learn English, so yours should learn Spanish.

I think the eventual results of an interchange of students would surpass the most optimistic expectations. But we must realize that, here again, no time should be wasted because it will take many years for these results to materialize. First of all, one cannot expect the flow of students to be very great from the start, regardless of what may be done about it. It will take time to get parents used to parting with their boys and to allow them to go abroad. Then it will be years before the returning boys become leaders of public opinion in their own countries. But, however long it may take, no more solid foundation can be found to make the peoples of this great hemisphere genuinely friendly; friendly through mutual understanding, through respect for each other, and through personal contacts. We had an example of that during the war in those of our boys who had been brought up here and in England and France who from the beginning grasped the full implications of the struggle and went about fighting pro-Nazi activities. They provided a strong barrier to enemy propaganda. They openly opposed totalitarian tendencies in the most outspoken way and they did a lot of good.

The understanding, good-will, and friendship that would bind our peoples together if we were to follow the two courses that I have advocated tonight will ever be the only firm foundation of hemisphere solidarity. Nothing should be left undone to attain this end. But unless the peoples really have it at heart the governments by themselves will not be able to achieve much. Let us bear in mind that a united Western Hemisphere will be, at the same time, our best contribution to the peace of the world, for no group of nations will fit better within the framework of the United Nations Organization, none will have more at heart the fulfillment of its high mission in the world, and none will be more in agreement with the very spirit of the Charter than this group of American countries who hate war, who cannot be lured by any thoughts of conquest or by dreams of victory, who respect the right of others to work out their own salvation and their own happiness in their own way just as much as they claim that right for themselves, who believe that all nations should be equal and free, even the smallest and weakest, and whose peoples only want to be allowed to pursue their peaceful occupations under their own freely elected governments. We are firm believers in international collaboration. We fail to see why it should not prove to be the key to the solution of world problems just as it is in our own American affairs. Nobody need be afraid of a strong Western Hemisphere, for we do not want to be strong to abuse our power. We want to be strong to help make it impossible for anyone to think again of conquest and of imposing on the weak. None of us likes fighting. But so as not to shirk our responsibility to the community of nations let us make ourselves ready to provide our full contribution to the new international organization if ever the peace of the world is again endangered. It is for this reason that to dedicate ourselves to bind ever closer together the nations of this hemisphere is to dedicate ourselves to the cause of peace in the world at large.

---

## Mrs. Truman's Right to Privacy

EXTENSION OF REMARKS

OF

### HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

*Wednesday, December 12 (legislative day of Monday, October 29), 1945*

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Indianapolis Commercial of December the 1st regarding the holding of press conferences by the President's wife and her right to privacy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Mrs. Truman and the female section of the Washington press do not seem to be getting along too well together. We are for Mrs. Truman and if editors in general still possess good taste, they will see to it that some of their correspondents are instructed to respect her privacy. The President's wife makes no pretense at being a public figure. She happens to be the "first lady," but she seems to put little stress on that title. First, she seems to want to be a good wife, a good mother, and a good homemaker, and that is all the American public has a right to expect of her. She is entitled to privacy, even if fate has thrust her into the White House. She is not a public figure and she seems to prefer not to be one. And if that is her wish—and we think she exercises good taste because it is her wish—we think her wish should be respected—and respected in more ways than one. If the American people desire Mrs. Truman to become a public figure, they might elect her to public office. We predict that if such a thing could happen, it would be against her will.

Mrs. Roosevelt was a public figure by choice. She was more in the public eye than any other woman who ever occupied the White House. But that is no reason why Mrs. Truman should be so considered, if she does not choose to play that role. And we think a majority of the people will enjoy for a while, at least, a modest and unassuming wife of the President of the United States.

We do not believe that a hardboiled female press contingent has a right to try to make Mrs. Truman a public figure against her will and we resent their attempts to "pan" her simply because she has the good taste to refuse to hold "press conferences" and to discuss public issues which are none of her business except for the interest that might be shown such issues by the ordinary citizen.

The American people are unkind and almost barbaric, when public opinion will permit the wife of the President to be shoved around by a group of women feature writers, who seem to believe it is their right to make a show out of the Chief Executive's wife. If Washington comment is to be taken at its face value, Mrs. Truman seems to have been forced to make some concessions for the sake of her husband's public relations. If the Washington newspaper women have no better taste, their editors and publishers should have. These men, who must secretly admire Mrs. Truman for her stand almost to a man, should see to it that their "girls" are not rude, pushy and revengeful simply because Mrs. Truman wants to play her role quietly. Unless the privileges of the press are abused, a newspaper writer has no right to try to make a public figure out of any person if he or she wants only to be left alone.

And as for the President's daughter, we have boiled inwardly because of occasional references that have been made concerning her.

If Mr. and Mrs. Truman want their daughter to grow up as an average American girl that is not only their right but we believe it shows that they have good taste. Being the daughter of a President can be quite a handicap, if she is spied upon constantly by writers who make comments about her clothes, her behavior and her every act in public. It is cruel to place a young girl in a goldfish bowl simply because she happens to be the President's daughter, especially when the young lady seems to want nothing so much as to simply be left alone.

## Moral of Pearl Harbor

EXTENSION OF REMARKS
OF
**HON. BURNET R. MAYBANK**
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
*Wednesday, December 12 (legislative day of Monday, October 29), 1945*

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Moral of Pearl Harbor," from the New York Times of today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MORAL OF PEARL HARBOR

Testifying before the Congressional Pearl Harbor Committee yesterday, General Marshall said that President Roosevelt had personally ordered that all warnings of imminent war sent to field commanders in the Pacific should also include an instruction to them not to precipitate hostilities, but to wait for an overt act by the Japanese before hitting back. That our field commanders did so, at Pearl Harbor and in the Philippines, is evident from the result. If anything had still been needed to knock into a cocked hat the suggestion insinuated by some of the probers and voiced openly by their publicity claque that President Roosevelt "plotted" Pearl Harbor in order to drag the country into war, this statement of the American Chief of Staff at the time should complete the job.

But General Marshall's testimony likewise points another lesson which is of the utmost importance, not to the clarification of history, but to our future security. And that is the lesson of the vulnerability of the democracies. Because democracies do not go to war, and do not even prepare for war, until the overwhelming majority of the people is convinced of imminent peril by overt acts on the part of an aggressor, the aggressor will always have the advantage of them. That applies not only to the surprise attacks with which aggressors have learned to begin their wars, but to the whole preparation and planning of war, in which the initiative is a priceless advantage.

The Japanese had demonstrated the advantage of the sneak attack nearly 40 years before Pearl Harbor, when they crippled the Russian Fleet at Port Arthur. Hitler had improved on their technique, in both the military and diplomatic fields, a fact which enabled him to placate the democracies while he prepared for war, and then to attack them individually for the purpose of eliminating them one by one. The revelations at the Nuremberg trial and the admissions of the Japanese leaders themselves have demonstrated how both the Nazis and the Japanese plotted to wage war against the United States; how Goering called for planes able to bomb New York as early as 1938; how Hitler was preparing to seize islands in the Atlantic as stepping stones to the Americas; how Hitler and Matsuoka, the Japanese Foreign Minister, concerted their plans early in 1941; how the Japanese war lords obtained an undated war declaration from their Emperor and prepared to put it into effect at a time strategically most convenient for them, which turned out to be December 8, 1941, their time. We did not know these details then, but only the politically blind could mistake the purposes which they had loudly proclaimed by their past actions. It is to the credit of President Roosevelt and his associates that they realized the danger and did what they could—through such measures as lend-lease—to prepare for it.

Despite this, Pearl Harbor happened. How far military negligence or misjudgment was responsible for it, or at least for the extent of the disaster, should be revealed when all the evidence is in. But it is already clear that there were two main factors in the situation. The first was the misjudgment of the spirit of this country, which tempted both Hitler and Japan to attack us in the confident expectation of victory. The second was the determination of the American Government, well known to our enemies, not to strike the first blow, which enabled them to plan at leisure and to strike at a time and place of their own choosing.

In short, we deliberately surrendered to our enemies the element of surprise, against which there can be no absolute protection, even in the midst of war. We did so because American public opinion would not permit the Government to take the initiative in the face of even known danger without so splitting the country as to impair its effectiveness for war. That is the price we pay for liberty and democracy. If the price was high in this war, it is bound to be much higher in any future war fought with atomic weapons. For liberty and democracy we shall continue to run whatever risk they bring. We would not have it otherwise. But unless we do our utmost to banish war from this world, and unless, pending this achievement, we prepare sufficiently not only to stop tempting powerful aggressors to attack us but also to meet them with superior force able to survive all surprises, we may yet hear history pronounce the verdict that we deserve whatever fate befalls us.

## Weaknesses of Our Foreign Policy

EXTENSION OF REMARKS
OF
**HON. LOUIS LUDLOW**
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House, I present for printing in the CONGRESSIONAL RECORD a radio address I delivered last night over the Columbia Broadcasting national network, entitled "Weaknesses of Our Foreign Policy," as follows:

Our foreign policy, if it can be said that we have one, is lamentably defective. It may be expressed in one word, "drifting." We are drifting, drifting, drifting, apparently without chart or compass. No one knows whither we are bound or in what port we are likely to land, or whether we shall remain forever at sea. We have altruistic purposes, but they are singularly lacking in strength and direction. "Without vision the people perish." We seem to have no clear vision. We have no plan for future action. Our foreign policy is improvised from day to day. All is confusion.

Let us face the naked facts courageously, in a spirit of camaraderie and helpfulness, for through constructive criticism and friendly cooperation we may ultimately hope to find the right path.

THE APPALLING WORLD PICTURE

Four months after VJ-day what is the world picture? It is an appalling picture. We have our fighting men in China and for all I know they may be killing Chinese Communists in the civil war that is going on there. We are told by the Associated Press that American Air Force pilots are "debating angrily" their postwar assignment to the perilous job of flying airplanes wholesale over the "hump" from India and Burma for delivery to Chiang Kai-shek's forces. The International News Service reports that at least 11 American planes have crashed in this operation, with untold loss of American lives. What business have we interfering in the internal affairs of another country? The world is fast sinking into the old groove of power politics where wars are spawned and I very much fear that by our fumbling we may be contributing to the making of another war. We hear it said that the race for armaments is on and that another world war is looming on the horizon. Our two most powerful allies—Russia and Britain—are carrying on unilateral activities wholly inharmonious with the spirit and purpose of the United Nations Charter. There are indications that every nation on earth that has any means of doing so is feverishly attempting to develop its own atomic bomb, so that it may get the drop on all other nations and wipe them out of existence. The world appears to be moving toward another atomic war and the atomic fever has risen several degrees since November 20 when the announcement was made that the United States is still manufacturing atom bombs, "for experimental purposes". If the United States, the leader among nations, sees fit to continue the manufacture of atom bombs it gives an excuse to all nations to manufacture them and stack them up pending developments. And what kind of a "one world" will we be living in if every nation has its stack of atom bombs ready to use on other nations whenever a hair-trigger situation develops? The first thing to be done with the atomic bomb is not to manufacture more of them but to outlaw the use of the bomb in war by as tight an international agreement as can be made.

MAC ARTHUR'S SUGGESTION NEGLECTED

Nearly 4 months have elapsed since VJ-day and we have not taken one single step to implement the wise suggestion made by Gen. Douglas MacArthur when, in accepting the surrender of Japan, he spoke of the futility of war and said:

"We have had our last chance. If we do not now devise some greater and more equitable system Armageddon will be at our door. The problem basically is theological and involves a spiritual recrudescence and improvement of human character that will synchronize with our almost matchless advance in science, art, literature, and all material and cultural developments of the last 2,000 years. It must be of the spirit if we are to save the flesh."

TIME TO MAKE A NEW DECLARATION OF FOREIGN POLICY

For four long years in the storms of war, we have made world leadership our business. We cannot, we must not shrink from that leadership now. It is time to make a new and ringing declaration of our foreign policy and in that declaration we should make crystal clear that, God helping us, we of the United States of America intend in good faith and with all of the earnestness and sincerity we can command to help establish His rule on earth.

Long ago, I proposed the creation of a religious advisory council to aid in the peace settlement, this council to be composed of eminent religious leaders who could speak in one voice—Protestant, Catholic, and Jew—for moral ethics and Christian-Judaic spiritual principles in the making of peace and in ordering the future of the world. The great religious organizations stood by ready to present their nominations for this council but the State Department would have none of it.

There is a responsibility resting on the United States for leadership in world peace that rests on no other nation on earth. Are we living up to that responsibility? No. If we were we would not have our fighting men taking part in a civil war in China and we would not be manufacturing atomic bombs for experimental purposes or for any other purpose. We voluntarily assumed lead-

ership in World War II. We grabbed the ball and we, more than any other nation, won the war which was to establish permanent peace and brotherhood on earth, yet when our great commander, General MacArthur, tells us how that permanent peace may be established and how civilization may be saved, we proceed to pay no attention to him. We have done nothing to encourage a great moral and spiritual resurgence which alone can bring about the salvation of the world. We must not forget that we are in a new era now, and that our duty henceforth will be to do our very best to establish peace on earth and to saving, instead of destroying, priceless human values.

WE CANNOT ESCAPE OUR RESPONSIBILITY

Having led in the military leadership that brought about a successful conclusion of the war, we cannot now, if we are true to our faith and loyal to our promises, refuse to accept the moral leadership of the world that must be relied on to convert the fruits of military victory into permanent and lasting peace. The world is looking to us for such leadership. How are we going to justify the dropping of atom bombs on great cities and the killing of hundreds of thousands of civilians, including women and children, unless we make good on our promise to lead in redeeming the world forever from war and hate and establishing it on a permanent basis of peace and understanding? Hiroshima and Nagasaki are not attractive pages in our national history. Those colossal tragedies can be justified only by a good-faith redemption of our pledge to do everything we can to make a better world. The finger of history is on us and we had better buck up and do something.

SITUATION NOT HOPELESS

What can we do? Fortunately, I believe, the situation is not hopeless if we retrace our steps in the right direction. America, first of all, must face the fact, so well stated by General MacArthur, that only a great moral and spiritual leadership can save the world in this age of the perfection of the lethal instruments of war. America, having led the world in war, must not now back away from that moral and spiritual leadership in peace. We cannot escape our responsibility.

FIRST STEP IS TO OUTLAW THE BOMB

I propose two things: First, I propose that we exercise our leadership a little in connection with the atomic bomb. Immediately after VJ-day I introduced in the House the following resolution:

"*Resolved*, That the President of the United States, the Secretary of State, and the personal representative of the President on the United Nations Organization, Edward R. Stettinius, Jr., be, and hereby are, urged to exert their utmost efforts to secure a definite postwar agreement by the United Nations to ban the atomic bomb forever as an instrument of war."

The preparatory commission of the United Nations Organization is meeting this month and the General Assembly will meet in January. I sincerely hope that the President and Mr. Stettinius, our representative on the United Nations Organization, will do their best to secure an agreement by the United Nations at these meetings whereby all of the United Nations will join in binding themselves not to use the atomic bomb in warfare. With that agreement made, we can very well join all the other nations in developing atomic energy to serve the arts of peace, thus conferring incalculable blessings on mankind.

We can say to the nations of the world, "If you will join us in outlawing the atomic bomb as an instrument of war we will never manufacture another bomb. We will seal the doors of our atomic bomb plants and will never open them again."

That would be one forward concrete demonstration of the kind of postwar leadership we promised mankind when we were marshaling the forces to victory on the battlefronts, and I cannot imagine any action we could take that would have a more immediate or dynamic effect in composing the fears of the world and in substituting peace and a patient outlook in place of hectic preparations for war. As long as we make announcements that we are continuing to manufacture atomic bombs without undertaking to secure an agreement of the United Nations to ban the atomic bomb as an instrument of war we are applying irritants, instead of emollients, to the troubled international situation and we should be careful not to do that.

DEPARTMENT OF PEACE AND GOOD WILL

The other suggestion I have to make by way of improving our foreign policy and fulfilling our mission of moral and spiritual leadership on which the hopes of mankind now rest, is that Congress should proceed to pass and the President to sign a bill I have introduced (H. R. 4648) which is proposed as a measure to implement the advice of General MacArthur when he warned that war has become so destructive that unless nations turn from war and find a common denominator of peace "Armageddon will be at our door." The text of H. R. 4648 is as follows:

"*Be it enacted, etc.*, That there is hereby established a new department of the Government of the United States to be known as the Department of Peace and Good Will, which shall have for its purpose the activating of the forces of good will and mutual understanding throughout the world and the fostering of amity among nations."

One way to help in winning the peace is to dramatize our purpose by the establishment of a department of peace and good will. Why not? With our Nation professedly committed to the creation by earnest efforts of a new world of peaceful relations between man and man all around the earth, we have no governmental agency to implement that endeavor—not one. Let us examine the scroll of governmental establishments and see what we have:

First. A War Department—function to destroy and kill.

Second. A Navy Department—function to destroy and kill.

Third. An Office of Scientific Research and Development—function to invent the instruments that destroy and kill.

And so on.

I would not eliminate or depreciate any one of these. In the present posture of world affairs we must have, and must continue to have until peace is secure, an adequate Army and Navy. But after we have committed our leadership, as we have in a thousand solemn ways, toward bringing about a new and better world, patterned even though imperfectly on the plan of the fatherhood of God and the brotherhood of man, is it unreasonable to expect that we shall inaugurate this new era of peaceful endeavors and make our Government responsive to our professions by adding to the roster of our governmental activities a new department of peace and good will to protect and conserve the great human values?

WE NEED A FIGHTING DEPARTMENT TO WIN PEACE

If we want peace, and I am sure that all American do, we must be ready to fight for it.

We need a fighting department that can bring more activity to the solution of the problem than the State Department can under its traditions and authority. We need a department that can and will reach out around the earth and propagandize for peace; a department that can and will get in touch with the moral and spiritual forces of the world; a department that can and will contact and activate and unify the forces in all lands, which alone by common purpose and united action can make the permanent peace of the world a blessed reality. It is a tremendous fight we are up against, but we must win it—or else Armageddon. The brotherhood of man, once a beautiful vision, has become a necessity if the world is to escape destruction.

The passage of this bill by the United States Congress would be notice to the world that when we said we wanted to be a good neighbor in the family of nations we meant it. Other nations are reported to be much confused by our militaristic preparations and are finding it difficult to reconcile our plans for forced military training and regimentation with our protestations for peace. To those doubting Thomases in the family of nations the passage of this bill and the creation of this Department of Peace and Good Will would mean that we are going all-out for peace and that we are not for peace with our tongues in our cheeks. I say again that in the recent war we voluntarily assumed leadership among nations in emancipating enslaved people from tyranny and oppression, and I ask again, Are we now going to fail humanity by refusing to accept the moral leadership that is necessary to translate the fruits of victory into a peaceful world of the future?

LET US REMEMBER OUR HEROIC DEAD

Before long the hearts of our people will be wrung by the saddest of all spectacles in the aftermath of war—the mournful procession that will bring our beloved dead from their temporary graves in foreign countries to their final resting places in American soil. Two hundred and seventy-four thousand seven hundred and sixty-six Americans, the flower of our manhood, gave the last full measure of devotion fighting for our flag in foreign theaters of war, and the bodies of these men will be brought back and committed to the home soil of the communities from which they sprang—earth to earth, ashes to ashes, dust to dust. Funeral corteges will soon wend their sorrowing way to almost every locality in the United States, and all of the pent-up grief of fathers, mothers, wives, and sweethearts will break forth in a new deluge. The millions of our people who will be touched by the poignant grief of this panorama are going to say to the statesmen of our time, "We serve notice on you now that this must not happen again. We expect you to build firm foundations of enduring world peace and we will hold you responsible if you do not."

It is time the people should express themselves on these vital issues. I hope that every person in America who wishes to do his part in ushering in a peaceful world will write to the Foreign Affairs Committee, House of Representatives, Washington, D. C., and request a favorable report on this bill, H. R. 4648, and at the same time send letters expressing interest in the bill to the Representative in Congress from his district and the United States Senators from his State.

## The War and Our Vanishing Resources

EXTENSION OF REMARKS

OF

### HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. KING. Mr. Speaker, under leave to extend my remarks I include therein an article written by Hon. Harold L. Ickes, Secretary of the Interior, entitled "The War and Our Vanishing Resources,"

which appeared in the December issue of the American magazine.

Mr. Speaker, yesterday I introduced H. R. 4955 to establish a national resources policy, to create a natural resources council, and, amongst other important provisions, to provide for a natural resources inventory. The following article written by the Honorable Secretary of the Interior states the case clearly on behalf of this legislation.

THE WAR AND OUR VANISHING RESOURCES

(By Harold L. Ickes, Secretary of the Interior)

We may have peacetime conscription. We may retain a tremendous peacetime Navy. But the plain fact is that we cannot afford another prolonged war in 20 or 30 years.

Not that we haven't the men, not that we haven't the will to fight again if we have to, not that we haven't the crash—we just haven't got the oil, the copper, the zinc, and the mercury, which are so vital to the machines and munitions of modern warfare.

The prodigal harvest of minerals that we have reaped to win this war has bankrupted some of our most vital mineral resources. We no longer deserve to be listed with Russia and the British Empire as one of the "have" nations of the world. We should be listed with the "have nots," such as Germany and Japan.

The overwhelming significance of this change from a "have" to a "have not" nation lies in these facts: Without mineral resources, the United States could never have built the ships, the planes, and the guns which have made us the greatest military power in the world. We could never have been more than an agricultural country. We could never have been able to support, at a standard of living that is the envy of the world, the 135,000,000 people now living within our borders.

Does this change in status mean that we are about to become a pushover for other countries, that our standard of living will be greatly reduced, that we shall all become farmers, and horse-and-buggy farmers, at that? This, in fact, is the future that we are now carving out for our grandchildren and our great-grandchildren by our do-nothing policy.

It should be burned into our consciousness that we do not have an inexhaustible supply of minerals—the sinew that makes this country mighty. Our minerals are not inexhaustible and irreplaceable. Unlike wheat and corn, new crops of minerals do not appear from year to year. Further, the faster we grow in industrial strength and military potency, the more rapidly we dissipate our mineral resources—the very basis of our military and industrial power.

To prevent the decline of the United States as a major military and industrial power, and to maintain our high standard of living, we must take immediate positive action to increase our known mineral resources. We must begin at once—

To stock-pile minerals.

To explore our country more extensively than ever before.

To hunt for better methods of recovering metals from scrap.

To have access, in common with other peacefully disposed nations, to minerals in the lands that have been conquered in the recent war, for from now on we shall be increasingly dependent upon imports for our minerals.

The bountiful heritage of minerals and oil with which the United States was originally endowed has tended, unfortunately, to make most of us complacent about these resources, and our time has been spent in patting ourselves on the back for mining such great quantities of them. This puts us in the position of the man who was so happy about the speed at which he was sawing off the limb that he forgot that he was sitting on the limb.

How close we are to cutting off the limb that supports us can be seen by casting up our accounts to ascertain the cost of this war to our mineral resources, and inventorying how much we have left.

Between January 1, 1940, and January 1, 1945, we tore from the earth some 5,000,000,000 tons of minerals. Included in this total are 516,158,500 tons of domestic iron ore, the most astonishing amount ever produced by this or any other nation in a similar period. During this period we mined 3,061,060,000 tons of coal, or enough to cover the whole city of New York with a blanket of coal 12 feet thick.

Here are some figures which will give an idea of the variety and quantity of our mineral resources that have been sacrificed on the altar of the god of war. In the 5-year period from New Year's Day, 1940, we mined 3,061,060,000 tons of coal, 516,158,500 tons of iron ore, 2,278,000 tons of lead, 3,642,000 tons of zinc, 5,000,000 tons of copper, 14,169,000 tons of bauxite, 20,750 tons of tungsten, 112,000 tons of molybdenum, 17,118,000 tons of sulfur, 68,000,000 tons of salt, 3,155,000 tons of potassium, and 1,000,000,000 tons of petroleum.

Into the war machine and domestic economy also went 15,700,000,000,000 cubic feet of natural gas. The tonnage of petroleum mentioned above equals 7,325,000,000 barrels. Some idea of the demands upon our petroleum resources may be measured by the fact that the United States has 36 percent of the known oil reserves of the world, but has been furnishing approximately 60 percent of the petroleum used in the war.

These figures do not encompass our total mineral production during the war; we have also mined large amounts of other minerals, but they do show how great has been our dependence upon our minerals and what great quantities of these limited resources we have used.

If we are to continue as a dominant industrial and military power, the big question is not so much what we have used but what have we left.

The fact is that some of our "blue chip" minerals have been depleted to the critical point. On the basis of known usable reserves, we have in this country only nine major minerals which, at the 1935–39 rate of use, may be expected to last 100 years or more—nitrogen, magnesium, salt, bituminous coal and lignite, phosphate rock, molybdenum, anthracite, potash, and iron ore. And a hundred years is nothing in the life of a nation.

We have less than a 35-year peacetime commercial supply of 21 minerals. The significance of this is that 35 years are but little more than the usual interval between wars, and among these 21 minerals are: Petroleum, copper, lead, and zinc, in the production of which we have led the world for many years. The others are: Sulfur, natural gas, fluorspar, cadmium, gold, lead, silver, bauxite, vanadium, antimony, tungsten, platinum, asbestos, manganese, chromite, nickel, and tin. Our automobile and electrical industries, to mention only two, would not have made the advances that they have made had they been hampered by shortages in any of these minerals.

So far, I have mentioned coal, iron ore, and petroleum only briefly. Their prime importance—imagine the United States trying to get along without the products made possible by coal and iron and petroleum—merits special consideration, however. Coal is the Nation's No. 1 mineral asset. Iron ore ranks second, and petroleum third.

Just how important coal is to a nation's economy is shown by the facts that the five great centers of industrial and military power—the United States, England, Russia, Japan, and western Europe—have developed on the basis of large coal resources.

Coal is the stuff that spins the wheels of most of our industry. It would appear that we have plenty of coal, but already our reserves of high-grade coking coals, without which it is difficult to make steel, are none too plentiful, and their lack may compel us to seek different and perhaps more expensive ways of making steel, within a comparatively few years.

Despite their fundamental importance, we don't know enough about coking coal reserves. In mining almost any bed of coal, a third or more of the coal in that bed is irretrievably lost. Some of this loss is unavoidable, but much could be prevented if the cutthroat competition in the industry did not force the mine owners to take the easy pickings and move on to new coal beds, instead of getting all of the coal that there is out of any particular seam. Further, there is no wisdom, from a national viewpoint, in consuming our limited reserves of high-grade coking coals to generate steam for power plants, when these coals are so vital to the making of steel. Steam plants can use lower grade coals. We have plenty of them.

Iron ore is an outstanding resource in four of the five great centers of industrial power. Much to her regret, Japan is notably deficient in iron ore, and attempted to overcome this weakness through aggression. Our reserves of iron ore do not match those of coal by a wide margin. Originally, some 6,000,000,000 tons of usable ore were to be found in the good earth of this country. About two-thirds of the original cache remains, but, in true American style we have already licked the icing off the cake, and much of the ore that is left will be harder and more expensive to get.

The high-quality ores which are found in the Mesabi Range in Minnesota will soon be only a rusty memory. This ore is the cream of our resources, because it can be mined cheaply and because it is so free of other minerals that it can be used directly in the blast furnace, without prior treatment. These high-quality ores account for 50 percent of the total iron production of the country. At the prewar rate of extraction, the remaining tonnage will be exhausted in 22 years.

We must develop our lower-scale ores, and we shall have to build large plants to treat them. Such plants will limit production capacity and will be costly. But to maintain our position of self-sufficiency would justify some extra cost to the public, although the consumer cannot be expected to assume an unreasonable burden, such as paying $10 for an iron frying pan.

As to oil, the daily newspapers give evidence that supplies are far from ample to meet all demands. The American Petroleum Institute estimates known or proved reserves of oil at 20,000,000,000 barrels. Last year we produced 1,700,000,000 barrels of crude oil.

Thus, if future discoveries fail to bring in enough oil, we shall shortly—in 15 to 20 years—be faced with the need for developing sources of oil supply outside of the continental boundaries of the United States. Under peacetime conditions, substantial quantities of oil could be obtained from the Caribbean area and, if necessary, from more distant sources, such as Saudi Arabia and Bahrein. This would seem to be the cheapest solution.

Secondary recovery of domestic supply from apparently depleted oil fields has begun already, and could be increased considerably at higher prices

Synthetic liquid fuels also offer a feasible, though more costly, solution. Synthetic motor fuel can probably be made from coal at 18 cents a gallon in large plants. The Bureau of Mines of the Department of the Interior is experimenting in the production of synthetic gasoline in commercial-sized plants. Costs of from 12 to 15 cents are possible, after the techniques have been fully developed. The costs of producing

gasoline from crude petroleum are approximately 5 cents a gallon.

If we exhaust our readily available domestic reserves of minerals—what experts call our "commercial reserves"—the car owner, manufacturer, or housewife is directly affected. The consumer's automobile, his electric iron, and his refrigerator will cost more, because we shall be forced to pay the extra cost of shipping these minerals in from abroad, and it will cost more to extract what we call our submarginal resources.

Our submarginal resources of today may be, and frequently are, our commercial reserves of tomorrow, because almost all of the earth which covers the United States contains minerals which could be used if we were willing to pay the price for extracting them. This, of course, could be tremendously expensive and might run the cost of some minerals up to several hundred dollars a pound.

Already technological advances indicate that this possibility is not too remote in some fields. Before the war the aluminum industry, for instance, would not attempt to use bauxite which contained more than 8 percent silica. Bauxite deposits found to have more silica than this were rejected as unfit for use, and this constituted our submarginal supply. Now processes have been developed whereby bauxite containing 20 percent silica is being used, and bauxite containing a greater proportion of silica constitutes our submarginal supply. Tomorrow, with improved technology, bauxite containing even more silica may be used.

Because most commercial companies hesitate to spend money in this field, federally financed research along this line would pay big dividends. In inventorying the Nation's mineral resources, I have, however, discounted the possible enlargement of our sources of supply by the discovery of new methods of extraction for two reasons: first, these methods have not yet been found or perfected; and, second, in some cases we just haven't the minerals in submarginal supply.

But, if we are willing to pay the price for them, our potential reserves of iron ore, phosphate rock, molybdenum, potash, and all forms of sulfur are ample for many years to come. Resources of nitrogen, magnesium, and salt, for practical purposes, may be regarded as limitless as the sea and the sky from which they are drawn. There are large submarginal resources of bauxite, manganese, and vanadium. How our submarginal resources of uranium stand will have to await further exploration.

But of such vitally necessary minerals as copper, lead, zinc, tin, nickel, and chromite little is left. We shall have to import these minerals in larger and larger quantities. Otherwise, we shall be faced with the prospect of a civilization without all of the necessities (batteries, paints, washtubs, plumbing supplies, tin cans, shiny automobile radiators) with which these minerals now provide us.

Even more alarming than the fact that we are coming to the end of some of our known resources is the fact that we are uncovering few, if any, unknown deposits of minerals.

The failure of petroleum discoveries to keep pace with the rapid rate of depletion has received much attention during the war. Discovery of other mineral deposits has declined alarmingly for half a century. No major metal-producing district comparable to Butte, Bisbee, Homestake, or Coeur d'Alene has been brought into production in the United States since 1916. There have been few important copper discoveries in this country during the twentieth century. Most of the large producing deposits were known before 1900. The largest discovery since then has been the United Verde Extension mine at Jerome, Ariz.

New discoveries now depend upon the development of effective and economical means of finding deposits not recognizable from surface indications alone. Large quantities of ore hidden deep in the earth have been found by underground exploration conducted in active mining areas. Geophysical methods have been very successful in locating petroleum deposits. New findings of concealed resources by a combination of these methods are looked for, but we have come to the end of the good old days when digging for water might produce an oil gusher or a gold mine.

In view of our impending have-not position, should we shut down our mines and preserve the scarce resources remaining in the ground for future emergencies? No. The cost would be too great. It would be wasteful, because much of the unmined portions of developed deposits probably could never be recovered after prolonged shutdowns. The abrupt shut-down would strand thousands of miners and their families in isolated mining areas. Huge capital losses would be incurred. For these reasons, the proposal does not seem to merit serious consideration.

Then what can we do?

Stock piles should be built up, for this is one of the surest ways of assuring our basic security in minerals in time of need.

A large-scale stock-piling program would provide a reservoir into which domestic materials might be placed in times of depression. This would mean that the Nation would benefit from low costs and the miners would have employment. Such a stock-piling program during the last depression would have given us a substantial inventory that would have eased greatly the job of producing minerals during war years.

Such minerals as we lack entirely, or whose supply here is insignificant, should be imported and added to our stock piles.

Our second line of defense is our marginal and submarginal resources. Exploration for new deposits should be carried on vigorously, and plans made for emergency production.

Private industry alone cannot be expected to carry this burden. Since the defense of the Nation is involved, the work of private industry should be aided by Government research and by Government-sponsored explorations. Such a program might lead to the development of new peacetime industries. Interesting possibilities in this direction are offered by our large deposits of manganese-vanadium, and aluminum-bearing materials.

We should never again be so prodigal as we have been in the past in bestowing our precious scrap upon nations that may send it back in the form of bullets and bombs. Further, we should spend time and money in seeking new and better ways to recover metals from scrap.

As our mineral resources grow smaller and as we are compelled more and more to seek raw materials outside of our borders, we must keep our military forces—our Army, Navy, and air arm—strong enough to do our share in maintaining the peace of the world—a peace that is necessary if we are to bring in what we require for our own economy. Without a strong military force, we would be laying open the life lines of raw materials to the first aggressor who could gather a sizable military force about him.

We must encourage and support, morally and financially, the investigations of our research workers and scientists.

If followed, the program that I suggest would prevent or postpone for many years the loss by the United States of its dominant position and its high standard of living.

Such a program would cost money, and, as a nation, we have been willing to talk a great deal about conservation but unwilling to put up much cash for it. We have preferred to see millions of cubic feet of an irreplaceable resource—natural gas—flared off—burned up—rather than spend money to store it. We have preferred to waste millions of tons of coal rather than halt cheap but wasteful methods of mining.

The time has come to face the fact that we can no longer afford to keep our present nonconservation policy. The need in war for modern weapons made from metal and propelled by mineral fuels, mineral shortages that have at times threatened serious repercussions on the battle front, the scarcity of the modern conveniences to which we have become accustomed, and fuel and gasoline rationing ought to have brought home to us the tremendous importance of minerals in modern life. The situation calls for positive action on a long-range program that will guarantee the Nation's future mineral supply.

## A Letter to President Truman

EXTENSION OF REMARKS

OF

### HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following open letter to President Truman, which appeared originally in the Brooklyn (N. Y.) Tablet:

A LETTER TO PRESIDENT TRUMAN

Man to man, may I intrude on your precious time for a few moments of serious talk?

Accumulating evidence seems to indicate that your State Department is joining willing hands with the loud alien, semialien or alien-minded Soviet agents and fellow-travelers who are now shouting in this country for a break with Spain and implicitly for another civil war in Spain.

Unfortunately, you yourself, Mr. President, could not have let us down with a more sickening thud than when you came home from Potsdam uttering your unprovoked attack on Spain to the dismay, disheartenment, and even real heart-scald of your well-wishers and friends.

As a false step I, for one, hoped you would soon retrieve it.

You have so far done nothing of the kind. Almost willingly, though I sincerely hope not, you have been and are now being pushed into the position of the bully with regard to a nation of some 25,000,000 persons who have just recently gone through a terrible civil war that cost it 1,000,000 dead.

Suppose the United States in the late war had suffered in proportion to Spain during her civil war, Mr. President. That would mean more than five million dead. Assuredly this is no small matter.

Yet now the big, brave, chivalrous United States of America, fresh with its Atlantic Charter and its pledge to the "four freedoms," is going to tell tiny Christian Spain that Franco can no longer rule that country. Why? Because the Soviets say so; there's no other visible reason.

Oh, yes, you will be told that Germany and Italy helped the Spanish Nationalists. Are you quite unaware that Russia and France helped the Spanish "reds"? Were the American colonists blameworthy for accepting help from the absolute monarch Louis XVI's Lafayette and Rochambeau?

Spain has not attacked us. Spain is not aggressive in politics in the United States. She is not running even a propaganda campaign here, though many another foreign country is. Spain is not threatening our lifeline. She is not fomenting revolution here. Spain is not even backing a Republican for our Presidency. Why, then, all the

excitement? Is it because she is trying to mind her own business?

Surely, Mr. President, your common sense is going to put a stop to all this criminal nonsense before it goes any further. Those yelping for civil war—at the recent New York meeting, was there a single bone fide veteran present?—like to yell and so to be heard. I prefer to keep silence. But I can do so no longer.

That peace-promoting Pontiff Pius XI praised, not the totalitarian government of Spain as such, but the people of Spain who rallied around some leader to put a stop to the murderous and tyrannical attack on traditional religion all over that country under such worthies as many of those now calling for more civil war in Spain. Our founding fathers did no less.

Are you prepared to push this assault against the conscience of Catholics throughout our land, some 25,000,000 of them, too, for the sake of an allegedly liberal crowd who are so really liberal that they supported poor Russia against aggressive little Finland? These are many of the same who backed the Russo-German pact of 1939, you will recall.

If you will scan the heaviest casualty lists as printed in the papers of New York City for months during the awful European conflict, you will be able to judge for yourself what a price Catholic boys paid in the war.

Yet, Mr. Laski and Mr. Novikov attack their spiritual guide under the mask of democracy, or what not. People are asking, "Does Mr. Truman give silent consent even to that?"

Now your administration appears on the verge of trampling down the very Christian faith of these men to satisfy a pressure group whose patriotism is certainly centered elsewhere than before Washington's shrine at Mount Vernon. Will it be Nikolai Lenin or George Washington?

If you persist in thus disregarding and impliedly insulting the conscience of American Catholics who were so loyal during the war, you are in time going to be a very sorry man for that fact—the loss of intelligent Catholic sympathy from coast to coast for one thing, and for another, your own eventual awareness of the further fact that you have pulled out a major prop for Christianity in Europe and that you have substantially helped to install in its place "red" atheism.

Recently the Primate of Spain, the Archbishop of Toledo, pointed out that some 300 out of his 600 own diocesan priests were killed by the reds during the trouble in Spain. These clergymen carried no arms. Their hands were anointed to bless. But they were killed nonetheless. And they are by no means the whole story even in the single archdiocese of Toledo.

Suppose half of your congressional and senatorial friends were tortured and shot. Do you think you would so soon extend the right hand of fellowship to their torturers and murderers? You are far too loyal a man for that, I am convinced. Yet the danger of your mind being poisoned, if not overwhelmed and swamped, by all the shouting and the rigged-up machinery of the vociferous agencies of Red propaganda in our midst seems indeed very real today.

Why not seek other and saner counsel? In Washington itself you might easily take sound advice from such high-principled and competent men as Rt. Rev. Msgr. John K. Cartright; Rev. David A. Rubie, O. S. A.; and Mr. Constantine Maguire.

Why don't you talk to the Spanish Ambassador, Senor Cardenas? It can hardly be that he is beyond personal contact or impervious to straight and sincere conversation. Why don't you use that horse sense that has become proverbial with Missourians? To the criers for civil war in Spain, you might make the perfectly natural and very effective everyday demand: "I'm from Missouri; show me."

Mr. President, they can't show you; nor anyone else. They know it. That's why they are screeching so loud.

Preferring to keep quite silent, I still feel constrained to appeal to your fundamentally Christian conscience and your sense of abstract and practical justice. In that conscience and sense I am trying to maintain confidence. You are not going to let us down, are you, Mr. President?

Respectfully and sincerely yours,

JOHN L. BAZINET, S. S.

(Father Bazinet is vice rector of St. Mary's Seminary, Roland Park, Baltimore, Md.)

## Is This the Pattern of America's Future?

EXTENSION OF REMARKS

OF

### HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. DIRKSEN. Mr. Speaker, in the December issue of a magazine called Common Sense, is an article written by Victor G. Reuther, whom I understand to be a brother of Walter Reuther, the UAW leader in Detroit, which bears the title "Look Forward, Labor."

In this article Mr. Reuther makes this very interesting observation:

For this reason a new American progressive party must propose a pattern of social ownership that will serve to break the controls of monopoly capitalism. And the forms of social ownership it does propose to institute must, in the fashion of the cooperatives and the TVA, be absolutely democratic in character. Such an economic approach—involving the substitution of democratic social ownership for private monopoly ownership and the retention of useful and efficient small business under private controls—can win the support and participation of important groups whose contributions are essential to the operation of a modern economic system.

Here then is an economic pattern which follows very closely that which is being evolved in certain other areas in the world, namely, the ultimate destruction of the free enterprise system of the United States. I am sure the membership of the House will be interested in this new economic philosophy since it comes from a very authoritative source.

The article follows:

LOOK FORWARD LABOR

(By Victor G. Reuther)

Within the next decade, labor organizations in this country will face a critical and continuing challenge to their capacity to lead the fight for full employment and full production under democracy. The manner in which labor meets this challenge will in large measure determine whether or not the democratic forces in the world can build the economic basis for an enduring peace.

In facing up to this challenge, American labor must, I think, give serious consideration to the three following basic facts:

First, we have succeeded in smashing the military vanguard of world reaction as represented by the armed forces of the Axis Nations; but, in order to win this victory, the workers had to be substantially convinced that a victory over foreign fascism would result in fulfillment of the "four freedoms."

Second, in winning the military phase of World War II, we have only done a portion of the job of winning the "four freedoms," because we have not even begun to clean up the economic and political conditions out of which fascism grows—and we have not educated our people to understand that realization of the "four freedoms" is fundamentally incompatible with the economic and political devices that were employed to win the military war against foreign forms of fascism.

Third, upon the assumption of the validity of the foregoing two propositions, it is clear that we cannot attain the "four freedoms" by a return to "normalcy," free enterprise, "the American way," or any of the other verbal dodges of the status quo—and so we face the task of making up our minds that labor has the responsibility to design, propose, initiate and carry through a program of social action that will abolish the conditions from which fascism draws its strength.

In the short time that has passed since VJ-day, the need for a labor program has been expressed with unusual prominence in the public press. Unfortunately, the initiative has been seized by the partisans of the status quo—like Senator VANDENBERG—who have called for a conference of labor, industry, and government to iron out the industrial problems arising out of conversion to peacetime production.

This initiative from the right for formulation of a labor program is unfortunate because it proceeds on the antiquated theory that government can persuade labor and capital to join hands and work like brothers for the common good. It is unfortunate that some labor spokesmen have agreed to the theory that labor must depend upon the free enterprise system to provide the bulk of the 60,000,000 jobs that everybody is talking about.

The recent strikes and threats of strikes for necessary wage increases reveal the real danger in this supposed get-together program of labor, industry, and government. The danger is that under any such get-together program as may occur today, a two-thirds majority of the conferees—namely, industry and government—will gang up on labor in an effort to compel it to accept a labor program designed to maintain the status quo.

It appears that this drive for increased government supervision and regulation of industrial relations is motivated by the desire of the employers and their political partisans to cushion themselves against the impact of an expected period of labor militancy. So far, no major employer of industrial labor has shown any inclination to agree to raise wages, to hold or reduce prices, or to take any other essential steps toward full employment under free enterprise.

Most large employers have, on the contrary, exhibited a marked determination to fight to the last ditch all endeavors of labor to achieve full employment and full production. The only conclusion to draw from this behavior of the major employing groups is that they are girding up their loins for an all-out battle to retain their privileges, prestige, and profit-making powers under the "normal" system of "free enterprise," to which they insist the Nation must return.

There is every indication that American monopoly capitalism intends to wage a bitter fight to perpetuate its controls over the lives and destinies of the majority of the American people. Congress has already reflected the temper of the American business community by the manner in which it has handled conversion.

The full employment bill, which was inadequate to begin with, has been emasculated with amendments which destroy even its original inadequate intent.

Unemployment compensation, for example, has been handled in a completely shameless fashion, for after providing the employers with tax rebates, profit insurance, contract termination awards (not to mention the fabulous boosts in net worth built up out of war profits) Congress then bluntly refused to give unemployed war workers a pittance of $25 a week for 26 weeks.

Price-control authorities, instead of protecting the public against postwar inflation, have fallen over themselves in their eagerness to meet business demands for higher prices.

And there has been no manifestation of interest whatsoever, on the part of either business or Government in any sensible plan to harness the vast network of publicly financed, Government-owned plants to a full employment program.

All in all, labor seems to be caught in a sort of domestic pincers movement; on the economic front the employers are standing firm against trade union demands for necessary upward adjustments of wages, and at the same time they are calling loudly for Government regulation of collective bargaining procedures. On the political and legislative front Congress bows to every whim of business, yet refuses stubbornly to enact any legislation favorable to labor.

While the workers are thus squeezed between the economic power of the employers on the one hand and the political pressure of an unfriendly Congress on the other, labor is called upon by both business and Government to join in a program to work out solutions for our industrial problems. Labor leaders should certainly attend such a conference, or conferences, but not for the purpose of helping industry and Government to preserve the "free enterprise," monopoly capitalism, scarcity system.

It is time to debunk the notion that labor can meet in parleys with Government and management, and, by some miracle, fashion a compromise that will keep all parties happy and contented. So long as such conferences are based on the premise that monopolistic industries are going to be permitted to maintain their powers, privileges, and profits, their only achievements will be more devious devices for dividing up scarcity.

Participate in the conferences, yes—but let labor's spokesmen declare in these conferences their determination to fight with every ounce of their power for a democratic economy pledged to attain full employment and abundance; an economy in which public welfare will take precedence over private profit.

In short, labor today should proclaim a declaration of independence. Our best labor economists and our most far-sighted labor leaders should, regardless of their union affiliations, pool their talents in a plan looking toward the formulation of a realistic program for economic democracy. To declare its independence of business and government, however, does not mean that labor should isolate itself from other important functional groups in our economy. The kind of program we need today will fail in its inception if it does not include the ideas and techniques that farm organizations, progressive businessmen, and consumer groups have to offer.

To achieve a labor declaration of independence means to divorce progressive trade unions from the restrictive concept of "unionism as usual," under which the major function of labor organizations has been to wrestle with business and government for larger shares of scarcity under a system of "free enterprise." It involves recognition, and public proclamation, of the fact that the profit-taking power of monopolistic "free enterprise" is the bottleneck that is barring our path to full production and full employment. (In 1944 the profits of about 2,000 large industrial corporations were nearly five times more than they were in the prewar years of 1936–39. Figures, before taxes, showed a profit of $9,900,000,000 in 1944.)

It involves the summoning of sufficient courage by labor to state bluntly that punitive legal regulation cannot break the monopolistic bottleneck of unearned income. Finally, it involves realization of the fact that—if the industrially employed workers are to have the income essential to full employment—private ownership of monopolistic industries must be replaced by forms of social ownership, such as the TVA and cooperatives, all fundamentally democratic in character.

A program of this nature will prevent America from drifting into some form of totalitarianism in which big business will combine its economic power with the power of government to compel the people to obey its decrees.

Of course, such a program is political dynamite, but the task of social engineering that we face is of such scope that nothing short of political dynamite can blast away the obstructions to economic abundance and insure the expansion of political democracy.

I will be the first to admit that with the present political set-up there is small hope of placing this basic program before the people in such a fashion that they can intelligently act upon it. Figuring out political stratagems for persuading either the Republican or Democratic Parties to wage a campaign upon a basic issue like the social ownership of monopolistic industries seems hopeless at present.

It is my opinion that the time is now ripe for labor to divorce itself from the two old parties and resolve to build the base for an independent, indigenous, new national political party—a party designed to mobilize the American people for democratic abundance at home and enduring peace in the world. We face that decision now.

In the first place, it is clear that the majority of the American people sincerely desire full employment, full production, expansion of full political democracy and international security based on justice and equity, but they do not possess a national vehicle through which to express and act upon these desires. There is no national implement of power, not even in the Federal Government, that has the democratic will to attack and break the dominance of the monopolies which stand in our way. Instead, the Nation is torn by sectional skirmishes and incited by factional groupings concerned mainly with their own self-interests.

The present Federal Government has demonstrated its inability to cope democratically or realistically with the urgent economic problems confronting the Nation. The legislative, executive, and administrative instruments of Federal power have failed tragically in this hour of national need.

On the domestic front, as I have already said, Federal authorities have indulged every whim of the monopolists, industrialists, and financiers, while shamefully neglecting the basic needs of the returning veterans and unemployed war workers. Internationally, American diplomacy likewise reflects the interests of the cartelists. The tendency in our foreign policy seems to be toward peace negotiations founded on power politics and imperialistic expansion of American big business.

Because of the apparent unwillingness of the Federal powers to act, except in the interests of the monopolists who today dominate our economy, aggressive pressure groups are taking the initiative and exerting force to attain their particular ends. Even labor—divided as it is, and lacking a national implement with which to work for legitimate and democratic goals—is compelled through expediency to employ the tactics of these big pressure groups.

In this atmosphere capital stands out as the giant among the warring pressure groups, and Government largely reflects its policies. Should this situation continue into a period of widespread unemployment and unrest, as seems dangerously possible under current economic trends, there is no power on the American scene that can prevent a further coalescence of monopoly capitalism and Government, and the emergence of a home-bred variety of fascism.

Moreover it is tragic to observe that in spite of our victory over foreign forms of fascism there are many Americans who seem more than willing to adopt Fascist techniques at home as an alternative to democratic reconstruction of our economic-political system.

I see no hope of staving off this catastrophe except in the unification around a common economic program, and within the framework of a national political organization, of trade unions, farm organizations, cooperatives, independent and progressive business groups, and such other democratic institutions as are willing to break with the past. Alone, no one of these groups can either formulate or implement the necessary program of social change. United, they can formulate a program containing the basic requirements of all participating groups.

Organized labor is obviously the one functional group that has the initiative and the organizational resources to start such a move for dynamic democratic action. I realize, naturally, that we cannot expect all sections of the American labor movement immediately to throw their resources into this proposal. There will be hesitancy, reluctance, and even outright opposition to the idea of creating in this country a counterpart of the British Labor Party.

But I am confident that there are enough leaders of vision and courage in the CIO, the A. F. of L., the Railroad Brotherhoods, and the genuine independent unions to form a block of opinion and initiative whose force would be weighty, if not decisive, in American labor politics. Moreover, it is not in the least far-fetched to speculate that the creation of such a block would serve most effectively to implement the badly needed solidification of the American labor movement.

In any event, the promotion of this idea would provide a rallying point for the more youthful and militant minor labor leaders who are today frustrated by the artificial barriers dividing American labor. It would, in addition, serve as a most valuable educational device for teaching our millions of inarticulate card-carriers that "unionism as usual" cannot solve the national economic problems against which labor is dissipating its strength.

I realize fully that the course of action I am here suggesting is fraught with perils and pitfalls. The gravest of these, I am certain, is the difficult task of persuading broad sections of the nonunion public that the American labor movement is not an aggregation of goons, racketeers, and wild-eyed Bolsheviks. We must uneducate great masses of Americans who have been convinced that the trade unions are un-American cliques of self-seekers. But I can think of no more effective tool for this task than a national political organization which will offer to these nonunion and largely unorganized masses of ordinary folk a weapon with which to express and pursue their goals and desires.

These unattached and misinformed legions are the potential shock troops of American fascism; and, if we of labor do not have the foresight to invite them to join with us in the formulation of a common program, they will one day attack us from the right with all the fury that social frustration kindles in the breasts of its victims.

Secondly, a new national progressive party cannot succeed in America unless it overcomes the danger to democracy inherent in any over-all program of economic planning under political controls. It is a matter of historic fact in the world of our time that a government manned by a minority cannot force the democratization of a machine-age economic system without curtailing those very rights and liberties that are the substance of democracy itself. Universal state ownership of the means of production, as traditionally envisioned by leftist planners

of the ideal social order, or even excessive government intervention in economic processes, can be just as destructive of democratic freedom as any rightist dictatorship.

For this reason a new American progressive party must propose a pattern of social ownership that will serve to break the controls of monopoly capitalism. And the forms of social ownership it does propose to institute must, in the fashion of the cooperatives and the TVA, be absolutely democratic in character. Such an economic approach—involving the substitution of democratic social ownership for private monopoly ownership and the retention of useful and efficient small businesses under private controls—can win the support and participation of important groups whose contributions are essential to the operation of a modern economic system.

These groups, including farmers, professionals, technicians, small businessmen, and so forth, must be persuaded to take their place beside labor in the planning and building of a more democratic America. If they share in the formulation and implementation of a program of democratic abundance, these non-labor groups will have faith in its future; and their presence in the progressive camp will help to insure against too great a concentration of both economic and political power within the Government.

American labor is today well on the way to understanding the urgent need for political action. The limited success of the Political Action Committee (PAC) has demonstrated that the workers can be aroused to act politically and that they can unite with other groups for common objectives.

But PAC is only a good beginning. Unless we act soon to channel its energy into a national political organization that will offer to the American people basic and democratic solutions of our national economic problems, the militance and the awareness it has generated may be dissipated in futile demonstrations of pressure.

This is the eleventh hour for American labor. The chips are down and the stakes are democracy itself and global peace founded on justice and brotherhood. A new progressive American political party may not win power tomorrow, but it can certainly begin the long over-due job of educating our people to understand that they must organize, act collectively, and win political power—in order to secure the four freedoms that were promised to them as a reward for their contributions to the winning of World War II.

## American Ballyhoo in Support of English Propaganda

EXTENSION OF REMARKS

OF

### HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. WHITE. Mr. Speaker, much has been said about the effectiveness of molding public opinion.

We are about to witness another great drive to condition our way of thinking in favor of piling $3,750,000,000 on the unbearable load of our national debt in making the British loan. Already many of our leading columnists by subtle reasoning have come out with their arguments in support of the British plan.

The mechanics to be used and the technique to be followed is presented by the Wall Street Journal, November 13, 1945, issue, in an article entitled "Ballyhoo for Britain," which I submit here for the consideration of the Members of Congress:

WASHINGTON.—The American public is expected to drop its opposition to a loan for Britain between now and the turn of the year.

It won't happen by accident.

Five top Government agencies are mobilizing their opinion-manufacturing machinery for a campaign which will start soon and which officials say will be running at full tilt by December, when Members of Congress will be home listening to constituents. The pay-off will be legislative action in January.

Between now and then the pressure will pile up. Some maneuvering will be in public view, carefully timed. Speeches will be made by Cabinet members, for instance. Some of it will be a bit more obscure; the Government aims to help in preparation of many a magazine article, Sunday newspaper feature, and privately sponsored radio programs plugging the loan.

MANY "OFF-THE-RECORD" SESSIONS

A great deal of the activity will be entirely behind the scenes. Plans are afoot for "off-the-record" sessions in Washington and other cities from coast to coast, in which officials will indoctrinate businessmen, clubwomen, labor and farm leaders, and representatives of literally hundreds of miscellaneous organizations—all carefully chosen for maximum influence on public thinking.

Religious leaders, both ministers and laymen, will be among those welcomed to Washington for education, officials say, much as during the campaign to sell the Bretton Woods monetary plan.

Meanwhile, representatives of Britain in the United States have been specifically instructed to keep quiet about the projected loan.

The American strategy is all drawn up. It is incorporated in a State Department document bulking 100 pages or so which has been distributed to key officials in the Treasury Department, Commerce Department, Federal Reserve Board, and Agriculture Department.

STUDY SHOWS 70 PERCENT OPPOSE CREDIT

This includes a section entitled, "Special Report on Public Attitudes on Foreign Policy," based upon unpublicized governmental polls of public opinion. This study, which also includes analyses of press and radio comment, is understood to show that about 70 percent of the American people are presently against a large credit for Britain.

The present tactics were decided upon after a battle which for a time rocked the State Department. A group of top officials outside that agency demanded that a high-powered publicity expert be hired to run the campaign for popularization of the British loan. But after a tussle it was decided "at a high level" that this could backfire, so the job of planning and directing was left to a little-known division of the State Department which has proved its mettle in previous drives.

This is the Office of Public Affairs, whose acting head is Francis H. Russell, a Boston lawyer who came to the State Department in 1941 and first worked on economic warfare and the blacklisting of foreign firms tainted by Axis influence.

OTHER CAMPAIGNS GO ON

Mr. Russell contends—doubtless quite correctly—that the British loan campaign will not dwarf other drives on public opinion which his division has carried on with little uproar. These include popularization of the food and agriculture organization, the International Aviation Conference, some inter-American pow-wows, the big hullabaloo for the Dumbarton Oaks plan, and minor campaigns like one for the St. Lawrence waterway.

This work goes on constantly. A few days ago a group of industrialists were invited to Washington for the correct "background" on UNRRA. Off-the-record meetings were held recently in Washington, New York, Chicago, Denver, and San Francisco to further the cause of a projected global Educational and Cultural Organization. Late last week an influential group of Washington representatives of national organizations was lectured privately on preparations going on in London for the start of the United Nations Security Organization.

At least one governmental memorandum has referred to such activities as propaganda. Members of Mr. Russell's staff never use this word themselves, they contend. They wince even when the word "selling" pops up. "We like to think we're meeting a demand for information," they explain.

S. Shepard Jones is in charge of Mr. Russell's Public Attitudes Section which, with funds not appropriated for that purpose by Congress, is engaged in polling public opinion, analyzing the returns together with press and radio comment, and compounding his reports in documents which are stamped "confidential."

Chester Williams is in charge of group relations, among other things, arranging an average of one speech each day by some State Department official somewhere in the country. He also fixes up the "background" conferences. For instance, 120 organizations will be in Washington November 26 under auspices of the Carnegie Endowment for International Peace, to hear private talks by Under Secretary Acheson, Assistant Secretary Clayton, and others on the British loan and other matters, officials say.

HELPS ON DATA FOR ARTICLES

Mrs. Margaret Carter is in charge of a section to which folk are shuttled when they come to the State Department in search of information for magazine stories, radio scripts, or what not. She gives them the proper angle, and arranges interviews with Department dignitaries.

Mrs. Delia Kuhn is in command of Public Views and Inquiries, a special writing service which helps publish governmental pamphlets and which answers letters that pour into the agency from the populace. These average 400 daily, but in times of excitement, as during the San Francisco Conference, they hit a rate of 5,500 a day.

Though the State Department occupies a central position in the British loan campaign, it is flanked by strong supporters. Mr. Russell says that liaison is maintained at a high level by conferences between top State Department officials and Treasury Secretary Vinson, Commerce Secretary Wallace, and Federal Reserve Board Chairman Eccles. He did not mention any ranking official at the Agriculture Department, which is also participating.

Interdepartmental ballyhoo is supported even more effectively at a lower working level by mobilization of the public relations experts of all five departments. A representative of each goes to Mr. Russell's office for briefing on the campaign.

OTHER ORGANS AVAILABLE

The resources of these agencies can be rather staggering when fully mobilized. For example, the Agriculture Department, if it wishes to pull all the stops, can use these organs among others:

A Nation-wide extension service, with an editor in each State who can supply rural papers with stories about the markets for farm products which might result from foreign lending.

County agents, and 4-H Club organizations, where information can be passed by word of mouth.

The AAA organization, including State and local committees empowered to adopt resolutions and hold meetings on the basis of material prepared in Washington if they choose.

Services supplied direct to farm papers, journals, and radio stations.

Agricultural councils in all States and counties, able to reach local facilities of publicity.

The Commerce Department has numerous publications, and doubtless can play on its close connections with trade organizations. The Federal Reserve Board has its own publication, and its representatives, like those of the Treasury, can be influential in speech-making and private word-of-mouth contact with opinion.

## Full Employment

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. ROWAN. Mr. Speaker, the basic issue that has emerged from the debate so far over full employment in this country, reduced to its fundamentals, is jobs versus relief. For some time the debate has centered on almost everything else but the subject of jobs and relief, and that after all is the accepted strategy of attempts to block the legislation—to talk about everything else except what is really bothering one. One thing the argument is not about is whether there could be full employment even without the bill. Everyone is agreed that unemployment is unavoidable if we do not take a positive position to prevent it. To be sure the opponents of the bill place more faith than its sponsors in the length of time for which immediate boom factors may stave off that depression. Both sides, however, are equally alert to the reality of severe demobilization readjustments in the months that are ahead, and to the danger of a serious collapse after the boom has spent itself. In fact, the opposition has revealed itself as completely defeatist on this score. Again and again it has stressed the inevitability of business cycles and the inability of the Government to do anything about it.

Likewise the disagreement does not relate to freedom as is sometimes claimed. All are agreed that freedom is more important than employment. But it cannot be demonstrated that there would be a conflict of the two under the operation of the bill. On the contrary, we all know that opportunity to earn a living is prerequisite to individual freedom to enjoy life, liberty, and the pursuit of happiness—that a man on relief is not free to develop his personality and to make the most of his potentialities. And we know that without the markets provided by employed consumer, there can be no freedom of enterprise and business initiative and competition.

If there is any kind of freedom that is threatened by the promise of full employment, it is the freedom to profit from misfortune, to squeeze out one's competitors, to reap the windfall rewards of inflation and the bargain prices of deflation.

Another spurious issue has to do with public spending under the bill. A great deal of noise has been made about the tremendous sums that would have to be spent to close the gap in private activity, and about how this would mean constant growth in a public debt that is already enormous.

This is most interesting in its implication that private enterprise is completely impotent to respond to Government encouragement, and that it will fall far short of providing enough jobs. Again the opposition admits that unless action is taken we will have mass unemployment—but they prefer to do nothing about it.

Even more pertinent is the fact that these same people are themselves advocating huge public expenditures. They readily admit that in the event of depression—that depression which they would do nothing to prevent—the Government will be liable for emergency relief expenditures. No one, they say, will be allowed to starve. They will feed the people. They will provide clothing and housing and medical care. They will give them doles and work relief. But they will not give them work.

The only difference is that they do not favor the kind of constructive, carefully planned expenditures designed to increase the productivity of the economy, raise the national income and stave off depression. Instead they propose unproductive emergency expenditures, incurred after the crisis has hit, for wasteful and hastily improvised make-work projects, or for outright doles.

In the light of these facts, the clamor about the importance of balancing the Budget stands clearly forth in its absurdity. They know as well as we that deficits occur during depression—as a result of rising emergency expenditures and a shrinking tax base—and never during prosperity. They know that if we really want to balance the Budget and reduce the public debt we must sustain a full-employment level of national income.

This leaves as the real issue the fear of Government intervention. The opponents of the full-employment bill do not want to commit the Government to a full-employment pledge. They are afraid of a guaranty of the right to work, and they are not willing to assure that right. They oppose positive collective action to prevent unemployment, and they want to circumscribe Government responsibility.

There has been a great deal of sparring all around this issue. Sometimes they claim that we cannot bind a future Congress. But they know full well that in a democracy if the people are behind a piece of legislation they will enforce it. Why, then, do they oppose the measure if they are convinced that it has no binding or legal effect?

Sometimes they claim that since the bill does not offer individual redress in the courts in the event of unemployment, it is a misleading and fraudulent promise, not a genuine guaranty. But they know full well that a pledge of all the resources of the world's richest and most efficient nation is all the guaranty that the people need or desire. I am sure that if the people are convinced that the Government will do all in its power to achieve full employment, they will not ask for more.

Sometimes they claim that there is nothing new in this legislation—that nothing can be accomplished under it that cannot now be done without it. Again it may be asked, if they are sincere in this conviction, why do they oppose the measure so strenuously?

The answer, of course, is that they are not sincere. It is true that the Government has always collected statistics, taxed and borrowed and regulated, subsidized and underwritten private enterprise, controlled, and supervised, and spent. And it is true that under the operation of the bill the Government would still be doing these things.

The difference, however, is that all of these tools of Government would become part of a single integrated program—they would have a common purpose, and their total effect would add up to full employment. This is the essence of a national budget—that it should balance all of the various flows of public and private consumption and investment at a particular level, namely, the full employment level of activity. It would budget for enough jobs for all who are able and willing to work, and for nothing short of that.

The opponents of the bill grant the usefulness of statistics, and proclaim their readiness to estimate and forecast. But they do not propose to use the figures as a guide to action. If their budget should reveal a deficiency in private activity, they would let the slack be taken up through unemployment. They would close the gap with human misery, rather than constructive Government action.

And why are they afraid of such action? Because they know that if Congress were guided by the full-employment goal, it might have to do these various things differently—it would take action in the same fields as before, but not necessarily in the same direction. A full-employment program might step on some privileged toes, because it might call for more progressive taxation, or more aggressive action against monopoly, or more assistance to new and small firms, or more adequate development of our natural resources at the wealthier taxpayer's expense, or expanded social security, or opening up of new industrial regions to compete with established centers of activity, or more tangible support to the traditional formula of higher wages, larger output, and lower prices. There might be occasions on which the collective will of the majority would override the interests of the minority.

What do the people, those who will really be affected by the enactment of such legislation, say about full employment. In an effort to ascertain the viewpoints of the average man and woman, a very comprehensive and most unusual method of sampling opinion was employed in the Second Congressional District of Illinois, which I have the honor to represent in this Congress. Nearly a year ago the Independent Voters of Illinois undertook to ascertain the opinion of the people in the Second Congressional District of Illinois. The poll was decided upon at a meeting of this league. Sixty citizens volunteered to make a very complete canvass of the district under

the direction of Mr. John H. Millar, secretary of the Independent Voters of Illinois. The volunteers set out to develop a new technique of political information and action. A detailed block-by-block study of the district was made, so that it was possible to pick for interviewing a "sample" that, in miniature, would have the same characteristics as the district as a whole. Persons within this "sample" were interviewed by a corps of specially trained volunteer interviewers in the period shortly before VJ-day.

The Second Congressional District of Illinois is the fourth largest district in the United States, with a population of 612,641 in 1940. It has a cross section of varied economic, racial, and nationality groups. It includes the University of Chicago community and the south Chicago steel mill area. Consequently, although I would not vouch that the results of this particular study are 100-percent typical of the Nation as a whole, I cannot see why there should be any great divergence.

In the first place, it was learned that the people are worried. Canvassers asked them whether they thought job conditions would be the same, better, or worse after victory over Japan? The result? Forty-nine percent, practically half of them, expressed their conviction that things would be worse. Only 19 percent, or one-fifth, thought they would be better; and 13 percent thought they would remain the same. The more optimistic estimates were based upon such abnormal, temporary factors as large reconversion demands at home and abroad, and—this is significant—their confidence in a Government program to help stimulate activity. The more pessimistic reasons, on the other hand, related to cutbacks in war industries, return of servicemen, and the record of depressions in the past.

Having established the fact that the people have no real confidence in the future, poll takers then asked, "If there are not enough jobs for everyone after the war, do you think anything can be done about it?" And here the overwhelming response—83 percent, to be exact—was "Yes." Only 8 percent said "No," while 9 percent just did not have an opinion.

The next question obviously was what should be done; and to this over half of those interviewed spontaneously proposed some sort of Government program. Forty-eight percent supported Government action to stimulate business, build public works, give direct relief, or provide social security. Twenty-three percent recommended spreading work or shortening hours, presumably through Government control.

This much is certain, the people of Illinois are not opposed to working together to help one another through Government action.

It might be added for the benefit of those who see the demand for Government action as the radical and desperate plea of the underprivileged, that all income groups responded equally in favor of the positive Government policy. Just as many of those earning over $100 a week recommended such action as among those earning up to $43 a week.

Now, let us quickly summarize the results of the $64 question—before someone jumps to his feet to protest, "Yes, but how do you know they would favor the full-employment bill?"

Without naming the full-employment bill, this question was asked, "What would you think of a bill like this? First, the President would find out each year how many jobs there are going to be for the coming year. Then, if there were not enough jobs for everyone, Congress would give financial help to private business so that it could provide more jobs. Then, if there were still too few jobs, the Government would give contracts to private business to build public works to make up the balance of jobs needed."

The results? Eighty-three percent indicated they would favor such a proposal. This is more than just a majority, it is an overwhelming majority. Not only does it represent more than four-fifths, but 5 percent just could not decide, so that only 12 percent were actually opposed.

Note that according to the phrasing of the question, the first step would be financial assistance to private business, and the second step would be private contracts for public works. This, of course, is much narrower than the original full-employment bil, which, as a first and primary requirement, calls upon the Government to exercise the whole range of responsibility to which I have referred earlier and not merely financial assistance. Similarly the last resort would be Federal investment and expenditures in any one of a number of possible forms, not just for public works.

As a matter of fact, the divergence of this question from H. R. 2202 accounts for most of the unfavorable responses. Further questioning revealed that opposition to such a measure was related primarily to reluctance to subsidize private enterprise, which should stand on its own feet, and to fear of increased taxation. Hence, these people should find it reassuring that real full-employment legislation proposes to take steps to enable business to stand on its own feet—not merely to subsidize it, but by underwriting its markets, and combating monopoly, and encouraging consumption and in a good many other ways than direct expenditures. Then perhaps they would realize that the kind of full employment which is the objective of this bill would not increase tax rates but would improve the ability of people to pay taxes.

---

## Retirement of Brig. Gen. Robert L. Denig, United States Marine Corps

EXTENSION OF REMARKS

OF

### HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD I want to pay tribute to the greatest military family in my district.

Last week one of the grand old "young" men of the Marine Corps, Brig. Gen. Robert L. Denig, 61, retired from active duty Saturday, December 1, 1945, after more than 40 years in the corps.

The general, who was Director of the Division of Public Relations since its inception in mid-1941, was highly honored in Washington's Statler Hotel on the night before his retirement by members of his immediate staff at headquarters.

Attending were the Marine Corps Commandant, Gen. A. A. Vandegrift, Maj. Gens. Pedro A. del Valle, Allen H. Turnage, and Field Harris and numerous other high-ranking Marine officers as well as many of the over 200 enlisted combat correspondents and "exes," the majority of whom are back at work on newspapers throughout the country. Attending, also, were many well-known civilian newsmen and photographers, news-reel editors and cameramen.

General Denig, who was wounded in action while commanding an Army battalion in France as a major, is generally credited with being the father of the combat correspondent idea in the American armed forces.

Certainly, he was the impelling force which prevailed on a theretofore tradition-bound Marine Corps to loosen its restrictions and permit enlistments of qualified newspapermen for reporting of action on all the Marines' front lines.

Throughout a war that saw the general send his 2 sons into the Pacific in active roles as tank commanders, 1 never to return, also saw the general at the helm of a program that sent out into action over 200 of the Nation's most active and aggressive newsmen to report the war.

These men were present in small numbers when the marines jumped off the landing barges at Guadalcanal in the first offensive action of any of the American forces in World War II. They were present also at all subsequent Marine landings up to and including final Okinawa. Seven of General Denig's own—his combat correspondents—were killed in action. In addition, over 40 were wounded.

Son of a naval officer, Brigadier General Denig was born September 20, 1884, in Clinton, N. Y. As the son of a naval officer, General Denig became acquainted with the naval service early in life, and went to grade school for several years in Japan, while his father was at sea in the United States Asiatic Fleet.

General Denig attended high school in Sandusky, Ohio, where in 1900 he was a private in Company B, Sixth Ohio Regiment, National Guard. He left Sandusky to attend Manlius Preparatory School, and upon graduation entered the University of Pennsylvania.

On September 29, 1905, General Denig was appointed from Sandusky, Ohio, as a second lieutenant in the Marine Corps. One year later, following a period of training at the School of Application, Annapolis, Md., he was attached to an expeditionary force organized for service in Cuba where he served until November 1907. After his service in the Cuban pacification campaign Lieutenant Denig was assigned to sea duty and served

in the Marine Detachment, U. S. S. *Missouri*, until December 1909.

While at sea in August 1908, he was promoted from second to first lieutenant, and in December went ashore to duty at the marine barracks, Annapolis. Duty as post quartermaster at Annapolis occupied Lieutenant Denig until October 1911, when he was transferred to recruiting duty, and after a short period of instruction at Philadelphia in the duties of a recruiting officer, he took charge of recruiting district of Minnesota, No. 12, Central Recruiting Division, St. Paul.

In May 1913 Lieutenant Denig was again transferred to foreign duty and served in the Philippines until January 1916. The Marine Barracks, Philadelphia, was Lieutenant Denig's next station, and it was while serving in Philadelphia that he was promoted to captain in September 1916.

March 1917 saw Captain Denig having his first contact with Germans, when with a platoon of men he arrested the crew of the German auxiliary cruiser *Crown Prinz William* interned along with the *Prinz Eitel Frederick*, and conducted them from Philadelphia to Fort Oglethorpe, Ga. July 1917 saw the Fifth Regiment of Marines assembling at Quantico for duty overseas, and on August 5 Captain Denig, in command of the Seventeenth Company, Fifth Marines, sailed for France. After several months at the various combat schools in France, during which time he received a temporary promotion to major, Major Denig was given command on May 1, 1918, of the First Battalion, Thirtieth Infantry, Third Division. As commander of the Army battalion, he participated in the Aisne-Marne defensive, east of Chateau-Thiery from June 1 to July 7, and on July 8 he joined the Second Battalion, Sixth Marines, Second Division. At the battle of Soissons Major Denig stayed with the Sixth Marines, but on July 30 the Army again needed experienced field officers, and Major Denig commanded a battalion of the famous Ninth Infantry. He commanded the Third Battalion of the Ninth until October 3, when a serious wound took him out of the fight, and on November 27 he was evacuated to the naval hospital at New York.

Duty in New York, Philadelphia, and Marine Barracks, Portsmouth, occupied the major until 1922, and in March 1921 he received his permanent majority.

Major Denig sailed in March 1922 for foreign service in Santa Domingo where he was attached to the Second Marine Brigade until the spring of 1924.

From 1924 until 1929 he spent a tour of duty at the Marine Corps schools and Marine Barracks, Quantico, first as a student and then as an instructor.

November 1929 marked the beginning of another Caribbean period of service, this time in Nicaragua, and from December 1929 until the following December he commanded the northern area at Ocotal, Nicaragua. In April 1931 after a few months duty at Managua, Nicaragua, as chief of staff of the Guardia Nacional, Major Denig returned to the United States for duty at Headquarters, Marine Corps, and was promoted to lieutenant colonel in October 1931.

In May 1933 Lieutenant Colonel Denig was again assigned to duty at Quantico where he served first as assistant chief of staff of the Fleet Marine Force and then as chief of staff until the early spring of 1936. While at Quantico, in 1934, he was promoted to the rank of colonel.

Command of the marine barracks, naval prison, Portsmouth, N. H., was Colonel Denig's next tour of duty at which he continued until his transfer in July 1939, to marine barracks, Navy Yard, Pearl Harbor, T. H. There he served as commander of the marine post, district marine officer, and district commander, Nineteenth Reserve District, until June 1940. He then took command of the post at Puget Sound, Bremerton, Wash., and served as district marine officer and comandant of the Thirteenth Reserve District.

On June 1, Colonel Denig was ordered to Headquarters, Marine Corps, and advanced to the rank of brigadier general. He continued on active duty and upon the establishment of a Marine Corps Division of Public Relations, General Denig was appointed Director of the Division, in which capacity he is now serving.

General Denig holds the following decorations: Navy Cross; Distinguished Service Cross; Purple Heart; Cuban Pacification Medal; Victory Medal with Aisne, Aisne-Marne, St. Mihiel, Meuse-Argonne and Defensive Sector clasps; Expeditionary Medal; Second Nicaraguan Campaign Medal; American Defense Service Medal with Bronze Star; French Legion of Honor; French Croix de Guerre with bronze star; French Croix de Guerre with palm; French Fourragere; Presidential—Nicaraguan—Medal of Merit.

General Denig is married and has one son, Lt. Col. Robert L. Denig, Jr., USMC, who is in command of the Tank Battalion, Training Center, Camp Elliott, San Diego, Calif. Another son, Capt. James L. Denig, USMC, who commanded Company B, Fourth Tank Battalion, Fourth Division, was killed in action on Namur Island, Kwajalein Atoll, Marshall Islands, on February 1, 1944. In addition, there is one grandson, Robert L. Denig III, the son of Lieutenant Colonel Denig.

Mr. Speaker, I am inserting the record of his famous father, the late Commodore Robert Gracey Denig, as well as the record of his distinguished son, Capt. James L. Denig, USMC, who was killed in the Marshall invasion in the Pacific area:

COMMODORE ROBERT GRACY DENIG, UNITED STATES NAVY

Robert Gracey Denig, who rose from cadet engineer to commodore in the United States Navy, was born on May 22, 1851, in Columbus, Ohio.

After attending college in Kenyon, Ohio, and the Ohio and Jefferson College in Philadelphia, Pa., he entered the United States Naval Academy at Annapolis as a cadet engineer. He was graduated in 1873.

Commodore Denig's early tours of duty took him to Panama, Honolulu, and South America. He was one of 29 persons who were rescued when the U. S. S. *Trenton*, on November 24, 1877, was wrecked off the coast of North Carolina. During the Spanish-American war, Commodore Denig, then a lieutenant commander aboard the U. S. S. *Niagara*, took part in the bombardment of San Juan and the Battle of Nipe Bay.

For several years thereafter, Commodore Denig served on flagships which went on world tours and special trips to Africa and South America. He was made a commander in 1903, a captain in 1907, and in 1908 was placed on the retired list with the rank of commodore.

When the First World War broke out, Commodore Denig and his family were living in Sandusky, Ohio. In April 1917 he was recalled to active duty as chief inspector of navy engineering material in Pittsburgh, Pa., where he served until the end of the war.

During this period, Commodore Denig was active in stimulating war production in this vital manufacturing area. He designed a war-worker medal for persons employed in war plants. At his instance streetcar service for war workers was immeasurably improved.

This job completed in October 1919, Commodore Denig returned to Sandusky, where he helped organize the Perry Post, No. 83, of the American Legion. He died suddenly on April 10, 1924, in that city. Three years later, the name of Perry Post was officially changed to Commodore Denig Post.

Commodore Denig was married on April 11, 1878, to Jeannie Livingston Hubbard, of Sandusky. They had three children, one of whom is Brig. Gen. Robert L. Denig, the recent director of the Marine Corps Division of Public Relations, in World War II.

---

CAPT. JAMES L. DENIG, USMC, SON OF BRIG. GEN. ROBERT L. DENIG, USMC, KILLED IN MARSHALLS

Marine Capt. James L. Denig, son of Brig. Gen. Robert L. Denig, Director of the Division of Public Relations of the United States Marine Corps, has been killed in the Marshall Islands invasion.

Captain Denig was in command of a tank company in the Fourth Marine Division, which made the initial landing in the Roi Island area of the Marshalls. No details have been received on his death.

Word of his death was received today by his father in Marine Corps Headquarters, Washington, D. C.

Captain Denig's address was 2122 California Street, NW., Washington, D. C., the home of Brigadier General Denig.

Only 24 years old last December 25, Captain Denig was determined to follow in his father's footsteps. He was graduated from the Manlius School, Manlius, N. Y., where he completed a course in the reserve officers' training course, junior division of the Infantry.

On April 20, 1939, he was commissioned a second lieutenant in the Marine Corps Reserve. Part of his training in the inactive Reserve was received at Pearl Harbor, T. H.

Meanwhile, he continued his schooling at the University of New Hampshire. In June 1941, he received a bachelor of science degree in economics, cum laude.

On September 13, 1941, he was called to active duty. He reported to Marine Barracks, Quantico, Va., where he received basic training.

In February 1942 he was assigned to the Navy Department as an intelligence officer. In that capacity he was transferred to Ensenada, B. C., Mexico, as assistant liaison officer on the staff of Gen. Lazaro Cardenas, then supreme commander of the western defense area in Mexico, and former President of the Mexican Republic.

In June of that year young Denig was commissioned a second lieutenant in the Regular Marine Corps. He then was transferred to Port of Spain, Trinidad, British West Indies, as naval liaison officer.

In August, he was transferred to Dunedin, Fla., to the Amphibian Tractor School. A promotion to first lieutenant followed on September 30, 1942. In April 1943 he was advanced to captain.

In May 1943 Captain Denig was transferred to the Fourth Division, then being organized at Camp Joseph H. Pendleton, Oceanside, Calif.

His enthusiasm for marine tanks was handed down to him by his brother, Marine Lt. Col. Robert L. Denig, Jr., a veteran of Guadalcanal and currently executive officer of the Marine Tank Training School near San Diego, Calif.

Captain Denig was a member of the Phi Lambda Phi Fraternity, a scholastic honor society. He was unmarried.

## Clayton Act Should Be Amended

EXTENSION OF REMARKS
OF
### HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include an editorial which recently appeared in the Nashville Tennessean in support of H. R. 4810, a bill to amend the Clayton Antitrust Act:

UNDER OUR OWN CARPET

General MacArthur's crack-down on monopoly in Japan is a reminder that our own antitrust program, suspended for the most part during the war, is being resumed under more unfavorable conditions than in 1942, largely because of a reduced staff, a reduced budget, and the failure of Congress to take any action on the various proposals to strengthen the laws enforcing competition.

Thurman Arnold put the fear of God in the hearts of monopolists with the most vigorous antitrust policy in the history of the Nation before his retirement in 1943. He considered the nearly 300 suits which he brought only the beginning of an effort to restore free competition to America.

To carry on the brilliant and aggressive program, Arnold's able successor, Mr. Berge, needs an expanded budget and a bigger staff for the war-shrunken antitrust division of the Justice Department. The war and the closed season on trusts have given monopoly one of the greatest lifts in history. A campaign even more vigorous than that launched by Mr. Arnold in 1938 is needed to roll back the tide on behalf of the consumer, the wage earner, and the small-business man.

The antitrust division needs more than a bigger budget, however. Its antitrust weapons—the Sherman, Clayton, and Robinson-Patman Acts—are inadequate. The Temporary National Economic Committee's recommendations for strengthening them deserve something better than the small consideration given thus far by Congress.

The Federal Trade Commission should be raised from its present low stature as a referee between businesses and a collector of statistics to be a real agency of the people. This could be done by adopting the TNEC proposal to give it the power to grant or refuse to grant Federal licenses for interstate commerce and to withhold approval of any business merger. Such a measure would make it possible to head off monopoly before it could form.

Other bills based on the TNEC recommendations, such as the O'Mahoney-Kefauver bill and Senator LANGER'S proposal to raise the criminal and civil penalties for violating antitrust laws from mere taps on the wrist to punishment severe enough to deter, deserve early consideration.

One of the reasons why the Clayton Act his been practically a dead letter for a quarter of a century is found in its weak original construction, which failed to outlaw the acquisition by a corporation of a competitor's assets in addition to stock in cases in which it would lessen competition. If holding companies during the twenties failed to reach the size of the gargantuan Japanese "big four," it was not due to the restraints imposed by the Clayton Act. The O'Mahoney-Kefauver bill would correct the serious weakness of the 1914 law and also make up for some of the inroads on the act by judicial review.

Hope for full employment and expanded production in America is closely tied in with the question of monopoly control. Experience has clearly shown that if left alone monopoly power will raise prices, narrow consumption, reduce production, lower wages, and head the Nation into depression. Congress cannot afford at this time to be indifferent to the question of preventing restraint of trade through industrial concentration, if a free capitalist America is to evolve.

## "We Must Unify Our Armed Forces" Is Theme of Excellent Magazine Article by John Cowles

EXTENSION OF REMARKS
OF
### HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. RANDOLPH. Mr. Speaker, I have just read one of the most splendid and convincing articles which has been published on the subject of the unification of the War and Navy Departments. It was written by John Cowles, chairman of the board of Look magazine. The author possesses first-hand knowledge of the theaters of war. He was on Okinawa at the time of the Jap surrender. He was also in north Africa and Alaska, and he visited installations in the Pacific.

As a vigorous advocate of unification, I present for the information of my colleagues, the following:

WE MUST UNIFY OUR ARMED FORCES

(By John Cowles)

If the American people realized the extent of the ineffectiveness, friction, and waste that results from our having separate, independent War and Navy Departments, they would overwhelmingly demand that Congress immediately integrate them into a single unified Department of National Defense.

Not only would the war have been won sooner had the two services been unified 10 years ago, but fewer American boys would have lost their lives. Hundreds of thousands fewer men would have bee n.eded in uniform. Tens of billions of dollars would have been saved.

Saying this implies no criticism of the superb valor and achievements of either the Army or the Navy. In the victory that our forces won, there is ample glory for all.

THE SYSTEM IS WRONG

Our double-headed system of separate War and Navy Departments, each completely independent of the other, each getting its own separate appropriations from Congress, is basically wrong. Our system of having both the War and Navy Departments perform many of the same functions inevitably results in staggering duplication and waste. Our system of emphasizing the separation of the services is wrong. Our system of separate Army and Navy intelligence services is wrong. Our system whereby no one but the President—who is too busy with other matters—has command authority over the two services is wrong.

Because of our double-headed set-up, General Marshall and Admiral King had to devote large proportions of their time not to planning affirmative strategy to defeat our enemies but to composing disputes between the War and Navy Departments. As a result, many phases of the war had to be conducted on a basis of compromise, with necessarily reduced effectiveness.

Everyone who has testified either for or against Senator HILL'S proposal to integrate the two services now concedes the need for unity of command in each combat theater of war. Unity of command in Washington is even more important.

People who believe that we did have real unity of command even in all of the war theaters are mistaken. Right up to the day of the Japanese surrender, control of American forces occupying Okinawa, our closest territory to the Japanese homeland, was under divided command. Some were under General MacArthur, a thousand miles to the south in the Philippines; some were under Admiral Nimitz, more than a thousand miles to the east on Guam; while those in the strategic air force were under General Spaatz, also a thousand miles away. MacArthur reported to General Marshall, Nimitz reported to Admiral King, Spaatz reported to General Arnold, all of them in Washington, and even in Washington no one except the President had the power of command over the separate services.

DOOLITTLE WAS APPALLED

When Lt. Gen. Jimmy Doolittle arrived to take command of B-29 operations on Okinawa, he was apparently so appalled by the situation that he did an amazing thing for a top-ranking military man to do; he publicly pleaded for unification of command.

The so-called island commander of Okinawa actually lacked the authority even to discipline traffic violators, except for that relatively small proportion of the total forces directly under him, even though he had responsibility for seeing that the thousands of motor vehicles engaged in the construction of roads and air strips were not delayed by traffic jams.

Handling the 325,000 natives on Okinawa—enemy nationals—was no small problem. Yet the successive conflicting orders as to whether the Navy or the Army were to exercise control of military government finally became an open joke.

There was even question as to the degree of coordination of air attacks on the Japanese by our three separate Air Forces, the Fleet Air Arm under Nimitz, the far eastern Air Force under MacArthur, and the United States Strategic Air Force under Spaatz.

When war correspondents of the highest professional standing attempted to send dispatches hinting at the lack of unification that so obviously existed, censorship stopped them.

The procurement services of the War Department and Navy Department at home bid against each other for supplies and equipment. Qualified ordnance experts have even expressed the view that some standardization suggestions were purposely vetoed so that munitions and weapons would not be interchangeable between the Army and the Navy.

Manufacturers of various items used by both the Army and Navy were required to package their products completely differently, 12 in a box for the Army, 25 for the Navy, at increased expense and production delay, for no apparent reason except that the War and Navy Departments had separate procurement set-ups.

Service rivalries between the War and Navy Departments produced duplicating airfields,

hospitals, and even officers' clubs in many places.

Both the Army (ATC) and the Navy (NATS) operated on air-line service across the Pacific. Even on a tiny island like Johnston, an island only large enough for a single air strip, the Army and Navy each maintained its own exclusive personnel to put gasoline into its planes. The Army took the position that only soldiers should service Army planes, and the Navy that only sailors should service Navy planes, so we had double-headed administration and personnel.

Such wastes of manpower and money were multiplied a hundredfold by duplicate Army and Navy headquarters with all of their supporting service troops, duplicate intelligence services, duplicate supply depots, duplicate facilities and installations throughout the globe.

The Army specified one color and weight of underwear for its men in Iceland and Alaska, and the Navy another. Consequently, both forces couldn't be outfitted from a single store of supplies.

Although most people assume that the Navy handles all ocean shipping, the War Department actually has an enormous shipping section, duplicating functions that the Navy should be better qualified to perform.

If a college football squad were divided into two separate groups, one of linemen and the other of backs, and they were coached entirely separately, using different signals, we wouldn't expect them to function effectively if they were put together for the first time as a team only at the opening whistle of a game. Yet that is precisely the situation we have in our defense set-up with separate War and Navy Departments. That is at least a partial explanation of the disaster that occurred on December 7, 1941, at Pearl Harbor.

If—God forbid—another war comes, and the simultaneous dropping of atomic bombs on a score of American cities signals the start of hostilities, do we want two groups of uncoordinated players, even if they are individual stars, or do we want a trained team where each member knows exactly what he must do to help the team as a whole?

Unification of the Army and Navy into one department does not necessarily mean making either service subordinate to the other. Scientific progress may reduce the relative importance of one branch as new discoveries are made, but that is no reason for opposing integration.

Some opponents of unification argue that combining the services would necessarily "shatter the morale" or "destroy the traditions" of this specialized service or that. But no one would suggest that the Marine Corps does not have superb morale, and yet it is only one small part of the over-all Navy Department.

Today war is "total." It is an indivisible mixture not only of land and sea and air fighting, but of construction and logistics, of production and scientific research.

Recent scientific developments in atomic fission, in radar and the whole field of electronics, in jet propulsion and rocket projectiles, multiply the imperative reasons why the War and Navy Departments should be unified. The hundreds of millions of dollars a year that would be saved by eliminating duplication would provide funds for more research work on new weapons than we have trained scientists available to handle.

All Army, Navy, and Air Force uniforms, except clothing designed for some specific operational function, should be identical. Military titles for commissioned and noncommissioned officers should be identical. Pay should be the same in all branches for men of the same rank performing tasks of comparable danger or difficulty. Morale can be safeguarded through collar insignia indicating the specialized service in which the individual is engaged.

Our whole system of military and naval education should be overhauled. Instead of allowing admission to West Point and Annapolis to be controlled even in part by political patronage, competitive examinations should be given those who, after completing two or more years of college with ROTC training or service in the National Guard, want to make a career of military service. Possibly every boy so selected should have a year of training at West Point in the ground forces, a year at Annapolis in the naval service, and year of aviation at Randolph Field, before deciding in what branch he prefers to specialize. Other promising students should be sent to scientific institutions, so that we will have trained physicists and chemists working constantly on the scientific problems of national defense.

If war comes again, it will probably be all over, won or lost, in a far shorter time than any past war has been. It will be too late then to unify for maximum effectiveness. A second-best system of national defense, like a second-best hand in a poker game, is a poor bet.

With the discovery of the atomic bomb and the rocket, war has been revolutionized. Our national-defense system must be revolutionized, too.

## Housing for Middle-Income Families

EXTENSION OF REMARKS
OF
### HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

*Wednesday, December 12 (legislative day of Monday, October 29), 1945*

Mr. MITCHELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by Msgr. John O'Grady, secretary of the National Conference of Catholic Charities, before the Senate Committee on Banking and Currency on December 6, 1945, on the subject of housing for middle-income families. The committee had under consideration Senate bill 1592. Monsignor O'Grady's statement was comprehensive and pointed. As such it should be given wide circulation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Recently I held a meeting of our clergy in an industrial area of a certain city as a preliminary step to setting up a community organization that would include all groups. The clergymen that I brought together for a discussion of their neighborhood problems represented 12 different nationalities. One thing about which they spoke with a good deal of feeling was the lack of decent housing in the area. They stated that the families in that area wanted to own their own homes but that there was a scarcity of homes for sale; that when such homes as were available were purchased it was difficult for families to keep up their payments because of the high costs.

PUBLIC HOUSING A PREPARATION FOR HOME OWNERSHIP

What I found in this community is typical of what one finds all over the United States. When I have talked to local leaders in industrial areas about the low-cost public-housing program they have told me that while it is most essential and should be continued, that it is really a transitional program; that one of the best gains from public housing is the preparation of people for the ownership of their own homes. They have pointed out that while a number of their people who have been renters in the public-housing projects have purchased their own homes this number would be much larger if homes were available at a price they could afford to pay.

VALUE OF HOME OWNERSHIP

It is not easy for one to appreciate what the ownership of a small home in the ordinary American community means in the conservation and upbuilding of family life. The home is something that families cherish. It is a bond of union between the members of the family. It gives the head of the family a sense of achievement that can hardly be acquired in any other way.

In the conservation and upbuilding of American family life it is not only the home itself that matters but also the neighborhood. Everyone is aware of the process of deterioration that has been going on close to the heart of American cities in recent years. We know how the so-called slum areas have been breeding places of ill-health and of juvenile and adult delinquency. We know how difficult family life is in those areas. In the building of homes for American families we have to consider not merely the physical home itself but also the environment in which it is located. Our present slum areas are not suitable places therefore for the building of homes. The present slums must be cleared away in order to make the areas on which they are built suitable places for home building.

MINIMUM STANDARD OF LIFE INCLUDES HOUSING

During the past 50 years in the United States much has been said and written about the right of the citizen to a certain standard of life. People have talked and written about the right of the worker to a living wage not only for himself but also for his family. One of the basic purposes of the American labor movement has been the securing of a living wage for its members. In recent years the principle of the living wage has found expression in American statutory and constitutional law. The American people have also come to recognize the right of workers, in fact the right of all citizens, to protection against the hazards of life, such as, age, unemployment, and industrial accidents. This minimum standard of life includes not only a living wage and protection against the major hazards of life but also decent housing with proper sanitation, sufficient space to insure that privacy which is an essential part of family life, and adequate bathing and toilet facilities.

For more than 50 years there has been considerable discussion in the United States about the part that housing plays in a standard of life. As early as 1888 the Bureau of Labor made a study of workers' housing in this country. The same Bureau made a still more comprehensive study in 1902.

Beginning about 1917 we had much discussion about municipally owned and operated homes. About this time a few model home projects were established here and there throughout the country. During the twenties there was a wide interest in limited dividend corporations as a means of bringing homes within the reach of the people at a price that they could afford to pay. In 1932 the Federal Government entered the field of housing on the credit side. The mortgage market had become very shaky. It was necessary to have an institution similar to the Federal Reserve System to help home loan agencies make their credit more flexible. For this purpose the Federal Home Loan Bank System was set up in 1932. The Federal Housing Administration was set up in 1934 in order to secure a new flow of capital into the housing field and also to protect existing capital investments through a large insurance program. In 1937 the United

States Housing Act was passed to aid local housing authorities in building low-rent homes for families who could not pay the rent that private capital was compelled to charge.

AN ALL-INCLUSIVE HOUSING PROGRAM

During the past 2 years the Senate of the United States, through its Subcommittee on Housing and Urban Redevelopment of the Special Committee on Postwar Economic Policy and Planning, has made a complete study of the whole place of housing in the economy of the Nation. Now this Committee on Banking and Currency has before it the bill based on the committee's report. In this bill we have an all-inclusive housing program. Those who are interested in the purely fiscal side of housing are no longer separated from those who regard it as basically a social problem. Public as well as private housing are parts of one program and side by side with them we have a comprehensive program for urban redevelopment. Over the entire program there is to be a general planning agency which is to insure that housing will no longer be dealt with in separate watertight compartments. Without this over-all agency there is no possibility for a housing program that will meet the needs of the American people.

A CHALLENGE TO PRIVATE ENTERPRISE

It is no exaggeration to say that housing plans for middle-income families under this bill present one of the most serious challenges that has ever been presented to American private enterprise. They challenge American business to meet one of the greatest needs of the Nation. They challenge it to provide decent homes at a price within the reach of 9,000,000 nonfarm families earning in peacetime between $1,000 and $2,000 a year. In 10 years there will be 11,500,000 families in this middle-income group, assuming relative prosperity and high national income. Private enterprise is not only challenged to meet the needs of this very large number of families but it is offered a variety of inducements to do so. Once the American people understand the far-reaching provisions of the Wagner-Ellender-Taft housing bill for middle-income families there will be no question about their attitude toward it. The United States is still a country of middle-class people. It still has a middle-class mentality. Its families cherish home ownership. They want to have a stake in the soil. Think of what this legislation will mean for millions of families who heretofore have never had an opportunity of owning their own homes. Think of what it means for those who have purchased homes at a price they could ill afford to pay. Think of what it means for the families who have lost their homes because they were unable to pay the relatively excessive service charges.

MIDDLE-INCOME FAMILIES FORGOTTEN

The middle-income families of the United States are not unemployed people. They are an important section of the wage-earning people of this country. They are the backbone of American democracy. At the same time they are the families that are most likely to be forgotten in housing, in health measures, and in other services. The upper income groups are able to take care of themselves. Most of our public efforts so far have been concentrated on the lowest third of the population. Families in the middle-income group, particularly families of four or more, cannot afford to pay more than one-fifth of their entire income for housing. If these families spend more than this amount they must skimp on their allowances for food, for clothing, for recreation and for religious activities. Broadly speaking, this means that the middle-income families, with incomes from $1,000 to $2,000 a year, can afford to spend for their housing at most $20 to $40 a month. This may be for rent or it may be applied toward the cost of owning a home. It follows, therefore, that the middle-income families can obtain good housing only if such housing is available in adequate supply at costs ranging from $20 to $40 a month.

According to the 1940 census, middle-income families in great numbers were not getting good housing in 1939; they were not getting even decent, safe and sanitary housing. Of the nonfarm families paying between $20 and $40 a month for their housing, almost 875,000 lived in houses in the worst classification—those needing major repair. Another 265,000 of these middle-income families lived in houses without running water or plumbing—although not needing major repair. Still another 960,000 of these families lived in houses lacking basic sanitary facilities, such as private baths or flush toilets. Thus, more than 2,000,000 middle-income nonfarm families were deprived of housing coming up to what could be called an American standard. On the farms, the situation was relatively worse. In the years since 1939 there has not been much home building because of the war. Housing today is relatively much older. The housing prices have gone much higher than incomes—the total situation is far worse now than in 1939.

PLANS FOR HOME OWNERSHIP FOR MIDDLE-INCOME FAMILIES

How does the Wagner-Ellender-Taft bill enable private enterprise to build for middle-income families? First, and most important, there is a plan for home ownership. This plan uses the Federal Housing Administration system to insure 95-percent loans on individual homes, thus reducing the down payment required of the home purchaser to 5 percent, contrasted with from 10 percent to 20 percent under the present FHA plan. It extends the term of repayment of the loan to 32 years, contrasted with 20 or 25 years under the present FHA plan. It reduces the maximum statutory interest rate on these loans to 4 percent, contrasted with a maximum statutory interest rate of 5 percent under the present FHA plan. It is contemplated that, with experience, the actual interest rate under the new plan might average around 3½ percent. (This would be apart from the one-half of 1-percent charge for FHA insurance.)

The plans for bringing decent housing within reach of millions of middle income families in the United States have been clearly thought out. The program has a large nonpartisan support in the Congress. Those who are opposing it are undertaking a very serious responsibility. If they want to adopt a do-nothing policy, this ought to be made clear to the American people. A critical review of their objections is certainly in order at the present time.

OBJECTIONS TO NEW HOUSING BILL

The objections of Raymond M. Foley, Commissioner of the Federal Housing Administration, before this committee may be regarded as fairly typical. Commissioner Foley opposes the plans for middle-income housing because he feels the problem has been in large measure solved. In his testimony he said, "Since its inception and progressively thereafter, the great bulk of FHA operations has been in the middle market." Now, the figures presented by Commissioner Foley are a complete refutation of this assertion. According to the figures, 95 percent of all the home buyers in 1940 under the FHA small-homes plan had family incomes above $1,500 a year. Seventy-one and one-half percent of these home buyers had incomes above $2,000 a year. In other words, only 5 percent of this FHA housing was produced for families with incomes under $1,500 a year, and only 23½ percent of the FHA housing was produced for families with incomes between $1,500 and $2,000 a year.

Even assuming higher postwar incomes and a better standard of life than ever before, about 32 percent of American families in 1935 will have incomes between $1,000 and $2,000 a year—and this 32 percent is the middle-income third (which is all the middle market can mean, if it means anything)—then we see in cold figures the utter unreality of the claim that the great bulk of FHA operations has been in the middle market.

Incidentally, upon questioning, Commissioner Foley said that all he meant by the middle market was the middle of what FHA was actually doing. This would mean that if FHA were producing homes mainly for those with incomes of $2,000 to $3,000 then the $5,000 a year income would be the middle marked by Commissioner Foley's definition. Of course, less than 10 percent of the families in the country have incomes of $5,000 a year and above.

POSSIBLE RESULTS OF POSTPONEMENT OF A HOUSING PROGRAM

As part of his second objection Commissioner Foley tells about the scarcity of materials and of labor during the next year. He claims that without any new plans we can use up all our materials and employ all the available labor in building 500,000 houses. Commissioner Foley therefore concludes that we should postpone all these plans for the time being. This argument shows a lack of proper appreciation of the present housing situation in the United States. Will we secure the most effective results in meeting the needs of the American people by using up our materials and our labor in the next year in building $6,000 to $10,000 homes? Should we not rather try to lay more stress on the building of homes for families who need it the most, namely, the middle-income families. The principal result of a "do nothing policy" will in all probability be a speculative boom in the building of houses for the high-income groups to be accompanied by deprivation and overcrowding for ordinary wage earners and returning servicemen.

For a number of years this great lack of a housing program to meet the needs of the middle-income groups has been quite apparent. The proposed program should be an important element in stabilizing the housing market. It should provide us with a pattern designed to meet the needs of the ordinary people instead of the lopsided developments we have had in the past leading to speculative booms, to be followed by depressions of increasing severity.

CLAIMS OF ECONOMIC UNSOUNDNESS

A third objection to the middle-income plan for home owners is that it is "economically unsound" and would jeopardize the FHA system. It is difficult to understand what Commissioner Foley means by "economically unsound." He refers to a certain period in the life of the mortgage during which the still outstanding principal of the loan will be slightly less than the value of the house. During this stage he contends that the loan will be in a condition of "economic unsoundness." Now the depreciation schedule used by Commissioner Foley to place the value of the house below the value of the outstanding loan in the early years is an arbitrary schedule of depreciation, which adopts a higher depreciation rate in the early years of the house than in the later years. This may be sound from the standpoint of the speculative seller but it is hardly sound from the viewpoint of the economics of home ownership. It is a well-known fact that it is during the latter years that wear and tear begin to tell most heavily on the house. Under this plan if the majority of the houses were to be foreclosed and sold in a speculative market within a few years then there might be some merit in Commissioner Foley's arbitrary depreciation schedule but our experience indicates that most of the homes purchased will not be purchased for speculation but rather will be retained in the hands of their owners.

But even if Commissioner Foley's depreciation schedules are right, they merely mean that there would be some losses on those houses foreclosed during the period when the depreciated house is worth less than the outstanding loan. But all this means that there would be some losses in some cases. In any insurance system there are some losses in some cases. Commissioner Foley does not give us any facts which take account of the premiums collected to cover these losses. He takes no account of the fact that on most of the houses under this plan there would be no foreclosures and no losses. In fact, the premiums collected on the houses that were not foreclosed would be greater than under the present FHA system because the collection of premium at the same premium rate would continue for 32 years instead of 20 or 25 years.

PRIDE IN HOME OWNERSHIP MAINTAINS STANDARDS

The Commissioner of the Federal Housing Administration clearly underestimates the interest of the lower middle-class American families in home ownership. Their interest is far wider and deeper than any purely financial interest. For them the buying of a home is one of the great achievements of their lives. It is the pride that they have in maintaining their homes that keeps these homes up to good standards and that also maintains good standards in the neighborhood. Commissioner Foley has issued a great challenge to all who want to maintain good standards of home life in the United States. He has issued a challenge to those who would build better neighborhoods with a better neighborly spirit—neighborhoods in which there is more genuine democratic discussion of their neighborhood problems and the problems of American life.

EXTENSION OF LOAN MATURITY

The fourth objection made by Commissioner Foley is directed toward the 32-year loan. He considers this economically unsound. But the extension of the life of the mortgage proposed in the new bill is necessary to bring the monthly charge for home ownership down to the level of the family with an income of $1,000 to $2,000 a year. Now Commissioner Foley tells us that this is economically unsound. Families, therefore, must keep on paying the $40 to $50 a month which is most of what FHA offers to the middle-income groups. We know that this is beyond the means of the ordinary family earning even $2,000 a year. It would require at least a $2,500 yearly income under the present FHA plan to support a $5,000 house, or a $3,000 income in the case of large families. We must remember that FHA generally quotes monthly charges that cover debt service and taxes, but leave out maintenance. Most of the FHA-quoted figures are about $8 below the actual monthly shelter cost.

We are asked to accept on faith this statement in regard to economic unsoundness. What is there that is economically unsound about a 32-year mortgage? Most of the private industry groups have been recommending a 30- to 35-year mortgage for years. We have not been given any figures which show that the premiums charged are not adequate to meet the losses. On the basis of available information I contend that the extending of the period of mortgage maturity would minimize rather than increase the risks of payment. I understand that this has been the experience of the Home Owners Loan Corporation. I understand also that it has been the experience of the Farm Credit Administration. It has been the experience of many reputable lending agencies. In all probability the middle-income home purchaser would be a better risk on a 32-year mortgage than he is under the present FHA provisions, because the charges would be better adjusted to his capacity to meet them.

But suppose for the moment that FHA assumes some additional risks. Was not this the original purpose of FHA to carry part of the risk that was too much for private capital. Now if FHA is not willing to take additional risks, and should it continue in its present field in which it is insuring one-third of the loans on home building in the United States, what will be the future of housing under FHA?

It is interesting to note that while the opponents of the middle-income plan object to it on the ground that it involves greater risks, on the other hand they object to the compensatory insurance features that have been written into the bill to cover the greater risks. They say that these additional insurance features are unnecessary to accomplish the desired results.

PROVISIONS FOR RENTAL HOUSING

The second plan designed to provide adequate housing for middle-income families has to do with rental housing. This plan provides for FHA insurance of loans for 95 percent of the value of large scale rental projects, contrasted with the present FHA law which permits insurance of loans only up to 80 percent of the value. It enables these loans to be made for a period of 40 years, contrasted with the present FHA practice of making such loans on rental housing only for a 26- to 31-year period. It fixes the maximum statutory interest rate on these loans at 3½ percent, and it is anticipated that an average interest rate closer to 3 percent will be attained in practice.

Under this plan the owners or developers of large-scale rental projects—those to whom these loans of private funds insured by FHA would be made—might be cooperatives, limited dividend companies regulated by State law, public instrumentalities such as city corporations, housing authorities, and public educational institutions. Private educational institutions could get a 90-percent loan. It is estimated that these more liberal terms would provide rental housing in great quantity for middle-income families, resulting in many cases in rents as low as $30 a month.

The objections against the 40-year, 3½-percent, 95-percent insured loans for mutual and rental housing for middle-income families are the same in substance as the objections to the 32-year home-ownership plan. The answers to these objections apply with even greater force to the mutual or rental housing than to the home-ownership plan. There are no individual risks but only group risks in this mutual or rental plan. The need for this type of housing is so great, and the rents would be so far below those ordinarily charged for the same type of housing that the vacancy rate would be extremely low. Loans for such housing represent one of the soundest types of investment, and FHA insurance on such loans with a premium charge would certainly not involve losses to the Government.

LAPSED PAYMENTS PROVISION

The fifth objection to the plans for middle-income housing under the bill relates to the provision for lapsed payments. This provision does not prevent the FHA from drawing up appropriate rules and regulations in terms of operating necessities. It merely requires that in a form approved by the FHA a provision for lapsed payments should be inserted in each mortgage contract, so that in the case of economic hardship or other adversity the mortgage term may be extended at 1-year intervals up to a maximum of 3 years.

The objectors to this lapsed payment provision would substitute an amendment requiring the FHA to draw up such regulations, but not requiring any mortgagee to make use of the lapsed payment provision unless he so desired. In other words, after Congress had declared by policy in favor of a lapsed payment provision the mortgagee would be able to nullify this policy completely by refusing to use it.

From the point of view of the home owner there can be no question about the benefit of the lapsed payment provision to him. But the objectors do not talk about the interest of the home owner. They talk only about the interest of the lender and of the secondary-mortgage market. But even from the viewpoint of the lender it has been demonstrated both by HOLC experience and by the practices of the more progressive lending institutions that a lapsed payment provision enlarges rather than reduces the opportunity for the full recovery of loans made. Flexibility of terms is an advantage to the lender. Foreclosure and default is not the road to full recovery.

WARRANTY PROVISION

The sixth objection raised by Commissioner Foley and others is directed toward the warranty provision of the bill, which they contend will drive lenders away from the FHA system. Now, this argument overlooks the place that the homeowner occupies in the whole system. Will he not come in time to associate the warranty with good building practices? Will not therefore the warranty make the FHA system more, rather than less, attractive?

It may well be that much of the opposition to the warranty as well as to the 32-year period of mortgage maturity may come from those who would build homes with poor materials and thereby do a grave injustice not only to the homeowner but to the community. Has it not come to the time when the citizens as a whole must be ready to strike out for better standards in housing construction? Why should not the FHA assume the leadership in this movement? Once the people recognize the value of the warranty, once they come to associate it with better standards of housing construction, then instead of driving them away from the FHA system should it not rather attract them toward it?

At the present time FHA processes each individual house for plans and specifications. It makes an appraisal in connection with each house. It is supposed to inspect each house three times. If the FHA can perform so many services for the lending institutions, why can it not perform one service on behalf of the home owner?

INSURANCE OF CONSTRUCTION LOANS

The seventh objection raised by Commissioner Foley against the middle-market plans of S. 1592 is that the 85 percent firm commitment in connection with the 32-year plan for home ownership is unsound. Under the present FHA law an 80 percent firm commitment may be made. This means a loan is insured up to 80 percent of the value of the house before a purchaser is found and a down payment made. This really means insurance of a construction loan on behalf of the builder. The bill would permit this insurance on behalf of the builder, or "firm commitment" to be made up to 85 percent of the value of the house. It is called a "firm commitment" because technically what really happens is that the builder gets a firm commitment that the FHA insurance will be put into effect when the ultimate purchaser is found. The great advantage of this firm commitment is that it enables the builder to escape the risk of not being able to find a purchaser immediately. Thus, he can undertake large-scale operations, knowing that if purchasers are not found for all the houses at once, he may rent them for a while or sell them on a lease-option plan without a down payment. This large-scale operation, and assurance to the builder, makes for better planning and economies in cost of construction, consistent with good standards.

The objection is raised that the 85 percent firm commitment is too high because it would permit the builder to undertake construction with practically no capital, especially if there

were an initial overvaluation of the ultimate cost of the job through overvaluation of the land. The argument is made that allowing the builder to proceed without capital of his own would make for irresponsibility. There are a number of valid answers to this argument. In the first place, during the war a 90 percent firm commitment was permitted on small houses in order to get large volume. This 90 percent firm commitment worked well. There is no indication that it was detrimental to the FHA. On the contrary the FHA has frequently reported that despite the risks of building houses during the war when populations were unstable, the agency is coming out ahead on its war operations. For these reasons, Senator TAFT has pointed out that he can see no basis for the FHA objection to the 85 percent firm commitment.

In the second place, the 85 percent firm commitment could not result in a commitment equal to the value of the house unless the FHA was faulty in its own appraisals. The FHA has to appraise each job. Senator TAFT has made this same point.

DEVELOPING RESPONSIBLE BUILDERS

In the third place, the whole concept that a builder is responsible only if he has an equity involved is fallacious in its basic assumptions. In this country we must try to develop builders who have a professional pride in their work, who build good houses because that is their job, and because the FHA would not permit their use again if they built poor houses. The loss which the builder would suffer if he did not do a good job would be the loss of his reputation as a builder and his failure to be used again in connection with FHA insurance. The FHA should endeavor to exert this kind of pressure on builders instead of using the indirect method of getting good builders through the banker idea of a builder's equity in the job. The FHA argument is a slur upon the builder.

The FHA objection to the higher firm commitment on the ground that it would create irresponsibility on the part of the builder ties in with its objection to the warranty provision. The warranty provision is aimed directly toward getting good building by making the builder responsible for good building. If we have a warranty provision we do not need to be afraid of the 85 percent firm commitment.

REDUCING THE COST OF HOUSING

The eighth objection made against the middle income plans of the Wagner-Ellender-Taft bill is that we should reach the middle income groups by reducing the cost of housing rather than by tampering with the credit machinery. It is contended that if we could reduce the cost of building by 10 percent we would accomplish more than by the credit improvements in the middle income plans provided by the Wagner-Ellender-Taft bill. Now the bill contemplates stimulating every type of cost reduction, including the cost of the house, the cost of the land, and the cost of money. All of them must be reduced.

The very people who say that we should reduce the cost of the house instead of the cost of money, at the same time say that we should not try the middle income plans now because we are in an inflationary situation in which the cost of housing is sure to be higher. In one sentence they claim that it is extremely unlikely that the cost of building a house will be reduced, and in the second they claim this is the only way to reach the middle income groups.

It is true statistically that reductions in the cost of building a house, taken alone, cannot meet the needs of middle income groups. In most urban communities today it is impossible to build a good house for much less than $6,000. Even if this cost were reduced 50 percent, which is a naively optimistic assumption, the result would be a $4,000 house. A $4,000 house under present methods of financing serves a $2,000 a year income family. The middle income groups, on a Nation-wide average, have incomes between $1,000 and $2,000 a year. Thus it is obvious that while we must reduce the cost of building the house we must also lengthen the life of the mortgage and lower the interest rates in order to meet the needs of the nine to twelve million middle income families for whom no adequate provision can be made with our present methods.

INTERPRETATION OF NEW HOUSING LEGISLATION

In interpreting the Wagner-Ellender-Taft bill to the American people the basic emphasis of all the organizations sponsoring it will be on its plans for the middle-income groups. They will emphasize its value to the American wage earner and his family, to the American farmer, and to the agricultural worker. They will point to its contribution in maintaining the great middle clas traditions of the United States. They will stress the contribution of this bill to the development of better families and better neighborhoods. They will point to what its provisions for redevelopment will do toward the clearing of the slums and the rebuilding of the blighted areas of American cities, thus removing one of the greatest sore spots in the life of the Nation.

All the organizations sponsoriug this bill are interested also in its provision for expansion of the low-cost public-housing program. They know that this program has become a part of the accepted pattern of American family life. If private enterprise is not able to meet the needs of the middle-income groups it certainly cannot reach those who cannot pay the rents that private enterprise must charge even with the new implements provided by the Wagner-Ellender-Taft bill.

The new housing bill will provide untold benefits for American wage-earners and their families. In view of its contribution to their welfare it is most important in carrying out the vast plans envisaged under this legislation that proper cognizance be taken of the rights of American wage-earners. The requirement to pay not less than the wages prevailing in the locality should be made a condition of all aid extended by the Federal Government in the form of FHA insurance. To accomplish this, the prevailing wage amendment should be embodied in title III. The accepted standards, including the wage standards that have been secured through years of struggle, should be applied in the administration of each and every section of the bill.

## Hon. Clarence Cannon

EXTENSION OF REMARKS

OF

## HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. THOMAS of Texas. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein an article from Printer's Ink of November 23, 1945, concerning the Honorable CLARENCE CANNON, chairman of the Appropriations Committee. Chairman CANNON is one of the ablest and most effective men in the Congress. Not only his district, which he so ably represents, but the State of Missouri and the Nation are proud of his untiring efforts, his fine judgment, and his unerring knowledge of this country, and its needs.

The article follows:

MORAL: DON'T TRY TO INSTRUCT CLARENCE CANNON'S APPROPRIATIONS COMMITTEE

Alfred Schlindler, Under Secretary of Commerce, had the best intentions in the world when he appeared before the House Appropriations Committee in a laudable effort to pry out a little extra money for the Department. But he made the mistake of pontificating—of explaining things the committee knows better than anybody. The chairman, CLARENCE CANNON, Democrat of Missouri, has been in Congress since 1923 and during most of that time has been a member of Appropriations. He knows the story backward, as do other veteran members, Republicans and Democrats. Naturally enough, therefore, when anybody from a department attempts to instruct them, as Mr. Schindler innocently did, they are likely to take him for a ride—which is just what Mr. Schindler had. The Under Secretary found, as has been discovered by many before him, that hard-bitten Congressmen are much smarter than you would think, and that one underestimates them at his peril.

## Full Employment and the OPA

EXTENSION OF REMARKS

OF

## HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mrs. LUCE. Mr. Speaker, as coauthor of a full employment bill, which is prefaced on knowledge for the need of full employment in the highly industrialized Bridgeport section of the district I represent, I have been deeply concerned with the results of a survey made by the Bridgeport Chamber of Commerce as to the effects of OPA policy on employment and production.

During the past 6 weeks this survey has been carried out to determine what answers should be given a letter written by Mr. Chester Bowles, Administrator of the Office of Price Administration. On November 9 Mr. Bowles sent out a general inquiry as to what businessmen and the general public out in the country are really thinking about the effect of OPA on our national economy. The Bridgeport Chamber of Commerce engaged the firm of Thompson & Lichtner, management engineers of Boston, Mass., to get a factual answer.

They turned in a remarkably comprehensive report on the effect of OPA policy on employment and production in the Bridgeport area. I quote the following brief facts from that report:

PERTINENT BASIC FACTS AND FIGURES

There are, according to the USES, 220 industrial plants in the Bridgeport area (Bridgeport, Fairfield, Stratford). One hundred and thirteen of the above, however, have from only 4 to 25 employees. Eighty percent of the sampling was obtained from locally owned and managed plants having from 50 to 1,000 employees. There are 107 plants of such a character in the Bridgeport area. According to the United States Bureau of Labor Statistics sampling procedure, a 10-percent sampling of the number of plants quoted above is adequate to secure facts characteristic of the whole. Moreover, the plants employing labor from 50 to 1,000 produce more than 90 percent of all that is

manufactured in the area, according to United States Bureau of Census figures.

SAMPLE THREE TIMES MORE ADEQUATE THAN NECESSARY

It devolves, therefore, that this survey embraces, in number of samples taken, more than three times that which is necessary to warrant the assertion that the statements and figures elicited from the respondents apply to the entire Bridgeport industrial area.

HIGH LIGHTS OF THIS REPORT

*Ten outstanding statements gathered from top-ranking plant executives*

1. OPA price ceilings, squeezes, and regulations, unless adequate relief be afforded before February 15, 1946, will render 8,700 jobless in the Bridgeport area. This is 14.8 percent of the current total employment in industrial plants of 59,000.

2. OPA price ceilings, squeezes, and regulations, despite a present lack of help in many industrial plants, has currently caused "unemployment" in 34 percent of all manufacturing plants in the same area. But for the OPA plants would be offering jobs today to 3,400 more men or women or 5.7 percent of current industrial employment.

3. More than half of the responding executives state that a 30-percent wage increase without proportionate price relief would put them immediately out of business, practically all the remaining executives state they would face a bankruptcy within a short period.

4. If a 30-percent wage increase is granted with no corresponding price relief, 68 percent of manufacturers state that they will immediately dismiss their entire labor force; 22 percent (or a total of 90 percent) state that they will reduce personnel by 50 to 90 percent.

5. Total manufacturing costs in the Bridgeport area since price-freezing began in 1943 have risen variously from 10 to 100 percent. The average is 29.4 percent.

6. To operate at a fair margin of profit at current wage level, price relief on products sold, ranging from 0 (8 percent of respondents only) to 75 percent, is demanded. The average is 19.1 percent.

7. Fifty-eight percent of the Bridgeport area industrial plants report manufacture of one or more items which they are forced, to maintain trade position, to sell at less than cost; 72 percent at break-even prices, and 88 percent at unreasonably small profit.

8. Fifty-eight percent of the same type of plants, because of the OPA, have discarded, or will shortly discard (unless adequate relief is granted), one or more fair-profit pre-OPA items

9. OPA inequities, inconsistencies, difficulties, or hardships, affect 64 percent of Bridgeport's industrial plants.

10. Forty-six percent of responding top-ranking executives offered further remarks, facts, or opinions deemed pertinent to the material at hand. There was a strong undercurrent of thought generally that "the OPA was acceptable in principle and should continue to function, but"—

The entire report, which will shortly be made public, deserves careful consideration by legislators and by the public as a contribution to factual understanding of the present situation both of labor and management, and the effect the continuance of ceiling prices at their present levels may have upon full employment, as well as the effect such ceilings may have in continuing the present shortage of consumer goods which might encourage growth of a black market in somewhat the same way as prohibition led to bootlegging.

These problems cannot be solved with slogans. They demand careful, documented and audited inquiry. The survey made by Bridgeport is, in my opinion, a very important contribution to such an inquiry and deserves to be followed by like surveys elsewhere as well as to be studied for its own sake and value.

---

## Stabilization of Shipbuilding

EXTENSION OF REMARKS

OF

### HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. KING. Mr. Speaker, under leave to extend my remarks, I include an article published by the Industrial Union of Marine and Shipbuilding Workers of America, CIO, entitled "Stabilization of Shipbuilding":

STABILIZATION OF SHIPBUILDING—SHIPYARDS NOT JUNKYARDS

After World War I our combat ships were junked, our merchant marine left to barnacles and rust. So the Axis counted us out on December 7, 1941—and let us have it below the belt.

But America answered, and ships that had been only ideas in designers' heads—or plans on drawing boards—slid down the ways in a steady mounting stream.

It was the "bridge of ships" that ended two bitter years of defeat and turned the tide for ourselves and our allies. America's productive capacity had done the impossible.

The shipbuilding stabilization program, a joint agreement of labor, management, and the Government, blueprinted the production miracle.

Shipbuilding stabilization meant ships for the United Nations in war. The CIO Shipworkers' Union wants it to mean ships for America in peace.

Crucial test for the stabilization program will come on December 4 when a National Shipbuilding Conference convenes in Colorado Springs to review wages in the industry. This, the first of the annual reviews in peacetime will determine whether we will have—

Shipyards to build vessels needed for national defense and postwar prosperity; or—

Junk yards that invite a future Hitler to start World War III.

STABILIZATION—SHIPS FOR VICTORY

In 1938 the CIO Shipworkers' Union submitted a shipbuilding production plan to the Government.

In 1940 the union's plan was accepted by the National Defense Advisory Commission. A joint agency of Government, labor, and management was set up—the Shipbuilding Stabilization Committee.

Since 1940 a stabilization program has set the framework for collective bargaining in the industry. It embodies four shipbuilding zone standards agreements: Atlantic, Great Lakes, Gulf, and Pacific.

Within these zones, labor, management, and Government representatives agreed on:

1. A uniform skilled mechanics rate.
2. Uninterrupted production.
3. Arbitration of all disputes.
4. Cost of living wage increases.
5. A training program for new workers.

In 1942 a national shipbuilding conference set the ground rules which geared the entire industry to all-out production during the war and provided for an annual wage review by the Shipbuilding Stabilization Committee after labor had agreed to waive the wage-escalator clause in the old zone standards agreements.

The CIO Shipworkers' Union and the AFL metal trades department represent labor on the committee. Twelve industrialists represent management. The Navy, the War Department, and the Maritime Commission represent the Government's interest in shipbuilding.

THE WHEELS WENT 'ROUND

Everybody is in on it. The wheels have gone 'round in the shops and the keels have slid from the ways.

Everybody agrees stabilization did the trick.

Stabilization was the big war factor in the shipbuilding industry.

Stabilization worked—we won the war.

And in addition to the production record, stabilization saved money.

Navy and Maritime Commission officials say that shipbuilding cost the Government less in World War II than in World War I. Though workers' earnings were higher, they produced more per hour. And profits were so generous for the industry in World War II that contracts were often renegotiated and refunds made to the Government.

The saving to the Government was accomplished by an industry on an even keel—an industry stabilized—an industry that paid its workers, its management, its stockholders and produced for victory.

The industry can continue to do this in peacetime—if stabilization continues.

FIGURES ARE FACTS

Just one detail of savings goes into the billions.

In 1942 the national shipbuilding conference planned 'round the clock, seven-day operations. Automatic overtime on Saturdays and Sundays was abolished. Absenteeism took it on the chin. Remember—this was voluntary, long before the administration ordered the very same thing for the whole Nation.

This elimination of calendar premium days saved the Government $1,800,000,000 from 1942 through 1945.

The employee's suggestion program in the shipbuilding industry saved, according to United States Department of Labor statistics, $44,000,000.

From January 1943, through June 1944, idleness due to strikes amounted to only 0.06 percent of available working time, and absenteeism dropped in the shipyards, adding millions of man-hours to production.

That's the play-by-play record of stabilization.

But there's something more.

STABILIZATION AND WAGES

The national shipbuilding conference in 1942 committed the Shipbuilding Stabilization Committee to conduct a wage review each year. A wage review, in plain language, means a look at wages to determine whether they need adjustment.

In 1943 and again in 1944 the National War Labor Board which handled the wage review at the request of the stabilization committee flatly refused a blanket cost-of-living raise.

Now the NWLB is quitting. The war is over. The CIO Shipworkers' Union says the wages must rise in the 1945 review.

At the December 4 national shipbuilding conference the union will lay the figures on the table. It will exhaust every recourse of collective bargaining to reach an agreement that will cement stabilization.

WHAT ABOUT STABILIZATION?

The Shipbuilding Stabilization Committee, as set up in 1940, is to last until the President of the United States declares the end of the national emergency.

Then what?

If the shipbuilding industry is to continue—and it must continue for the sake of national security—then stabilization must

stay. It must be permanent. It must become a part of American industrial life in peace, as well as in war. It must become a part of America's life in order to insure the life of America.

STABILIZATION—SHIPS FOR PEACE

The shadow of Pearl Harbor will be cast upon the national shipbuilding conference December 4. Its decision on the 1945 wage review will vitally affect America's ships for peace.

The CIO Shipworkers' Union says that the American shipbuilding industry must be maintained in business on an efficient and functioning basis.

Officials of the Navy and the Maritime Commission, prominent Members of both Houses of Congress, and leaders of industry say it also.

The Graduate School of Business Administration of Harvard University made a report for the Navy Department. It found that with respect to ships and shipyards the country could and should have been more realistically prepared than it was for World War II. The war would have been shortened. Lives would have been saved. The final cost would have been less.

Admiral Ernest J. King, in the March 1944 report Our Navy at War, said: "Our armed forces and production were not adequately expanded and developed to permit our taking the over-all offensive in any theater. The Army Ground and Air Forces and our shipping were not yet prepared to move overseas in sufficient strength for an offensive, and the Navy, even without the losses sustained at Pearl Harbor, could not alone carry the war to the enemy."

WE NEED SHIPS FOR PEACE

For preparedness against attack the United States needs ships in peace.

We also need ships in peace to make possible a prosperous, expanding peacetime economy.

Ships and shipbuilding contribute to national prosperity by—

Furnishing a transportation system, internal and external, prevent interruption of service and tend to improve the service available to importers and exporters of the United States.

Providing 10 percent of our national employment.

Creating business opportunities among companies which will invest in shipping, and industries which will supply shipbuilding material.

Stimulating international trade to the benefit of our own expanding economy. There is almost a direct ratio between the volume of foreign trade and our national income.

MUST CONSERVE OUR ASSETS

To maintain an effective and functioning shipbuilding industry, a substantial portion of present production facilities and managerial know-how and the painfully acquired skills of the shipbuilding workers must be retained. Shipbuilding of tomorrow will be a long-range program, whose needs must be anticipated in advance.

The workers for whose skills there may be urgent needs next year or in future years must be kept in the industry.

Already an alarming decline is noticeable in the shipbuilding industry, greater in proportion than the cut-backs in production. Workers are quitting shipyards because of uncertain job security and sharply reduced earnings.

To retain these skilled workers, the CIO Shipworkers' Union says that the forthcoming national shipbuilding conference must provide wage adjustments which will make their difficult, unpleasant, often hazardous employment attractive.

Continuation of the shipbuilding industry is also a matter of national policy. Congress must act soon.

STABILIZATION—WAGE EQUALIZATION

Peacetime stabilization requires that America keep its shipbuilding workers employed in shipbuilding. This can be done only by returning to the shipyard workers the loss in wages which they voluntarily accepted under the wartime stabilization program and by maintaining present take-home pay.

*Here are some facts*

Shipyard workers were promised a roll-back in the cost of living in 1942. In return, they relinquished their rights to full-wage increases to which they were entitled under the wage-escalator clauses in the four-zone-standards agreements.

This promise was not kept.

American shipyard workers have lost 32.2 percent of 1 year's pay. It would take a 38.6 cents per hour increase to restore this loss. The CIO Shipworkers' Union is asking only a 17½-cent per hour increase—less than half of what it is entitled to.

*One and one-fourth billion dollars loss in pay*

An additional 30 percent wage increase is essential to compensate for the loss in pay resulting from a return to the 40-hour week. Over $1,250,000,000 is being taken from the annual income of shipyard workers by this reduction in work. This is dangerous. It will encourage deflation and a vicious cycle of depression.

The wage increases for which the union is asking will result in no increase in the cost of shipbuilding production. The industry can absorb the cost of these increases.

*Here is the balance sheet*

Given to Industry

1. Increased productivity per man—during the war it rose 30% to 50%.

2. Elimination of wasteful practices necessitated by the wartime demand for ships, such as labor hoarding, inefficient supervision, and so forth.

3. Elimination of excess profits tax and reduction of the corporate income tax.

4. Huge reserves resulting from wartime profits.

The ability of the shipbuilding employers to pay wage increase sought by the IUMSWA–CIO out of their profits is indicated by the financial reports of a number of typical corporations in the industry. Their average profits after dividends, taxes, and reserves for the years 1941 through 1944, as contrasted with their average over the 1936 to 1939 period, are as follows:

| | *Percent increase* |
|---|---|
| Bath Iron Works | 642.85 |
| Electric Boat Co | 541.62 |
| Los Angeles Shipbuilding Co | 224.80 |
| Maryland Drydock Co | 1,366.27 |
| Newport News Shipbuilding Co | 201.87 |
| New York Shipbuilding Corp | 2,313.48 |
| Todd Shipyards Corp | 1,378.27 |

Owed to Labor

1. Correction of the inequities created when wages were frozen during the war.

2. A bulwark against constantly shrinking real income.

3. Compensation for still rising living costs.

4. Protection against relaxation of price controls, which appears likely for the future.

5. Minimum lay-offs to make up for the lack of savings that can tide workers over reconversion unemployment.

FACTS FOR AMERICA'S FUTURE

Pearl Harbor has become a symbol of unpreparedness.

Final victory was won only because of a gigantic production feat in the shipbuilding industry, an accomplishment which would have been impossible without the shipbuilding stabilization program and the resultant cooperation of Government, labor, and management. Thus the shipbuilding stabilization program was a major contributing factor to victory.

Our Nation cannot afford another Pearl Harbor. The shipbuilding stabilization program must be continued in the interest of our national security and peacetime economic prosperity.

The Shipbuilding Workers of America—CIO request your consideration of the facts. They are facts which concern America's future.

---

## Machinery Improvement

EXTENSION OF REMARKS
OF
### HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and editorial:

OCTOBER 9, 1945.

Hon. WILL CLAYTON,
*Assistant Secretary,*
*Department of State,*
*Washington, D. C.*

DEAR SIR: As a part of the presentation which your Department made to the Ways and Means Committee, seeking authorization for the extension of the reciprocal trade treaty policy, your representative, Hon. Charles P. Taft, as shown on page 051, volume 19, of the hearings, stated:

"If I may take the textile industry, in this country again, the development of textile machines in this country has slowed down. As a matter of fact, the Japanese, who are generally accused of being only imitative, and developed considerable improvements in textile machinery which, in part at least, explains why their competition was very serious for our cotton textile industry."

This representation, above quoted, has been seriously challenged by an editorial which recently appeared in the July 19, 1945, issue of the American Wool and Cotton Reporter, a trade publication, from which I quote the following:

"MACHINERY IMPROVEMENT

"The textile industry has always been replete in enthusiastic research. We will give some instances. The textile industry of the United States leads the world in automatic looms. No other country in the world approaches us in that matter. The Draper Corp., its successor, the Draper Co., or the original George Draper & Sons, invented and perfected the first automatic loom and today the textile industries of the whole wide world appreciate and acknowledge the wonderful productive, low-cost properties of the Draper loom and admire the cotton textile industry of the United States and the rayon weaving industry because of the accomplishments of that equipment.

"The Crompton & Knowles W 3 automatic magazine looms and the newest S 5 silk loom are similarly powerful and potent in the woolen and worsted and fancy rayon industries. No other textile country in the world approaches us on low cost, high quality, high productive weaving. But even after the Draper loom had become a fact, improvements and research on weaving did not cease. The Drapers themselves have maintained powerful interest and accomplishments in improving their looms and in weaving in general. The same thing for Crompton & Knowles. But that isn't all of it. Other people have made efforts, as typified by the Stafford loom, which was taken over by Drapers, and the Hopedale loom, with a similar experience. And Crompton & Thayer Loom Works. And

still research and expenditure on weaving problems continue.

"Some years ago a man named Lucas invented a loom and he was financed by a very wealthy New York Stock Exchange and sugar broker concern, Lamborn, and the Lucas-Lamborn loom was worked out. After Lucas and Lamborn thought they had the loom perfected they asked us to go down to see it. We went with Mr. Lamborn over to a hidden little shop in Elizabeth, N. J., where Lucas himself was stationed with the loom and operating it. We were told all about the loom before we saw it, the framework of it was all steel, perhaps pressed steel, the gears were all cut steel gears. The filling package of about 3 pounds was passed through a very wide open shed, and that 3-pound filling package would, theoretically, keep the loom in operation for hours and hours and hours without needing any replenishment.

"The loom would, theoretically, be running 300 picks a minute. We went over to see it. Lucas himself operated it; we stood and watched it for about 3 hours, and finally we said to Lamborn: 'Mr. Lamborn, you haven't got anything. The Draper loom will beat the life out of it. Your 3-pound filling package is interesting but what good is it when the Draper loom, with all of its automatic attachments, has the big battery where the filling supply is replenished automatically; one boy, a battery hand, can tend 100 looms or 120 looms. You say you can run 300 picks a minute, but we have stood here for 3 or 4 hours and you haven't been able to do 100 picks a minute. You haven't got anything.' Lucas said: 'Are you a practical loom man?' And we said: 'No.' Then he asked us to send a practical loom man to him. So we hired the head loom fixer, an old, experienced expert weaver, from one of the finest cotton mills in New England and sent him down to Elizabethport to operate the loom and to report on it. Incidentally, we got an expert's fee of $150 a day and expenses for that loom fixer. He ran the loom, he was impressed with it, or perhaps he was talked into it, and he wrote a quite glowing report on it. But there isn't any Lucas-Lamborn loom today.

"Weaving equipment, looms made in this country and used by our domestic textile industry, are so far ahead of any weaving equipment in the world. Of course, loom improvement has not ceased; the Drapers will see to that, Crompton & Knowles will see to that, every intelligent weaver in the country, every loom fixer, every overseer of weaving, is thinking about it all the time. We have a tremendous amount of practical—not theoretical—research working all the time for the advancement of the industry.

"And then at another time, a few years ago, the late Frank C. Hopewell, who was treasurer of the Sanford Mills and head of the L. C. Chase & Co., the great commission house, he had a loom. Some professor at the Massachusetts Institute of Technology invented a loom. Hopewell financed it. They had the loom set up in a secret shop out in Watertown, Mass., and after they had worked on it for several years and thought they had it perfected, Mr. Hopewell asked us to go out and see the loom. We went out to Watertown, to the shop, with Hopewell, and there was the loom, and there was the inventor, the Massachusetts Institute of Technology professor, operating it. As we went into the shop Mr. Hopewell introduced us to a young man whom he called Erhart. We didn't recognize Erhart.

"This was an electrically operated loom. Instead of having a regular picking motion, with a picker stick, and a picker, and a picker arm, and a picker ball, and a shaft and shoes, it was operated by electric rheostats. On each side of the loom in the shuttle box was the electric rheostat arrangement, and it theoretically so operated that the rheostats coming into action threw the shuttle to the other side into the other shuttle box, and rheostats there checked it, slowed it down, and then reversed the operation and threw the shuttle back to the other side, etc. We watched that loom for a couple of hours. Erhart expatiated on it and Mr. Hopewell became quite enthusiastic. Finally we said to Hopewell: 'You haven't got anything'—and his face fell. Erhart bragged about the loom because he was afraid not to. He was afraid of displeasing Mr. Hopewell.

"But there was the loom with all the electric riggings on it, something way beyond the powers of the average loom fixer, they would have to have electricians all through the weave shop to take care of the looms, to keep the electric rheostats in operation, they would be adversely affected by lint and by the humidification; instead of being simplified the loom was made tremendously more intricate, it couldn't begin to compete on woolen and worsted production with the Draper loom on piece dyes or warp fancies, or with the Crompton & Knowles looms on woolen and worsted fabrics in general. And that loom is gone out of the picture. But it did represent—along with the Lucas-Lamborn loom, also—something of the always occurring effort of men within the industry and men allied with the industry in efforts to improve machinery, to keep down costs, all part of the very practical research effort that is, and always has been, present in this industry of ours.

"The yarn-producing equipment of the American textile industry leads the world. We invented spinning frames for cotton-yarn production that replaced the old mules and that made our cotton-yarn-producing industry the leader of the world. We invented the woolen spinning frame which is working out similarly. And Whitin, and Saco-Lowell, and H. & B., and Davis & Furber, and Johnson & Bassett and others, are all of the time experimenting, researching, improving and keeping our yarn producing industry way out front in leadership.

"We had an experience on new spinning equipment a few years ago. Somebody, or a group of people, had invented some new kind of a spinning ring and traveler and had it on exhibition with the machinery running in a shop up on Water Street in Boston. They were selling stock in the company that owned the patents and that was going to build the new spinning equipment so naturally we were a little leery of it. We went up to see it. As we remember it, it was some kind of a floating ring and some kind of a floating traveler and the claims for it included a claim that the whole thing was going to operate much more economically and much more efficiently and very much faster and produce yarns at very much lower cost. The man who was running it and in charge of everything up at the shop on Water Street was a fellow named Fobes. We watched it for an hour or two and then we told Fobes that he didn't have anything. His claims included a speed revolutions per minute for the front rolls that were wholly outside of possibilities. The cotton stock wouldn't stand any such speeds.

"Fobes asked us, 'Are you a practical spinner?' and we said 'No.' He asked us to send a practical spinner to see the equipment, so we got hold of Martin, who had been superintendent of yarn production in the Lancaster Mills, and had held similar important jobs in other mills, and sent him up to see it, to watch it, and to report on it to us. Martin made a very favorable report, but we told him he was wrong, we knew he was wrong. And that spinning equipment is wholly out of the picture. The fact that the expert weaver and loom fixer reported favorably on the Lucas-Lamborn loom and the fact that Erhart, who had been a loom builder himself in a minor capacity, reported favorably on Frank Hopewell's electric loom and the fact that Martin reported favorably on the new spinning method is not derogatory of them. They were mill men, they were all the time looking for improvements—in fact, the whole industry is all the time looking for better equipment, better methods, better processing, and will give everything a fair chance, and that was the attitude of the three men referred to.

"The fact is that this American textile industry of ours is pretty well equipped, way ahead of the rest of the world. There is no lack of continued, speculative experimentation by the textile machine builders themselves. They actually do spend a vast amount of money every single year and in every succeeding year on practical and theoretical research. So when anybody tells us that the textile industry has been deficient on research it grieves us a little. We know a darned sight better. And the facts of the American textile industry prove it."

I will greatly appreciate receiving from you such statement or explanation as you believe advisable to indicate that the presentation on the part of the Department of State to the Ways and Means Committee, as related above, was warranted by the facts easily obtainable.

With all good wishes, I am yours sincerely.

## Basic Reasons for Credits to Britain

EXTENSION OF REMARKS

OF

### HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 11, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks, I include an excellent article by Arthur Krock which appeared in the New York Times, December 7, 1945:

THE BASIC REASONS FOR THE CREDITS TO BRITAIN

(By Arthur Krock)

WASHINGTON, December 6.—The administration is braced for protests in Congress against the terms of the proposed credits to the United Kingdom, and the British expect difficulties in the Empire when they undertake to carry out some of the commitments they made as a quid pro quo. Both obstacles, however, may prove easier to surmount than was envisaged in the preparations being made for that purpose.

The administration, of course, wishes it did not have to go to Congress for specific authority on the details of this loan and could have arranged them through the Export-Import Bank, after getting a commensurate increase in its loaning capital. But in all the circumstances the alternative was an impossible idea, and so the administration is ready publicly to meet and answer all criticisms, item by item.

The chief questions and objections, which are probable, and the responses administration spokesmen will make, can be summarized as follows:

Question. The United States already has a huge internal deficit, and there is no guaranty in the terms of the credit that this arrangement will not increase it. Where is the money coming from?

Answer. The total amount involved represents the cost of waging the recent war for about 15 days. That money was all shot away. This is to construct a free and productive world economy and reduce to the lowest possible minimum the number of economic blocs in the postwar world, and through the lend-lease settlement we shall not have the issue that afflicted our international relations between the two World Wars. The money is coming out of the Treasury. We have it, and also there is no

present prospect that it will be requisitioned rapidly.

Question. The interest rate is stated as 2 percent. But with the 5 years of grace it works out at 1.62 percent and can go lower if the British omit any annual interest payments, as they can on their own finding that conditions warrant it, and the Treasury pays an average of 1.92 percent on its obligations.

Answer. That is quite true. But the British cannot undertake higher terms. And it should not be forgotten that they must make their annual payments on the principal with no waiver privilege. Also it should be remembered that the conditions we have imposed oblige the British to change their national economy, which is no simple assignment.

Question. Why did the British ever adopt an economy which requires fundamental change to participate in the kind of world we want?

Answer. Do not forget that the Ottawa agreements and other aspects of the British bilateral trade and preference system were their measures of protection after we raised the wall of the Fordney-McCumber Act and adopted other repressive trade policies. Also do not forget that, if we do not come to fair credit terms, the British economy will be intensified, and they can do that for quite a while anyhow.

Question. Aren't the terms of the credit a bad precedent? Won't other nations expect the same treatment, notably Russia, where Stalin (according to Senator PEPPER) is thinking of a request for billions of dollars? And how many times are you coming here to ask for appropriations for other national credits?

Answer. The United Kingdom's case is a special case. We recognize no other like it and do not expect to, so no precedent is being set. Also we do not plan to take up with you the credit or loan requests of other nations. These will be handled through the Export-Import Bank.

Question. Britain has more assets, dollars included, than seem to have been taken into account in these terms. Aren't we being credulous and easy?

Answer. The British came here to get a grant, or gift, and the sum they had in mind was $5,000,000,000, though at times they mentioned $6,000,000,000. From their own viewpoint, and their own war books, they had a tenable claim. But we declined to consider this at all. We insisted on a business deal, and that is what we have made, subject to approval of Congress. In their acceptance of the proposals for the expansion of world trade and employment, prepared by our technicians, the British also have made concessions of vast importance to the cause of enduring peace.

Question. Aren't we assisting them to nationalize their industries, which will put our private industries at a disadvantage in the world market?

Answer. No. And if this plan fails the world's turn to nationalization will increase and force a hateful decision on us.

Question. Recently B. M. Baruch said that the Government should compile a careful and complete list of its assets and liabilities and its own domestic commitments and needs before deciding what gifts, loans, and credits it can extend abroad, and to whom. Has the administration such a list, or anything resembling it? If so, does it sustain this credit? If not, should we make it now?

What the answer to such a question, if asked, would be this correspondent has no idea, but not improbably the response would be general—to the effect that, of course, the Government knows what obligations it can assume and that the problem of the United Kingdom is of such immediacy that it must be dealt with at once in our own ultimate interest.

But whatever this particular reply, the other answers above are reasonably accurate paraphrases of the arguments in favor of the credit plan as they have been stated to this correspondent by some of its negotiators who will appear before the committees of Congress.

## American Jeweled-Watch Industry

EXTENSION OF REMARKS
OF
### HON. J. ROLAND KINZER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. KINZER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter received by me yesterday from Walter W. Cenerazzo, national president of the American Watch Workers Union:

THE AMERICAN WATCH WORKERS UNION,
*Boston, Mass., December 10, 1945.*

Congressman ROLAND KINZER,
*House of Representatives,*
*Washington, D. C.*

DEAR CONGRESSMAN KINZER: On last Tuesday, December 4, 1945, Congressman EMANUEL CELLER, of New York, took the floor of the House of Representatives and assailed the three American jeweled-watch manufacturers—the Elgin National Watch Co., the Hamilton Watch Co., and the Waltham Watch Co.—and criticized the State Department for coming to the aid of the American jeweled-watch industry.

Congressman CELLER's actions are understandable. He represent the Benrus Watch Co., one of the largest Swiss watch importers in America; he represents the Lazaruses, of which family S. Ralph Lazarus is the president of the Swiss watch importers group, which masquerades under the name "American Watch Assemblers Association." Congressman CELLER simply forgot his identity as a Congressman on Tuesday, December 4, and he thought he was representing his client, the Benrus Watch Co. As to the contents of the letter which Congressman CELLER sent to Mr. Arthur Paul, Director of the International Trade Operations, United States Department of Commerce; it is apparent that Mr. CELLER in his anxiety to please his clients, has failed to look at the record and to investigate the facts.

Had Congressman CELLER cared to read the hearings before the Ways and Means Committee and the Senate's Finance Committee of 1943 and 1945, he would have found the case of the American jeweled-watch industry and its employees versus the Swiss watch importers and the Swiss cartel (the Swiss Superholding Co.). For four long years, the employees of the American jeweled-watch industry have been crying as a voice in the wilderness protesting the fact that a foreign country which was supplying Germany and the Axis with military timing mechanisms was being allowed to build a Frankenstein in the United States through Swiss dumping of civilian watches. We have knocked at the door of Congress many times as have we appealed to the State Department and the Committee on Reciprocity.

We have had a hearing on October 23 before the Committee on Reciprocity and that hearing was declared confidential by this committee and they gave a hearing to the Swiss Watch Importers on October 26, 1945 which was confidential also. We requested of Mr. Edward Yardley, executive secretary of the Committee on Reciprocity, that these hearings be made public, and that we be given the opportunity to see what was said by the Swiss Watch Importers, and that they be allowed to see our case. This request was denied. We appealed to the State Department through Winthrop Brown, chief of the commercial policy of the State Department, to open up the records. We were again refused. After both cases were heard by the Committee on Reciprocity on October 23 and October 26 of this year, the Committee on Reciprocity delayed action for 5 weeks waiting for a brief from the Swiss Watch Importers which it granted them the right to file. To this date, such a brief has not been filed from the best information available.

Congressman CELLER's arguments in behalf of his client are fallacies and are the handiwork of a group groping in the dark to protect a group which was allowed to expand in the United States during wartime to the detriment of the national defense of the United States. We agreed with Congressman CELLER that international trade should no longer be a one-way street. It's time that American interests were protected and the job opportunities of American workers were protected. Mr. Wallace's 60,000,000 jobs will never be a reality in America if we eliminate the opportunity for employment from the many basic industries which are subject to foreign competition. However, we can appreciate Mr. CELLER calling Mr. Paul's attention to his superior, Mr. Wallace, because Mr. CELLER knows that Henry Wallace, Secretary of Commerce, is a brother-in-law of Henry Bruggman, Swiss Minister to the United States. We don't know whether Mr. Wallace is interested in the Swiss interests or the American interests in this case as he has never yet expressed himself. As for the effect limitations of Swiss watch imports on the merchant marine, Congress CELLER had better discuss with his client, the Benrus Watch Co., the amount of shipping space watches take, for he will find out if you can put 20,000 watches in a suitcase and accordingly all of the Swiss watch imports into the United States in any one year can be put in the hold of one boat. How the merchant marine would starve to death if they had to depend on only Swiss watches for employment and trade.

As for the employment aspect, not one bit of employment is given by the Swiss watch importers that would not be given by the American jeweled industry if all watch movements were manufactured here—as a matter of fact, more employment would be given to the workers of our country if all watch movements were manufactured here, because many Swiss watches come here already cased and the American watch companies buy all their cases in the United States. Such items as bracelets, golden and silver watch straps, boxes, etc. that Mr. CELLER mentions—all that employment and domestic sales of such products would be given by the American jeweled watch industry to Americans. The only one that would be hurt by the elimination of such imports would be the Swiss watch importers who have much room from 50 prewar to 500 now and who have waxed fat from the profits on the 28,000,000 watches they have imported during the war. They are in the same position as the gambler who is allowed to prosper during an unscrupulous municipal administration and made to abide by the laws in the best interests of the community. The gambler protests because he has been allowed to operate over a long period of time and thinks he has a vested interest in his business, even though it is illegal. So it is with the Swiss watch importers—a wartime condition has allowed them to become large traders in war and they believe that they now have the right to exclude the American jeweled-watch industry from a fair place in the market of the United States.

Eighty-five percent of the unit cost of a watch movement is labor cost. American workers receive three times the pay of Swiss workers. Comparable watch movements—Swiss and American—retail at the same price.

even though the Swiss watch movement is imported into the United States from one-fourth to one-third of the cost to the manufacturer in the United States, but the consumer doesn't benefit; nor does the retailer. The Swiss watch importer picks up the difference as his profits, to the detriment of the national defense of the United States. Congressman CELLER should know that there are only two sources of supply for timing mechanisms in the world—the United States and Switzerland. He should be deeply interested in the fact that the Swiss watch industry supplies the machinery and timing mechanisms for Germany and the Axis and that they did not supply the Allies with any military equipment. Congressman CELLER should be deeply interested to know that American boys were killed and maimed by the products of the Swiss watch industry. Congressman CELLER should be deeply interested to know that there are 90 war plants in existence today in Germany, all of which are equipped with machinery made in Switzerland. Congressman CELLER should be deeply interested in the fact that if the program that he advocated last Tuesday on the floor of Congress were adopted that it would mean the elimination of the American jeweled-watch industry and that the country that controls Switzerland would control the timing mechanisms of the world in future wars.

As for his analysis that the demand in 1946 and 1947 will total 10,000,000 watches—all we can go by on this subject is the record. The average sales of watches in the United States from 1926 to 1940 were 3,475,000 watches per year. These include domestic production and Swiss watch imports, combined. The figures for this period are as follows: 1926, 4,464,000; 1927, 4,834,000; 1928, 4,279,000; 1929, 5,139,000; 1930, 3,475,000; 1931, 1,779,000; 1932, 898,000; 1933, 1,001,000; 1934, 1,646,000; 1935, 2,188,000; 1936, 3,527,000; 1937, 4,451,000; 1938, 3,100,000; 1939, 3,990,000; 1940, 4,751,000.

These figures are the totals of watch sales in the United States from 1926 to 1940. During this period Swiss watch imports averaged 2,100,000 watches per year. During the war, these imports increased tremendously. In one month—October 1945—2,100,000 watches alone were dumped into the United States from Switzerland. Since Pearl Harbor 28,000,000 watches were dumped into the United States by these Swiss watch importers who now cry that it is un-American for Americans to demand that their jobs be protected. We note that Congressman CELLER recommends that the Swiss Government refuse to accept the limitation of 3,000,000 watches as suggested by the State Department. We pray to God they do; for we believe that 3,000,000 watches is excessive and that no more than 2,000,000 per year should be allowed into the United States. We believe that the American people once they are acquainted with the facts in this case will rise in wrath and demand that Congress enact legislation to protect industries such as our's that are essential to national defense. How can any Congressman representing the people of the United States have the gall that Congressman CELLER has to stand up on the floor of Congress and advocate the destruction of an industry essential to national defense.

As for smuggling of Swiss watches—who better than the Swiss Government can police this? But again, the Swiss were never fussy who they did business with—for anyone who would do business with Hitler during wartime would do business with anyone. Senator KILGORE, of West Virginia, chairman of the Subcommittee on Elimination of German Resources for War, said that correspondence in his hand makes it clear that the principal concern of the Swiss was the prospect for future business dealings with a postwar Germany, irrespective of its political character and its relationship to the peace- and freedom-loving nations of the world. Need we say any more?

As for Congressman CELLER's reasoning on his statement that of retail sales of $82,500,000 only $10,622,000 went abroad, doesn't this statement speak for itself? The Swiss watch worker who works for two-thirds less than the American watch worker and the Swiss watch manufacturers dominated by the Swiss cartel sell their watches cheaper, or cost them less to produce. But the Swiss watch importer, when he sells these same watches, charges as much for them as does the American jeweled-watch manufacturer for the product which costs the American manufacturer so much more to produce. Let Congressman CELLER investigate the profits of the American jeweled-watch industry for the past 20 years, and he will find that the net profit for the American watch manufacturers has been less than $1 per watch over this period and let him contrast this $1 per watch with the profits made by the Swiss watch importers on Swiss watches, and he will find that the average profit for the Swiss watch importer to average between $7 and $10 per watch.

As for employment, the Swiss watch importers supply—other than the big three Swiss watch importers: Bulova, Gruen, and Benrus—the rest, or 90 percent of the rest, if they have an office, a telephone, and a sales room, they are doing well—and some of them even use their bedroom as a place of business.

If it were not for the important position which Congressman CELLER holds, as a Congressman and a member of the all-important Judiciary Committee, we would not have dignified him with a reply when we found out his affiliations with the Swiss watch importers as an attorney for the Benrus group. However, in view of his position, we deemed it mandatory to reply.

If democracy is to survive in America, if the Republic of the United States is to be maintained, integrity in our public officials must be of high standard, and every United States Senator and every Representative in Congress must consider the national good and must keep our country at all times prepared against the bullies that arise in international affairs. The best insurance for peace in the world is a prepared America. That is all we are pleading for in asking for the survival of the American jeweled-watch industry. We plead with Americans for America so that a national defense industry will be maintained and that America shall not be dependent upon any foreign country for timing mechanisms.

We respectfully request you, as the Congressman representing one of three localities in which an American jeweled-watch factory is located, to place this reply to Congressman CELLER in the CONGRESSIONAL RECORD.

Thanking you in behalf of the membership of the American Watch Workers Union, I remain

Very truly yours,

WALTER W. CENERAZZO,
*National President, American Watch Workers Union.*

---

## Demobilization of the Armed Forces

EXTENSION OF REMARKS
OF
**HON. DANIEL A. REED**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. REED of New York. Mr. Speaker, our boys overseas and those who are in this country are fully aware of the failure of Congress to act in behalf of their release. They know that petition 8 is on the Speaker's desk awaiting the signature of the Congressmen. They are fully aware that had the Members of Congress signed petition No. 8, thousands of the boys now marooned and idle on desolate islands could now be on their way home. These fighting men scattered all over the globe cannot understand why their respective Members of Congress refuse to sign petition No. 8 in an effort to hasten their release.

Under leave to extend my remarks, I am inserting letters I have received from soldiers on the subject of their demobilization.

From Manila comes this letter dated November 15:

DEAR SIR: Having nothing else to do only write letters and wait, I thought I would write you a line to let you know what we are thinking about over here.

I am wondering why all these men must stay over here, away from their loved ones, etc., when there is nothing useful for us to do. My opinion is that we are merely here to take care of the unemployment problem back there. They can't make me believe there is a shortage of shipping as our company supervises the loading and unloading of ships at one pier here, and no one is of the opinion there is any ships lacking.

I suppose our higher officers are letting on what a wonderful thing is being done here, etc. Why shouldn't they want to stay here where they can make their fortune in short order? They have the best of everything and, I dare say, live better than they did in civilian life. If they want a jeep to take a Wac for a ride, they manage that, and altogether they should enjoy their Army life. To keep us busy the officers have inspections to make sure our mosquito nets are a certain distance from the floor, shoes in a certain spot under our cots. They don't mind inspecting the food, which is rotten. Chicken half picked isn't very appetizing even on Sunday.

I have a wife and two children at home and neither of the children will know me when I do get home. If we were doing anything useful, I would be willing to do my part, but as near as I can figure we are here so those draft dodgers and IV-F's can strike and still keep their jobs.

I was brought up on a farm near Falconer, N. Y., and your reputation among the farmers is very high. I thought you might be interested to hear some "beefing" from a GI and no doubt help influence your ideas.

Respectfully yours.

A serviceman writes me the following letter from Dutch New Guinea:

DEAR REPRESENTATIVE REED: We read in our news bulletin several days ago that you along with Representative HAVENNER and others are sponsoring a move to speed the return home of armed forces veterans.

This is certainly a very fertile field for such a move and one very close to the heart of every serviceman. Now that we have made many sacrifices to win these two wars (Europe and Pacific) the least that the War Department can do is to get us back to our broken-up homes and families quickly, which they certainly aren't doing at this base. The last ships returning men to the States pulled out of here on August 4, so you can easily figure up until today how many days that has been. Prior to our coming here the longest wait for a ship had been 31 days, but the present stay beats all previous records for waiting here. Yet that was while the war was still going on. Now that it is over one would think they would give us more transportation but just the reverse is true. We see moving pictures of the *Queen Mary* docking in New York bring back 15,000

men in less than 5 days, hear of a ship leaving Australia with 500 GI wives for the States, yet we men waiting for discharges have to stay here and sweat it out.

Hollandia is the only embarkation port between Manila in the Philippines and Australia. All the men from the other bases in between have to come in here from both north and south. They are piling in here daily, forcing the erection of more tents, yet none but a few emergency furloughs have left, and these left by plane.

It wouldn't be quite so bad, but this camp is in a most out-of-the-way place on this base. I spent 11 months on this base, and it is the dampest, coldest-toward-morning place that I have lived here. We are living eight men in six-man tents, most of which leak very freely. Ours looks like it was fired into with a 12-gage shotgun.

Water is turned on only for 1½ hours in the morning and 1½ hours in the afternoon. This has to suffice for shaving, washing, showering, and washing our clothes. The day I was on KP we ran out of coffee for breakfast, and we didn't have even water to offer the men to drink as it wasn't turned on until 8:30 a. m. and of course we couldn't start cleaning up until then.

At night the only lights we have are candles, just like our forefathers used. Needless to say the chow is lousy, dehydrated eggs every morning for breakfast, most of which go into the garbage cans. The other day one 50-gallon trash can was the only thing 1,400 of us men had to wash our mess gear in.

Still on this base are standing barracks with wooden floors built up off the ground, that have never been lived in, with plenty of lights and water available and a nice sandy ocean beach nearby where the waiting troops could go swimming. Yet they stick us back in the jungles in a place like this away from everything. I know from seeing with my own eyes the Jap prisoner-of-war camp on this base had better accommodations than we have here. They had tents that didn't leak, wooden floors up off the damp ground and water turned on 24 hours per day, for I was there several times and I know. This is part of the thanks we get for serving our country and its people in their time of dire need.

It's not myself so much that I'm thinking of, but the other thousands of service sons who will follow me through this camp on their way home for age and point discharges and for temporary duty. Thought you would be interested in getting the facts first-hand as we find them on the long way back home. Just because we are on the way back, we are still human beings and United States citizens which some of the higher-ups seem to forget.

The War Department was given a free hand to do as they saw fit during the war, but now that it is over, it is up to Congress to step in and take a hand, otherwise they will be 20 years in demobilizing the armed forces at their present speed. The men aren't worried about finding work, they are more than willing to take their chances. Just an opportunity to be with their loved ones and try to restore their broken-up homes and families.

You may show this letter to all interested, yet I want my name withheld, until such time as I can walk out of the separation center a free man. For I know the Army still holds a noose around your neck until 24 hours after you leave the separation center, and I don't want to get into any trouble this late in the game, with a clean record so far.

Remember the ex-servicemen are going to be a strong influence in the future of the United States. They still have faith in their Congressmen but not for long, unless things change fast.

Saturday and Saturday night it rained so hard here that some of the men's personal belongings and clothes were washed for yards out of their tents. Some of the tent areas are low and water was standing ankle deep inside the tents.

Regardless of what newspapers and radios say back home, no action has been taken on this base toward releasing 35-year-olds with 2 years' service or 80-point men. And no action probably will be taken until a good portion of the men already here have been moved out, whenever that is.

Today they are issuing us overcoats, woolen blouses, and long heavy underwear so they must be expecting it to be very cold weather when we finally do reach the States.

We also read that the large luxury liners, *Queen Mary, Queen Elizabeth,* and *Aquitania* are very soon going back to civilian service. If Congress and the American people permit this, they are certainly giving their country's defenders a good knifing in the back.

Just 7 weeks ago today our group of men came into this place, and we haven't caught a ship out yet. And General Marshall can stand up and tell you, the Congress, that shipping is not a problem. Don't know what the hell you would call these 7 weeks, it certainly is far from a night's stop-over.

Another thing we soldiers don't like to hear and read about is this wave of strikes sweeping across our Nation that we fought to defend. They are certainly very quick to let us down, adding much more to our delay in getting back. A lot of fellows have expressed opinions they would like to have their rifles given back to them so that they could use them to clean out these sort of things on the home front upon returning. They will be wanting jobs, not excuses that reconversion was held up because of strikes.

Are you in Congress going to still sit idly by and let these conditions continue, or will someone take immediate action to correct them? Time will tell very shortly.

Yours for speedy action in our behalf.

A private, first class, stationed at Camp Crowder, Mo., wrote me the following letter:

DEAR SIR: I am just one of several thousand men who are sitting around in Army camps, twiddling our thumbs. There are thousands of men who haven't done a day's work for 2 months or more, just being retained in service because the War Department is being deliberately slow in releasing men.

The War Department must think they are pulling the wool over the public's eyes by issuing the order for December 1, "All men with 4 years' service will be released beginning December 1." Everyone in the Army knows very well that there are very few men with 4 years' service who haven't already been discharged, as there are only a few men with that length of service who haven't been overseas. And this business of releasing men who are surplus is just another "snow job" for the public. It is a good "cover up" for the discharge of men like Mickey Rooney and others with the necessary "pull" who have been released without sufficient points as the points stand now. But try and be declared "surplus." I can assure you that the men in the Army who realize this situation as it really is are completely fed up and won't take much more.

I returned from 1½ years' overseas service, had my "temporary duty" recuperation furlough at home, and after sitting around 4 weeks was assigned as a company clerk in a medical training battalion which has no trainees. All I do is type a morning report and perhaps a couple other pieces of work, and sit around the rest of the day. Everyone is just sitting around, doing practically nothing. I have never seen such a waste of manpower. Mine is just one case in a few thousand.

The whole reason that the War Department is slowing discharges is because a few top-ranking men in Washington are afraid of their skins. They do not give a damn about how fast men are discharged. Their only concern is to retain their jobs at all costs. And this waste of manpower is the taxpayers' burden for many years to come.

As a representative of the people, I implore you to have another investigation made of the situation which exists. The blindfolds which the War Department are working on the general public are completely uncalled for and should be immediately stopped.

I thank you for your attention in this matter, and so do thousands of other fellows in my predicament.

Very sincerely yours.

This next letter I am going to read is from a sergeant who sent copies of this letter to many of you. Because it may not have received careful attention, I am going to read it to you:

DEAR CONGRESSMAN REED: Yesterday: Yesterday we were patriotic and consecrated to doing the best job possible to preserve democracy and the "four freedoms" and rid the world of despots like Hitler, Mussolini, Tojo and company. With total victory came the glowing promises of rapid demobilization, a point system that would be strictly adhered to and an early return of overseas veterans—Congressmen proposed this and that, but War Department assured the men and their families that everything possible would be done to bring about Christmas reconciliations. Wives, mothers, and sweethearts pinned their hopes on promises like "MTO, Europe and Austria to be cleared of all but occupation forces by December 1945."

Today: Today, December 1, 1945, and all 55–59 pointers are eligible for discharge. But, we are far from the homeland where men of almost any score are getting released daily because they are stars in sports or movies, or the son of a general, or just plain surplus.

Plenty of shipping was allotted to clear this theater as promised, but diverting of shipping that began in November was culminated by transfer of 11,000 spaces on the carriers *Wasp* and *Champlain* as announced today—and no reasons are given for the change.

Today the overseas veteran is the helpless pawn of Regular Army militarists who have the unholy authority to act the same as in the midst of the holocaust of war.

Tomorrow: Christmas is not far off on the calendar of tomorrows—in fact, it's much too close for any of us to continue nurturing that hope of enjoying it at home with our families. The man overseas must resign himself to writing off another Christmas away from home as his little contribution to the peace of the world.

Tomorrow does little to brighten our outlook with meaningless statements and promises like "all personnel not needed for occupation purposes will leave Europe by late January," or "critical point score will be reduced to 50 by January 1, 1946," or "no enlisted man is essential and none will be held when his discharge score is reached."

But some time in the future tomorrows we overseas veterans will be men again, with equal rights and privileges, and able to level our sights on the former almighty brass hats who were able to interrupt their important tasks to fly home for ceremonies or in time for Christmas.

Here is a letter a serviceman on Okinawa wrote to his father in New York:

OKINAWA, *November 17, 1945.*

DEAR DAD: Up to this new development in the discharge system, I didn't have too much to gripe about. Of course, I want to get home. There is nothing I want more. I know that there are a lot of others who deserve to get out first, but when they start pulling what they are doing now, it changes my attitude quite a bit.

The Army won't give you a break. There are just no two ways about it * * *. They don't want to release the men any faster than they have to; only fast enough to keep public pressure and opinion from them. The way it is presented to the public and the way it actually works out are two different stories. I realize there are difficulties involved, but still it's not the way it should be.

The system for December helps barely anyone, especially a man overseas. A fellow who has been in the Army 4 years up to September 2 and is overseas most likely has 60 points or more and is already eligible to leave under the 60-point score for November. There are exceptions, I admit. For men in the United States it is fine. If they have 4 years they have 48 points and will be released. But most men in that category in the United States are already out. All it takes back there to get out is 2 years. They declare you surplus and that's all there is to it. Most men, with 3 children, overseas also have 60 points or more. There again, it is the guys in the United States who benefit. The 35-year-olds with 2 years of service and the 38-year-olds is nothing new. So actually what do you have: the exceptions and the men in the United States are the ones who gain by it.

The Army figures claim that with this move 783,000 more men will become eligible for discharge. I don't believe it, even with the men with scores from 55–60 being included. What does the man overseas get—nothing. Actually we are being penalized one point per month by not having them add up. It places us on an equal basis with a man in the States, and that is decidedly unfair. He can live fairly decently, and I don't mean by that that we are suffering, but there is a lot of difference being here and in the States. He can get passes, go out, get a furlough, and just having the feeling of being on United States soil is plenty in itself. My complaint is that the men overseas are not being treated fairly. Add up the scores for us in any way, just so we get credit for the time since September 2 that we have spent 10,000 miles from home.

Here are some figures which were published in a paper that we get. I have 38 points and 29 months of service up to September 2, so you can see where I stand in the group. It won't be too long before I'll have 3 years in, but still all that time isn't going to count. If you have been in the Army that long or anywhere near it, you surely deserve to get out and without any waste of time or mincing of words.

These figures are as of October 15:

| Points | Pacific | Elsewhere overseas | United States | Total |
|---|---|---|---|---|
| 85 and over | 75,000 | 135,000 | 200,000 | 410,000 |
| 80 to 84 | 50,000 | 135,000 | 100,000 | 285,000 |
| 70 to 79 | 170,000 | 454,000 | 176,000 | 800,000 |
| 60 to 69 | 245,000 | 450,000 | 205,000 | 900,000 |
| 50 to 59 | 227,000 | 468,000 | 255,000 | 950,000 |
| 40 to 49 | 125,000 | 332,000 | 393,000 | 850,000 |
| 0 to 39 | 402,000 | 311,000 | 1,197,000 | 1,910,000 |
| Total | 1,294,000 | 2,285,000 | 2,526,000 | 6,150,000 |

On the shipping situation. Cargo ships which could house troops go back empty because they claim they don't have feeding facilities. There is not a man here who wouldn't eat K rations and sleep on a cot or anywhere to get back home. The Army won't do that, though. They say they are thinking of the comfort of the men. When they brought them over double loaded, there was no thought of comfort. You spent 12 hours on deck (regardless of weather) and 12 hours below.

I heard on a news report that 11,000 men came in from the Pacific on 21 ships, or on the average of about 520 men per ship. There were 5,000 on the one I came over on. And to top that off, we have heard, and we know it to be true, that Japanese prisoners of war are being returned to their country on our ships. They claim a shortage of ships, but still they have enough to use for those no-good yellow so and so's. There is a ship off the coast here that has been there close to a month. That helps, too.

So, altogether from our point of view, the system is no good, and they aren't doing what they claim they are. Don't be fooled by all the promises they feed the people. There is just one thing to do. exert pressure on Congress so that they will either get control of the discharge system, or else watch the Army so closely that they can't pull any fast ones.

I hope this gives you and idea of what actually is going on.

Your loving son.

This letter was signed by a GI of 1 year's overseas service:

DEAR REPRESENTATIVE REED: I don't know exactly how to begin this letter, but I'll be quick and to the point. This letter not only speaks my sentiment but also that of many others still overseas.

We read in the paper of men in the United States with 21 months of service which exempts them from overseas duty. If you're on this side of the pond with 44 points or less, you're stuck for army of occupation, and mind you, most of us have been overseas a year or better. To prove my point I myself have 2 years' service—8 months in the United States and 16 months overseas, saw 2 months of actual combat in the infantry, for which I received one battle star. I have 41 points.

Here's another thing that is undermining our morale over here. Next month GI brides will be shipped to the United States to join their loved ones. Hell, aren't we who fought for our country human also; have we not families? In most cases these brides have seen their husbands last since we've seen our loved ones.

In conclusion I say why not at least get us back to God's country, the United States of America?

A Navy man writes to me as follows:

DEAR MR. REED: I especially desire to add my protest against the unwarranted and malicious discrimination against yeomen in the Navy's present application of the point-discharge system. Because I have no relatives affected by this discrimination, I feel I am fairly objective about it.

I know a chief yeoman on Guam who had more than enough points for release on November 1. Because yeomen are arbitrarily required to amass additional points, however, he will be held in service there at least another couple of months. And yet this man is a Navy volunteer who enlisted before Pearl Harbor. He writes me that he averages only about 3 hours' work a day, which demolishes the theory that he is really needed in his present assignment. He has already volunteered to stay in the Navy until next June, if he can be brought to the States to assist in the demobilization process (which is ostensibly the Navy's excuse for keeping yeomen in service); but this offer was summarily rejected.

I sincerely hope you can do something for this man, and for others like him. If the Navy Department expects the public and Congress to support its desperate struggle to remain an autonomous branch of the Government don't you think it had better stop acting as though it still thought of its citizen sailors as the chattel they largely are in wartime?

From the Philippines comes this next letter from a captain:

DEAR MR. REED: On tonight's news broadcast from radio station WVTM in Manila, we learned that "Representative DANIEL REED, of New York, instituted proceedings to determine why a certain general's son, a private first class of the Marine Corps, should have been discharged from service before his turn under the discharge system for his service." The announcer went on to say that his father requested through MacArthur that his son be discharged so that he might continue his premedical education.

Mr. REED, if you were listening tonight, I am sure you would have heard the resounding cheer you received from both officers and enlisted men, most of whom have seen service in the British Solomon Islands and Philippine campaign, and, speaking for the enlisted men, many have given up their premedical or predental education due to the war. Now due to their training they are the laboratory, X-ray, and dental mechanics who were recently declared essential. As things now stand, all they need for discharge is to be adopted by some "name" general.

The officer situation here is equally as bad. I am a dentist and formerly practiced in Cattaraugus County at Salamanca before entering the war early in 1942.

Now I am assigned to a field hospital. Due to excess number of dentists, I volunteered to take over the anesthetic service in the department of surgery here, as there are not enough dental patients for all the dentists to remain busy. Personally, I appreciate my duties as it makes my time pass faster, and it is much better than being an excess officer at one of the many general hospitals or sitting around a replacement depot waiting for my 68 points to make me eligible for discharge.

A fellow dental officer, in a visit with the AFWESPAC dental surgeon learned that on Luzon alone there are over 1,400 dental officers at present. Consider, as we did in combat, that one dentist attends 2,000 soldiers, then it looks as though there are about 3,000,000 men on this island.

I am sure that your available figures will give you the actual number of men on Luzon, so that you and I know the dentist-patient ratio here is a mere fraction of what it is back in western New York, if I am to believe the reports my old patients in Salamanca write to me, as they have to wait for weeks for an appointment with one of the four remaining, overworked aged dentists there.

As for the physicians and surgeons, the condition here is even worse, as there are over three times as many medical officers according to the usual Army proportion.

Naturally every medical and dental officer in the armed forces has given, and will continue to give and do his best for every patient available, but when it comes to only working 1 or 2 hours daily, as compared to the 8, 10, and 12 hours worked by civilian dentists and doctors, it makes us wonder if we are not defrauding the taxpayers back home by accepting our monthly payments for what little service we are needed to give over here.

Your action as described by the radio tonight has certainly championed the cause of all of us, both officers and enlisted men, and speaking for all of the Army personnel here on Luzon, I wish to thank you for what you have done, and I am sure will continue to do, to rapidly lower the discharge scores for all dental and medical personnel so we can return to civilian practice where we will have work to do and where it seems we are needed.

---

## H. R. 32

EXTENSION OF REMARKS

OF

## HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. DE LACY. Mr. Speaker, under leave to extend my remarks, I include a

letter from Lewis G. Hines, national legislative representative of American Federation of Labor, and one from Joseph A. Padway, general counsel, American Federation of Labor in reference to H. R. 32:

AMERICAN FEDERATION OF LABOR,
*Washington, D. C. November 14, 1945.*
Hon. HUGH DE LACY,
*House Office Building,*
*Washington, D. C.*

MY DEAR CONGRESSMAN: As per our telephone conversation, I am attaching hereto a copy of a letter received in this office from Judge Padway, which is self-explanatory. I am informed also that a similar letter has gone to Chairman SABATH.

With kind personal regards, I am
Sincerely yours,
LEWIS G. HINES,
*National Legislative Representative,*
*American Federation of Labor.*

---

NOVEMBER 9, 1945.

Mr. WM. C. HUSHING,
*Chairman, National Legislative Committee, American Federation of Labor, Washington, D. C.*

DEAR MR. HUSHING: I am advised that Representative HOBBS informed the Rules Committee that after consultation with Mr. Tuttle and myself he tore up his 1943 bill and brought in a new bill identical with the present bill (H. R. 32), and that this bill had the approval of Mr. Tuttle and myself.

I think Mr. HOBBS is in error respecting any conference he had with me and Mr. Tuttle. I do not know what Mr. HOBBS and Mr. Tuttle may have discussed, but in any conversations I had with Mr. HOBBS I certainly did not give my approval to the old bill nor to the new one. Perhaps Mr. HOBBS assumes that because we vigorously opposed his first bill and criticized it, that his new bill removes our criticism. Also, Representative CELLER proposed some amendments which I, as counsel for the American Federation of Labor, deemed imperative in any bill dealing with the subjects of the bill.

It has been the position of the American Federation of Labor, and it is my position with respect to the first bill and subsequent bills proposed by Mr. HOBBS, and the present bill (H. R. 32) that they are destructive of labor's fundamental rights. I cannot conceive of anyone approving of a bill which embraces within its definition of crime what constitutes mere minor misdemeanors and defining them now as major felonies with penalties for violation of 20 years imprisonment and a fine as high as $10,000.

But it is not the penalties alone that are objectionable. It is possible under this bill to convict a person who, in his official position, informed an employer that if demands for increased wages or improved working conditions were not met a stoppage of work would take place. Under section 1, paragraphs (b) and (c), "robbery" and "extortion" are so defined that placing one in fear of injury (which under the definition includes fear of loss of property) constitutes a crime.

There are other fundamental objections to this bill which the American Federation of Labor has voiced from time to time and which I have made at different times. Certainly there is no need for the bill because crimes such as robbery and extortion are defined by the statutes of every State. These definitions, whether new or borrowed from the statutes of some other State, are exceedingly dangerous to the fundamental rights of organized labor because of broad concept and the tendency of some judges to give a still broader interpretation to them so that what would ordinarily be lawful conduct, or might constitute a minor offense, becomes an aggravated felony. In fairness and justice, the bill should not be enacted into law.

Sincerely yours,
JOSEPH A. PADWAY,
*General Counsel, American Federation of Labor.*

## Leather Flight Jackets

EXTENSION OF REMARKS
OF
## HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a letter dated December 12, 1945, from Rear Adm. W. J. Carter, Chief, Bureau of Supplies and Accounts, Navy Department, concerning an article by Columnist Drew Pearson which appeared a few days ago. Mr. Pearson stated that information had come to him that around 12 cars of leather flight jackets valued at $42 each, are being slashed so they may be condemned and then burned. The Navy Department informs me that such is not the case.

Admiral Carter has had a thorough investigation made and the enclosed letter from him speaks for itself. I want the Congress to know what the Navy has to say concerning this alleged destruction of the taxpayers' property. I have known Admiral Carter for a great number of years. The whole Congress knows he would have no patience with any subordinate official under his command who was a party to the commission of the act referred to in Mr. Pearson's article.

NAVY DEPARTMENT,
BUREAU OF SUPPLIES AND ACCOUNTS,
*Washington, D. C., December 12, 1945.*
Hon. L. M. RIVERS,
*House of Representatives,*
*Washington, D. C.*

MY DEAR MR. RIVERS: In further connection with our telephone conversation, the following data are submitted for your information concerning the statement of Mr. Drew Pearson that 12 cars of leather flight jackets, valued at $42 each, ar being slashed so that they may be condemned and then burned.

The Naval Aviation Supply Depot, Philadelphia, is the central procurement and distribution center for flight jackets. The depot also serves as a clearing center for all jackets returned as unfit for use. When used jackets reach the depot they are carefully inspected. If they can possibly be repaired, the jackets are renovated and are reissued. If the jackets are damaged beyond repair, they are shipped to the salvage and disposal section of the Philadelphia Navy Yard. The salvage and disposal section again inspects the jackets. Those fit for use by naval personnel performing work which necessitates the protection afforded by jackets, and which by its nature is apt to ruin new clothing, are issued on custody receipts. Those jackets determined suitable for sale or disposal by N. M. R. & D. A. are segregated. Those which are so badly damaged that they are without value are stripped of their linings and zippers and are sold as scrap leather.

The flight jackets received to date by the Salvage and Disposal Section approximate 6,100—less than two carloads. The value of these jackets when new ranged from $13.35 for the intermediate weights to $29.42 for the heavy jackets. Of this 6,100, 400 were determined as suitable for sale or disposal by N. M. R. & D. A.; 4,200 were issued on custody receipts to naval personnel, the majority going to submariners; 1,500 were declared unfit for any use, were stripped of their zippers and linings, and were sold as scrap leather.

In summary:

1. Less than two cars of jackets, valued at from $13.35 to $29.42 when new, have been declared as unfit for renovation.

2. Of these jackets, only 1,500 have been sold as scrap leather. This was done in accordance with current Navy Department instructions.

Sincerely,
W. J. CARTER,
*Rear Admiral (SC), U. S. Navy, Chief of Bureau.*

---

## Santa Claus Rides Again

EXTENSION OF REMARKS
OF
## HON. MARION T. BENNETT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. BENNETT of Missouri. Mr. Speaker, Jesse H. Jones, of Texas, one of the outstanding financial authorities of this country and for years one of the few sound Cabinet officers under the New Deal, is opposed to the Truman loan of American taxpayers' and war bond buyers' money to Great Britain. As part of my remarks I include an editorial which appeared December 7, 1945, in Mr. Jones' newspaper, the Houston Chronicle and Herald.

This loan is indeed a fine Christmas gift to Great Britain. A gift is what it is. The other day a responsible member of Parliament expressed the views of his country when he said, "We fought earliest, hardest, and longest. It is we who are the creditors." He opposed our advancing these funds as a loan and undertaking to collect any interest. He wanted a gift. Like lend-lease, the loan is a gift. It will never be repaid. The interest will never be paid in full. We went through this same wringer after the last war.

With a national debt bigger than that of any of our allies, with heavy taxes, with interest being charged our veterans on GI loans at 4 percent, I cannot support loans to foreign nations at 2 percent. About the only way I could support this loan is for it to be raised by British bonds voluntarily bought by our individual citizens who would be willing to take the risk of the usual British default. Or, it might be raised by a special tax called the Truman-British tax, so the people would know they were being trimmed.

It is said this loan is necessary to promote world trade. The truth of the matter is that we will lose both our money and our goods. Business will be good while impecunious peoples raid our markets with our money but the shelves will soon be bare and we will be holding some I O U's against a debtor who is execution-proof.

Where are we going to get the money to continue these global spending sprees? We would do well to heed the advice in

the fifteenth chapter of Luke, twenty-eighth to thirtieth verses, wherein it is asked:

For which of you intending to build a tower sitteth not down first and counteth the cost whether he have sufficient to finish it? Lest haply after he hath laid the foundation and is not able to finish it, all that behold it begin to mock him, saying this man began to build and was not able to finish.

The editorial follows:

BRITISH LOAN PROPOSAL IS UNBUSINESSLIKE

United States negotiators have proposed that we make a loan to the United Kingdom of $3,750,000,000, to be repaid in 50 annual installments from 5 to 55 years, largely at the convenience of the British. No interest is to be charged on the loan for 5 years, and thereafter the rate will be 2 percent per annum. Allowing 5 years' interest free, the average interest rate on the loan will be 1.62 percent, assuming that the interest will be paid continuously after 5 years. There is, however, a provision in the loan agreement that no interest will be charged in any year where the United Kingdom has an unfavorable international exchange position. If this should happen every year, we would get no interest whatsoever. If it happened in one-half of the years our average interest rate would amount to less than 1 percent.

During the past few years the United States Treasury has been borrowing money from its citizens at an average interest rate of 1.92 percent, so that on the interest alone, assuming that we make the loan and that the British pay it, and pay the interest in full, we will have a very substantial loss in the difference between the interest we collect from the British and the interest we pay our own citizens for the borrowed money.

In addition to the loan of $3,750,000,000, the terms and conditions of which bear little if any relationship to business principles, our negotiators have agreed to accept Britain's notes for $650,000,000 in full settlement of our unpaid $27,000,000,000 lend-lease account and all our investments, materials, and surpluses in England. Obviously, this is tantamount to a gift.

In consideration of our making this very large loan at a great sacrifice to our own taxpayers, the British agree that—manana—within 1 year after the loan has been ratified by our Congress and approved by the British Parliament, they will eliminate the dollar pool which they now control, thereby enabling countries of the British Empire to use their current dollar receipts without restriction. In other words, if Australia or India, or some other member of the Empire should sell us something and get dollars for it, such country could then use the dollars any way it wished. With the dollar pool in effect such countries can only use those dollars at the pleasure of Britain. They must give Britain the dollars and accept sterling.

There is nothing in the agreement to indicate that the United States will receive anything in the nature of foreign bases, raw materials, communications, or other concessions.

In connection with the loan agreement Secretary of State Byrnes has issued a beautifully written white paper containing many laudable and desirable aspirations with respect to world trade. While recognition of this white paper is made by the British, they are not signatories to it. They agree to undertake to help us work out world-wide multilateral agreements governing such things as tariffs, cartels, quotas, and production, to be administrated by an international trade organization. But these are only promises to try to help work out agreements with the other 48 countries of the United Nations. Bluntly stated, the British will only cooperate in working out world trade agreements if we lend them $3,750,000,000 and settle our lend-lease account, and give them title to our hundreds of millions of investments and materials in Britain on a 55-year note. If it costs this much to get the cooperation of Britain in world trade, what will it cost to get the cooperation of the other 48 countries of the United Nations?

If we must continue to help the British temporarily, let's do it by selling them our agricultural products—cotton, grain, meat, tobacco, etc.—on easy credit until the world gets more settled, and we can see our own way a little better, and let's see what we are to get in return. Fifty-five years is much too long.

## Indianapolis Doesn't Want Federal Money for Slum Clearance

EXTENSION OF REMARKS

OF

### HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal of December, 7, 1945:

INDIANAPOLIS DOES NOT WANT FEDERAL MONEY FOR SLUM CLEARANCE—HAS OWN PLAN BASED ON SPECIAL TAXES AND ADVISES OTHER CITIES TO FOLLOW SUIT

WASHINGTON.—Indianapolis does not want any Federal financial handout to help with its slum clearance.

In fact, a representative of that city Wednesday suggested to the Senate Banking and Currency Committee that it is time all cities stood on their feet. He was Paul L. McCord, president of the Indianapolis Redevelopment Commission, which is charged with remaking Indianapolis' slum areas with money raised by local taxes.

Mr. McCord testified against the Wagner-Ellender Federal housing bill, which would give subsidies to local communities for slum clearance and urban redevelopment. He declared: "We are convinced that the majority of taxpayers want their local communities and their States to assume their rightful obligations of government and quit calling upon the Federal Government to transfer these obligations to Washington."

While the people of Indianapolis are confident that the city can take care of its own problems, Mr. McCord said they would "feel a little foolish if we proceed to do so with our own resources and then wake up to find the Federal Government pressing subsidies on other cities, which we shall have helped pay for.

"The answer to that suggestion, however," he continued, "is not in our accepting Federal aid but in all communities awakening to their own responsibilities and the threat to our national existence of further deficit spending and determining to meet the problem, themselves, without Federal aid."

Detailing for the benefit of the committee just how it works, Mr. McCord said that under a bill passed by the Indiana General Assembly last March by a large majority in both houses, a redevelopment department of the city government was established. It was made a special taxing district, with power to levy taxes but not to issue bonds, and placed under the management of a board of five citizen commissioners, appointed without regard to political affiliations. This board was given authority to designate blighted areas, acquire them, clear them, plan for their redevelopment and offer them for sale to private enterprise.

"In order to erect safeguards to prevent any possible misuse of such authority," he continued, "notices must be given both to owners of property declared blighted and proposed to be purchased and to the taxpayers of the whole community. Hearings must be held and taxpayers may remonstrate against any project, in which case the whole proceeding must be heard by the full panel of our superior court of five judges, whose decision as to the designation of the blighted area and the authority to purchase them is final.

"In acquiring blighted areas, the commission must follow specified provisions for appraisal and determination of price but the commission also is given the right of eminent domain, if it cannot agree with the owner as to price."

The commission has already levied the first tax for its work and next year approximately $550,000 will be collected for slum clearance and redevelopment projects, Mr. McCord stated. He added that some of this money, after being spent to acquire blighted areas, would be recouped from the sale of land either to private capital or to other public agencies.

The amount of money which the commission may levy next year will add 10 cents per $100 to the city's tax rate, which over-all, for city, school, county, and State purposes, totals $3.45 per $100, Mr. McCord said.

Indianapolis is confronted with the same problem which is facing most other urban centers—demand for extension of public services without proportionate increase in assessed valuation plus a top-heavy dependence on real-estate taxes.

"But," he declared, "we are convinced that the answer to this is not more Federal aid but more economical spending of what we raise, plus withdrawals by Federal and State governments from some of the taxation fields which they are now so completely exhausting."

## Management-Labor Relations

EXTENSION OF REMARKS

OF

### HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me Monday, December 10, 1943:

In the field of management-labor relations our country faces a fundamental choice. On the one hand we can choose to have decisions made in this field by governmental bodies such as the War Labor Board has been during the war or such as we would have under compulsory arbitration proceedings. Theoretically we could say that there could be no strikes or stoppages at all and we could substitute impartial decision by a governmental body for collective bargaining. This, of course, would take away from labor the right of striking and from management the right to make decisions about many of the things connected with its industry. On the other hand we can choose to continue with a system of freedom depending upon collective bargaining for the settlement of disputes. But if we choose this method, it must be recognized that collective bargaining will not always succeed and that from time to time we will have shut-downs of industry on the part of management and strikes on the part of labor. We have to choose between collective bargaining and all its consequences or else a pretty full degree of control by a governmental body. In the field of essential

public utilities like water, electric service, gas, and the like, it is probable that to protect the public against most serious consequences something in the nature of compulsory arbitration will have to come, but I do not believe that America really wants to choose this method in preference to collective bargaining in the great field of industry generally.

If this be true, then we must recognize that the right to strike is exactly equivalent to the right of a company to cut down production or shut its plant when it feels it is not getting a sufficient price for full production. And we must also recognize that to force one man or group of men to work for the profit of somebody else is so contrary to American principles as to be unthinkable in this country.

Having said all this, it nonetheless remains true, that the interest of the general public must be paramount. It must come ahead of all the interest of all special groups including labor and management combined. And so all responsible government officials will say that the price of freedom for labor and management is that they agree reasonably well together and that strikes by labor or shut-downs by management shall only occur when it is actually true that there is absolutely no other way to solve an irreconcilable problem.

The Labor-Management Conference resulted in substantial failure. It accomplished something but it was marked by an arrogance on the part of management and a stubbornness on the part of labor which rendered the development of agreement on important issues impossible. I am afraid that there was an attitude in that conference to the effect that the problems of labor and management are none of the people's business. Such an attitude is decidedly not one upon which we can build the future of America. Under these conditions it was squarely up to Government to decide whether it would leave matters in the situation where the Labor-Management Conference left them or whether it would take action to assert the paramount interest of the general public. The decision had to be that the Government would take such action. Why? Not because the United States is in grave economic danger but because in the case of both management and labor the people of the country confront concentrations of very great power. Whereas this has not been nearly so true in the past, millions of people are worried and concerned about this power. They must believe—they must be shown that the Nation as a whole is stronger than, and superior to, any special interest in it. The primary duty of the Government is to demonstrate that this is so.

Therefore, the President of the United States did act—he acted, I believe, with courage, promptness, and foresight. That in itself is a great big point for the President, but, more than that, the proposal which he made is exactly in line with the principles I have just set forth. He did not propose that freedom be taken from management or labor. Indeed, he warned the Congress against the passage of punitive or coercive legislation, some of which has already been proposed and is likely to come before the House at any moment. What he asked was that the facts be laid before the American people for their judgment. He asked Congress to pass legislation so that the people could know the right and wrong of disputes between management and labor and so that they could intelligently pass upon the issues. The President simply asked that through the appointment of fact-finding bodies of impartial citizens the Nation be enabled to know whether either management or labor is abusing the priceless freedom which America affords. Apparently the President believes as I do, that the moral power of an informed public opinion of a free people is one of the most powerful forces on earth. He has asked for that moral power to be mobilized as a factor in settling industrial disputes and avoiding strikes and conflict. In my opinion, he is not only on strong ground but on high ground as well. Congress certainly should consider the President's proposal from every angle and should bear in mind in any legislation which it passes that its primary purpose is to strengthen and improve the machinery of collective bargaining. But, basically, I believe Congress should, and I believe it will, support the President regardless of what the immediate political consequences to individual Members of Congress may be.

## House of Representatives Should Participate in Treaty-Making

EXTENSION OF REMARKS
OF
## HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include an article written by me which appeared in the December 1945 issue of the Tennessee Law Review on the subject of the desirability of having the Members of the House of Representatives participate in treaty-making and of consideration of treaties as other legislation. The article is as follows:

THE HOUSE OF REPRESENTATIVES SHOULD PARTICIPATE IN TREATY-MAKING

(By ESTES KEFAUVER, Representative, Third Tennessee Congressional District)

The two-thirds rule in the Constitution for the approval of treaties should be amended.[1] The recent confirmation of the United Nations Charter by the Senate with only two dissenting votes does not alter the necessity of modifying this outworn provision of our Constitution. The approval of the United Nations Charter merely marks the beginning of our full-fledged participation in international affairs. In the years to come treaties and international agreements in which this Nation will be called upon to participate will be presented to the Congress in increasing numbers. Treaties and Executive agreements growing out of the United Nations Charter will be more controversial than the Charter itself. Many worth-while agreements with foreign powers will be disapproved if their confirmation is required by two-thirds of the Senate.

The Committee on the Judiciary of the House of Representatives, on February 13, 1945, favorably reported House Joint Resolution No. 60 which provided that an amendment should be submitted to the States to change the two-thirds Senate provision for the making of treaties. The resolution, sponsored by the Honorable Hatton W. Sumners, chairman of the committee, provides simply that "Hereafter treaties shall be made by the President by and with the advice of both Houses of Congress." This is the constitutional method of acting upon general legislation.

In view of the fact that this country is going to deal more and more in the field of international affairs, it is timely that the public, and especially the lawyers of America, should again examine the merit and workability of the two-thirds provision in the light of conditions and problems confronting the Nation in this advanced era. The House of Representatives, on May 9, 1945, with less than 90 dissenting votes, passed the Sumners resolution. It is now pending in the Committee on the Judiciary of the Senate. The Senate could perform no act which would so increase the faith of the people in representative government as to give the State legislatures a chance to consider this amendment.

THE TWO-THIRDS RULE REPRESENTS NO FUNDAMENTAL PHILOSOPHY

When an amendment to the Constitution is proposed, it is important to differentiate between provisions which were adopted as a result of the deliberately thought-out theories of political government and provisions which were included in the basic law as a compromise to meet local or domestic differences. As for the latter class, it is important to determine whether the particular condition which gave rise to the provision still persists.

The motive that caused the insertion of the two-thirds rule in the Constitution was not to insure that treaties should be considered on their merits, considering the welfare of the country as a whole, but to appease a demand arising out of the suspicions, differences, and jealousies of the original States.

The two-thirds clause was the culmination of a long and heated struggle between the colonies which had been going on since the signing of the Declaration of Independence, which found expression in the Articles of Confederation, and which, in fact, almost prevented the union of the States. "There can be little doubt, historically," writes John W. Davis, "that the two-thirds rule was dictated in the Constitutional Convention, not only by prevailing jealousy of executive power, but also by recollection of the requirements under the Articles of Confederation that 9 of the 13 States voting as units should assent to any treaties entered into by the 'United States in Congress assembled,' a provision which in its turn derived directly from the mutual jealousy of the colonies."[2]

This heated struggle was between the northern and southern States to preserve what each group regarded as its special interests. The four southern States were interested in navigation on the Mississippi and the future of New Orleans as a port.[3] The four New England States were interested in protecting their fishery rights. Either group of four, if they could get one other State to vote with them, would be able to block any treaty affecting their local interest. The dispute between the sections became so dan-

[1] United States Constitution, art. II, sec. 2.

[2] Davis, Present Day Problems (1923) 9 A. B. A. J. 553, 556.

[3] Warren, The Mississippi River and the Treaty Clause of the Constitution (1934), 2 Geo. Wash. L. Rev. 271, 278. In this article it is said: "Gov. Patrick Henry, so wrote John Marshall to Arthur Lee (March 5, 1787), 'has been heard to say that he would rather part with the Confederation than relinquish the navigation of the Mississippi'." It is also said: "The two-thirds provision was inserted (as a North Carolina delegate, Hugh Williamson, later wrote), 'for the express purpose of preventing a majority of the Senate or of the States * * * from giving up the Mississippi'." Quoting further: "The New England States, while having little real interest in the West, feared that France was opposed to their essentially necessary rights in the fisheries, and hence they combined with the South in opposing the influence of the French Minister."

The Southern States, fearing that even the two-thirds rule did not give them sufficient protection over what was then only a theoretical right of navigation on the Mississippi River, had difficulty in securing approval of the Federal Constitution on this ground. Virginia and North Carolina in the first Congress sponsored drastically more difficult treaty-making machinery (id. at 299).

gerous and violent that James Monroe, of Virginia, feared, and, in fact, came very near advocating, that the United States should be divided into three confederacies: a southern, a middle, and a northern confederacy. The differences between the States, the fear of the smaller States that the larger ones might unduly dominate them, was the underlying cause for the inclusion of the two-thirds rule in the Constitution.

The clause is a striking example of the class of provisions which was inserted to take care of a burning political issue of the times. One may search the debates on the Constitution in vain to find any fundamental political theory on which the two-thirds rule was founded. The provision, therefore, was used as a compromise to unite 13 States into a union. The Union has long since been created and firmly cemented. We must now examine the provision, not with reference to the problem of creating the Union, but with reference to the problem of this country of dealing in foreign affairs in an advanced era, never visualized by the founding fathers.

The founding fathers held no firm philosophy to the effect that treaties with foreign nations should be ratified by two-thirds of the Senate. This is shown by the fact that on September 7, 1787, a motion of James Madison to exclude "treaties of peace" from the two-thirds provision was adopted without dissent. The following day the provision was eliminated without much discussion.

REASONS FOR EXCLUDING THE HOUSE

First, it was contemplated that the President would actually advise and consult with the Senators (26 in number at the time of the adoption of the Constitution), and that the Senators would be an expert body which would participate with him in the formation of treaties. In accordance with the anticipated procedure, President Washington attempted personally to advise and consult with the Senate during the First Congress. The subject was a treaty with the Creek Indians. History records that he was treated coolly on this occasion. He vowed he would never return. Since that time, treaties have been handled by the Senate as other legislation. The "advice" provision of the treaty clause is obsolete. The Senate has never entered into the active negotiation of treaties as was contemplated by the founders.[4]

Second, it was anticipated that treaties would be made in executive or secret sessions of the Senate and the President. Secrecy no longer plays a part in treaty making. The present Senate has more Members than the House had at the time of the first Congress.

Third, under the Constitution as originally written, Senators being elected by the legislatures of the States, it was thought that they would have greatly superior knowledge on foreign affairs as compared with the Members of the House, and that they would have much longer terms of service than the Members of the House. Since the adoption of the seventeenth amendment, the first of these reasons has ceased to be valid. Furthermore, history demonstrates that the tenure argument is no longer logical or sustainable.

Hamilton, in the Federalist, expressed the prevailing idea that "the fluctuating and multitudinous composition" of the House would unfit it for a share in treaty making.[5] But even Hamilton failed to foresee that the negotiation of treaties would be taken over by the Executive, leaving to the Senate only the duty of passing judgment on treaties already signed.

Several members of the Constitutional Convention were dissatisfied with the two-thirds provision. James Wilson made this point at the time the Convention was considering the rule: "If two-thirds are necessary to make peace, the minority may perpetuate war, against the sense of the majority."[6]

THE TWO-THIRDS RULE IMPEDES FOREIGN AFFAIRS

When our international relations were few and simple, when the oceans really protected us, the emasculation and rejection of our treaties by a minority of the Senate could be tolerated. Today modern science and invention have made the frontiers of all nations almost contiguous. Events in any part of the world directly or indirectly affect the economy and welfare of the United States. In these days, the very life and death of the Nation depend on smooth-working machinery for regulating our international relations.

The record of the Senate in handling treaties of peace is long and it is disturbingly bad.[7] From the moment the United States became a world power as a result of the Spanish-American War the Senate has frustrated every significant move to make it possible for the country to participate in settling international disputes. It rejected the Olney-Pauncefote Arbitration Treaty of 1897. It emasculated the Hay Arbitration Treaties of 1904. It retained a stranglehold on the innocuous Root Arbitration Treaties of 1908–10. It impeded the effort of President Taft in connection with the Taft Arbitration Treaties of 1911. Then, of course, the history of what happened to the Treaty of Versailles, the League of Nations, and the World Court following World War I is well known to all. It should also be pointed out that the two-thirds provision prevented the annexation of Hawaii and Texas by treaty. A circumvention of the Constitution called executive agreements had to be resorted to for their annexation.

In the modern world negotiations must be conducted with foreign countries. The two-thirds provision ties the hands of our negotiators. This Nation, the most powerful and influential in the world, cannot exert its great strength for the cause of better international relations and world peace because of this anachronism in our Constitution.

TWO-THIRDS RULE AND EXECUTIVE AGREEMENTS

The Government must function in the international field. This necessity has forced Chief Executives, particularly during the past 50 years, with the support of the public, to enter into executive agreements and to resort to the use of concurrent resolutions in order to accomplish the desires of the people. These devices are, of course, used because of fear, which was a reality in most instances, of not being able to secure approval by two-thirds of the Senate to the particular matter under consideration. Thus, the two-thirds provision has an increased tendency of placing the important foreign affairs of the Nation more and more in the hands of the Executive to the exclusion of Congress.[8]

Prior to 1939 the United States entered into nearly 2,000 international instruments. Of this number 1,182 were executive agreements. Seven hundred and ninety-nine were treaties. We do not condemn the agreements as illegal. They were for the most part necessary for the welfare of the country and have subsequently been approved by Congress, but most of them should have been submitted as treaties. This would have been done if they could have been considered as other legislation.

This is an unhealthy tendency. It has far-reaching and ugly possibilities. The maintenance of the two-thirds rule, instead of working to maintain a great power in the Senate, is actually taking that power away from the Senate. Congress should act as a check upon the treaty-making powers of the President, but by maintaining a rule that prevents negotiations which the people desire, the Congress is in the process of eliminating itself from this important function of government. The proposed change will diminish the use of Executive agreements. It will stop driving American diplomacy underground.

THE HOUSE OF REPRESENTATIVES SHOULD PARTICIPATE

Since the old reasons of secrecy, longer tenure, and intention to advise no longer exist, and since navigation on the Mississippi and New England fishery rights are no longer imperiled, the House of Representatives, for good and affirmative reasons, should participate with the Senate in shaping our foreign policy. The Members of the House are closer to the people, and the viewpoint of the direct representatives of the people should be heard in helping to shape our foreign policy.[9]

In our complex society, most of the important domestic laws are necessarily closely interwoven with our foreign policy—laws affecting the merchant marine, the size of the Navy, money stabilization funds, air bases, tariffs, etc., which require the concurrence of both Houses of Congress, directly pertain to foreign affairs. It is impossible to draw the line between purely local problems and problems dealing with foreign policies. Therefore, both types of problems should be treated as regular legislation.

In the years to come, treaties and agreements relating to foreign affairs will increase greatly in number. If this Nation is to maintain its world position, these matters must be handled expeditiously. Few treaties can long be sustained without implementing

---

[4] In early history, on rare occasions, the Senate proffered its advice to the President, but the Senate has never entered into active negotiations of a treaty. See 2 Haynes, the Senate of the United States, 276.

[5] The Federalist, No. 75. "In the North Carolina convention it was urged that, since treaties were to be the supreme law of the land, the House of Representatives ought to have a voice in making them. The objection also was made that the President and 10 Senators might make treaties of alliance and dispose of the country in such manner as they might please. To these objections William R. Davis, who had been a member of the Federal Convention, replied: 'The power of making treaties has, in all countries and governments, been placed in the executive departments. This has not only been grounded on the necessity and reason arising from that degree of secrecy, design, and dispatch, which is always necessary in negotiations between nations, but to prevent their being impeded, or carried into effect, by the violence, animosity, and heat of parties, which too often infect numerous bodies. Both of these reasons preponderated in the foundation of this part of the system'." See Crandall, Treaties, Their Making and Enforcement, 61.

[6] Farrand, Records of the Federal Convention (1913), 548.

[7] Important treaties defeated in the Senate by lack of two-thirds majority:

| Date of vote | Country | Vote | Subject |
|---|---|---|---|
| June 27, 1860 | Spain | 26:17 | Cuban Claims Convention. |
| June 1, 1870 | Hawaii | 20:19 | Reciprocity. |
| Jan. 5, 1883 | Mexico | 35:20 | Convention for retrying claim. |
| Apr. 17, 1884 | Zollverein | 28:18 | Reciprocity. |
| Apr. 20, 1886 | Mexico | 32:26 | Convention for retrying claim. |
| May 5, 1897 | Great Britain | 43:26 | Arbitration. |
| Mar. 19, 1920 | Multilateral | 49:35 | Versailles Treaty |
| Jan. 18, 1927 | Turkey | 50:34 | Amity and commerce. |
| Mar. 14, 1934 | Canada | 46:42 | St. Lawrence Waterway. |
| Jan. 29, 1935 | Multilateral | 52:36 | Adhesion to the World Court. |

[8] Perry, The Treaty Making Power (1922) 216, North American Review 40.

[9] Fleming, The Treaty Veto of the American Senate, pp. 14, 15.

legislation which requires the concurrence of both Houses of Congress. Appropriations and legislation to work out details will be necessary. Few important treaties can be completely self-executing. There is no present valid reason why one type of legislation should be considered only by the Senate and a two-thirds approval required, when that legislation must sooner or later receive the sanction of the other House of Congress. No foreign policy agreed upon by the Senate can long endure unless it has the support of the people. If it secures the sanction of a majority of both Houses of Congress, it is undeniably the foreign policy of the Nation. Having been thus sanctioned, it will receive better and more enlightened support from the people.[10]

Under our Constitution, treaties are declared to be a part of the supreme law of the land, along with the Constitution itself and laws passed in pursuance thereof. This legislative status is an important reason for associating both Houses in the treaty-making process. It is an important reason for permitting them to act by the same majority which suffices for other legislative acts. At present it is possible for a bare majority in Congress to abrogate a treaty by passing conflicting legislation or by failing to pass subsidiary legislation necessary to carry out its provisions. Such action leaves the treaty in existence as an international obligation, but, as the law of the land, the treaty is overruled and of no effect.[11] In view of this undeniable fact, it would be better to have both houses of Congress act upon the treaty by a majority in the first instance. The other method has, and will, lead to international obligations which cannot be fulfilled because of subsequent congressional action. This creates bad relationships with other countries. It impedes the ability of our negotiators to deal with foreign powers.

During its early history the United States, as a remote young nation, could indulge in a negative foreign policy of withdrawal from world affairs. Today, as a great nation, the responsibility for leadership in the organization of world peace is thrust upon us. Two world wars in one generation demonstrates that this country cannot shrink from its responsibility to provide for peace and still survive as a free nation.

International leadership demands capacity for positive and constructive national action in the forging of a just and enduring world order. To cooperate in this imperative undertaking, there is a very valid reason why the power of the United States Government to make peace should be as broad as its power to make war. Yet the Constitution requires only a majority of both Houses of Congress to declare war, while a small minority in the Senate may prevent the United States from ratifying treaties providing for international organization. The desire of the people as reflected by a majority of both Houses of Congress should be the guiding influence in settling war, just as it is in making war.

[10] Henry Hazlitt, in A New Constitution Now, has this to say: "The requirement for ratification of treaties by a two-thirds vote places the power of indefinitely prolonged obstruction in the hands of a minority. It was largely responsible for America's refusal to enter the League of Nations or to adhere to the World Court. 'The irreparable mistake of our Constitution,' wrote John Hay in a letter in 1899, when he was Secretary of State, 'puts it into the power of one-third plus one of the Senate to meet with a categorical veto any treaty negotiated by the President, even though it may have the approval of nine-tenths of the people of the Nation'."

[11] *Cook* v. *United States* (288 U. S. 102 (1933)): "A treaty may supersede a prior act of Congress, and an act of Congress may supersede a prior treaty." *United States* v. *Ferreira* (13 How. 40 (U. S. 1851)): "A tribunal created by an act of Congress in conformity to a treaty derives its whole authority from the statute creating it and not from the treaty."

## Marine Corps Maj. Paul H. Douglas, of Illinois, Heads a Splendid New Organization, Appreciate America

EXTENSION OF REMARKS
OF

### HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following syndicated article, which appeared in the magazine section of the Sunday Star of Washington, D. C., on December 9, 1945, describing an interesting activity of Maj. Paul H. Douglas, husband of our colleague, the gentlewoman from Illinois:

APPRECIATE AMERICA

Even in the darkest days the Army had a stock remedy for gripers: "Take your TS card to the chaplain and let him punch it." TS meant, approximately, "Tough Stuff." Of course, there weren't any "Tough Stuff Cards." It was just a gag, but it provided the Army with a great safety valve. During the worst days in Normandy I saw soldiers forget gripes and laugh when someone said, "Take your TS card to the chaplain, Joe."

Sometimes, and particularly now, all America needs a TS card. You'll find one in Chicago—an organization with a title that is so simple it almost makes you jump—"Appreciate America."

In the pains of war and the aches of reconversion, this organization says to every griper in the land, "Take your TS card to the chaplain, Joe."

BUILD AND LOOK FORWARD

But Appreciate America is a great deal more than a safety valve. It has set itself a positive job: to build, not to break; to look forward, not backward; to give hope, not despair. Its honorary chairman is Marine Corps Maj. Paul H. Douglas, wounded at Peleliu and Okinawa, who continued appreciating America from a bed at the Naval Medical Center, Bethesda, Md. Its chairman is Brig. Gen. A. F. Lorenzen (retired), the man who smashed Von Papen's spy ring in World War I and smoked out Caribbean U-boat bases in World War II.

Serving under these two are dozens of men of good will—businessmen, labor men, educators, clergymen, entertainers—who differ on many subjects but agree about America. "Appreciate America" is a "for" organization. It accentuates the positive. General Lorenzen states the platform in this capsule: "We are for everything that is good for America. We are against everything that is harmful to America."

FIGHTS DESTRUCTIVE DRAGONS

To implement this aim, Appreciate America has plunged into the arena of public opinion where, unfortunately, there are still the unslain dragons of the malicious lie, hate-mongering, minority-baiting. Appreciate America has assailed these dragons with a bombardment of constructive Americanism in printed form: booklets, cartoons, placards, pamphlets, posters, stickers.

One series of booklets, in which "Joe Doakes" answers the breaker-downers and the haters, became so popular that business firms all over the country requested copies to put in pay envelopes. The Inland Steel Co. distributed 50,000. The Carnegie-Illinois Steel Corp. filled its pay envelopes with 150,000. Gimbel Bros. placed Joe Doakes booklets on its counters as give-aways and the YWCA distributed 500,000 more. In all, Joe Doakes had a circulation of 12,000,000.

In 1941, when Appreciate America printed a condensed version of Douglas Miller's You Can't Do Business With Hitler, the Sixth Army Corps Area requested 6,000 copies for its morale division.

Aided by James Montgomery Flagg and a dozen other top artists, Appreciate America has turned out more than 60,000 posters for the walls of schools, factories, offices, and stores. Its poster on religious freedom was chosen by the Encyclopaedia Britannica as the best patriotic poster of the year. Its free-press poster was used as the emblem of Newspaper Week by the National Editorial Association. The American Federation of Labor chose its poster on unity as the official placard for a meeting in Chicago.

Ham Fisher has put his Joe Palooka to work, appreciating America on red, white, and blue posters from coast to coast. Other comic strip artists have followed suit. Harold Gray, in the last days of isolationism, had his Orphan Annie looking across to the flaming shores of Europe and saying, "Leapin' lizards! It's later than I thought! But we'll not let it be too late for America! Eh, Sandy?" Sandy, of course, said, "Arf!" And so did Eisenhower.

When war hardships brought an epidemic of gripes, "Appreciate America" produced its "griper series." For the businessman who griped because he couldn't get a seat on a train, there was an autographed picture of Hirohito saying: "Whether you know it or not, you're my friend." For the griper about rationing, there was a German iron cross awarded with Hitler's compliments for "distinguished service." For the tax griper there was a 50-yen note with the legend, "Beefers belong on Hirohito's pay roll."

Hollywood stars added their voices. Bob Hope, Bette Davis, Bing Crosby, Frances Langford, Humphrey Bogart and others turned in signed messages for "Appreciate America's" hungry presses. Bing Crosby's message contained one line that seemed to say it all: "Americans can live as friends."

DREW CARTOON SERIES

Recently Vaughn Shoemaker, cartoonist for the Chicago Daily News, undertook a series of cartoons for "Appreciate America." All of them stress the constructive factors in Americanism. But the one which has drawn the warmest comment is a little picture of four boys in a baseball game. Defending the right of one of them to play, a lovable toothless kid with a mit in one hand and a catcher's mask in the other says, "What's the difference what nationality he is—he can pitch!"

Some 1,800 publications, with a total readership of more than 25,000,000, are being supplied with Shoemaker's cartoons. More than 18,000 schools, as well as veterans and service groups, have displaced "Appreciate America" placards and posters.

One large university refused the material. A spokesman said, "We must view things from all sides."

"Very well," "Appreciate America" replied. "We'll be glad to give you the American side."

"You have me there," the spokesman said. "Send us your material."

Much of "Appreciate America's" prodigious output is distributed free. In some cases there is a charge to cover expenses. The organization is nonprofit, depends upon contributions. Douglas, Lorenzen, and their col-

leagues work without pay, as does everyone in "Appreciate America," except one full-time girl secretary at the Chicago headquarters.

"Joe Doakes" is the organization's most valuable spokesman. Here's what he has to say:

About the gripers: "When someone keeps criticizing the way things are going, I tell him I never saw a ball game won by the noisy fellow in the bleachers who's yelling at the umpire and razzing the players. Games are won by the men in the field."

About unity: "When somebody knocks a neighbor of mine because he is a Protestant, a Catholic, or a Jew, I tell him he may not know it, but he is falling for Hitler's stuff. Hitler started knocking the Jews and ended by knocking religion, the Masons, labor unions, business, and everything that makes for a free world. When you begin to hate you can't tell where it will stop."

Paul Douglas was a professor at the University of Chicago when "Appreciate America" was founded in 1940. He taught economics and he also served in Chicago's city government as alderman from the Hyde Park ward. Chicagoans were shocked when he refused the swanky car provided for aldermen and instead rode around town on the "El" and streetcar.

He shocked them again by publishing a full accounting of how he had spent his salary and a tabulation of his campaign expenses, which were less than $5,000 while others had spent $100,000.

Then the Nation went to war—and so did he. At 50 he enlisted as a private in the Marine Corps.

He served for 2½ years in the Pacific, rising to the rank of major, and returning with a pair of Purple Hearts. He caught Jap steel in his cheek at Peleliu and later had his left arm ripped to ribbons by mortar fire on Okinawa. Douglas, at the Bethesda hospital, insisted that I not make him out a hero. So remember—he wasn't a hero. He came back 65 pounds lighter, his brown hair turned snow white—but he wasn't a hero.

MUST WORK AT UNITY

When the doctors get through with him, Douglas, a Lincolnesque character who stands 6 feet 4, will be back in Chicago fighting the Battle of America. "The greatest thing we can do for America is to build unity," he told me. "We've got to work everlastingly at unity."

General Lorenzen, like Douglas, entered the armed forces as a buck private. But that was in 1891, and he has since served in the Spanish-American War, and World Wars I and II. Looking at his warm, ruddy face, you'd never guess that Lorenzen could be a menace. But he is—to America's enemies. As an intelligence officer in World War II, President Roosevelt sent him to find the U-boats' refueling bases. He found them.

Back in civies just a few days when I saw him, General Lorenzen was in a different kind of intelligence business. He wanted to spread the intelligence that will give America unity.

Lorenzen suggested a three-point program:

"Our schools must teach young Americans to live together under the only real definition of 100 percent Americanism—tolerance, equality, and freedom to live and let live.

"Our war veterans must pitch in to insist upon the free, unified America for which they fought.

"Our molders of opinion must be constructive. Let those who get a crude delight out of destructive criticism offer a better solution to our problems, or it would be healthier for America if they kept their mouths shut."

It was an onslaught of destructive criticism from the mouth of Herr Goebbels which brought Appreciate America into being in 1940. The first thing that burned them up was the Nazi lie about labor's utopia under Hitler and the companion insults to labor here. Appreciate America crammed the truth back into Goebbels' maw: 90 percent of Hitler's workers averaged $10 a week; 22 percent of this was deducted for taxes and "voluntary" contributions. The workweek was 72 hours.

To nail down the facts, Appreciate America obtained and published the pay slip of a skilled German worker showing a monthly salary of $74, with $16 deducted for dues and taxes.

HURLED BACK HITLER'S WORDS

When Goebbels preached anti-Semitism, Douglas and his crew hurled back the words of Hitler in Mein Kampf: "We are not out against the hundred and one different kinds of Christianity itself—even those Christians who really want to serve the people will have to be opposed." And the words of Storm Troop Leader Ammerlahn: "Roman Catholics are the black vultures of German nationalism. We will not stop until we have scratched them out of the German people."

For contrast, Appreciate America submitted the words of Franklin D. Roosevelt: "There can be no peace if humble men and women are not free to think their own thoughts, to express their own feelings, to worship God."

Douglas says it all adds up to this:

"We want to aid in the indestructible unification of Americans by promoting a love for our country through an appreciation of its advantages, to the end that Americans may cherish their liberties and the countless assets which distinguish America as a blessed land."

## The Alaska Highway

EXTENSION OF REMARKS
OF
### HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a statement made by Mr. A. J. Breitenstein, secretary of the Great Falls Chamber of Commerce, Great Falls, Mont., before the Mountain States Association annual convention held on November 13 at Denver, Colo.:

This report is to cover generally the present status and the future development of the Alaska Highway; how it can be reached by the people of the United States; its prospect as a tourist highway and a commercial road; its role in developing the natural resources of Canada, the Yukon, and Alaska; its importance as an established interregional connection from the Mountain States territory through Montana to Alberta.

Right now the only all year-round hook-up is by way of United States 91 at Sweet Grass and entering Alberta at Coutts to Lethbridge, Macleod, Calgary, and Edmonton over improved roads, thence approximately 456 miles over ordinary country roads, of which 353 miles is graveled, in a northerly and westerly direction to Dawson Creek where the Alaska Highway officially starts.

At present the situation is something like this: The Alaska Highway proper of 1,422 miles is completed. The southern terminus is Dawson Creek, British Columbia. The northern terminus is Big Delta, Alaska. Big Delta to Fairbanks over the Richardson Highway, approximately 90 miles more. Less than 3 months ago Thomas H. MacDonald, Chief of the Bureau of Public Roads, and Congressman J. W. ROBINSON, of Utah, chairman of the House Committee on Roads, drove over this highway. Mr. MacDonald in a visit at Great Falls on his return from that trip, stated:

"The Alaska highway is a better road than the early Montana graveled roads were. Not yet a tourist's road, oil finished, but a road which can be used in all seasons, well engineered, wide, and well graveled. Chambers of commerce should use caution about encouraging tourist travel until the highway is under permanent management and has tourist facilities. What will be done about the future of the Alaska highway is entirely in the hands of Congress."

Mr. MacDonald prevailed upon Mr. O. S. Warden, the publisher of the Great Falls Tribune, to send a staff correspondent over the highway to get a true story of its future, not alone for the present but from a long-range standpoint. Four representatives of the Great Falls Chamber of Commerce accompanied the special writer. The entire trip was made by automobile the first 2 weeks of last September.

Thereafter 12 articles on successive days were printed in the Great Falls Tribune. These were based on official reports and conversations with military and civilian engineers, civic leaders, and men on the street. They contain substantial and well-thought-out reasons, all indicating that the Alaska Highway can and will be a well-traveled road in the years to come. The subject covered included Future of Alaska Highway, An Implement to Airway Travel, This Route Will Build Northwest, Expense Great but Has Value of Tourist Route, Development Would Justify Upkeep, Engineers Coping With Economic Problems, Should Be Important Trucking and Commercial Route, Telephone and Telegraph Lines Require Well-Kept Road, Many Tales Untrue Concerning Alaska Highway, This Road Will Attract Prospective Tourists, West Coast Admits Need for Inland Highway, and Prompt Decisions Essential on Upkeep.

The Great Falls Chamber of Commerce is republishing these articles and they will be ready for distribution in the next few days. After reading them and analyzing the report of the committee who accompanied this staff correspondent, we are of the belief that the Alaska Highway is important enough to both Canada and the United States to warrant its becoming a permanent, all-weather, well-maintained road.

A properly equipped and controlled air route to Alaska is indispensable to the defense of the American continent. Toward this end, Canada has purchased from the United States the airports now located at frequent intervals along the Alaska Highway. In order to service this most feasible air route there must be a land route. The present road serves as a guide to flying as well as being an essential part of the service of supplies. Its maintenance will determine the permanent value of the air route.

The Alaska Highway is in good shape today according to Thomas MacDonald, Chief of the United States Bureau of Public Roads, and from first-hand reports of folks who have traveled the road recently, including Luke Wright, the writer of the Tribune articles. Bridges along the road are all of permanent construction.

The direct and indirect values to be obtained from permanent maintenance and upkeep of the Alaska Highway are:

1. It will provide an indispensable part for the maintenance of an air route to Alaska which all agree is essential to our military defense;

2. It will make possible the maintenance of present telephone and telegraph communications between the States and Alaska, already constructed by the Army;

3. It will open up a whole new area for tourist travel. Development and indications from tourist, travel, and other sources show

that interest in this highway and region is very extensive in the United States.

To accomplish these ends, we believe:

1. That a permanent Alaska Highway Commission of five members should be established and that at least one of these members be appointed from the Mountain States; and

2. That possible consideration should be given to request the Congress of the United States to extend financial aid to Alaska and Canada in the maintenance of this highway.

These two recommendations are cited because from official sources and through the press all indications point that on April 1, 1946, this highway will be turned over to Canada for future maintenance and upkeep. This is quite a challenge to Canada. The finances involved will run into substantial figures. Some Canadian citizens claim there is no disposition to furnish any definite information to their public on this subject but that generally speaking most of them advocate making the Alaska Highway a main artery in the road system on this continent and a dare to American business ingenuity.

An Alberta magazine, published at Edmonton, says in part editorially:

"The Alaska Highway is worth millions to the future of Canada's industrial revenues, both internal and external. It is worth still more as a lure for the tourist of future years. It is up to Canada to see that this great asset does not return to the wilderness stage. A great gift like this from our friendly neighbors is one that all Canadians will appreciate.

"As to upkeep, it is true, the bill will be fairly heavy, but the road is in good condition and should not cost more than $400 a mile to maintain for many years to come, as a graveled road, but it will be cheaper in the long run to surface it, using Alberta bituminous sands for that purpose."

Very few of the fellows in the Mountain States Association membership group responded to our query as to the future value of this highway. One outstanding reply came from Gus Backman, secretary, Salt Lake Chamber of Commerce, who stated:

"I would say that the future value of the Alaska Highway to us fellows in the intermountain area, is the development of the finest scenic and tourist highway that can possibly be on the American continent. The construction of that highway will unquestionably call for the development of highways leading out of the Alaska Highway to all points of tourist interest in Canada and Alaska. In addition, it will open up new territory for colonies and industrial development, particularly mining, which in turn is very closely related to the activities in our area. Of necessity, it will develop a route that will provide transportation between Alaska and the main line that will be of tremendous worth to all of us."

INTERREGIONAL HIGHWAY CONNECTIONS

We now refer to the report dated January 1944 of the National Interregional Highway Committee outlining and recommending a national system of such highways. It includes the primary routes of the Federal-aid system with certain improved highways totaling 33,920 miles recommended as interregional routes.

There will be additional mileage added, bringing the grand total to 40,000 miles. Recommendations for this extra mileage are to be made by the State highway commissions by joint petitions. It is expected that such announcement will be made before July 1, 1946.

Reports from the eight States, members of this organization, indicate Wyoming and Montana are left out in the cold on northward interregional connections. Here is the picture:

Montana: In February 1944 the Governor of Montana learned that no such interregional route connected Montana and this intermountain country with Canada. Grand Forks-Winnipeg was the nearest eastern connection and Coeur D'Alene-Eastport, Idaho, on the west, leaving a 2,000-mile void. The governor's protest was immediately backed up by various Montana chambers to continue US 91 from Butte to Helena, Great Falls, Shelby, and connect at Sweet Grass-Coutts. The official designation is from Los Angeles, Salt Lake, Pocatello, to Butte, thence westerly to Missoula, Wallace, Coeur D'Alene-Eastport.

Wyoming was pretty much the same as Montana. The interregional highway from El Paso, Albuquerque, and Denver runs out at Cheyenne. Montana communities along US 87 joined Wyoming in trying to have this continued on to Casper, Sheridan, Billings, Lewistown, and Great Falls, thence on 91 to Sweet Grass.

Colorado from Mexico, El Paso, Albuquerque, and Denver, thence to Cheyenne, where it stops.

New Mexico: Same as Colorado.

Arizona: Starting at Las Cruces, N. Mex., going westward, thence northward to Phoenix, Wickenburg, and Ash Fork, where it stops but joins in with east-west U. S. No. 66.

Nevada's designation is more east-west than north starting at San Francisco to Reno and Salt Lake City.

Utah: From San Diego, Los Angeles, Barstow, to Salt Lake City.

Idaho really has two such designations. One, Salt Lake to Butte, and the other northwesterly from Salt Lake, Boise, to Portland.

TOURIST TRAVEL TO THE ALASKA HIGHWAY

Several years ago conservative tourist organizations and other groups interested in motor travel were really condemning this particular route as one impossible to be traveled by tourists and setting it up as a bugaboo with no merit whatsoever. Lately, however, the thought has been different. This was brought about by declarations of those high in authority that the prospects for travel over the Alaska Highway is most promising before another half decade is over.

The American Automobile Association in a recent survey on postwar travel trends brought to light some very interesting findings. It says that 43 percent of the people who plan their vacations in the United States expect to tour the Rocky Mountain States, the Northwest, California, and Southwestern States. In expected travel to 13 foreign countries listed, Canada is second with 20 percent, Alaska third with 16 percent. Mexico is first with 25 percent. Transportation preferences: Automobile, 84.5 percent; airplane, 8.5 percent; railroad, 6.5 percent; steamship, 6.5 percent. The AAA this year published a special pamphlet on Alaska containing several interesting chapters devoted to the history and future use of the Alaska Highway.

Thomas MacDonald very recently said: "It seems to me that Great Falls, Lethbridge, Calgary, and Edmonton can form a very strong combination to obtain proper recognition of the Alaska Highway, its maintenance and further improvement. I think there will be immediately no great rush of traffic overland to Alaska. However, when a bus can be driven from the center of the United States through to Fairbanks in 9 days, it definitely puts Alaska within reasonable reach of the automobile. Our people go far afield for recreation. We should approach the future of the highway not from the standpoint along of the present, but for a period of say 25 years."

He further said—"From the first connection that I have had with this road I have believed in the soundness of the location and its continuing importance. This inland route is the most reliable for travel between the major part of the United States and the interior of Alaska, say Fairbanks. The road now is in splendid condition and the bridges over the major streams are exceptionally fine, permanent structures."

ALBERTA

Alberta has taken a significant part in the future of the Alaska Highway. The civic leaders of Lethbridge, Calgary, and Edmonton, together with provincial officials, have always realized, I believe, the potential development of this highway as a tourist possibility. Groups from the Great Falls chamber have visited these 3 principal cities, at their invitation, at least 10 times the last 3 years to assist in a cooperative way the course by which we in the States can urge development.

Unfortunately, Alberta does not have the highway-building set-up that we in the United States do. There is a 7-cent gas tax for the Province and 3 cents additional to the Government. But this is not earmarked for road building. It all goes in the general fund. They have a tough problem on their hands. Yet they are fighting valiantly to tie in with us to work out something and in some way establish plans to maintain this highway and also to build a first-class connection from Edmonton.

The versatile Dan Campbell, Alberta director of publicity and travel at Edmonton, has these opinions:

"The road is already an important commercial artery. It is even now internationally important because it is the only line of transportation for vital supplies and materials with which the airports must be maintained.

"Governments do have an important duty to perform in the maintenance of the Alaska Highway and other newly built transportation systems in the north. If this generation is to benefit, if the north is to be brought into alinement with other efforts at man's disposal to alleviate unemployment, to provide homes and livelihood for multitudes of bewildered human being now, the road must be maintained as a modern highway and the necessary maintenance work becomes an urgent necessity."

"The fundamental fact of the need for immediate action cannot be stressed too strongly. Virtually no effort short of violence can be too powerful to insure immediate action. Every thought and agency at the disposal of wise and energetic men should be thrown unreservedly into the struggle for immediate action, because the need is now, not 10 years from now. This does not alter the fact that if we do not get immediate action now, no power on earth can restrain progress in the North in the future."

In the final summary in venturing some opinions and beliefs in the development of the now famous and alluring Alaska Highway as a tourist road, it would seem that the development of the fertile expanses of the North holds many potent benefits for commerce and society. The immediate benefits go to Alberta primarily and to the tier of mountain States. This depends upon the energy of putting our visions into effect; they must be tremendous in scope and overwhelming in magnitude.

In conclusion, can the delegates to this Mountain States Association convention as an organization, put forth these proper and continuous efforts to help bring about the development and maintenance of the Alaska Highway, so that it will really assume its proper place as a tourist highway. Are some of the suggestions outlined here worthy of presenting to our congressional delegations, national and State highway leaders, public relation experts, and our own chambers of commerce to ascertain if they can help in such an achievement.

I believe we can.

## Letter From American Watch Workers Union

EXTENSION OF REMARKS
OF
## HON. PEHR G. HOLMES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. HOLMES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE AMERICAN WATCH WORKERS UNION,
*Boston, Mass., December 10, 1945.*
Congressman PEHR HOLMES,
*House of Representatives,*
*Washington, D. C.*

DEAR CONGRESSMAN HOLMES: On last Tuesday, December 4, 1945, Congressman EMANUEL CELLER, of New York, took the floor of the House of Representatives and assailed the three American jeweled watch manufacturers—the Elgin National Watch Co., the Hamilton Watch Co., and the Waltham Watch Co., and criticised the State Department for coming to the aid of the American jeweled watch industry.

Congressman CELLER'S actions are understandable. He represents the Benrus Watch Co.—one of the largest Swiss watch importers in America; he represents the Lazarus' of which family S. Ralph Lazarus is the president of the Swiss watch importers group, which masquerades under the name "American Watch Assemblers Association." Congressman CELLER simply forgot his identity as a Congressman on Tuesday, December 4 and thought he was representing his client—the Benrus Watch Co. As to the contents of the letter which Congressman CELLER sent to Mr. Arthur Paul, Director of the International Trade Operations, United States Department of Commerce; it is apparent that Mr. CELLER in his anxiety to please his clients, has failed to look at the record and to investigate the facts.

Had Congressman CELLER cared to read the hearings before the Ways and Means Committee and the Senate's Finance Committee of 1943 and 1945, he would have found the case of the American jeweled watch industry and its employees versus the Swiss watch importers and the Swiss cartel (the Swiss Superholding Co.). For four long years, the employees of the American jeweled watch industry have been crying as a voice in the wilderness protesting the fact that a foreign country which was supplying Germany and the Axis with military timing mechanisms was being allowed to build a Frankenstein in the United States through Swiss dumping of civilian watches. We have knocked at the door of Congress many times as have we appealed to the State Department and the Committee on Reciprocity.

We have had a hearing on October 23 before the Committee on Reciprocity and that hearing was declared confidential by this committee, and they gave a hearing to the Swiss watch importers on October 26, 1945, which was confidential also. We requested of Mr. Edward Yardley, executive secretary of the Committee on Reciprocity, that these hearings be made public, and that we be given the opportunity to see what was said by the Swiss watch importers, and that they be allowed to see our case. This request was denied. We appealed to the State Department, through Winthrop Brown, chief of the commercial policy of the State Department, to open up the records. We were again refused. After both cases were heard by the Committee on Reciprocity on October 23 and October 26 of this year, the Committee on Reciprocity delayed action for 5 weeks waiting for a brief from the Swiss watch importers which it granted them the right to file. To this date such a brief has not been filed from the best information available.

Congressman CELLER'S arguments in behalf of his client are fallacies and are the handiwork of a group groping in the dark to protect a group which was allowed to expand in the United States during the war to the detriment of the national defense of the United States. We agreed with Congressman CELLER that international trade should no longer be a one-way street. It's time that American interests were protected and the job opportunities of American workers were protected. Mr. Wallace's 60,000,000 jobs will never be a reality in America if we eliminate the opportunity for employment from the many basic industries which are subject to foreign competition. However, we can appreciate Mr. CELLER calling Mr. Paul's attention to his superior, Mr. Wallace, because Mr. CELLER knows that Henry Wallace, Secretary of Commerce, is a brother-in-law of Henry Bruggman, Swiss Minister to the United States. We don't know whether Mr. Wallace is interested in the Swiss interests or the American interests in this case, as he has never yet expressed himself. As for the effect limitations of Swiss watch imports on the merchant marine, Congressman CELLER had better discuss with his client, the Benrus Watch Co., the amount of shipping space watches take, for he will find out you can put 2,000 watches in a suitcase, and accordingly all of the Swiss watch imports into the United States in any 1 year can be put in the hold of one boat. How the merchant marine would starve to death if they had to depend on only Swiss watches for employment and trade.

As for the employment aspect, not one bit of employment is given by the Swiss watch importers that would not be given by the American jeweled watch industry if all watch movements were manufactured here; as a matter of fact, more employment would be given to the workers of our country if all watch movements were manufactured here, because many Swiss watches come here already cased and the American watch companies buy all their cases in the United States. Such items as bracelets, golden and silver watch straps, boxes, etc., that Mr. CELLER mentions, all that employment and domestic sales of such products would be given by the American jeweled watch industry to Americans. The only one that would be hurt by the elimination of such imports, would be the Swiss watch importers who have much room from 50 prewar to 500 now and who have waxed fat from the profits on the 28,000,000 watches they have imported during the war. They are in the same position as the gambler who is allowed to prosper during an unscrupulous municipal administration who is called to task by the honest successor to this unscrupulous administration and made to abide by the laws in the best interests of the community. The gambler protests because he has been allowed to operate over a long period of time and thinks he has a vested interest in his business, even though it is illegal. So it is with the Swiss watch importers. A wartime condition has allowed them to become large traders in wartime and they believe that they now have the right to exclude the American jeweled watch industry from a fair place in the market of the United States.

Eight-five percent of the unit cost of a watch movement is labor cost. American workers receive three times the pay of Swiss workers. Comparable watch movements—Swiss and American—retail at the same price, even though the Swiss watch movement is imported into the United States from one-fourth to one-third of the cost to the manufacturer in the United States, but, the consumer doesn't benefit; nor does the retailer. The Swiss watch importer picks up the difference as his profits, to the detriment of the national defense of the United States. Congressman CELLER should know that there are only two sources of supply for timing mechanisms in the world—the United States and Switzerland. He should be deeply interested in the fact that the Swiss watch industry supplies the machinery and timing mechanisms for Germany and the Axis and that they did not supply the Allies with any military equipment. Congressman CELLER should be deeply interested to know that American boys were killed and maimed by the products of the Swiss watch industry. Congressman CELLER should be deeply interested to know that there are 90 war plants in existence today in Germany, all of which are equipped with machinery made in Switzerland. Congressman CELLER should be deeply interested in the fact that if the program that he advocated last Tuesday on the floor of Congress were adopted that it would mean the elimination of the American jeweled watch industry and that the country that controls Switzerland would control the timing mechanisms of the world in future wars.

As for his analysis that the demand in 1946 and 1947 will total 10,000,000 watches—all we can go by on the subject is the record. The average sales of watches in the United States from 1926 to 1940 were 3,475,000 watches per year. These include domestic production and Swiss watch imports, combined. The figures for this period are as follows: 1926, 4,464,000; 1927, 4,834,000; 1928, 4,279,000; 1929, 5,139,000; 1930, 3,475,000; 1931, 1,779,000; 1932, 898,000; 1933, 1,001,000; 1934, 1,646,000; 1935, 2,188,000; 1936, 3,527,000; 1937, 4,451,000; 1938, 3,100,000; 1939, 3,990,000; 1940, 4,751,000.

These figures are the totals of watch sales in the United States from 1926 to 1940. During this period Swiss watch imports averaged 2,100,000 watches per year. During the war these imports increased tremendously. In 1 month—October 1945—2,100,000 watches alone were dumped into the United States from Switzerland. Since Pearl Harbor 28,000,000 watches were dumped into the United States by these Swiss watch importers who now cry that it is un-American for Americans to demand that their jobs be protected.

We note that Congressman CELLER recommends that the Swiss Government refuse to accept the limitation of 3,000,000 watches, as suggested by the State Department. We pray to God they do, for we believe that 3,000,000 watches is excessive and that no more than 2,000,000 per year should be allowed into the United States. We believe that the American people, once they are acquainted with the facts in this case, will rise in wrath and demand that Congress enact legislation to protect industries such as ours that are essential to national defense. How can any Congressman representing the peoples of the United States have the gall that Congressman CELLER has to stand up on the floor of Congress and advocate the destruction of an industry essential to national defense?

As for smuggling of Swiss watches—who better than the Swiss Government can police this? But again, the Swiss were never fussy who they did business with—for anyone who woul do business with Hitler during wartime, would do business with anyone. Senator KILGORE, of West Virginia, chairman of the Subcommittee on Elimination of German Resources for War said that correspondence in his hand that makes it clear that the principal concern of the Swiss was the prospect for future business dealings with a post-war Germany, irrespective of its political character and its relationship to the peace- and freedom-loving nations of the world. Need we say any more?

As for Congressman CELLER'S reasoning on his statement that of retail sales of $82,500,000 only $10,622,000 went abroad. Doesn't this statement speak for itself? The Swiss

watch worker who works for two-thirds less than the American watch worker and the Swiss watch manufacturers dominated by the Swiss cartel sell their watches cheaper, or cost them less to produce? But, the Swiss watch importer, when he sells these same watches charges as much for them as does the American jeweled watch manufacturer for the product which costs the American manufacturer so much more to produce. Let Congressman Celler investigate the profits of the American jeweled watch industry for the past 20 years, and he will find that the net profit for the American watch manufacturers has been less than $1 per watch over this period and let him contrast this $1 per watch with the profits made by the Swiss watch importers on Swiss watches, and he will find that the average profit for the Swiss watch importer to average between $7 and $10 per watch.

As for employment: the Swiss watch importers supply—other than the big three Swiss watch importers: Bulova, Gruen, and Benrus, the rest or 90 percent of the rest—if they have an office, a telephone, and a salesroom, they are doing well—and some of them even use their bedroom as a place of business.

If it were not for the important position which Congressman CELLER holds as a Congressman and a member of the all-important Judiciary Committee, we would not have dignified him with a reply when we found out his affiliations with the Swiss watch importers as an attorney for the Benrus group; however, in view of his position, we deemed it mandatory to reply.

If democracy is to survive in America, if the Republic of the United States is to be maintained, integrity in our public officials must be of high standard, and every United States Senator and every Representative in Congress must consider the national good and must keep our country at all times prepared against the bullies that arise in international affairs. The best insurance for peace in the world is a prepared America—that is all we are pleading for in asking for the survival of the American jeweled watch industry. We plead with Americans for America so that a national defense industry will be maintained and that America not be dependent upon any foreign country for timing mechanisms.

We respectfully request you, as the Congressman representing one of three localities in which an American jeweled watch factory is located, to place this reply to Congressman CELLER in the CONGRESSIONAL RECORD.

Thanking you in behalf of the membership of the American Watch Workers' Union, I remain

Very truly yours,

WALTER W. CENERAZZO,
*National President, American Watch Workers Union.*

## War Cost in Materials One Trillion, One Hundred Fifty-four Billion Dollars

EXTENSION OF REMARKS
OF
**HON. WRIGHT PATMAN**
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. PATMAN. Mr. Speaker, Mr. James H. Brady, of the American University, has devoted considerable time to research concerning the cost of World War II. I am inserting herewith a recent statement relative to his studies:

World War II cost the world $1,154,000,000,000 for armaments and war materials alone, James H. Brady announced yesterday after completing a cost study. The researcher also expressed belief that total property damage, not counting loss of life, amounts to about one-fifth the direct cost, or $230,900,000,000.

The study took 3 months. Brady assisted American University in the preparation of a war-cost study last May before the war was over.

The direct cost of armaments and war materials was arrived at by exhausting all available sources, Brady said. This included embassies, records of Government agencies, information services, and official reports.

Brady's study did not include the money spent and large damage resulting from 10 years of war in China. There was almost no data available on China's expenditures, Brady said.

## The Oswego Refugees

EXTENSION OF REMARKS
OF
**HON. SAMUEL DICKSTEIN**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 6, 1945*

Mr. DICKSTEIN. Mr. Speaker, some time ago I had the occasion to speak on the radio with reference to the problem of solving the situation now existing at the Government camp maintained at Oswego, N. Y., to shelter a number of refugees from countries at war.

The committee of which I am chairman held hearings at Fort Ontario in order to get first-hand information about the group and to formulate a just and humane policy with respect to the situation.

Some 60 persons appeared before my committee as witnesses and some of the witnesses were members of the refugee group itself.

Among the outsiders who spoke was General O'Dwyer, now mayor-elect of New York, and John Pehle, who was the executive director of the War Refugee Board.

After a thorough discussion of the situation, the matter was thoroughly gone into and definite policies were recommended by the committee to the Government of the United States.

Unfortunately, up to the present time, the recommendations of the committee have not been commented upon by the Government and I am obliged to speak to the public of the United States in order to bring this problem to the direct attention of the people.

The refugee camp at Ontario was one of many camps which were opened in various countries in order to save from immediate death a number of refugees who were threatened with extinction. This country took care of the smallest number of refugees who were able to enter camps in the various countries established for that purpose. Little Switzerland, Sweden, Portugal, and other countries received into their midst many more persons than we did in the United States. The total number of those received at Oswego was less than 1,000. The exact number was 982. The refugees arrived in New York on August 3, 1944, and from there proceeded to Fort Ontario, Oswego. Ten of these unfortunates died before the time the hearings of our Committee on Immigration had begun, but 11 infants were born and these deaths were offset by the births.

Some 60 or more persons, particularly of Yugoslavian nationality, left the camp and returned to their homelands since the hearings began.

The number of refugees is therefore diminishing steadily and by the time some action is taken by our Government there may not be more than 900 who will require attention. These 900 unfortunates are entitled to the care and protection of our Government.

There is no reason why the camp should continue to be maintained at a great expense to the Government, when these persons could be easily let out and permitted to come in as legal immigrants under our immigration laws.

These refugees are of many religious persuasions and we have among them Roman Catholics, Greek Catholics, Protestants, and Jews. Everyone who has come in contact with them has been impressed by their high cultural level and the high proportion of talented and gifted people among that group.

The children have been attending the local schools and have been among the brightest and most responsive pupils. The occupations of these persons are varied. There are people who were professionals, managers, salesmen, people engaged in agriculture, fishery, forestry, butchers, farmers, and others.

Many of their refugees have relatives in our armed forces. Twenty-one of the refugees are either the sons of or the parents of people in the armed forces. Most of them have relatives in the United States who would be able to and are willing to take care of them if these refugees should be allowed to enter the United States for permanent residence.

It would be almost impossible for these refugees to go back to Europe. The conditions are such that so-called displaced persons would find it exceedingly hard if not impossible to resume life in those places from which they were driven out.

One of the members of a committee which was organized in the vicinity to help these refugees said that it would be almost criminal to keep them enclosed in the fort, because, while they have tentative security there, they are more or less in the position of people in concentration camps who cannot move out of their quarters and who are enclosed in an area where they can be of no use either to themselves or to the community.

These refugees have been trained by our welfare organizations for eventual admission to the United States and to become a part of our country. We organized for them classes in English, as well as recreational facilities, such as movies, musical entertainment, and the like.

I am sure that if these persons are allowed to enter the United States for permanent residence they will make a valuable addition to our population.

The committee of which I am the chairman has therefore recommended that steps be taken to close the camp and permit these refugees to enter the

United States for permanent residence under our existing immigration laws.

A few days ago we were informed that the Canadian Government allowed 3,500 refugees, who were admitted in the same manner in which our refugees were admitted to Fort Ontario, to become citizens of Canada without any further ado. Our committee did not recommend anything as drastic as all that, although it would not have been amiss to allow these persons to apply for citizenship at once.

Nevertheless, mindful of the difficulties of our immigration laws, our committee simply wishes to facilitate the admission of these persons for permanent residence under our existing immigration laws.

I feel that this is the least we can do for these unfortunate persons, and I feel that this method of solution will be satisfactory to everybody.

As a gesture to other countries it will be up to us to devise a satisfactory plan for the solution of this problem. It is intolerable that the United States, which is now engaged in the task of closing up concentration camps throughout the world and setting their inmates at liberty should maintain a concentration camp in its very midst. The refugees should be freed at once. There is no palliative that will do. It would be futile to give the inmates a sort of a leave of absence or a sponsored leave or any other temporary liberty as distinguished from full freedom.

If we should resort to have measures from time to time, it will mean that the problem will be with us again later and later and instead of one debate on the subject we shall have many debates much more futile than the preceding one.

It is desirable that a uniform policy be adopted, so that there will be no delay in the reorganization of all of the Oswego refugees, and I believe that all of these refugees should be treated alike.

The refugees should be given the status of visitors who have overstayed their temporary admission. Those that can qualify for regular immigration visas should be given the opportunity to apply for such visas and be readmitted for permanent residence. Those who do not so qualify should be weeded out as undesirable. In this way, the refugees who came as guests of the Government and who can easily qualify for immigration visas should obtain the proper status as such.

The contention could be made and in fact voices have been uttered to the effect that these refugees should be sent back to Europe where they belong.

If conditions were normal and if Europe were in a position to resume its ordinary life, the story would have been different. Such, however, is not the fact. Europe is not in a position to welcome back anyone who has left its borders. In fact, the great problem of Europe today is the resettlement of many displaced persons who cannot go back to the land of their birth.

President Truman has just appointed a committee to cooperate with a British committee appointed for this same purpose, to find ways and means how to resettle many displaced persons in Palestine.

The refugees at Fort Ontario will not be welcomed by any European country. In fact there is no European country today which welcomes any of its former citizens.

There remains, therefore, one way by which this relocation of human beings can be effective.

We must find a place for them in the United States and it is not up to Congress to find a place for these unfortunate persons, but for the executive branch of the Government.

Congress did not authorize their coming to the United States and the executive authority acted on its own responsibility and the cause of humanity to permit the admission of these 900 persons or so to the Oswego shelter.

Since the executive branch of the Government has created the problem, it is up to the executive branch of the Government to solve it.

I therefore believe, and in this I am supported by all of my colleagues, that relief can be given to these refugees by executive action under our immigration laws. Only in this way can these harassed human being finally find a haven of refuge.

## Resolutions of Decatur County, Iowa, Farm Bureau

EXTENSION OF REMARKS

OF

### HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD I desire to include therein a set of resolutions adopted by the Decatur County (Iowa) Farm Bureau at its annual meeting on November 9.

Farmers of Decatur County are interested in progressive agriculture and have made great strides in soil improvement and development of livestock and crops. They have produced great quantities of foodstuffs during the war years in spite of being seriously handicapped by lack of labor and machinery. With such farmers as we have in this progressive county the United States has been able to feed its own people and materially aid in supplying foodstuffs for the rest of the world.

DECATUR COUNTY FARM BUREAU RESOLUTIONS, 1946

We believe that the support of township meetings, our county organization, and board of directors, and to stand solidly behind our State and national organization is our only hope of securing for farm families our fair share of the national income and educational and social improvement.

I. ROADS

*Resolved*, That counties which so desire should be permitted to use State and Federal funds to surface secondary roads on a drainage grade, rather than being forced to build a percentage grade.

II. FARM PROGRAM

*Resolved*, That any farm program should be a balanced program that will give grass land and livestock producers the same proportionate protection that was formerly limited to the seven so-called basic commodities.

III. PARITY

We firmly believe in the principle of parity as the basis for farm prices, and, if and when the price of any major farm product drops below parity, we urge our organization to use every means at their command to keep such product off the market till parity prices can be obtained. If farmers are to secure the necessary labor to continue operating in an efficient manner, we will have to compete with industrial hours and wages for labor, and we believe parity prices must be computed on that basis.

IV. SOIL CONSERVATION

*Resolved*, That soil conservation is imperative, and we recommend the continuation of conservation payments for approved practices.

V. TAXES

*Resolved*, That the State income tax should be restored to 100 percent as originally passed.

VI. MILITARY TRAINING

*Resolved*, That peacetime military training should not be made compulsory.

AUBREY REDMAN,
ERALD SCOTT,
E. B. SAYLOR,
*Committee.*

## Letter From a Small Businessman

EXTENSION OF REMARKS

OF

### HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. MASON. Mr. Speaker, the following letter from one of the small businessmen of Rockford, Ill., presents such an excellent and concise picture of what the average American small businessman thinks and desires that, under the unanimous-consent request already granted to me, I insert it for the benefit of my colleagues, and particularly for the benefit of the Washington bureaucrats who insist upon war controls of all kinds being retained because they claim the American people and the American businessman cannot get along without such controls:

HILL MACHINE CO.,
*Rockford, Ill., November 30, 1945.*

The Hon. NOAH M. MASON,
*House of Representatives,*
*Washington, D. C.*

DEAR SIR: I am what is known as a small businessman. I operate a small manufacturing establishment employing less than 100 people. I hope that it will grow to employ 500 or 1,000 or more.

I am writing to tell you as my Representative in Congress that I do not want any help from the Government. I am quite willing to take my chances on competing with the big fellows. I don't want any special breaks as I think I am smart enough to make and distribute my products cheaply enough to sell them competitively. If I can't, I'll quit and work at something else.

However, while I don't want help, neither do I want interference or hindrances from my Government. I want to be free to apply the special technical talent and ability which I

think I possess to produce and distribute my merchandise more efficiently and cheaply. I can't do that and read OPA regulations, talk to labor organizers, WLB, NLRB, Wages' and Hours' men, conciliators, and what have you at the same time. My big competitors can keep a high-priced staff of lawyers, so-called labor-relations men, and nonproducing specialists to contend with these, but my little company can't support them.

I think I can offer to buy the component parts and manufacturing operations for my products for high enough prices in the form of wages so that enough people will want to work in my plant to produce the full capacity of the plant and tools.

I want to be free to buy or not to buy from these people either individually or collectively and I acknowledge the right (and claim it has existed since 1776) of these people to sell or not to sell to me either collectively or individually as they choose. I don't want any antistrike legislation and on the other hand, I don't want the Government to force me to deal with people against my own free will.

What I do expect from my Government is impartial police protection for myself and other citizens from unsocial individuals who threaten or commit assault and battery, mayhem, defamation, libel arson, and riotous or other heretofore unlawful acts to prevent me from freely dealing with other individuals and to compel me to deal only with the particular group they sponsor and whose membership is dependent upon their ability to so coerce me. I expect that protection from my local government, but if it isn't provided, I expect it from my State or Federal Government.

I have read and understand the Constitution of the United States. I have read the Wagner Act and many of the Government decisions under it. I insist that it is unconstitutional, court decisions to the contrary notwithstanding. Its application is an encroachment on the freedom of all individuals. I refuse to recognize the existence of a separate class or caste called labor entitled to special rights.

Collective bargaining in its true sense is a privilege or right which has always been available to any group, but under the Wagner Act the words mean coercion of individual employers and employees.

The right to picket, that is, the right of individuals to walk peaceably on a public thoroughfare and express their ideas unmolested, needs no new law to uphold it. But under the Wagner Act picketing has come to mean legalized violence and disorder and the abrogation of the individual's right to walk unmolested on a public thoroughfare to his work.

I urge that you work for the repeal of the Wagner Act, and the repeal of all other laws upon which is built the present bureaucratic interference with the freedom of individual citizens to engage in enterprises individually or collectively for the purpose of bettering themselves.

Very truly yours,

F. LEROY HILL.

## United States Marines in China

EXTENSION OF REMARKS

OF

### HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. ANDERSON of California. Mr. Speaker, there has been a lot of loose talk lately concerning the status and utilization of United States Marines in China. In my opinion it is the duty of the Congress to see that the entire country is kept currently, and what is even more important, accurately informed on a subject of this kind. Accordingly, and in an effort to obtain the true facts, I recently addressed a communication to General Vandegrift, Commandant of the Marine Corps, requesting that he advise me of the progress that is being made by our marines in disarming the Japanese forces in China. Under date of December 10, 1945, I received a communication from General Vandegrift which reads in part, as follows:

United States forces were ordered into China to discharge a commitment to our Chinese Allies to bring the war with Japan to a conclusion by assisting in disarming the Japanese troops in China. Execution of this assigned mission is in progress. Retention of United States forces in China after completion of this mission is not expected. The Marine Corps, in employing its forces, is carrying out the directives received from higher authority which were issued in implementation of the commitment outlined above.

Marines overseas who are eligible for discharge or who have had long periods of service overseas on their current tours of duty are being returned to the United States as rapidly as practicable, regardless of the employment of their units. As far as is possible, men who have the highest number of points are being returned to the United States first.

Particular attention should be directed to the general's statement that "Retention of United States forces in China after completion of this mission" (disarming the Japanese troops) "is not expected." This pronouncement, Mr. Speaker, confirms a similar statement which was issued to the press by the Secretary of War on November 12, 1945. Mr. Patterson's release at that time reads:

The military problem in China at the present time, insofar as the United States is concerned, is the completion of the surrender, disarmament, and evacuation of the Japanese forces. There are still more than a million armed Japanese in the China theater.

Our limited force on the continent of Asia is making every practicable effort to assist the forces of the Central Government of China in the accomplishment of this mission.

The Central Government of China under Generalissimo Chiang Kai-shek has been deeply and helpfully involved both inside and outside China in our common war against Japan.

The government of Chiang Kai-shek is formally recognized by the Soviet Republics, by Great Britain, and by the United States. All three of these powers are now cooperating with the generalissimo in accomplishing the disarmament and evacuation of Japanese troops from China.

The United States troops in China will not be used for the suppression of civil strife but will protect American lives and property.

Points in China that have been liberated by the United States forces will be turned over to representatives of the recognized Central Government of China.

There is no danger of our troops becoming involved in civil strife in China unless they are attacked, in which event we may expect the American troops to react with vigor and success.

Now, Mr. Speaker, if additional confirmation is needed to emphasize the reasons for our Marines being in China, we can turn to the State Department and refer to a speech delivered at the Foreign Policy Association Forum by John Carter Vincent, director of the Office of Far Eastern Affairs, in New York City, on October 18, 1945. One paragraph from this speech is particularly significant. Mr. Vincent said:

Some questions may have arisen in your mind with regard to the dispatch of American marines to north China. They have been sent there pursuant to military directives to serve a specific purpose; that is, to assist Chiang Kai-shek in demobilizing and repatriating Japanese troops in the area. Their stay is temporary. They will be withdrawn when they are no longer required for the purpose for which they were sent. Generalissimo Chiang has announced that the marines would leave north China as soon as they can be relieved by Chinese Government forces. The process of relief is now in progress.

The three statements I have quoted above, if read in reverse order, would seem to indicate clearly that it is not the policy of the United States Government to utilize our armed forces in quelling civil strife in China. If this assumption is not correct, we are being sadly misled. If it is correct then there should be an end to baseless rumors and irresponsible statements that lack foundation in fact.

## Remarks on Complaints of a Constituent

EXTENSION OF REMARKS

OF

### HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. RAMEY. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include two letters.

We must, of course, agree that it is much easier to get consent of this Congress to help others than to help ourselves. That is the way with the unselfish United States of America.

As has been stated, the United States of America means Christianity in action. In fact we have gone so far that a man who speaks of America has been called unpatriotic.

It seems to me that the time has arrived when it is both unwise and unsound to put our own country at the foot of the list. Too many want to throw over our own country under the subterfuge of "Building the Peace" talk. They use this slogan to substitute the "red" flag for the American flag, and substitute the Communist manifesto for the Sermon on the Mount.

Let us have an unbiased and well-balanced judgment and realize that no pressure group can respect a person they can control or influence by chain mail or threat.

TOLEDO, OHIO, *December 6, 1945.*

Congressman HOMER A. RAMEY,
*House Office Building,*
*Washington, D. C.*

HONORABLE SIR: Well, sir, Santa Clause certainly went on a wholesale rampage accord-

ing to the news just reaching the ears of a great many surprised and belittled Americans—surprised and belittled by whom? That's the answer we are waiting for. Santa Claus, always pictured such a square shooter, probably does not fit the name of the giver, as he surely would not let his own starve, and go naked, and play big shot to an outsider—four billion to Britain—disgusting to say the least.

Haven't we done enough for them already. The government of the people has taken and given at their own pleasure whatever and whenever they wished to help—always to help the British. What makes anyone think they are superior to any other nation? In most respects I think they are inferior. What is the scarry story they tell to make our representatives turn over more than they would to their own families? Whatever the story it works wonders. Well fairy tales used to be told to make one have a good imagination, some of them surely would sound preposterous, when I was a child, but after reading these headlines in the morning paper, the most fantastic fairy tale, can be made a reality and make more sense.

Four billion to this high-hat aggressor nation—simply adding insult to injury. The only nation that has done these thing to us—first.

I was brought up to believe charity is a virtue, but I was also taught in my early school days, it was "not good to take from the mouths of children and feed to the dogs." In other words, why take from the hungry mouths of our own American children and give to anyone out of all those we have been supposed to help. The whole world is human and in need.

I do not feel from reading past history that I have in the least no, not the smallest atom if the average can figure so small an amount, debt toward these hungry aggressors—they have never been called on to give us any assistance, but have well been practiced in the cry of "wolf," and I think this a big injustice to those of us who have lived in these wonderful United States and have claim to it as their beloved country.

I should think they would be satisfied that we saved their necks and forget about their vacant bank rolls. If we are going to make a people more comfortable and give them the benefits of additional financial help (I didn't know there was a surplus), as we have been taxed to the utmost, because I thought—our Government needed the help—well let's take weekly trips around some of the districts in even a city the size of Toledo, you can get rid of a lot of money just giving some of the poor little children the mere necessities of life. Shame on all of us, and doubly shame on those who make these unfair, un-American decisions.

Where is our patriotism?

All the dates one cannot remember, but one date I do remember and so do you, July 4, 1776. Something worthy to remember, Declaration of Independence. This war fought against whom? The very country who has in the past caused us untold misery and heartache. Refresh your minds, read it again. If you have been too busy to give this memorable day a thought, take a little time out, walk over the premises where you have the privilege of habitating these days, due to the votes of the American people, and then examine your conscience. We want proper representation and when things are of no small consequence, we want a voice as is our birthright.

The one-sided mustering-out allotment, $700 to their boys, $300 to ours who went into the mess to help them, and the American soldier who won the war and saved at least what they still have left, and stopped the guns from firing over the very heads, how thankful they should be, without asking for more. Certainly, evenly divided would be griping enough, but to be more than doubled, who does these terrible things to the American people? Someone is to fault.

Well, for the future that lies ahead, for those who will live after we have paid our call, and for the marvelous heritage which our forefathers left us, do something about this loan, or gift, while there is still time left, granting them so much for the mere asking; they may decide it would be better to live here in some not too long a time; they may demand this gift, who knows; asking gives them $4,000,000,000—what if they should demand?

Take action, immediately.

Yours very truly,

BLANCHE V. VALIQUETTE.

---

STOP THAT LOAN TO ENGLAND

Congressman HOMER A. RAMEY,
*House Office Building,*
*Washington, D. C.:*

Stop that loan and fast. I have never heard anything like it. Never. Till my dying day anyone that has anything to do with promoting or signing a $4,000,000,000 loan to Great (?) Britain will be on my blacklist forever, and I will work and connive to oppose him in everything he does, so help me God, and I do love my God.

I pick up the paper this morning and there staring me in the face, "The United States To Loan Great [nuts] Britain $4,000,000,000." My only comment was "Suckers again," and all the people in the car that I ride to work with felt the same way, so it's not just me. Why should we do that? We only paid for the war for them; they never paid the debt from the last war; in fact, they didn't even try. Words that ran through my brain were those of Winston Churchill: "I have succeeded. The United States is in the war." We should help that. No; we should not.

Should I pay a high income tax so we can give them a loan? No; I will not. I'll quit my job and let the Government support me for awhile. I'm as good and better than they are. Besides, there are too many people in my own country that need help; what about the people in the South, who can't read or write? The hill-billies, as they are called, and why, who have been left alone to live in poverty, with no schools for miles around, living in shacks. Why, because they haven't been taught to live decent—we don't have the money to launch such a big project. Well, let's start there, Mr. RAMEY, the British are smart enough when they can get a $4,000,000,000 loan from people who haven't got the money to help our own. Speaking of the last large sum of money we lent Britain in the last war (World War I), what are we doing to help Finland?

Something else that crossed my mind: What about the general conditions of the colored people in my country. Have we treated them right? We have not, and we are the ones who brought them away from their homes in chains. Yes; I said in chains. I protest that loan and it better be stopped (there are millions like me, too), and to a practical mind that is a lot of votes in any man's language.

Another thing that made my American blood boil (the loan made it overflow) was an article in the paper the other night with the list of "mustering out" pay for our soldiers as compared with our allies. And our soldiers are the ones who won the war, too, and not the bloomin' "limes." Guess who was at the bottom? The United States of America, the land of wealth and enterprise. I bowed my head in shame. But wait, this is even better. Guess who was at the top. Poor, poor England. Yes; the people who are asking and getting (over my dead body) for a $4,000,000,000 loan. They are giving their soldiers $700 compared to our $300. That is not right. Do you think so?

I am not going to buy a "hot dog" and pay for a steak so I can help give our soldiers $300 and they can pay theirs $700. I think too much of our GI's.

I love my country and I think it is wonderful to live here, but the things the servants of the people are trying to put over on us is making me sick to my stomach.

Let us stop that $4,000,000,000 loan to Britain.

Sincerely,

MARY A. CURRAN.

TOLEDO, OHIO.

---

## Address of Hon. Oren Harris, of Arkansas, on Transportation Problems

EXTENSION OF REMARKS
OF
## HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 12, 1945*

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks, I desire to include here the text of an address delivered this morning by my colleague the gentleman from Arkansas [Mr. HARRIS].

The address, delivered before the New York State Fruit and Vegetable Shippers and Receivers Association in Schenectady, N. Y., follows:

I am pleased with the opportunity you have afforded me to lay before such a representative body of users of transportation some of the considerations that have influenced the Interstate and Foreign Commerce Committee to undertake an investigation of transportation problems, for we in Congress know that shippers and transportation agencies must face these problems in the long and difficult period of readjustment tto an economy of peace. And we have already found that, in more ways than one, settling down to peace is a harder job than setting up for war.

I am not, in any sense, representing the committee. Any opinions that I may express are my own and are not, necessarily, the opinions of any other member of our committee.

Our committee is composed of some of the ablest men in Congress. They think for themselves. They differ widely on many questions but there is unanimity of opinion among them on one point. We believe that transportation, from the over-all viewpoint—rail, highways, water, air—has only one mission and that is service to the public. It is not an end in itself. It is an instrument. If it becomes inefficient through its own errors or through mistakes of regulatory bodies, or fails through neglect in Congress, the whole public suffers.

And we should never forget who the real owners of transportation are. Among those who suffer through financial default due to break down in our transportation machinery are the policyholders in hundreds of life-insurance companies, depositors in thousands of savings banks and other holders of transportation securities.

The approach then of our committee to the solution of these perplexing problems stems from solicitude for the users and the real owners of transportation facilities. And when we have said that, we have said practically the whole American public.

THE DECLARED POLICY OF CONGRESS

These considerations influenced Congress when it wrote the following declaration of policy as the preamble to the Transportation Act of 1940, as we sought to pass an act that would, and I quote:

"Provide for fair and impartial regulation of all modes of transportation subject to the provisions of this act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several States and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions."

It is perhaps a little presumptuous for an Arkansawyer to come up here into the great Empire State and talk to you about transportation. But I see from the nature of this organization that I am not entirely out of my element. As a boy I started out as an Arkansas farmer. I was a real farmer and did not become one when I sought to run for office. I remember well, in the spring of 1923, when I helped to plant a melon patch in which I was to have an important financial interest. The first two carloads of those sun-kissed Arkansas melons that went to market from that patch were mine. They were, of course, the finest melons that ever grew. They netted me $833.67 and with that profit I was off that fall to the Arkansas State Teachers College.

Some of my political adversaries have been mean enough to say that a melon patch was responsible for the loss to agriculture of a darn good farmer and for the creation of a mediocre politician. But enough of my good friends and neighbors, I am glad to say, think otherwise and have sent me three times to Washington as their Representative. It is apparent then that I slid into this meeting by way of Washington on a couple of carloads of melon rinds.

Another circumstance gives me a certain right to talk to your group. You are engaged in the shipping and marketing of the farm products that your hillsides and valleys yield so bountifully. Our hills and valleys in Arkansas also yield a bountiful produce. If the sun of your beautiful Finger Lake section enhances the sweetness, glamor, and potency of your grapes, we can also claim for our corn a certain enhancement of desirability due to our moonlight. What our moonshine does to our corn in Arkansas produces a result which can be compared favorably with what the sunshine does for your grapes. I have heard it said that our Arkansas white mule, which feeds upon our corn, packs a healthy kick.

### TRANSPORTATION IS A TOOL

It is not about the products that the members of your association convey and market to the people but about the mechanism through which that conveyance is made that I would speak to you today. That mechanism is in many forms. Grouping it all together we call its transportation. From the standpoint of the user, transportation is a single implement. It is a tool. It is created not for itself but for the use of others. It must, of course, under our system of free enterprise not only pay for its keep but pay a profit to those who supply the capital to create it and keep it running.

But transportation must serve the public first and its own interests second. It is that public service and not the self-interest of the agencies of transport that influences Congress in its approach to transportation. It is from the standpoint of predominant public interest that we must expect the agencies of transport and the users of transport to approach their problems. Unless we jointly—the Congress and the people—seek every possible means of adjusting self-interest to public needs, and succeed in doing so, we will get nowhere. Legislation enacted in the vacuum created by selfish pressure groups without strict regard to the needs of the people is merely empty phrases and meaningless words.

When the Honorable CLARENCE F. LEA, chairman of our committee, introduced last July a resolution calling for a thoroughgoing survey of postwar transportation, he made a comment before the House that so brilliantly pictures the situation that I can do no better than to quote him here.

"This problem," said Mr. LEA, "is vital because transportation is the connecting link between our producing machine and the consuming public. Without adequate economical transportation our whole economy can bog down, no matter how much energy, wisdom, and capital industrial executives may put into the other phases of reconversion from a war economy to an economy of peace."

He pointed out further that failure to provide a legislative remedy to meet the needs of our transportation system, or failure to focus the thought of leaders in the transportation field upon their own responsibility, apart from legislation, can prolong for many years this Nation's period of reconversion. And he truly said that it might even throw our whole economy into chaos.

As one member of the subcommittee that will conduct this inquiry, I can assure you that we will devote all the time and all the energy that is necessary to the prosecution of our study. We hope and expect to find the answers to some of the problems that are perplexing to you as users and providers of transportation. These same problems have likewise perplexed the users and providers of transportation throughout the Nation but we do not know what all of those problems are. We do not know how they measure up in your job of meeting the demands of the public you serve. We can only find out what those problems are from you and we want to know how you look upon them and from what angles you approach them.

### NOT TO REWRITE INTERSTATE COMMERCE ACT

Let it be understood, however, that we do not expect to rewrite the whole Interstate Commerce Act. We believe that we can do a pretty thorough job within the statutory framework that has been created over the many years that law has been on our statute books.

You will agree, I am sure, that the expansion of the services of the newer forms of transportation and the vast changes that have taken place recently in our economy have made much of this framework obsolete. Indeed, obsolescence set in many years before the war but just as that catastrophe has opened up new vistas in manufacturing; it has also opened new vistas in transportation and has multiplied and magnified its problems.

The Congress, in view of the significance of transportation to all of our people, will endeavor to apply itself in a statesmanlike, objective fashion to finding the right answers.

In dealing with a matter of this kind we should be statesmen and forget local and regional interests and hope the people who appear before us with their recommendations will do likewise.

If we are to be representatives of all of the people we must expect the people whom we serve to forget self-interest when they approach common problems. We grow the finest melons and corn and cotton in the world in Arkansas, but if you here in New York can't get them, due to a break-down in transportation, we both suffer. What we need from you I wouldn't know, but there are other States that are less independent than we are, and I am sure my people will wish me, as their representative, to act also as your representative in my approach to this inquiry.

I hope and believe that I have an open mind. Personally I am prepared to find that some of the views I held a few years ago on transportation may be quite erroneous when I have examined all of the facts inherent in the new conditions that surround our present transportation problems.

We frequently hear our transportation facilities in this country described as a transportation system. Magnificent as these facilities are, however, and tremendous as may be their achievements, it is not true to describe them as a system.

What we have, in fact, is a far-flung conglomeration of transportation systems and independent agencies. This is due largely to the enormous variety of needs, geographically and economically, which these systems have been created to meet. It is also due in part to the fact that each system and each mode of transportation has grown up under our system of free competitive enterprise largely through the inspiration of competition. This competition has been not alone that of the enterprisers who have created our transport agencies. In many cases a mushrooming and sporadic growth has been stimulated by intense competition among geographic and economic areas.

### THE PROBLEM

Let me devote a few moments to the task of laying before you some of the factors that give this transportation problem of ours such compelling interest to both the people and the Congress.

The history of the economic progress of the world is, in a very large sense, the history of the development of transportation—cheap and efficient. You men know that the thing which determines your ability to do business profitably is the extent of your market. To all business enterprise the business of the transportation has an importance exceeded by no other. It is transportation, and only transportation, that determines the extent of the market of any business.

Now what have we at this time in the way of facilities? We have 30,500 miles of navigable inland waterways served in peacetime by more than 11,000 vessels. At the beginning of the war there were more than 8,000 miles of coastal and intercoastal water routes competing with rail and highway users.

There are 1,302 railroad companies, of which 136 are class I roads operating 230,000 miles of privately owned tracks and thousands of terminals, freight depots, repair shops, and other supplementary and maintenance facilities.

While in 1919 this country had less than 10,000 miles of hard-surface highways, we now have nearly one and one-half million miles of such roads, 230,000 miles of which have been built with Federal aid. Operating over these highways, at the beginning of the war, were 26,200 trucking companies and more than 1,500 motor-bus companies, together operating 5,000,000 vehicles.

Also, there are 3,000 airports in the United States and the Civil Aeronautics Authority has plans for 3,000 more. There are nearly 35,000 miles of lighted airways.

Then, too, there is an extensive network of pipe lines, expanded greatly during the war. It, too, is a factor to be reckoned with.

Going back to the highways, we have to consider, as a most important competitive force, millions of motor vehicles, privately owned and operated, trucks and passenger cars.

All of these facilities have demonstrated beyond question their ability to serve our people. They must continue to do this and perform even more satisfactorily than in the past. Our only hope is that our regulatory system and our statutory framework may be perfected to aid them in this effort. Our aim shall be to prevent unbridled competition between private carriers and common carriers and among common carriers themselves, from destroying the value of this fine instrument.

### PEOPLE'S HUGE BILL FOR TRANSPORTATION

The people have a huge investment in their transportation instrument and they pay a

huge bill for its use and maintenance. They are paying not only through direct charges but also through taxation. They have paid this bill in the past without serious complaint because they know they must have the service. From farm and from factory a stream of produce flows through the channels provided by transport and this stream must never stop or we would starve and freeze and disappear as a nation.

The size of the transportation bill that the people of this country are paying is suggested by our appropriations for roads. Since the passage of the Federal Highway Act of 1916, approximately three and three-quarter billions of dollars have been authorized by Congress for expenditure on Federal highways. This includes one and one-half billions authorized last fall for expenditure during the first postwar years. The over-all cost of our highway system has never been ascertained but the figure is very large. Add to the three and three-quarter billions authorized for Federal aid, the State, county, and city funds that have been expended on streets and highway and the figure will run up into almost astronomical proportions. But whatever it costs I am certain that highway users consider the investment well worth while for they are still asking for more.

I will not burden you with further statistics. I have dwelt on the road situation because I assume that is your predominant interest, but I will ask you to think of the billions of private capital that have gone into the construction of the roadbeds, terminals, and other basic facilities of our rail lines and the other billions that have gone into the rolling stock of these lines. I will also ask you to think of the millions that have been spent by Federal and local governments for air-line development and the billions of expenditure that are in immediate prospect.

You will see, if you think clearly through these staggering figures, what our greatest problem is. We must make the services provided by private capital continue to be available to the users of transportation when they must compete with the billions of tax-free, interest-free, Government capital in other facilities. If we cannot solve this problem, we must face the alternative. That alternative is not pleasant.

Transportation must and will continue as a service to the people. You will never see a sign plastered on the door of a railroad station on any of our trunk lines, "This road has been closed down by its owners." A warehouse can go out of business whenever it finds it unprofitable to continue. A factory making hoe handles can close up any time it wishes. The stream of commerce through our transportation system cannot stop. It must continue as private enterprise or become a Government activity.

### THE ROAD TO SOCIALISM

I can hear some who do not think through this problem say "and so what?" This view is very narrow. It holds that so long as trucks and railroads, bus lines and air lines, roll and fly, we don't care what happens to other elements of our business fabric. But there is much more to this picture than meets the eye blinded by self-interest.

If you examine the history of countries that have gone over to socialism, you will see what I mean. The first step is the socialization of transportation and communication. We see in England today that almost first on the program of the new socialistic government is the nationalization of transport. A few days after the government took over the banks, it took over domestic air lines. I warn you that what is happening in England can happen and will happen here if privately financed transportation goes bankrupt in its unequal competitive race with Government-aided transport.

Let's assume that the Government can operate the business of transportation as efficiently as private enterprise. Let's assume that your trucks will roll as effectively for you if directed by a bureau in Washington as when directed from your office. I doubt this but it is possible.

But what are you going to say about turning over to politicians the largest single unit of purchasing power to be distributed by men who hold their jobs at the pleasure of a political party? This obviously could lead to totalitarianism.

What are you going to say about adding 3,000,000 transport employees to the Federal pay roll? They will vote. They will want new pension schemes. They will be in the driver's cab. They will run your business because they will run the Government.

How long can industry and agriculture exist as free enterprises with such a set-up? There is the answer to those who brush off this problem with a "So what."

### AFTER WORLD WAR I

Some 25 years ago we came out of World War I with a transportation problem quite different from that facing us today. Then, we merely had to consider the railroads. Air lines did not exist. Motor vehicles were not serious competitors. All that we had to do was to rehabilitate our rail facilities after 26 months of Government operation which had been characterized by the worst service in transportation that this country has ever seen, either before or since. I seriously doubt if anyone who had any experience during those dreary 26 months would ever contemplate the prospect of Government operation with anything but a shiver of horror and disgust.

Fortunately, our repair job at this time is much simpler. Except for a brief period of threatened labor trouble there has never been any suggestion of Government operation during the war which has just ended.

Everyone will agree that in meeting the demands of war, transportation did a magnificent job. When we approach the problem of peace, however, we cannot reasonably expect it to work miracles and continue to exist as a part of our free-enterprise system if we permit it to starve itself by unreasoning competition or impose upon it, through regulation, impossible restraints. The performance of highway, rail, water, air, and pipe-line transportation was beyond anything that the American people had any right to expect. This should be the best answer that can possibly be made to those who would force transportation into Government ownership and operation.

But this fine record will amount to nothing as an argument against Government operation if we do not compose the potentially destructive elements of transportation into a serviceable tool. The job will not be an easy one for part of this implement will be supported by private capital which must earn a return. Part of it will be supported by Government capital that does not have to earn a return to investors; the taxpayers provide this capital. It is a problem similar to that which faced this Nation when half of it was slave and half of it free. I am optimistic enough to believe that we can find the answer without going through the throes of a socialistic revolution.

Search for this answer we will. Searching for it we are.

### PROGRESS OF INQUIRY

Our subcommittee on transportation has made much progress in its inquiry. This has been due in large measure to the fine cooperation that we have received from many hundreds of users of transportation facilities, the operators of transportation agencies, investors in transportation securities, and economists—students of and experts in transportation. We have received a great volume of statements, opinions, and comments in response to the request which Chairman LEA sent out. This request went to thousands of individuals and companies throughout the country. Much of the material which we have received is highly significant and practical. It all shows how alive our people are to the importance of this problem. It indicates to me that Congress is on the right track.

These statements are now being digested and analyzed. We expect to publish them for the use of the committee, the Congress and the public generally. This publication, however, will not supply the only basis for action by our committee. Hearings will be held on any proposed legislation before it is reported to the Congress for enactment.

I want you to know that we are making this study in your behalf. If you have received the list of suggested topics and have not replied, it is important to us, as your servants, that you do so at the earliest possible date. We want to have before us all the pertinent comment in time for it to appear in our preliminary publication. If any of you wish to have copies of the topics sent to you, a request to the committee addressed to the House Office Building will bring an immediate reply.

### INQUIRY TOPICS SUMMARIZED

A brief summarization of these topics will serve to indicate to you the thorough nature of our inquiry. They are grouped under nine main headings. The first heading is "National transportation policy." Under this we seek to find what criticism can reasonably be directed against the statement of policy in the Transportation Act of 1940.

The second heading is "Regulation." Under this we seek comment on:

(a) Advantages and disadvantages of separate regulatory agencies for each mode of transportation.

(b) Advantages and disadvantages of a single regulatory body for all forms of common carriers, reporting directly to Congress.

(c) Should the Interstate Commerce Commission be reorganized in the light of present-day conditions and postwar transportation problems?

1. If so, how? by changing its powers, its procedures, or the mechanics of its set-up?

2. What would be the objects to be sought by such reorganizations?

(d) The extent, if at all, to which any or all forms of common carriers should be exempt from the application of the antitrust statutes where the activities in question are under the supervision of the regulatory agency.

(e) To what extent should Federal Government agencies be given powers to promote activities of common carriers?

(f) To what extent and under what circumstances are differentials in rates as between different types of carriers warranted or desirable; or necessary in fairness to the carrier; or necessary to give the public the inherent advantage of each?

(g) What do you suggest to coordinate further our transportation agencies, both within the same types and as between different types?

Time does not permit me to go into further detail. I think you will see that we have overlooked very little. We have dealt with the subjects of finance, common ownership, taxation, Federal aid, interstate barriers to commerce, and the submarginal carrier.

These suggested topics are not to be construed as just another questionnaire. We are quite sure that you and every other businessman in the country has seen quite enough of these. We have offered topics for discussion. They are subjects for comment. If anyone has anything to say on any subject not covered in our document, he may let himself go in any direction that he chooses and be sure that his opinions, if

they are germane to the inquiry, will receive our careful considerations.

COMPETITION A MATTER OF GREAT CONCERN

From what I have said you can rightly judge that the matter of competition gives us the greatest concern. Our committee will give much thought to this. We have the job of regulating competition not only between agencies of the same type but also between different types. We realize that each mode of transportation performs a special and valuable service. Each has its advantages and disadvantages. Furthermore, each excels to some extent all of its competitors.

These considerations make regulation in the field of transportation an absolutely necessary Government function. The job of the Government, however, is not that of either punitive control or encroachment on the field of management. Its job is to try to assign to each mode of transport the type of service for which it is most useful. We must endeavor to set up a legal structure which will preserve the inherent values of each.

Regulation, of course, must impose restraints on carriers. Sincerely carried out, with recognition on the part of Government agencies of their power for evil as well as good, regulation has in it substantial benefits for the regulated agencies.

A brief consideration of one of the important aspects of competition will serve to illustrate the nature of the whole problem.

From 1900 to 1920, except for the tonnage carried on the Great Lakes and by inland and coastwise water services, the railroads handled substantially all commercial freight and passenger traffic. Today, however, both the older and newer forms of transport provide far more efficient facilities and promise to be of added competitive importance. Especially is this the case with waterways, highways, and pipe lines in the handling of freight and busses and airplanes in the handling of passenger traffic.

Just before the last war began the railroads handled only 63 percent of the total freight tonnage, contrasted with practically all of it during the early 1900's.

Beginning with the advent of steam, transportation was almost entirely the function of the common carrier. Today vast tonnage is transported by farmers and manufacturers for their own account.

OBLIGATION OF HIGHWAY USERS

Those who use the vast facilities that have been provided by the taxpayers through our system of roads, which is the finest in the world, owe to the public the best possible service that can be given. The same responsibility rests with all other forms of transportation. I did not come here to lecture you on the conduct of your business. I think it might be useful, however, to point out that some 85 to 90 percent of the highway haulage of freight is by private and contract carriers and that only 10 to 15 percent is carried by the common-carrier trucker. The private carrier is immune from all regulation by the Interstate Commerce Commission. The contract carrier has almost none. This is as it should be.

I personally do not wish to see further regulation of either the private or contract carrier, and the situation is entirely in the hands of such carriers. So long as they operate strictly within the meaning of the law they should be treated exactly the same as any other private business. They should be free from snooping by Government agencies and free from bureaucratic meddling in their management.

But when either the private or contract carrier steps out of character and seeks or accepts, for instance, those innocent-appearing return loads, he must realize that he has become, under the law, a common carriers. There is no more place in our economy for a black-market carrier than there is for any other black-market dealing.

Abuse of privileges by a few can lead to the imposition of unwanted and undesirable restraints upon the many.

The members of your association are performing a fine service to this Nation. You are delivering food to our great cities. I want you to know that we of the Interstate and Foreign Commerce Committee of the House of Representatives are your servants in aiding you in the performance of your job. We do not seek to become your masters. Furthermore, we will do everything in our power to prevent those who seek to become your masters from accomplishing their purpose. We shall endeavor to reduce regulation to a minimum and to maintain it as a benign service rather than as a force for the regimentation of your business.

We ask you on the other hand to realize that you are a part of what can be a great transportation system. If you and the other parts of that system realize this fact, we may see a real transportation system in this country and not a mere conglomeration of transport facilities.

The serving of self-interest, failure to recognize that interest as merely a part and not the whole of any problem, cannot be tolerated in this complicated economy of ours. The alternative is just around the corner—Government ownership, Government operation, state socialism. In England there was no legitimate fault to be found with the service that transportation has rendered to the nation. It did a job under terrible conditions that compares favorably with what transportation did for us. Yet, we find the Government taking over transportation in a program for industrial socialization which reaches down even to the land itself.

That is a thing which we do not want to happen here. That is a thing which you as the operators and users of transport can help us prevent. The means are primarily in your hands, not in ours as your lawmakers. We can go just so far. You have the major task. You must make the law work.

---

## America, Russia, and Peace

EXTENSION OF REMARKS

OF

## HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 12, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, one of the foremost labor leaders in this country, Mr. George Meany, of the American Federation of Labor calls attention to a most important matter. Writing in the current issue of the American Federationist fearlessly states that the world picture is discouraging and there is serious doubt that our soldiers, sailors and workers are going to have the kind of world they envisioned, even after victory.

Mr. Speaker, this outstanding leader says:

By force, or unilateral action, Soviet Russia is exercising the prerogatives of a dictator in Poland, eastern Germany, Czechoslovakia and the Balkan nations and in addition, assuming a dominant antidemocratic position in eastern Asia. While screaming loudly against an imaginary western bloc this same nation has set up a chain of dominated states from the North Sea to the Pacific Ocean.

Mr. Meany places the American Federation on record against that kind of international manipulation and says forthrightly, "Will never submit to gag rule," so they intend to speak out against it.

Mr. Speaker, every Member should read this article, which I incorporate as a part of my remarks:

AMERICA, RUSSIA, AND PEACE

(By George Meany)

The people of America fought and worked for victory in the recent war against Germany and Japan in the hope of establishing a world of peace based on the principles so clearly enunciated in the Atlantic Charter. They worked and fought, hoped and prayed for a world in which men would be able to live and work toward a better day for all mankind without the eternal curse of war.

The soldiers, sailors and workers of our country hoped that, by defeating those who openly and frankly made a virtue of barbaric injustice they would be able to build a world of peace on the firm foundation of international fair dealing for all peoples.

WORLD PICTURE DISCOURAGING

But today, just a few short months after the end of the war, we find it difficult, if not impossible, to reconcile what we see about us with that which we had in mind when we fought and worked for military success. The world picture offers little promise for the peace that mankind ardently prayed for during 6 years of worldwide conflict.

We see definite indications in the Old World of a return to the philosophy that only the strong are fit to rule. This time we won't call it nazism or facism, but the victims will recognize the same old methods of oppression and tyranny for what they are—no matter what name is applied to the system.

By force, or unilateral action, Soviet Russia is exercising the prerogatives of a dictator in Poland, eastern Germany, Czechoslovakia, and the Balkan nations and, in addition, assuming a dominant antidemocratic position in eastern Asia. While screaming loudly against an imaginary western bloc, this same nation has set up a chain of dominated states from the North Sea to the Pacific Ocean.

Square this sort of thing, if you can, with the principles of freedom and self-determination for all peoples so forcefully expressed by the late President Roosevelt during all the years he was leading an inspired people to final and conclusive victory. Reconcile, if you can, the present situation in Bulgaria, Yugoslavia, and Rumania—where millions of people are suffering and starving under Soviet-imposed dictatorships—with America's promise that the right of self-government would be accorded to all nations liberated from Hitler's domination.

The American Federation of Labor has raised its voice in protest against these oppressions for the same fundamental ideals of liberty and justice on which it protested against the aggressions of Hitler and Mussolini for years prior to the start of World War II. We shall continue to raise our voices in protest. We shall continue to fight for a world system of justice in which right, not might, will govern relations between the peoples of the world. No one need try to tell us, as certain people are telling American leaders of political life and thought, that we must not speak out frankly against the evils we see in the recent actions of Soviet Russia, lest such utterances "worsen relations" between our two countries. That is ridiculous nonsense.

WE'LL NEVER SUBMIT TO GAG RULE

American labor, as represented by the American Federation of Labor, has never accepted and will never accept the gag rule. We have never and we do not now recognize that silence in the face of manifest evil is a virtue. We know that all history shows the utter futility of trying to correct wrong by refusing to expose it.

We of the American Federation of Labor will continue to speak out—bluntly and clearly—regarding undemocratic, unilateral actions by Russia in the conviction that there is more chance of securing change by criticizing what we don't like than by remaining mum.

We of labor also recognize that conditions which Americans cannot approve exist in countries other than Bulgaria, Yugoslavia, Rumania, and the other lands now under Communist domination.

We firmly believe that all peoples without exception—whatever their color and whatever the part of the earth in which their homes may happen to be located—are entitled to the opportunity to develop, to govern themselves and to strive for better economic conditions. Future peace depends upon fair treatment during the years ahead for all peoples who up to now have been ruled and exploited by other nations.

The philosophy that might makes right has never brought permanent peace. History tells us that power politics cannot bring peace. Our own capacity to remember, even for a short time back, tells us that peace cannot be purchased by appeasement.

The time has come for a real effort to achieve permanent world peace on the basis—the only possible basis—of international morality and justice. The entire world looks to the United States of America for moral leadership in this effort. Our representatives in Washington must accept this challenge.

TYRANNY IN EASTERN EUROPE

To pretend that we do not know that millions of people in eastern Europe are today victims of a dictatorial tyranny with all the old familiar trappings used by Hitler and his mob would be an act of national hypocrisy. We have nothing to gain by refusing to acknowledge the facts in regard to the lone-wolf foreign policy of Soviet Russia.

Our Government must resist firmly all attempts to set up spheres of influence which ignore the democratic rights of the people affected. Only in this way can the United States make its full contribution to future world peace as a major factor in the new United Nations Organization.

The American Federation of Labor wants the United Nations to be united nations and not just a jealous aggregation of powerful rivals. We are convinced that our country will gladly help to establish a United Nations of the world in which democratic liberties are assured and the free will of the people of each nation is given free opportunity for expression.

A great many Americans are puzzled today about our country's relations with Russia and our attitude toward the Communists. The great majority are frankly unable to decide what the aims of the Soviets are and what our American program should be. There are many earnest citizens who believe that Russia is bent on the traditional aim of world revolution for communism or on a frankly imperialistic nationalism. Another and far smaller group assert that "everyone is out of step but Russia," and that any opposition to any Soviet aim is prima facie evidence of fascism.

Within the 15,000,000 members of organized labor there are some of the latter. There are some actual and mental foreigners among those millions, and as a rule they make more noise than those in the majority. Even in those few notorious unions which are Communist-dominated, the actual number of Communists is very small in proportion to the total membership. But the "Commies" do not indulge in the luxury of differences among themselves. They have their orders to carry out and they organize their forces with firm discipline to vote "yes" or "no" and sometimes even "yes" and "no".

They spawn front organizations in great profusion. They have paper outfits for every one of the scores of campaigns upon which they are engaged at any time. Back in early June 1941, they had one called The Yanks Art Not Coming. After the Nazis broke the Hitler-Stalin Pact by invading Russia, they became military experts and demanded the immediate opening of a second front. What a few days before had been an imperialistic war which we should stay out of suddenly became a people's war against fascist imperialism into which we should enter at once.

The Communist Party front organizations would be useless, however, if there were no dupes. This country has thousands of good people whose hearts burn at injustice and whose minds seldom are bothered by checking up on facts. They are persuaded to sign resolutions, write their Congressmen, join organizations, and raise funds for the Communists to spend.

Even in labor unions they use stooges. They bring in resolutions denouncing oppression of labor in X Y Z land and, since everyone in a labor union is against oppression, the resolution usually slides through. Then the Daily Worker and perhaps Pravda and the Russian radio are apt to announce that another American labor union has denounced the reactionary imperialist program which Mr. Red-Baiting So-and-So, is trying to develop in fascist style.

That's the way they operate.

REDS HIT TRUMAN AND BYRNES

Right now there is a Communist compaign to extol Franklin D. Roosevelt and, by subtle inference, to criticize President Truman and denounce Secretary of State Byrnes. Such a resolution was introduced at Paris by the Russian-dominated World Federation of Trade Unions. It called on the United Nations' leaders to follow President Roosevelt's objectives in order to guarantee the continued unity among nations as the sole guaranty to the peoples of the world of their freedom, peace, and prosperity.

That seems harmless enough. But is it? Read it in the light of the recent London conference. That conference ran into a deadlock. Secretary Byrnes had to come home and tell the American people that there was a fundamental difference with Russian Foreign Commissar Molotov as to the meaning of the word "democracy." Everyone, it seemed, was out of step on this question except Molotov.

The Communists have an easy answer for that one. They say Foreign Secretary Bevin and Secretary Byrnes are reactionaries. They allege that President Roosevelt's personal choice as unofficial Assistant President was not carrying out his program. They imply that President Truman is being pushed by reactionary forces to a position contrary to that of his predecessor.

That brings forth more Communist resolutions and denunciations. They claim that atom-bomb politics are being played, that the capitalist countries are trying to gang up on the Soviet. Even though Britain is now under a Labor Government, the Communists allege that Attlee and Bevin are becoming Tories. Only the other day the British Communist Party came out in the open denouncing Bevin and demanding his removal. When we look over Bevin's record as a trade-unionist and his position against dictatorships of any kind, it must be clear to all that there can be no compromise between real trade-unionism and a political party which takes its orders from Moscow.

It is time that our Government talked matters over plainly with the Russians and made it clear that we do not want to push them around or let them push us around. We want peace, but we don't want peace at the price of having commissars giving orders at the White House. If the Russians are sincere in their asserted desire for peace and world cooperation, they ought to welcome frank and sincere talk along these lines.

The greatest contribution that our Government can make at this time to the cause of world peace would be to lay our cards on the table and ask Russia to do likewise.

Here at home the organized-labor movement also can make a contribution to world peace by seeing to it that Americans remain free. The people of all nations are looking hopefully to America for leadership—and not because we have more material wealth than some other nations, not because we proved in the recent war that we could produce and fight at least on a par with some other nations, not because we have a higher standard of living than most nations.

The people of this globe are looking to America—they have confidence in America—not because our country has more miles of railroads, or better highways, or more beautiful buildings, or greater natural resources, but because they know, as we do, that here in America there dwells—in full glory—that almost intangible something that is called freedom.

When the architects of the structure on which this Nation stands based that structure on the principle that all men are equal and endowed by their Creator with certain inalienable rights they brought into being, for the first time in history, a government that gave substance to the inherent love of freedom that lies deep in the human heart. The civilization which we see all about us in America today is the work of men and women who came to these shores from all parts of the earth because, above all else, they desired to be free.

We must maintain our freedom here at home. Unless we do, there will not be much that we will be able to do for those in other parts of the world who are today crying out against the oppression of dictatorial control.

## Economic and Production Goals of Farmers

EXTENSION OF REMARKS

OF

### HON. JAMES M. TUNNELL

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

*Thursday, December 13 (legislative day of Monday, October 29), 1945*

Mr. TUNNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject of economic and production goals of farmers, delivered by the distinguished senior Senator from Pennsylvania [Mr. GUFFEY] at a farmers' conference held at Altoona, Pa., on December 12, 1945.

There being no objection, the address was order to be printed in the RECORD, as follows:

Mr. Chairman and fellow farmers, probably you have never thought of me as a farmer, in spite of my interest in the family farm at Slippery Rock. But my job in Washington is a kind of farming. I've been plowing a legislative furrow there for nearly 12 years, and I think that in that time I've managed to reap quite a little benefit for our State—farmers, workers, merchants, and all classes of our people. In any event, I've done my utmost to plow a straight furrow, and by that I mean that the policies I advocate back home are the policies I advocate in Washington. That may not seem unusual, but you'd be surprised how many legislators get a change of heart after they get to Washington.

I have always felt that there was only one proper goal for any legislator—the greatest good for the greatest number. That may seem like an outworn maxim, but I submit

that in this conference on goals it is well worthy of your consideration. I suggest it because it illuminates one side of the farmer's problem which is all too frequently forgotten, namely, that the farmer does not prosper unless his customers prosper.

I say this because I have observed an inclination among farmers to look with suspicion, distrust, and even downright hostility, upon the efforts of industrial workers to better their standard of living through labor organization and collective bargaining.

You farmers, and the thousands of farmers you represent, are businessmen. You produce goods which you sell in the market. What is that market? It is the millions who live and work in our great industrial centers, our cities and towns. Some of them are rich, others are moderately prosperous, many are poor.

You cannot gain anything by trying to sell more food to the rich. They are already eating all they want, or all their doctors will let them eat. The moderately prosperous, who are able to buy all that their families require, are in the same situation. If you want to expand the market for your products, you have only one place to go. The poor do not have enough to eat because they cannot afford to buy enough. When I speak of the poor I am not referring to persons on public charity; I am referring to the worker who is struggling to raise a family, one who has to watch his budget so carefully that after he pays the rent he does not have enough left to feed his children properly.

It may be hard to believe that in this great land of plenty there should be a substantial portion of our population that doesn't get enough to eat. Yet the plain fact is that when the call to arms went out for the war just ended, 26 percent of our young men were physically disqualified for military service. That could never happen in a well-fed nation. It is is the price we paid for long years of undernourishment, particularly through the depression of the early thirties.

The idea has long been fostered among farmers, by those having axes to grind, that the farmer prospered when wages in the cities were low. It was argued that when wages were low the prices of manufactured articles the farmer had to buy were also low. The argument omitted the essential fact that when wages were low the worker couldn't buy enough to eat, with the result that the farmer had no market for his goods. We all remember, or should remember, how quickly unemployment in the cities was reflected in the collapse of farm prices.

The relation of a living wage for the worker to the farmer's prosperity has been brought out very clearly in all the studies that have been made on the subject. One of these, by the Brookings Institute, showed that families with $800 annual income spent $400 for food, that those with $1,300 spent $500, those with $1,800 spent $700, and those with $2,700 spent $900. There is now pending before the Senate Committee on Education and Labor a bill which, if enacted into law, will set a 65 cent per hour minimum wage. I am heartily in favor of the legislation and am supporting it. I point out to you that, if that legislation is enacted into law and a 65 cents per hour minimum wage made mandatory there will be no $800 income families. Those who are in that class today will through the carrying out of that act get up into the higher income brackets. They, of course, will be benefited by this. In turn, you farmers will be benefited in that the increased pay received by them will permit them to consume more of the foods which you produce.

There's nothing surprising about the figures I have given you. They are just what we would expect, namely, that as people earn more money they are going to keep on spending more of it for food until they are able to buy all the food they want.

The so-called conservative interests, which are in fact conserving their own profits at the expense of both farmer and worker, have been telling the farmer for years that labor was a bugaboo, a monster that would destroy him. And many farmers have come to think that labor is some kind of an imaginary monster. It's nothing of the kind. Labor is the boy down the street who fills your gasoline tank; it's the friend you have in the city, who has a job in a mill and has a hard time making ends meet. The millions of just such hard-working citizens, taken together, constitute labor. When they go hungry, the farmer goes bankrupt. When they prosper, through fair wages and working conditions, the farmer prospers. Moreover, when they are able to buy enough to eat we will have a Nation that will not have to reject more than a quarter of its sons because they are physically incapable of defending their country.

I have pointed out the close relationship between the farmer and the worker, or laborer, in order to emphasize the fact that their interests are identical. They rise or fall together. I do so because I wish to suggest an important goal for your conference, namely, an earnest effort to enlist the farmer's sympathy in and support for the efforts labor is making to better its economic status through proper and just demands.

I am not doing this on the basis of sympathy, or with any hope of having the average farmer join the picket lines in his spare time, but simply because as a cold cash dollars-and-cents proposition, the farmer is cutting his own economic throat when he permits conservatives to persuade him that labor is his enemy. The point is that they're both in the same boat, and the sooner the farmer realizes it, and acts upon that realization, the better it is going to be for the farmer.

Just the other day the Committee on Economic Development, at Chicago, reported that American agriculture faces a "slackening in the rate of increase of demand." It went on to say that "food demand does not keep pace with rises in family incomes; except for the very low income group, people spend proportionately less on food as their earnings increase."

Note that exception. The report makes it clear that the way to increase consumption, and thereby keep the farmer prosperous, is to increase the earnings of the very low income group. The low income group is labor. Labor is fighting to increase those earnings. If it succeeds, the farmer will benefit. If it fails, the farmer will suffer. What more logical goal for the farmer, then, than to help labor to prosper?

The farmer's problem is not one of production. He knows how to produce. The magnificent record of war food production speaks for itself. Year after year the farmer is producing more food, and producing it more efficiently. His real problem is markets. If enough people buy enough of the food he raises, his annual cash income will rise. But they won't buy if they don't have the money. They're trying to get it, these customers of the farmers. They're trying to get it through union organization, through collective bargaining. If they fail, both they and the farmer go hungry, and the Nation itself suffers through undernourishment.

The farmer can help to provide the greatest good for the greatest number, himself included, by giving his support to the battle his customers are making for a fairer share of the wealth they produce. He must identify himself with the interest of his customers, and do his share in helping them to win their battle. That's a big goal, one that overshadows all other goals today. Regardless of how he may arrange his production schedules, regardless of legislation he may advocate relative to farm prices, he isn't facing his basic problem until he raises his sights much higher and concentrates on the ultimate goal—prosperity for his customers, the men and women of labor, so that he in return may prosper.

---

## Paradox in Aluminum Plant Disposal Policies

EXTENSION OF REMARKS
OF
### HON. FADJO CRAVENS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. CRAVENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harold Fleming, from the Christian Science Monitor of November 26, 1945:

PARADOX IN ALUMINUM PLANT DISPOSAL POLICIES

(By Harold Fleming)

NEW YORK.—Anent the story of surplus war plant disposal, encountered by the "flying reporters" on their recent Nation-wide trip and discussed on this page Friday, the oddest and biggest story of all concerns the Government's war-built aluminum plants and what shall be done with them.

The reporters talked with aluminum officials at Pittsburgh, home of the Mellon interests, and here is the way the story works out—a sad or a comical one, depending on the viewpoint, involving a paradox of conflicting policies, the inevitable result of fuzzy national thinking on the subject of monopoly.

Present status of the case is that the Department of Justice has ruled that the huge new Government-owned aluminum plants cannot be sold to Alcoa (Aluminum Corp. of America). But there are no other bidders. Hence the SPA has recommended subsidies to other buyers. But President Truman has said that the thing ought to be settled without subsidies. And while subsidies are being discussed, naturally no new bidders are likely to come forward. So the Government is simply boxed in on all sides as to what to do about the plants.

The present chapter of absurdities started a few years ago when Thurman Arnold, the then head of the Antitrust Division of the Department of Justice, threw the book at Aluminum Corp. with a suit charging 143 kinds of violation of the antitrust law.

LEGAL DECISION AWAITS PLANTS' DISPOSAL

But Alcoa's people, in addition to being smart merchandisers and smart manufacturers, also are smart lawyers. Having learned their lesson back in 1912 in a consent decree promising not to violate the Sherman Act, they proceeded to make the antitrust law their bible, together with all subsequent revised versions, free translations, and higher criticisms. And the court, after millions of words of testimony had been taken, threw out the antitrust case on 143 out of 143 counts.

The Government then appealed the case to a special court set up because a Supreme Court quorum could not be obtained on it. This special court of review sustained the lower court on all but one count—though an important one. It found that Alcoa had no monopoly of bauxite, of alumina, or of anything except—an important exception—of aluminum ingot production, of which it had in 1940 over 90 percent.

But the court's decision was made in 1944, and in the meantime the aluminum picture had changed radically, with the country's

aluminum capacity multiplied several times, most of the new capacity being Government owned.

The court therefore sensibly announced that it would make no final order until final disposition should be made of these Government plants.

In this connection it opined that if Alcoa ended up with a third of the country's postwar aluminum capacity, that would definitely be no monopoly; and if it ended up with two-thirds, that would not necessarily constitute a monopoly—but might.

MISREPRESENTATION OF COURT

The scene then shifts to Washington and the surplus disposal law. Under that law the Department of Justice can veto the sale of any plant over $1,000,000 as threatening a violation of the antitrust law, and Congress can veto any sale over $5,000,000 for any reason it chooses. All the aluminum plants come under these vetoes, because aluminum cannot be produced cheaply except on an enormous scale.

The Attorney General then reported to the Surplus Property Board (since changed to the Surplus Property Administration) that it could not legally sell any of the plants to Alcoa—citing the court's decision. This was a misrepresentation of the court, however, since the court had not even said that 67 percent of postwar capacity would necessarily give Alcoa a monopoly.

Thereupon SPA Administrator W. Stuart Symington and RFC Director Sam Husbands, who had been making mild efforts since February to find other buyers, sent telegrams to 224 companies encouraging bids. But they got only three bites. Two of these, from Reynolds Metals, which had been in the field during the war, and from Columbia Metals, newly formed to make aluminum on the west coast, asked for direct or indirect subsidies. Reynolds asked for a 5-year lease under which the Government would buy at 15 cents (the present price) any ingots not sold to the market, and the RFC would stand all losses for the first year and 85 percent of losses for the second and third years.

SUBSIDIES RECOMMENDED EXCEPT FOR ALCOA

The Surplus Property Board thereupon, on September 21, recommended to Congress direct or indirect subsidies all the way down the line, from bauxite to ingots, for any bidder except Alcoa. It recommended that the Government get the bauxite from abroad for these hoped-for other buyers, and subsidize the intermediate or alumina process for them. Then it recommended 5-year leases, with subsidies and Government loss guaranties, after which the lessees should get options to buy the plants at prices to be based on their costs during the 5-year lease.

As the baffled Alcoa people, who had actually built the plants at no profit and run them for the Government, and who stood ready to buy some of them without subsidy, direct or indirect, pointed out, this lease-with-option plan would be an open invitation to extravagance.

As they put the consequences: "What would a calculating lessee * * * do who wanted to buy as cheaply as possible? * * * He would spend money with abandon to capture customers and markets and to create a sales organization * * * useful * * * when he purchased the plant. Sell below cost, drive Alcoa and his other competitors to the wall, and capture customers for later use. The more he spent during the * * * lease, the better. The RFC would pay the bills. * * * Extravagant management on Government money would kill two birds with one stone. * * * The more he earns as lessee, the more it will cost him to buy the plant under the purchase option; the more he loses under the lease, the cheaper the purchase price."

## Competitive Skill Seen Key to Alcoa's Position

EXTENSION OF REMARKS
OF
## HON. FADJO CRAVENS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. CRAVENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harold Fleming, from the Christian Science Monitor of November 28, 1945:

COMPETITIVE SKILL SEEN KEY TO ALCOA'S POSITION

(By Harold Fleming)

NEW YORK.—Previous article pointed out that in the present impasse in the disposition of the Government's aluminum plants Washington officials apparently reflect a feeling on the part of the United States public that it is cheaper to pay a high price (including subsidies) for aluminum than to let one corporation dominate the aluminum market by producing and selling aluminum cheaper than anybody else feels able to do.

At this point it is important to look into how Alcoa got its 90 percent of the prewar aluminum market. And, on the subject, the district court's findings of evidence (on the basis of a houseful of documents submitted by, among others, the highly vocal Thurman Arnold) are significant.

The court found that "anyone possessing the four cardinal tangible elements of intelligence, industry, courage, and money or credit is and has been able with confidence to go into the production of virgin aluminum * * * [and] is now free * * * since the expiration of the Bradley patent in 1909 * * * to produce virgin aluminum * * * no one stands in his way or so far as has been shown, unless armed with a patent, has ever stood in his way, of obtaining either bauxite or water power or of his producing aluminum therefrom."

DEPENDED ON NO MONOPOLY OF RAW MATERIALS

Muscle Shoals has been cited by enemies of Alcoa as "something that we do not want repeated"—but Muscle Shoals is an instance of why Alcoa held 90 percent of the aluminum ingot output up to the war. Ford wanted to go into Muscle Shoals in order to make aluminum. He finally withdrew because his engineers told him that, even if he had Muscle Shoals power, he could buy aluminum ingots cheaper from Alcoa than he could make them himself.

Alcoa, the courts found, depended on no monopoly or control of raw materials. As Alcoa said in its recent answer to the SPB report to Congress, "Raw materials are available in unlimited quantities at competitive prices. The manufacture of aluminum is not controlled either by patents or by secret processes.

"Government-owned facilities represent the last word in efficient equipment. Government-owned plants form the largest single aluminum enterprise in the world. They are admittedly in good balance and capable of operation on a competitive basis. The fact that Alcoa offered to buy several of these properties without benefit of subsidy or other favor, and operate them in competition with * * * whoever might obtain other Government plants, is a convincing demonstration that subsidies are not needed."

BENEFITS OF RESEARCH AVAILABLE TO ALL

And, as the district court said, "The astonishing thing is the great number of witnesses who appeared * * * competitors as well as customers * * * who have completely exculpated Alcoa from blame and * * * praised its fairness as well as its helpfulness to the aluminum industry * * * its consistent policy of helpfulness to competitors and customers alike. The benefits of its research * * * its engineering * * * have been made available generally to competitors and customers * * * without cost. * * * Alcoa has followed the practice of exhibiting and explaining to competitors and customers its equipment and manufacturing technique and has passed on to such persons the benefits of its experience, all without charge to them."

Long and short of the matter appears to be the fact that Alcoa, with Telephone, seem to be the only outfits which started 40, 50, or 60 years ago with virtual monopoly of a market, due to patents and the like, and have held them by the simple process of keeping ahead of everybody else competitively no matter what happened.

As the appeals court put it, "It was not inevitable that it [Alcoa] should always anticipate increases in the demand * * * and be prepared to supply them. * * * Nothing compelled it to keep doubling and redoubling capacity before others entered the field. It insists that it never excluded competitors; but we can think of no more effective exclusion than progressively to embrace each new opportunity as it opened, and to face every newcomer with new capacity already geared into a great organization, having the advantage of experience, trade connections, and the elite of personnel."

MONOPOLY GAINED BY OUTSPACING COMPETITORS

In other words, the gist of the matter seems to be that Alcoa gained its 1940 monopoly by keeping ahead of potential competitors. In this it has differed from great hopes like the United States Steel Corp., which was put together by the Morgan firm in 1903 with 60 percent of the country's steel-making capacity, only to lose its position until it was rescued from oblivion around 1935 by Myron Taylor's management; and the United States Rubber and American Woolen, which from a dominant position in their respective industries descended through the process of managerial stagnation into the bankruptcy courts in the 1930's. Alcoa appears to be in this respect a sociological fluke or exception.

This, however, may be a result of the fact that the aluminum business is only in the narrow-minded view of left-wing critics a business where monopoly can flourish. Actually, aluminum competes with virtually every other metal. Alcoa has not obtained a pound of aluminum ingot sales in 50 years except in competition with either magnesium on the one hand or, on the other hand, with copper, or other nonferrous metals, or with various kinds of steel. Aluminum markets in the past 50 years have been gained from beginning to end in direct price competition with other metals.

The housewife knows the competition between aluminum utensils and steel-and-enamel pots and pans, determined by price; but this competition extends from the kitchen to the railroad tracks, in which latter market aluminum competes directly with stainless steel. Every aluminum market today has been carved out, in straight-out price competition, of the former market of some other metal or material.

ALUMINUM HIGHLY COMPETITIVE PRODUCT

And this is obviously due to be even more true in the postwar than in the prewar era—that aluminum is a highly competitive product whose market can be expanded almost entirely on a price basis.

Aluminum competes with copper for high-tension power lines; with magnesium for fast-moving machinery parts; with needle steels for railroad-car bodies; with zinc-plated and galvanized steels for farm consumption; and with enameled steels for kitchen use.

There would, it appears, have been no aluminum business but for Alcoa; but, more fundamentally, there would have been no Alcoa and no 90-percent monopoly of the aluminum business but for the fact that Alcoa happens to be run by people whose answer to competition is to keep ahead of it.

This would seem an anomaly and an exception to the rule that monopoly breeds corporate sloth if it were not for the fact that even a 100-percent monopoly of the aluminum business would be, in the nature of the competition between metals and materials, no monopoly at all, but merely a challenge.

## Subsidy Talk Held Bar to Cheaper Aluminum

EXTENSION OF REMARKS
OF
## HON. FADJO CRAVENS
OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. CRAVENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harold Fleming, from the Christian Science Monitor of November 27, 1945:

SUBSIDY TALK HELD BAR TO CHEAPER ALUMINUM

(By Harold Fleming)

NEW YORK.—Previous article pointed out how Washington officials have arrived at a total stalemate on how to dispose of the country's war-built aluminum plants because, on the one hand, the Department of Justice has ruled that the Aluminum Co. of America, which built and ran most of the plants, must not get them, and, on the other hand, there are no other bidders now except for operation with subsidies—and President Truman has said there must be no subsidies.

The situation is further complicated by the fact that once the word "subsidies" was spoken, any hope that nonsubsidy bidders for the plant would show up has, of course, evaporated. No company in its right mind would bid for one of these plants without subsidy with the prospect that other similar plants would go to subsidized operators. It would then be in the same position behind the eight-ball as Alcoa. It seems that some competent metal companies, like American Smelting & Refining, might have taken their courage in hand and offered to compete with Alcoa on an equal basis, but that is out now that subsidies are talked of.

EFFECT ON GOVERNMENT-SUBSIDIZED POWER PRACTICES

One of the interesting types of subsidies proposed by the late Surplus Property Board consisted of sales of power from the TVA and the Government-owned Bonneville and Grand Coulee Dams at trick low rates from which Alcoa would be barred. The accounting on these projects has always been suspect, having been exempted from the accounting requirements imposed on private power companies by the Utility Act of 1935.

The new proposal would, in a furtive way, make them still lower, for the SPB's proposal is that buyers of aluminum plants—other than Alcoa—be allowed to have firm power on an "only when you want it" basis, so that the Government-subsidized power-authority seller, not the buyer, would take the loss involved in "water over the dam," as Alcoa has to do both with its own plants and when it buys from the Government.

The official figures on the present aluminum ingot capacity are as follows:

*Ownership of aluminum smelting facilities*

| | Pounds | Percent |
|---|---|---|
| Government | 1,360,752,000 | 57.9 |
| Alcoa | 828,127,000 | 35.2 |
| Reynolds Metals Co. | 161,730,000 | 6.9 |
| Total | 2,350,609,000 | 100.0 |

FUNDAMENTALS OF SURPLUS DISPOSAL

These figures, however, represent total capacity and not total competitive capacity. As pointed out on this page a few days ago, there are a good many war-built plants in the United States which, though beautifully constructed to jewel precision and Rolls-Royce efficiency, are in the wrong place or for other reasons could not stand the gaff of open competition in peacetime. Cutting these out of the table, the figures are as follows, showing a somewhat higher Alcoa percentage of holdings:

*Ownership of aluminum smelting facilities capable of fully competitive operation*

| | Pounds | Percent |
|---|---|---|
| Alcoa | 650,000,000 | 47.7 |
| Government | 552,000,000 | 40.4 |
| Reynolds Metals Co. | 162,000,000 | 11.9 |
| Total | 1,364,000,000 | 100.0 |

Alcoa could buy at least one or two more large plants and still not come within what the circuit court said might constitute a monopoly.

From here on, obviously, the discussion must get down to the fundamentals of what surplus disposal should be, and what actually constitutes monopoly.

Obviously, the original major purposes of surplus disposal have been lost to view as the fear of alleged monopoly has flashed in the eyes of Washington officials and of the American public. The originally declared congressional objectives of the Surplus Property Act—there were many more, all told, and, in fact, so many that the law was practically unworkable—were (1) to promote production, (2) to employ labor, and (3) to secure for the Government the fair value of the property sold. And a fourth was to produce "a peacetime economy of free, independent, private enterprise." In the case of the aluminum plants, these have all had to be sidetracked to keep the big, bad wolf Alcoa from using its seemingly inexplicable power of making money on 15-cent aluminum from doing so.

IRONY AS WELL AS PARADOX IN SITUATION

There is irony as well as paradox in this situation. For, on the natural assumption that Washington opinion reflects public opinion, it appears that the American public is prepared to pay through the nose for its aluminum in the next 5 years at least, and probably for many years beyond that, so as to protect itself against the imagined risk that it will become a victim of a corporation which in some years far over the horizon might use its power to hold up the American people for an economically unjustifiably high price for aluminum.

In other words, the philosophy of the present moves in Washington is that a present very large risk (or through-the-ceiling subsidized costs for aluminum) will be gladly accepted in order to avoid a conjectured later risk, far over the horizon of years, of an ultimately excessive and unfair price for this highly competitive metal.

To put the most charitable interpretation on this view, it is that the American public, through its Washington representatives, would rather have freedom from monopoly than a mess of pottage in the form of cheaper aluminum today, and that it would rather have its birthright of such freedom than to get aluminum cheaper for the next 5 or 10 years.

But there can be another guess. And the other possible guess is that the hand is the hand of Esau, but the voice is the voice of Isaac. It cannot be very wide of the mark to say that subsidized competition has bid for its place on false pretenses.

## How Danzig Was Liberated

EXTENSION OF REMARKS
OF
## HON. CARL T. CURTIS
OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I include an article that appeared in the December 5, 1945, edition of the Lutheran Companion. The article is as follows:

HOW DANZIG WAS "LIBERATED"

(Until its annexation by Hitler-Germany, the city of Danzig was a free state. According to the Lutheran World Almanac (1937) this city had a population of 421,000 people, of which 200,000 were Lutherans. Prof. Otto Piper of Princeton Theological Seminary has obtained the following eyewitness report on the fate of the Christians in Danzig. It was written by a 50-year-old teacher and describes her experiences during the occupation of Danzig by the Red Army.)

I saw the Russians march into Oliva on March 24, 1945. All women were in their cellars. The Russians first plundered everything, permitting us to remain in our cellars. The following day my two nieces, aged 15 and 22, were raped, the one 7, the other 15 times. The following day a Russian officer advised we move to the cathedral, since he could not guarantee the conduct of the drunken soldiers. But even there Russian soldiers entered and raped all women, some upwards of 30 times, while crazed men played the organ and rang the bells. The cathedral, apart from the raping of the women there, was terribly soiled and the vestments stolen. Driven from the cathedral, I then found refuge in the air-raid shelter of the parish house. There we were safe for 2 days, but when found by Russian and Polish civilians, all the women were raped again. Among them were Protestant and Catholic nurses.

On Good Friday we returned to our house, where 40 people stayed in 3 attic rooms. I kept the death register in the parish of Oliva. The death rate rose rapidly, there were suicides daily.

LOADED INTO CATTLE CARS

Not only persons of German descent, but also Poles whose families had lived in Danzig for generations, were evacuated. People were loaded into cattle cars, 120 to a car. We got no food during the 10 days' travel from Oliva to Guestrow, Mecklenburg. Polish militia offered us loaves of bread at prices up to 200 zlotys ($38.00). Anyone who reached the Mecklenburg frontier with more than 20 zlotys was shot. Seventy persons in our transport died between Oliva and Guestrow, another 10 after arrival.

A Protestant pastor makes the following statement: "My 18-year-old daughter was raped in the first days of the occupation of Danzig an average of 15 times a day, usually by Mongols, who threatened her with machine pistols. Mothers of 4 and more children were treated bestially. Nurses in hospitals, threatening to collapse from exhaustion, were raped. Many of them chose suicide. Only women employed by the Russians

in offices or in kitchens escaped rape. Watches and jewelry were stolen everywhere, even by Russian officers, who did not, however, participate in the raping of women."

RAPED GIRLS, KILLED BOYS

Dr. O., a Catholic priest from Danzig, reports as follows: "Almost everyone who did not belong to the Nazi Party, i. e., 80 percent of the total population, disregarded the Nazi order to evacuate captured Danzig. What remained of the city the Red Army burned. They raped girls as young as 8, and shot down boys who tried to protect their mothers. This was due largely to the intoxication of the Red Army. When sober, they showed greater human understanding and even tried to defend the population against the excesses of the Poles, who, on their arrival, plundered everything.

"The initial Russian attitude toward Catholic and Protestant pastors was correct. Later many pastors were arrested, several died from ill treatment and lack of food, either in prison or immediately after release. A Polish administration was established at the end of April. Evacuation of the population by the Polish militia started early in July. Whole blocks of houses were surrounded. Occupants were driven into the streets, herded to the railway station, and loaded into freight cars. In Langfuhr two vicars and their pastor resisted evacuation. All three were beaten with rifles, were forced to clean cattle cars.

"I left on August 1, 1945. At every station we were plundered by the Polish militia. Many died on the way.

"Between April and June (before the evacuation) we buried 500 people in our cemetery, while for the entire year 1944 our deaths were only 104. The Protestant churches of Danzig were occupied by the Poles in June and used for various nonreligious purposes."

THE SITUATION IN HUNGARY

The official organ of the Hungarian Reformed Church, Elet es Jovo, reports the following facts concerning the situation of the Protestant church in Hungary:

"All the churches in Budapest were damaged in the course of the fighting. Four of its 17 Protestant churches are damaged beyond use. Throughout Hungary (where there are more than 500,000 Lutherans) church-building damage ranges from 5 percent to 80 percent."

Of special interest to United States Lutherans are the following reports from the same source:

"Dr. Sander Raffay, the Lutheran-Evangelical Bishop of Budapest, has resigned and is ill. Dr. Zoltan Thuroczy, bishop of the Evangelical-Lutheran Church in Nyiregyhaza, was arrested on a charge of 'supporting the war and anti-Soviet propaganda.' He was sentenced to 10 years' imprisonment.

"The Reformed Bishop of Siebenburgen, Dr. Sandor Makkay, has also been brought to trial because his new book, Arte of Marte, was declared out of sympathy with the present authorities."

---

## Air-Mail Postage

REMARKS

OF

## HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. HAGEN. Mr. Speaker, recently I introduced two bills which now are before the House Committee on the Post Office and Post Roads.

These are H. R. 4734 and H. R. 4735. The first bill would reduce the present 8 cents per ounce or any part thereof on air-mail-letter postage to 5 cents per ounce. The second would set up an average man's air mail by providing 3-cent air-mail postal and post cards and authorize such a rate for use on souvenir and other cards. Many Members of the House have assured me they favor both of these bills.

Air-mail rates since the inception of the domestic air-mail system by the Post Office Department in 1918 have varied widely. They have been as high as 24 cents per ounce or fraction thereof, including special-delivery fee. Zoning systems also have been used, with a charge of 8 cents per ounce for each zone. It is interesting to note that in August 1928, 18 months after air-mail zoning was abolished and the rate was dropped from 10 cents per ounce or fraction thereof to 5 cents, there was a 95-percent increase in air-mail traffic.

The only recent change in air-mail rates, which had been set at 6 cents for each ounce or fraction thereof in July 1932, came on April 2, 1944, when Congress established the present rate of 8 cents for each ounce or fraction thereof with overseas air mail for servicemen still carried at 6 cents. The 2 cents increase per ounce was made for the purpose of raising revenues, just as certain luxury taxes were instituted. Now is the time to drop not only the 2-cent tax but an additional 1 cent, so as to make sure air mail will continue to be used in great quantities.

The bill calling for a reduction in air-mail rates to 5 cents an ounce would make possible a cut which has been ardently advocated by the Hon. Robert E. Hannegan, Postmaster General of the United States.

Speaking at a luncheon in New York on September 7, this year, in celebration of the silver anniversary of the first transcontinental coast-to-coast all-air route on which mail was carried, the Postmaster General, in championing air mail, said:

> From now on I want to encourage the use of air transportation for first-class mail in every way possible.

The honorable gentleman then went on to say:

> Now, under our present economic system, our business people know that one of the best and quickest ways to get the American people to buy a good product or use a good service is to lower the cost. There is no public education like the good old American method of offering the people a good bargain.
>
> I believe this principle applies to the postal service as well as any other, and I take this occasion to announce to you that I am going to ask that legislation be initiated in Congress to lower the cost of air mail.
>
> At present the rate on domestic air mail is 8 cents an ounce. This is a wartime rate, which automatically drops back to the peacetime rate of 6 cents an ounce, 6 months after the end of the war.
>
> But I am going to ask for a further reduction, a reduction of the peacetime rate to 5 cents an ounce. And I am going to start pressing for this reduction now.
>
> I believe many more people would use air mail if it were cheaper, and I also believe that if many more people did use it, the resulting increased volume would bring down the unit cost of delivery, and, within a reasonably short time, would justify the cost.
>
> That is a tried and true principle, you know, in the peacetime business of our country. It is this way we have been able to raise the standard of living of our working people above that of any other people in the world—by bringing the products of our industry and our services down to prices which they can afford to pay. And I want to remind the businessmen of America that they themselves, and their fathers before them, have proved, again and again, the soundness of this principle of American business. Every time it is tried it works. It works in bringing more and better things to our people. It works in creating more jobs. And in the long run it works in assuring better, steadier profits to the owners themselves.

Mr. Speaker, I am sure that most of us will agree with the Postmaster General in the soundness of this principle of American business and in his plan of reducing the air-mail rates. The reduction is not a great one in reality, for as the honorable gentleman pointed out, the air-mail rate is soon due to return to 6 cents by the act of Congress that raised it to 8 cents, therefore, the cut is but 1 cent.

I believe, and I know many Members of the House feel the same way, that this move should be made now for it would encourage, as the honorable gentleman has said, a greatly increased use of air mail and this encouragement will be needed, for we all know that a goodly portion of the large increase in air mail during the war was caused by the large number of letters that were exchanged between the boys and girls in the service and their families. With the boys returning home at an ever-increasing pace, it is going to be necessary to encourage the use of air mail by individuals and business houses—by following that fine old American custom of encouraging the use of a good service by lowering the cost.

And from the standpoint of national defense it is important that we keep our commercial air lines growing. Gen. H. H. Arnold, commander in chief of the Army Air Forces pointed out in a recent talk before the National Press Club here in Washington:

> The air lines today are as much a part of air power as is the bomber and fighter. We must have enough transport planes, civilian and military, so that we can transport an airborne corps of 30,000 men on short notice.

One of the ways to have such an air fleet, in as economical manner as possible, is by encouraging expansion of the air lines, and what better method could there be to do this than by following the good old American custom of encouraging the use of a good service by lowering the cost?

My second bill would also aid in this direction, for the adoption of an air-mail postal and post-card rate would bring a new force into the picture. The 3-cent post card, in inaugurating a poor man's air mail, will tend to give the public

additional benefits of air transportation—in fact it does not seem right to me—for so thoroughly an established service as is our air mail, not to provide the convenience of the postal card and post card.

There is nothing novel about the idea of an air-mail post card. In 1939 Great Britain, a majority of the British Dominions and colonies, Ireland, Denmark, Estonia, Iceland, Colombia, and Venezuela all had lower postage rates for post cards than for letters sent by air mail to certain destinations.
